FOR the old birds, however, it was no dozing time. With marked solicitude they fretted about the spot, and, having definitely located their babies, they tried to pluck up courage enough to deliver the food they carried. But, faced by so many new conditions at once, it was plainly a difficult problem for them to accommodate themselves to the circumstances. Not only did they miss the friendly shelter of the bay bush, but the very camera itself, now standing tall and gaunt in the open, was to their timid minds doubtless twice as awe-inspiring as before—a veritable three-legged Cyclops! Strangely enough, it was the father bird who was the first to muster strength of mind enough to settle on the branch with his children—and I snapped him. The picture I secured well illustrates his uneasiness at the time. His eye is large and startled-looking, his body is attenuated and his feathers depressed, as he stretches forward in his haste to feed one of the babies and be off again in a twinkling. Nevertheless, his admirable show of courage evidently had the effect of shaming his naturally bolder wife into action, and upon observing the safe return of her gallant spouse, she made up for lost time by feeding her young four or five times in quick succession. I was thus able to obtain several more photographs before sundown, at the same time making it a point to render my own person gradually more and more conspicuous. When I put the patient babies back to bed I felt well satisfied with the progress of my wild-bird taming, and left the place with great visions of what might be accomplished on the morrow.

Alas! The day following broke overcast and gloomy. Instantaneous photography was out of the question. But that I might not lose the ground I had gained, I spent much time with my little sparrow friends, accustoming them still more to my presence and addressing to them gentle words of reassurance, as I had from the start. Would the youngsters remain in the nest still another day?

Difficulties of the Bird-Photographer

YES, there they were when the next morning's sun found me early at the nest-side; though already they were standing on the rim of their home, and stretching their tiny wings in contemplation of a real start into the broad world. My plan of action was quickly completed: crouching unseen among the bushes near the nest, I extended my hand into the sunlight and placed the baby field sparrows on it; in my fingers I held a convenient twig for the parent to alight upon. The camera was focussed on my hand with the aid of a nine-year-old lad, who then withdrew into hiding. His duty thereafter was to appear at my call and replace upon my hand, without disturbing the focus, such of the youngsters as should take into its head to launch forth from its artificial perch. For the little fellows' wings were already well developed, and at first they did not at all relish the narrow limit placed upon their activity. But after many a tumble they became more contented, and then for me it was simply a case of wait. Motionless as a log of wood, I crouched in my hiding-place, one hand held aloft supporting its living load, the other in readiness grasping the camera bulb. Even my cap was drawn low over my eyes, to hide what evidences of animation might unavoidably emanate from that source. For a tiresomely long period I listened to the anxious *chip-chipping* of the parent birds, and amused myself trying to distinguish the more muffled sound that was uttered through a bill full of food from the freer tone of an empty mouth. By degrees the radius of the sound became more restricted, until I could feel the vibration of the twigs against my body as the birds hopped uneasily about close at hand. Breathlessly I waited and watched through half-closed eyes while the faithful mother made her way anxiously to the edge of the bush, where, mustering all her courage, she flitted across to my twig, and presto! she was immortalized! Incidentally the children were wild with joy at the sight of their mother—and food!

The ice once broken, my opportunities for snapshots became more frequent. Cramped by my uncomfortable posture, I began to straighten myself up; my cap was thrown back from my eyes; the branches that had been arranged to conceal my body were allowed to fall away. And still the birds came. Now I felt that the time had come to attempt to accomplish the highest ambition of the bird-photographer, namely, to have a wild bird settle actually upon my hand. Placing the young sparrows farther back upon my wrist, I discarded altogether the twig I had been holding, and extended my forefinger as a prospective perch for the parent. The bird soon returned, and I was sanguine of quick success. But no sooner had her feet touched my finger than she recoiled, as though from an electric shock, leaving a mere blur on my plate, and her babies unfed. Never before, doubt-

Fast overcoming her fear of me

Mustering her courage, she came across the twig

Jumping in alarm at the touch of my finger

less, had her toes felt the contact of so warm, soft, and unnatural a perch! Fearful to venture there again, both birds now did their utmost to entice the youngsters into more agreeable surroundings. Even a few hours' growth had had its effect upon the development of their wings, and there was many a call for my boy assistant to swoop down from his place of hiding and replace a refractory fledgling upon my wrist. The old birds occasionally uttered a certain note which apparently had a particularly alluring effect upon the young—a sort of little twitter—and every time I heard it I knew that one of my little lads (or both) would soon be off! Once on the ground, it was a pretty sight to watch the mother bird try to coax her baby to a place of safety by pretending to offer food, then running a few feet, turning again, and so on till her little stratagem was interrupted by the rude hands of the truant officer!

If ever, at this time, the parent ventured to my hand, mindful of her previous fright, she would not settle on my finger, but, poising herself in the air, she would deliver the food on the wing, quite baffling, by the rapidity of her movements, the capabilities of my camera shutter. At such times the youngsters, in their eagerness to obtain the uncertain morsel, would usually overbalance themselves and fall fluttering to the ground—altogether a decidedly exasperating state of affairs as the day sped on and I had no photographs of the bird on my hand. But my stock of patience was not yet exhausted (let him who has not patience leave untried the photography of birds!) and I was destined to be rewarded. Gradually reassured by the inoffensiveness of my personality, the field sparrow at last alighted firmly upon my finger and, stepping forward, fed her young. Had a fairy settled there it could not have sent a greater tingle of delight through my veins than the patter of that little bird's feet upon my hand.

More visits soon followed, and I was particularly pleased to observe that the male was coming almost as frequently as his mate. From an attitude of evident fear, and an invariable start at the click of the shutter, my subjects increased in assurance until I felt that the climax of confidence had been reached when one of the birds, after feeding the young, calmly lingered to wipe its bill by rubbing it against my finger! Was ever victory more decisive? From a motionless, hidden figure, I had emerged into the obviousness of a kneeling man, but still my little friends retained sufficient trust to settle fearlessly upon my outstretched hand. My fondest hopes had been realized, but still half an hour of sunlight remained.

Then I conceived an idea which I thought surely would be impossible of realization, namely, of having the bird feed her young upon my very shoulder. [illegible] the boy posthaste for a chair, I seated myself in full view, placed the nestlings on my shoulder, and waited. Surely this was asking too much! The youngsters, now well-fed and becoming sleepy, were satisfied to remain where they were, and heeded not their mother's seductive appeals. Nearer and nearer she would come, and then her heart would fail her. It was really pathetic to observe this bird's mental struggle between the instincts of self-protection and of love for her offspring. Meanwhile I was anxiously watching the sun sink lower, till it rested on the tree-tops. Once behind that hill and my photographic aspirations would be doomed. Tense and motionless I sat there, my right hand clutching the bulb and ready for immediate action. Now the sun's last rays are shining through the trees; in a moment it will be too late! Suddenly my cheek is fanned by vibrating wings as my bird hovers hesitatingly above her young, then a gentle touch upon my shoulder, a click from the camera, and the conquest is achieved!

Next day the cradle was empty, my birds flown. Though I shall never see them again, they are friends of a lifetime; though free to live out their own lives, they are mine forever! What gunner can recall an expedition half so exciting in its consummation, half so satisfying in its outcome?

At last the old bird settled on my finger

Stepping forward, she fed her young

As comfortable as on the branch of a tree

The Wood-Butchers

A Concrete Example of the Nation's Problem

ERNEST RUSSELL

IT HAS been said that communities, no less than individuals, manifest their true character outwardly. Accepting this view of the matter, the little mountain-walled, yellow-and-white town of Lincoln, New Hampshire, appears to doze, comfortably conscious of innocence and purity, in the valley of the Pemigewasset. In reality, however, Lincoln is an abattoir, a slaughter-house of the spruce forests of the White Mountains. Also it is the citadel of "the Henrys."

The Henrys—that is to say, Jim Henry and his three sons—literally own the town—land, houses, stores, mills, its one hotel—everything but the Catholic church and a little flagman's shanty of a public library. Even the Boston and Maine, which its enemies will tell you "stops at nothing," stops at Lincoln, before the upraised finger of the Henrys. Beyond, as the Lincoln and East Branch Railroad, it becomes their servant. They built it. For twenty miles it twists among the Franconia Mountains, spreads like a many-toed bird's foot to the lumber camps and the "landings," is taken up here and relaid there, but, ever pushing on, it penetrates deeper and deeper into the uncut spruce. "Wherever we can lay a track," say the Henrys, "we can bring out the timber." Well, they have been doing that, in the White Mountains, for just thirty-five years—seventeen years of it in the East Branch country—and in their story, the story of the fortune they have made and the wreck that rises behind it, lies, in epitome, the genesis of a great American problem.

Somewhat apart from the closely clustered village, in a little white-painted house which overlooks the valley and faces the huge rampart of Loon Pond Mountain, lives—if you can call it that—Jim Henry. Sightless, feeble with his eighty years, relinquishing to his sons, because he must, an industry that has been the very core of his existence, he frets away his few remaining years. He looks back on a boyhood of bitter poverty, of scanty meals, and the hardest labor. He remembers yet the taunts of other lads who stepped on his bare toes, blue and cracked with the cold. "I fought an' licked 'em when I could," he says, "an' when I couldn't, I set my teeth an' said, 'You ain't agoin' to step on my toes always,' an', by God, they hain't." Now he has his millions—perhaps the Lord knows how many, the assessors don't—and that is all.

Jim Henry's instincts were the primitive instincts of the fighter—but he had brains—and he has mixed them with his fighting just as he has mixed them with his bartering and his money-making. Moreover, he has never been hampered by any consideration of generosity or obligation to his fellow man. Lumbering has been his trade, the White Mountains his field. "I never see the tree yit," he has said with a frankness and an unction that would have fairly warmed the heart of Uncle Joe Cannon, "that didn't mean a damned sight more to me goin' under the saw than it did standin' on a mountain." Desolated Nature lies in his wake, but of this he cares not. His only regret is that he can not go on bargaining shrewdly for the forests, cutting and hauling the great spruce logs, working out, to the very end, his fighting destiny.

When Jim Henry's father died in 1851 the chief item in the little estate was a timber lot in Littleton. The boy Jim—he was only nineteen then—promptly bought out the shares of the other children—on credit of course—and "logged" it himself. He cleared fifteen hundred dollars in this first operation of his life, and it must have hit him pretty hard to lose, as he did, every dollar of it in his very next venture. But "the bark had got into his hair," as they say in the lumber camps, and he went back to his work as determinedly as a "game" fighter goes to the center of the ring after a round that has gone against him. There was no hint of the "quitter" in Jim Henry of that or any other day.

If any proof be needed of Jim Henry's genius for his calling it may be found in the rare instances when he deserted it. Whenever he is found scheming in oil or in horses, disaster lies just ahead; he turns to timber and everything comes his way. Moreover he fares best when unrestrained by partnerships or agents. His shrewd, intriguing mind and tight-closed lips permitted no confidences, delegated nothing of importance to subordinates. All his life he has dominated everything and everybody that touched his own activities—and the ledgers tell the story.

A Vast Cemetery

ZEALAND VALLEY was Jim Henry's first expedition into the field of "big lumbering." He had come to Fabyans in 1874, facing hard times with insignificant capital and no credit. In seven years, and by small operations, he largely increased the one and firmly established the other. Then came Zealand. His long-range vision had foreseen the opportunity and his stubborn will had won the way to its undertaking.

In the fall of 1881—it was "Henry and VanDyke" then—Jim Henry flung himself upon the Zealand forest, the finest in the valley of the Ammonoosuc. For eleven years he ravaged it, building his mills and his railways, creeping up the valley, scaling the steep slopes and tearing from their foothold the giant spruce. Little he heeded the slash that marked his course and invited that crowning destruction of all—a big "burn." Money was all he saw, all he labored for.

But seventeen years have passed since Jim Henry hacked his way through the forest of virgin spruce which clothed not only the broad intervale of Zealand Valley but rose to the summits of the surrounding peaks. To-day, however, it is a dull-brown waste of lifeless, fire-eaten soil and stark white boulders. All about lie the great blackened stumps and tangled roots of what were once majestic trees. It is as if the contents of some vast cemetery had been unearthed in that little valley.

It is in pathetic testimony to this destruction of natural beauty and to this waste of a great national resource that Edward Everett Hale has exclaimed: "It makes a man cry to see it." With reference to the mountain named after himself Dr. Hale may well have thus expressed his sorrow. Had he, however, penetrated farther up the valley, as I did in the autumn of 1908, tears would hardly have paid sufficient tribute to the wreck. Here, on the mountainsides, the ready axes of Jim Henry's men have felled a mighty growth of primeval forest. Fires—the last was in 1903—have followed. The soil that covered the rocks and filled the interstices between has been eaten away, and the roots that bound the rocks together have lost the grip that Nature gave them. Heavy rains have fallen, and, with all retentive agencies gone, the slides—you can count a score of them in the space of a mile's walk—gash the slopes with their hideous scars. "Nature, unaided," says Dr. Thomas E. Wills of the American Forestry Association, "must work and wait a thousand years to repair the wreck wrought in this landslide region by one man and his sons in the quest for gold."

The Henrys' Invasion

EVEN as he laid waste Zealand Valley, however, the keen mind of Henry reached beyond and grasped the possibilities of the great wilderness of the East Branch. By adroit planning and the employment of every possible resource he secured a foothold of fifteen thousand acres. Later he added forty thousand more. And then in May, 1892, a troop of thirty hard-visaged horsemen and a long line of laden wagons left behind the wreck of Zealand and, at two in the morning, filed southward through the Franconia Notch to raise their tents in a little clearing near the Pemigewasset. It was the vanguard of the army of occupation. It was Jim Henry and his men invading the East Branch country. This was the beginning of the Lincoln of to-day.

When I reached Lincoln, one evening in February of the present year, and frankly declared to George Henry, Jim Henry's eldest son, my mission of investigation on behalf of OUTDOOR AMERICA, it was not without some misgivings as to my reception. Solicitous friends had prophesied trouble. "They're bulldogs—those Henrys," they said. "You'll be kicked out of Lincoln in short order." It was therefore something of a surprise, and not a little of a relief, to find myself comfortably seated in the company's office and to hear the eldest representative of the firm say in a quiet, expressionless voice: "We don't mind just criticism—it's the other kind that hurts. There's no secret about this business of ours; we own the land and the timber and we're making every dollar out of it we can. You're welcome to watch us at it and tell the people how we do it. If you'd like to go into the woods with me to-morrow and see that end of it, you're welcome." I accepted the invitation on the spot.

Next morning, at seven o'clock, as I stood beside George Henry, on a flat-car of the logging train, it was not without a considerable personal interest that I watched this rough-clad, silent man of the woods, this millionaire in the rough, as he stood there, snow-shoes in hand, watching the make-up of his train. He has had the benefit of little of what we term education, but it has been sufficient for this purpose that he was pupil to his father in a rigorous school of experience which began back in Zealand and has continued ever since. It is so with all the Henry boys, with Charles the superintendent of the mills, John, the financier, and George

the woods-boss. They have, it is true, their "walking bosses," their "superintendents," and their "foremen," but practically it is the Henrys themselves who exercise those functions. They put in their sixteen hours of vigilance each day—these millionaires—and keep it up the year round—a trinity of brains and hard work. Small wonder that, under this triple reincarnation of their father's spirit, their mills run twenty-four hours a day through good times and bad, that the forest fades before them, and that their fortune mounts ever to higher figures.

A few spasmodic coughs from the engine behind us and the long train of empty logging trucks moved northward toward the mountain wall. Ahead loomed the sharp peaks of Big Coolidge and Potash, and beyond lay Flume and Liberty.

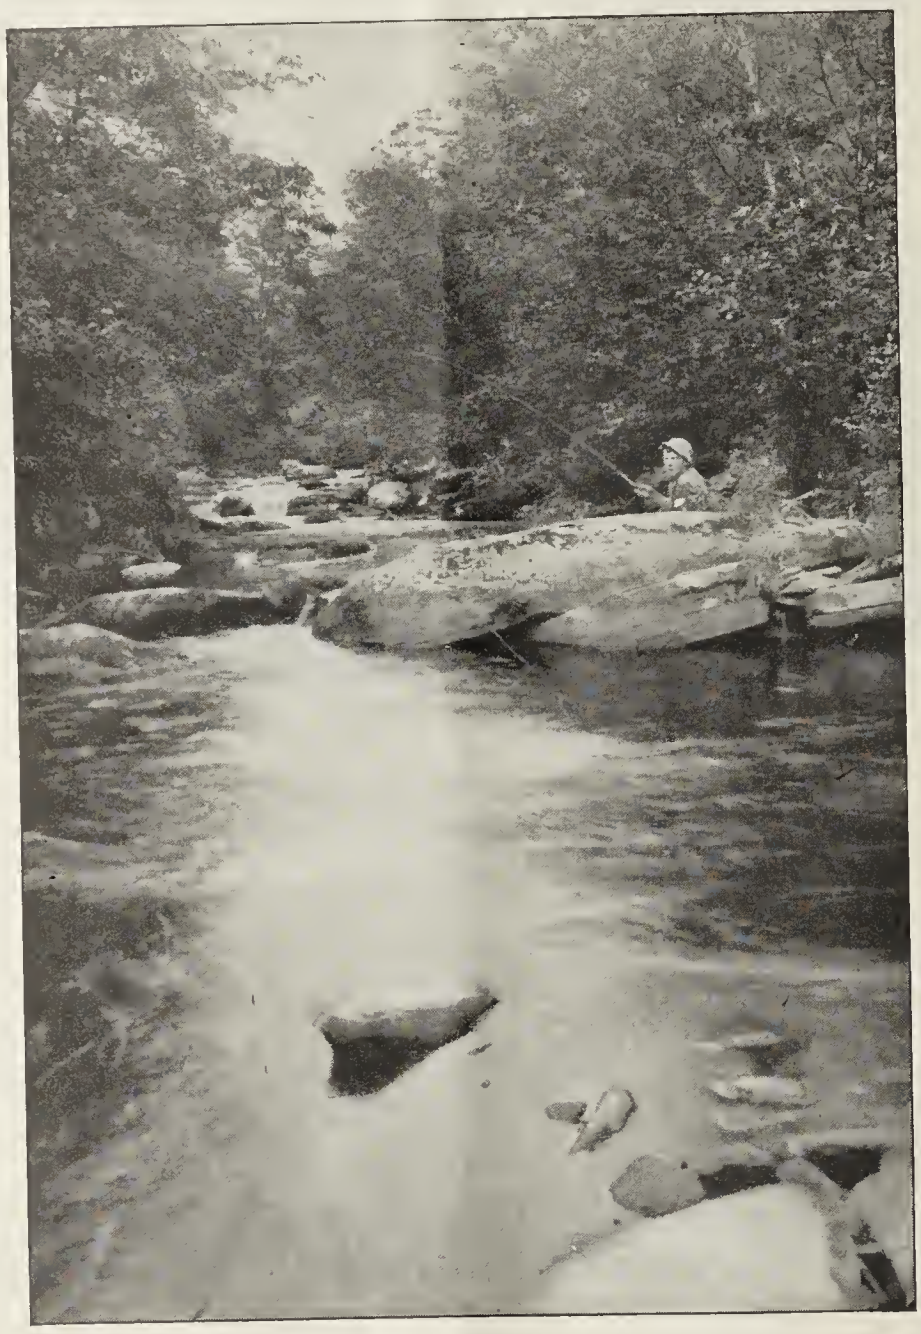
As we turned and twisted onward I could look down to where the Pemigewasset lisped and gurgled over the boulders. It roared once—and men drove logs upon it in a bygone day. Now, one might fancy it sobbed at the transformations it had witnessed in that valley. George Henry tapped me on the shoulder. "We can't show you spruce where there isn't any," he shouted above the rattle of the cars, "but here's where some of the best of it stood." He pointed at the open valley, where the brush was coming up, sparsely, in poplar and wild cherry. "That's Black Mountain over there," he continued, indicating a great denuded ridge across the river. "It's nearer white than black now," I commented. "Well, it was black enough when *we* came here," was the rejoinder. Small need to say it. Now it was clean-shaven to its crest.

We pushed on to the "cuttings." Here it was indeed the tragic story of Zealand repeated. The snow-covered wilderness rang with the regular "chock, chock, chock," of the axes and the rasp of the big saws. Trees crashed down everywhere, were stripped of their wonderful plumes, were dragged away to the landings. It is desperately clean work that is going on in the East Branch wilderness. There was little talk—simply concentrated effort and energy, and through it all a perfectly apparent genius of direction.

I looked about me for some sign of the modern forestry idea of "culling" the reservation of young trees. There was no hint of it. Everything was coming down before those merciless axes, and the "slash"—the prelude to the fire that some day will sweep up the valley as it did over Liberty two years ago—lay in great heaps, black against the snow.

Later, I stood on the top of a car loaded high with spruce logs, outward bound. Behind me stretched the long line of cars—twenty-six of them I counted—going to the slaughter-pen at Lincoln. "Pete," I said to the French-Canadian brakeman who stood beside me, "that's pretty small stuff. I thought you had a six-inch limit up here." Pete's grimy, gnome-like face wrinkled in a grotesque smile. "Ah, tink dey hain't been no limeet," he answered; "she all mak' paper—dose log—small ones jus' lak de big ones." Twice a day—every working day in the year—those long trains of empty trucks go clanking and rattling up the valley to the landings. Twice a day they come down again, loaded as I saw them, with the pitiful remnant of a forest's beauty. Fifty million feet of spruce last year were swept into the yawning mouth of a mill that knows no rest, that grinds out paper—a million dollars' worth of it a year—and more than that value in lumber, for three men who dream only of a big cut and a big fortune.

In the paper-mill—the big saw-mill is not running now because, as Charles Henry puts it, "there's more money in paper"—I watched the logs come whirling up to the saws in endless succession. Stripped of their bark and sawed into short pieces, they went into the grinders, came out in gray, fluffy flakes, and vanished into the great, twenty-cord-capacity boilers. A bit further on it seemed something of a miracle to see the soft slushy mixture of the pulp pass from the great metal rollers and stand up-ended on the storeroom floor in huge rolls of "manila" paper. Here again was silence, and method, and effort. Here, also, was that almost tangible atmosphere of economy. "I always imagined there was considerable waste in this paper-making business," I remarked to Charles Henry as we stood where a group of three stokers were feeding seven furnaces with refuse chips and bark and sawdust. A little snort of contempt broke from the thick-set, mackinaw-jacketed man at my side. "It's something like the stockyards pig here in this mill," he answered with a grim smile; "you'll find there's nothing left but the squeal." It was as fit a characterization as could well be made.



I have cited Jim Henry and his sons as examples, as type-specimens of the forest wreckers of the White Mountains. They merit that prominence by reason of the extent and character of their operations, and the spirit which has actuated them. They are big men in a bad business. But they are not criminals. They pay their men well, feed them well, deal fairly with them. In the little community dominated by their influence they are as charitable as it is possible for men to be who are more concerned with "the difficult art of getting" than with any other human activity or interest.

Wood butchers the Henrys are, beyond a doubt—Zealand and the East Branch have clinched their claim to that unsavory title—but they are not the only ones operating in the White Mountains; indeed, I doubt if they are even the worst.

Until a few years ago the finest stand of virgin spruce in New England clothed the north slope of the Presidential Range and spread almost to the summits of Mts. Jefferson and Adams and Madison. Only a small portion of it now remains. Where it stood lies a great tangle of slash and débris and the ruins of deserted lumber camps.

Seven miles west of North Woodstock, under the eastern flank of Moosilauke lies the Lost River. Here, in a little valley, the river disappears and reappears, flows through picturesque caverns, falls in beautiful cascades in the dim twilight, and in countless ways forms one of the most interesting of the natural wonders of the region. Between six and seven hundred men are at work there as I write, butchering the beautiful forest of that valley and doing the most reckless lumbering I have seen in the mountains. Do not lay this at the Henrys' door but at the door of the great paper company that sold the stumpage of that tract to a worse than ignorant contractor.

In the region about the beautiful Glen Ellis Falls, the highest cascade in the mountains, and in picturesque Carter Notch, large areas of magnificent forest have been hacked and slashed beyond the power of nature to repair it in a dozen generations.

The acme of trout fishing—May time at the old reliable pool

All of the instances of destructive lumbering cited in this brief paper have taken place within the proposed National Forest Reservation in the heart of the White Mountains. Ask who is doing it and you will be told a name, the name of a "Company," familiar enough perhaps, but as vague and inconclusive, in the impression it leaves behind as the traditionally elusive "They." There are men, however, at the head of those companies—Brown of the Berlin Mills Company, Burbank of the International, Thorne of the Publishers', might head the list—"men of affairs" indeed, with an equipment of education and manners, and even culture, beside which the ill-clothed, blunt-spoken, and unlettered sons of old Jim Henry make strange comparison. On common ground, however—the common ground and common interest of the Wood-Butcher—they shall stand when future generations shall appraise the havoe wrought in the White Mountain forests.

Whose Concern Is It?

TIMES without number, since the beginning of this great movement for forest conservation, have the senseless, age-worn inquiries been made: "Whose concern is it? Can't these men who own the land and the timber do as they like with them?" The answer is brief, but direct. It is *our* concern. We have arrived at a period of National Responsibility. The man in the gutter, throwing his money into the catch-basin, faces pauperism. The money is his—but your taxes must support him when it is gone. He is your—our—responsibility. So with the Wood-Butcher. Though you may not have to support him—he has seen well to that part of it—you will have to pay for his wastefulness. He is our responsibility, a responsibility of To-day—and To-morrow.

The Dollars and Cents Side of It

WEST of the Mississippi are a hundred and sixty million acres of the National Forest Reserves. They are more than self-sustaining; they yield an annual revenue of more than a million and a half dollars to the Government. There is none in the East; yet, in that little thirty-mile-square tract in New Hampshire, and two adjoining counties of Maine, rise the five great rivers which give New England water-power for her industries, and important aid to navigation. The forests are their safeguard.

Exit the Spruce

STILL another consideration. Standing timber in New Hampshire has increased in value more than sixty per cent in five years. That means that it is going—going fast. The value of spruce, in paper products alone—products that are national in their utility—increased in New Hampshire from one million dollars in 1890 to nine million dollars in 1905. Continue that per cent of increase until to-day. And when you consider that the spruce growth of this country is practically limited to a few New England States—New Hampshire near the head—and that it takes about one hundred and twenty-five years for spruce to reach a six-inch diameter at a three-thousand-foot level, you begin to get an idea—just a vague hint—of the economic value of the White Mountain forests, and the vital need of conserving them.

The Economic Value of Sentiment

THEN there is the "sentimentalist's" side of the matter—and this has an economic aspect also. Doesn't it mean something that seven or eight millions of dollars are invested in "summer property" in the White Mountains alone? Doesn't it mean something that more than a million people, from all over the country, visit this region annually? Doesn't it mean something that last summer over three millions of dollars were left in the White Mountains by the "sentimentalists" who were glad of the chance to pay for looking at the brave old mountains, and inhaling the odor of their forests? That great obstructionist, Uncle Joe Cannon, asserts that the whole movement for an Appalachian Forest Reserve is pure sentiment. There are too many dollar signs in the equation for that statement to appear anything less than pure, stiff-whiskered buncombe—yet, even if it were true, when, if not now, are we Americans to learn *the economic value of pure sentiment?* Let us not forget the influence of the White Mountains upon the creative genius of Emerson, Hawthorne, Saint-Gaudens, Stedman, McDowell, Cleveland, and a hundred others no less notable. Let us not ignore the stimulus to intellectual vigor and inspiration, the mental and physical regeneration, which lie nowhere more potently than in "the mountains clothed with trees!"

A Hint for Those in Washington

WHAT is to be the outcome of it all? Are the tragedies of Zealand and Lost River and King's Ravine and the East Branch to be indefinitely repeated until that little tract, thirty miles square, the natural sanatorium and recreation-ground of the East, is finally and irrevocably marred by deforested and fire-swept areas? Or, is the remnant of it, still beautiful, to be saved for the people? While the war of theories goes on in Washington, the axes and saws are at work, the loaded cars are clanking down-grade to the mills, and the mills are grinding the forests into pulp, twenty-four hours in the day. Ten years hence the last stand of a thousand acres of virgin spruce will be only a memory. Shall the Government wait for that day, and in the end buy a "cow milked dry"? Nothing would better please the lumbermen. Five or six years more and they will welcome the opportunity to sell the denuded areas, *on which they still must pay taxes*, to a "paternal" government, which has awakened—just a bit too late—to its duty.

The Best of Trouting

The Open-Minded Angler on the Stream

By CLARENCE DEMING

MAY is the heyday of the sport of the trout stream. Nature on the banks and the trout in the dashing waters between them join in a kind of climax of vital energy. The trout of April has lost in May much of his darker tint, exchanging his lines of jet for silver or old gold, varying with the bottoms where he feeds. He has left the deeper pools and hunts his prey in ripple and rapid, alert for fly or worm. If he wintered in a mill-pond, by early May he has worked his sinuous way up stream, taking his toll of insect life *en route*. In physical shape he has shifted, too. No longer is he thin, narrow-backed, big-headed. He has been at Nature's training table of strong food, going with active play. His flesh has thickened, his muscles grown hard, he is blunter, stronger in fight, fiercer on the hook. He is armed and equipped for the unequal battle with man that comes to him so unwelcome.

And Nature on the slopes and banks of the stream, measured in the scale of bud and bloom, has, like the trout, reached a May zenith. There is green where were the April drabs. Dogwood, cowslip, arbutus, and the tas-

seled alders are gone, but the bud of the trees has expanded in the half-leaf. The apple blossoms—sure token of the height of the trouting season—are at their pink and white fulness, and painted-cup is reddening meadow and pasture. In the still reaches of the stream the lily-pads that began in early April as knotted whorls at the mud bottom are half-way up toward the top water, where they are to rest till next winter knells their death; and the "skunk's cabbage," persistent neighbor of the trout stream and March's first harbinger of the spring, has in May swelled into tropical leaf—a plant scorned of man, yet, like not a few of human-kind, only offensive and resentful if disturbed.

The Wise Angler

IN APRIL the wise angler sought the trout as a kind of fishy recluse, whipping still waters, the smooth reach below the ripple, or the glooms where the slow current swirls below the knotted tree roots. But in May seek the fish rather as a free cosmopolite of the stream. Often *salmo fontinalis* is in the swift shallows, more often still by the side of the wavy rapids, now and then right in the rapid itself; but he may be anywhere or everywhere. In particular, mark down for the cast of fly or worm the little corner eddies of the upper pool just where the rapid begins; or again—a point not often fairly appraised by anglers—drop bait just at the outside sheet of foam at foot or edge of the pool, a favored haunt of the trout, especially in bright sunshine. How many anglers skip the smaller or swifter runs between pools and fish the pools alone! Yet it may be in just those middle runs, unpromising to the eye, that the trout will be found oftenest—partly because of his whimsical taste of a day, partly because "the man ahead," a careless angler bent on quick fishing, has skipped the mid-runs.

The same rule fits bush fishing. In April such angling may be wisely omitted, for the early spring trout seems to dread the overhanging shades; but in the warmer waters of the May stream, especially in the later days of the month and in early June, he is apt to welcome the brush or tree that breaks the sun. Hence the angler, patient enough to push, crawl and tumble through the brushwood, and challenge the vexation of tangled line and of the hook that ever catches twig, branch, and rootlet, will take many a fish where the opens of the stream, much whipped of other anglers, fail. It is not ideal fishing. It lacks swing and the breezy freedoms of the wide east. It tries temper, it is slow, and the fish must be "derricked" and not played. But bush fishing has its high merits as a mental discipline, and in actual skill of fisheraft, with its short but accurate casts and nice judgment of distances, it leaves the easier open fishing far behind. Use for it the short stiff rod, the small red worm quickly gorged, and the slightly heavier lead that spells greater precision in the east. If the bushy stream is mud-bottomed, wade as little as you can, lest you make the waters too turbid down-stream. But on pebbly or rock bottom, wade freely, for the down-stream trout is apt to herald the little mud cloud as the signal of a rise of the water and of oncoming food—a kind of "chum" for the fish—and a trouty trait which few anglers have observed.

Flexibility of judgment, the skill tipped and trained by experience, is one of the keynotes of the angling success so often miscalled "luck," which in May time has its widest range. There is the angler, hidebound by prejudice, who varies little or not at all his tackle, his style of fishing, his few *dicta* of the sport. And there is the other angler who studies conditions and fits his craft to them.

In May the stream now runs clear, now thickens and fills after rains. For the first is the variation of flies, the long cast far back from the stream, the small worm with its minimum of splash; for the latter, the larger worm and heavier lead, fitting the fact that the trout—whether he is actually hunting food or not—has for the time lost much of his normal timidity. It is the open-minded angler who absorbs, crystallizes, and makes profit of such small points of the game. He notes every sign of the spring hole, or, what is its equivalent, the runlet whose cooler waters seep to the bed of the larger stream; studies the direction of the wind; watches out for the overhanging branch which last week caught his hook and broke up the fishing of a good pool or ripple; bethinks himself of the size of the biting fish and whether his No. 3 or No. 4 Sproat hook is best; finds out the best direction of approach for each pool or run, and that not merely for the cast but for landing the fish; and analyzes the moods and tenses of the stream as a parent would those of his child.

If a rounded sportsman, he will also blend with his recreation, or, rather, own, as an elemental part of it, the joys of the naturalist; noting how each stream has its major or minor variants in its trout types; how those acids of the trout stomach that on a warm day so quickly eat the tissues and kill flavor of the fish are eradicated by the simple dressing of his fish every hour or two; how the same stomach in the post mortem—especially in early or belated May—gives up what seem little rough pebbles that, broken, have their insect larvæ inside—these not seldom, along with actual pebbles which, stirred by the current into semblance of life, the trout has swallowed by mistake. Such an angler, moreover, studies the trout temperamentally as well as anatomically, noting how the fish is ever an arch conservative of that human type that loves the motto *in medio tutissimus ibis*, and, aquatically, hates alike extreme cold of winter and the ultra warmth of the summer tide—a trait that even in May accents the value of the spring hole. And need it be added that with this scientific zest goes in the true sportsman the amateur spirit—the spirit that abides by law, that crucifies, so far as it can, jealous rivalry and that magnifying of the verb "to win," which deadens other sports than fishing, the spirit that makes of sport not merely a thing of the brain and hand, but of the *heart?*

Trout Worship

HOW happens it that trouting, notably at its May time acme, holds its charm and will ever hold it as against what some anglers misname "bigger" fishing? The trout is a small fish. He is not the match pound for pound in fight of the black bass; he is lovely to the eye, but other fish rival him in tints and far outpass him in weight; and the catching connotes effort, the long fatigue of tramp, the tumble over rock, the stress of ensnaring underbrush, toil, sweat, and the discomfort of wetness. No Goddess of Ease sanctifies the temple in which so many devotees of trouting worship. But there is another and more potent goddess—Variety—whose realm is that of the ever-changing stream, the shift of rock, pool, rapid, and bank, the variation of N[illegible] expressed in an endless succession and diversity of sc[illegible] It is not all of fishing to fish, and he distils the very essence of trouting who in his May sport joins the fervor of the angler with the more exquisite emotion of the nature lover.

As you turn that corner of the stream where two years ago you hooked and lost that big fellow, mark what a rich gleam of purple on the waters comes where the sunbeam seems to wed with the blue sky. On the next pool study, if only for a moment before you make the cast, how gorgeously the stream mottles the old gold of the outreaching oaks that still hold their dry leaves—and will hold them until the new life crowds them out and off. Note, too, the changes of color as you glance down the vista of a long pool when it steals the hues of the wooded banks. And in contrast of detail with these short landscape views, mark how in advancing May each tree, bush, and shrub owns its wealth of form and flower.

The Final Word

YET the final word to be spoken to the angler is one of precaution against the accident which may turn the joy of the most philosophic and esthetic fisher to bitterness. Forethought in testing tackle is the key-word of what we call luck on the stream. If the angler is wise, a dozen times in the season he will overrun his silk line from end to end for the little dent which marks the flaw sure to wax as it rasps on the rod guides. He will watch his rod and test carefully the upper ferrules that join the stouter lengths with the tip; see that snell and leader have not frayed; look more keenly still to the little screws of the reel and tighten them firm; above all, be sure that the rod, turned in the hand, hangs always with even curve—for the slightest elbow spells an indefinite but certain break! Look, too, for any infirmity in the clasp of bait-box, and creel, remembering that on such small caution hangs, perchance, a whole day's sport; and to the zestful fisher such care of tackle is never prose—punctuation marks, rather, in the poetry of anticipation.

As the old angler looks back under gray brows upon the trout fishers whom he has met they divide, in his mental vision, into three groups: There is, first, the mere fish-killer, who, with all his familiar and odious type, may be dismissed with short shrift. There is the angler who follows the stream with a kind of subconscious glimpse of those open or mystic phases of nature that are thick around him. And there is, finally, the conscious and complete angler whose sport is but one corner of God's picture and who looks far beyond the quiver of rod-tip and the vibrant line. Old Izaak Walton, poet-fisher, has told of him in his lines of the "Angler's Song":

> *"All other pastimes do no less*
> *Than mind and body both possess.*
> *My hand alone my work can do,*
> *So I can fish and study too."*

It is in such an angler, under the spell of his May tramp on the trout brook, who "can fish and study too," nature-searcher and outdoor seer, that the Waltonian ideal is incarnate. He will almost always be a good angler. He will always be a good man.

The land of lost races

Seasonable and Helpful Reminders

Lawn and Garden

VINE-VEILS.—Put vine-veils over the bare spots in the lawn too deeply shaded for grass to grow. Creeping myrtle, known otherwise as box-vine, is a very present help for such places of trouble. It grows quickly and certainly, is perfectly hardy, makes a beautiful flat mat of the glossiest green leaves, and, in the early spring, puts forth a wealth of bright blue blossoms. English ivy, planted in very rich earth and allowed to trail or sprawl at will, also grows luxuriantly and thrives better than if climbing on a wall. Take care not to let water stand around the roots or over the ground shoots—this upon pain of winter killing. Where there is tree shade, as from evergreens or even under tall-growing shrubs, it is well to plant the ivy in a barrel sunk flush in the earth and filled with the richest earth. Bore holes in the barrel half-way up the sides before planting it, and put at least six inches of broken stone or brickbats in the bottom. Pack fifteen inches of manure solidly over the drain-stuff, then fill up heaping full with fine earth, set the plant in it, and pack the earth firmly about the roots. As the manure decays and sinks, fill up the barrel with fresh earth. By coating the barrel inside and out with coal-tar, it will save the ivy from robber-roots for a good many years.

The need of such saving is shown by this experience. A thrifty young ivy was planted at the base of a chimney in a hole three feet square and two feet deep, filled with wood soil, mixed with its own bulk of rotted manure. Further, the plant was watered and tended carefully, and throughout the first six months throve as by magic. There was no other rooted thing within twenty feet of it, but by and by it began to peak and pine. By the next spring it had a starveling look. Investigation then showed that a silver poplar had sent two roots straight to the rich earth, and, once they reached it, had provided them with innumerable fine branchy fibers, to suck and devour the ivy's sustenance.

Wild Plants for Shaded Spots

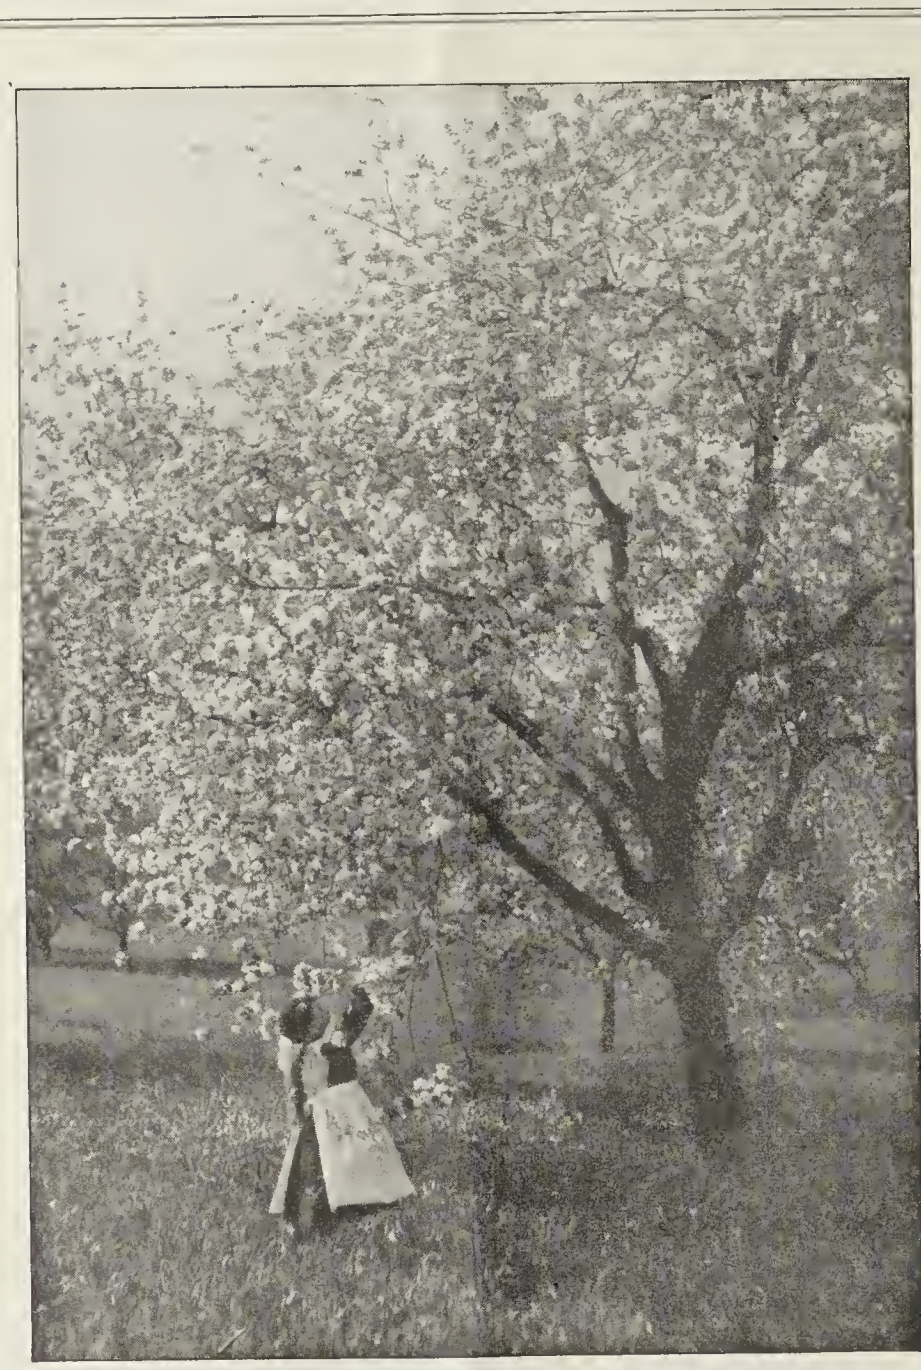
IF THE bare spots are rich and damp, fill them with wild things—hardy native ferns, once planted, remain for years. There is an almost infinite variety of them, but beware transplanting the tall brake, as it demands the moist airs of damp woodland. The white-flowered, cut-leafed plant known variously as rattleweed, or cohosh, thrives wonderfully in shade. So do the lady's slippers, yellow and pink, if the earth is rich enough—they will live in poor soil, but never bloom. Blue flags, once well established, bloom for many seasons. So do the tall white lilies, with star-like cups and long slender sepals, known to the countryside as "devil's onions." They are none so plenty but may be found in rich deep woods. Along with them should grow always the splendid red cardinal flower, which has the same season of bloom, likes the same seat, and, though an annual, resows itself steadily. Not one of these sylvan exiles will thrive in a sunny border or a set garden bed, but under the trees, in moist light black earth, they ask hardly more than to be let alone to grow in strength and beauty. And wherever May apples raise their fairy umbrellas in the woods, they should have room and to spare in the wild border. The infrequent wax-white blossoms have a rich, almost a cloying, fragrance, something between the odors of a ripe apple and a gardenia.

Mark down all these in May and leave them to be transplanted in the autumn, unless by such waiting there is a risk of losing them. In that case, transplant at once, but make haste slowly. That is to say, never begin until prepared and ready. Choose a cloudy morning or late afternoon for the work; use a sharp trowel and a broad-bladed knife in the digging up; work carefully, cutting roots rather than bruising them, trim away broken roots with clean cuts, and shorten in tops until they are little more than snippets. Have baskets for carrying, and take along with each plant a good ball of its native earth, tying earth and roots firmly in a bit of cloth. Better take home three good specimens than a basketful crushed and mussy.

Close Culture: The Lessons of Dry Farming

DROUGHT from May forward is the garden bugaboo. Dry farming shows how the bugaboo may be put to rout. Men who make paying crops with less than eight inches of yearly rainfall have certainly something to teach us who rejoice in an average climate. And they say, these dry farmers, that a dust-mulch is the only witchcraft they use. First they make their ground light, so it may store each drop of rain that falls, then keep it light by constant stirrings on top, so the water may not evaporate. There is a philosophical explanation. Water rises to the surface through capillary attraction. In baked earth it rises steadily and exhales, but underneath a dust-mulch, three to four inches thick, evaporation ceases.

The lesson is plain and easy. Work all manner of growing things as soon as possible after rain, and keep working them, especially if the weather turns dry. Beware, though, of working the ground while too wet. It takes a winter's freezes, sometimes those of two winters, to undo the mischief. Never stir land when it is so wet as to cake and stick to the hoe, unless between showers in a long rainy spell, when the stirred earth is certain to be wetter before it dries out. Cultivation then will do no harm, rather help by uprooting and checking the growth of grass and weeds. It is nearly as unwise to mow turf when the earth beneath it is soft and soggy.



Clean, close culture, from mid-May forward, is the corner-stone of success in gardening. Plant, plant, and plant again to the end of June—a vacant row is the nursery of weeds and insects. Dry and burn spent plants putting the ashes back on the ground. Burn rids the garden of potential blights and harbored pests. Burn pea-brush along with the vines—it is a favorite lurking-place for insects. Bean-poles that are used from year to year ought to be whitewashed each season, and will be all the better if a handful of bluestone is dissolved in the whitewash. They will last longer, besides keeping clean and sweet. Palings should likewise be whitewashed, and weeds cut away from them.

Watering Plants

WATER garden plants thoroughly or not at all. If the water supply is scant, give it all to a chosen few plants rather than barely sprinkle many. Soak the ground toward sundown or after it, then in the morning begin cultivation. Water a row at a time, unless you can wet the whole plot as a good rain would do it. Spring-planted trees and shrubs need to have the earth kept clean and light for at least a foot around the crown of the root, and should be watered plentifully, but so gently every drop soaks in, at least once a week. Spraying trunk and foliage helps them greatly.

Shelter Tents

SHELTER tents help wonderfully in transplanting. To make them, cut yard-squares of sleazy muslin diagonally in two, sew the straight sides of the cut pieces together, hem the bias ones, then run in heavy wire, bending it to a hoop. Tie the pointed tip fast to a slender garden stake, letting the stake come inside. In use, stick the stake down beside a newly set plant, letting the wire ring rest on the ground. The tent can be lifted at night, or in the daytime to give air if needed, and hung up on top of the stake. Such tents protect equally from sun heat and insects; they also materially help the plant beneath to make roots and hasten growth.

At their pink and white fulness

Choosing and Planting Flowers

SOIL AND FLOWER.—Choice and planting are the opposite poles of successful gardening. Right choice is impossible without something of knowledge—as, for instance, that there are flowers and shrubs which luxuriate in sunshine and even thrive in moist sand, as there are other flowers and shrubs that demand cool peaty loam and partial shade. Rhododendrons and azaleas, for example, require a soil and seat at least approximating their native forest haunts. They will live, it is true, in sunlight and thirsty ground, but quickly become ugly and straggling, with scant, almost abortive, blossoms and imperfect foliage. Roses likewise, though they "abhor wet feet"—that is, refuse to thrive with stagnant water below their roots, will not grow or bloom, hardly indeed live, in light, drifty sand.

It is the same with seeds, with bulbs, with bedding plants. For beds and borders lying in full sunshine, of friable and rather sandy earth, choose the sun-lovers. Phlox for low beds of single color. It runs the whole color gamut between dazzling white and black-crimson; it has, further, the crowning mercy of blooming the whole summer. Portulaca is like unto it, with the disadvantage of shutting its flowers upon cloudy days. Verbenas riot in sunshine; petunias do the same. At least the single ones do. The double ones, which are rather *tours de force* than actual lovable flowers, do better if shielded from the hottest sunshine.

Salvia — scarlet sage — might have been bred betwixt fire and water, it loves the sun so, yet flourishes so greatly in beds kept constantly wet. It is the same with the flowering geraniums—white, pink, and scarlet. The banded ones, however—bronze, silver, and golden—whose chief beauty is in their foliage, lose bandings and beauty if planted so as to have too much sun. Heliotrope is actually, no less etymologically, a "turner to the sunlight." To plant it in shade is to invite disappointment. Pansies, on the other hand, demand shade and moisture and coolness—witness the fact that they shrink and lose color and texture as summer strengthens. Myosotis—the forget-me-not family—also does best in moist shade. Fuchsias, though they thrive fairly if the sun is kept from their roots, reach perfection only when they get but an hour or two daily of sunshine.

Among strict bedding plants, the hardier sorts of coleus may be depended on to keep color the summer through. Others are apt to bleach out, lose their markings, and become either all of one color, and that rather an unsuccessful one, or else turn blotchy and streaky, also something ragged. It is wise to eschew, therefore, carpet or ribbon planting until after a test season with scattered single plants. The flowering wax geraniums, so called, are excellent bedders for sunshine. They require cutting back now and then, but both the white and red sorts make a brave show the season through. Moreover, they endure dust and a measure of smoke.

Nasturtiums paradoxically require sunshine and shelter. Give them morning sunshine, if possible, and beds of deep rich moist loam. For trellis growth choose the climbing sorts, and plant in a trench at least twelve inches deep, filled to the brim with the richest possible soil. If early shade is desirable, plant the seed in thumb-pots—the smallest size—putting two seeds to the pot and start them in a hotbed or cold frame, setting them in the trench as soon as true leaves appear above the seed leaves. For open-air sowing, make holes an inch deep and two inches apart, drop in seeds singly, then pack the earth down firmly over them. With the proper earth there is no danger of baking from the hardest rain. If, however, there is too much clay in the bed, rake the crusted top of it very lightly as soon after rain as it is dry enough.

Give the Seed Air

THE seedsmen, small blame to them, try hard to help amateur gardeners; they are at the pains to say in their catalogues of every flower whether it "bears transplanting" or "must be sown where it is to stand." Heed to the catalogue's admonitions will often save bitter disappointment. There is a further caution: "requires greenhouse culture"—that is all too often overlooked. While it is true that one born with the garden instinct, the garden touch, can make anything grow almost anywhere, not one in a thousand of us has that instinct, wherefore it is wise to walk by the light and leading of experience.

It is a garden axiom that seeds should not be covered deeper than twice their own diameter. Where seed are as fine as powder, this means that they should not be covered at all—that is to say, no earth should be sprinkled over them after sowing. Instead, firm the bed surface by pressing it hard all over with a smooth, flat board, then sprinkle it or spray it very gently, and cover it. Leafless brush full of fine twigs will answer—evergreen boughs are too heavy. But the best thing is a frame of light deal, with chicken-wire tacked to the upper edge and cheesecloth stretched over the wire. Cheesecloth alone will answer, the wire merely prevents sagging on the bed face in beating rains. A set of such frames is a handy garden adjunct, being better than glass in mild weather for anything needing shelter. As soon as the seedlings appear above ground the frame should be lifted between nine o'clock and four, so as to give them air. When the true leaves appear, thin out the plants, but leave them closer than the catalogue distance. Accidents will happen, and it is much easier to pull out a plant than to set one in place. With choice or costly seed it is worth while to watch closely, and as soon as they peep up lift superfluous ones on the point of a broad steel pen and set them in thumb-pots ready prepared with the finest earth. This sort of transplanting sets the young plants back much less than if they had struck deeper root. The pots can be left under the frame until the plants in them are big enough to go in other beds. In planting them make holes a little bigger and deeper than the pot, set the ball of pot-earth in them, and pack earth firmly around and over it, taking care not to bruise nor smother the seedling.

Clay and Sand

NOTHING, not the hardiest root, will thrive in packed clay, any more than in shifty sand. Remember that, all ye who covet ivied walls or chimneys, embowered porches or rose trees swinging blossom censers beneath your open windows. Setting any sort of foundation means commonly either the throwing up and trampling of clay or the heaping of sand. It is sinful to set healthy plants in either, and idle to expect from them growth and blowth. Before planting anything, even annuals or bedders, have the earth dug out to a depth of three feet, put a layer of broken stone a foot thick at the bottom, over that the top-soil for six inches, no more, then fill heaping full of rich earth. Pack it lightly, then open holes of proper size, fill them with water, let it sink in, sprinkle fine dry earth over the wet surface, put in the plant, spreading the roots well out, fill earth in around it, packing it firm as you fill, and leaving it at least two inches higher around the stalk than at the edges. If a rose has been planted, drive a light stake firmly down six inches away, and tie the stalk to it. Leave it there until the rose is fully established—say for two years. Even after roots are plenty, whipping about in winter winds breaks the finest of them, and by such breaking makes the spring bloom poor and scrawny.

Most vines are gross feeders, given to robbery of all weaker things. Set a stout board, a foot wide and well tarred, on edge, the upper edge a little below the surface of the ground, eighteen inches out from the vine-stem if you wish to have flower or bulb beds close at hand. The board will check robbery throughout a summer and longer if, in spring and fall, a sharp spade is thrust down its full depth to cut stealing roots. The cutting ought to be down on the side next the vine. In line with this is planting other garden robbers, as dahlias, golden glow, or even peonies, in tarred boxes or half-barrels sunk well in the ground and filled with earth that is half-rotted manure. The boxes or half-barrels should have holes bored in the bottom, but nowhere else. By their use smaller and slighter things have a chance of bloom. But where space is plenty, it is best to give the rioters room and to spare—their own special borders where they may wanton as they will.

Intelligence

THE soul of wise choice is understanding. If you have space for only a dwarf evergreen, do not be tempted into planting one beautifully small, but certain to reach a height of twenty, even thirty, feet. Take instead the fixed dwarf, which, the same year by year, becomes a familiar friend. Are your winters polar? Let alone roses with tea-blood. They are never hardy, and even with cellar-wintering and all imaginable pains there will be no fully perfect bloom. But there are hardy roses—roses from far Siberia, also the choice few that brave all weathers. Restricted choice makes perfection in the possible things imperative. Content yourself with what is possible, or move to a lower latitude.

All the wise men are against setting a new stock exactly in the place where another of the same sort has died, but often a shift of even a yard spoils the whole effect of planting. In such a case try burning out the old seat, first, of course, removing the dead stock and the earth for a distance about it. Throw all that is removed far away, then build a fire in the hole, and keep it going steadily for six hours. If it bakes the earth around to the hardness of brick, all the better. Leave ashes and charcoal in the bottom, and dig them well into the ground. Beat the baked earth to fine powder and mix it with the bottom soil, then put in fresh earth, a foot of it say, and set the new plant on top of it. Water it freely, but give no fertilizer until it is in healthy growth. Overfeeding is as bad for plants as for people—on the whole, rather more deadly than underfeeding. Starving, at most, only checks growth or stunts it; too rich a soil, too much fertilizer, spells weakness, disease, and, finally, death. Wherefore, it is best in gardening, as in so many other things, to aim at what the Irishman called: "the middle extreme."

Mrs. S. P. Decker of Denver, brought up to do tatting and now makes speeches

Mrs. Susa Young Gates of Salt Lake City, a forceful speaker on political themes

Mrs. Anna M. Scott, a particularly active politician of Denver

Mrs. Mary C. C. Bradford of Denver, an unusually persuasive orator

Mrs. Harry Crain of Cheyenne, who believes in mixing bread with politics

Mrs. Emmeline Wells and Mrs. Bathsheba Smith, prominent suffragists of Salt Lake City

Mrs. Alice Merrill Horne of Salt Lake City and her family. When Mrs. Horne was in the Utah Legislature she introduced a bill to create an art institute

The Woman Who Votes

III—What She Says About It

By SARAH COMSTOCK

¶ This is the third of a series of three articles on the Western woman voter. The first appeared in the issue of April 17 and the second in the issue of May 1

THE Woman Who Wants to Vote has long been classified as of one species. Her name has, until recently at least, called up a vision of drab cheeks, of extension soles, of hats without plumage. These garments have been accepted as the outward and visible sign of an inward temperament. When upon occasion she has donned a trifle of chiffon and applied a Marcel iron, she has gravely and thoroughly explained the duty of woman to be as charming as possible—the explanation successfully destroying any charm which might otherwise have inhered in the chiffon and the waves.

But the Woman Who Votes can not be thus simply classified. Only partially has she sought suffrage; for the most, suffrage has sought her. The law once passed, it could not be applied only to those women who had fought for it. Suffrage went not only to clubs and to lecture platforms; it invaded kitchens, nurseries, drawing-rooms, factories, department stores. It sought out every woman of every type, dragged her forth, willy-nilly, to the polls. Therefore it is that in her variety the Woman Who Votes is exceedingly like the Woman Who Doesn't, and is no simpler a matter to sum up.

In her variety, however, Mrs. Sarah Platt Decker finds at least one unity.

"What has suffrage done?" said Mrs. Decker. "It has educated the women of these four States—that's what it has done. You'll find them far better informed on current issues and all matters of government than the women who can't vote."

Mrs. Decker was quite a part of that brittle Denver morning, as crisp as its altitude and as stimulating.

"You Eastern people all come out here and ask: 'What has suffrage done for the State?' Practically nothing, from the standpoint of working sensational reforms. It's not what it has done for the State that proves its right to be; it's what it has done for woman. It has educated her.

"Oh, I was brought up in New England to do tatting and embroidery," she went on. "I'd rather not think what my grandmother would say if she knew I made speeches.

"People used to think those things were inconsistent—that a woman had to neglect womanly home duties if she voted. Have you found many neglected homes in your travels?"

I admitted that I had not, and Mrs. Decker's own agreeably well-groomed residence appeared no exception to the rule.

"Our women don't desert the biscuits for the polls—far from it. Occasionally, though, they reverse the matter. A thing no greater than a pan of biscuits has kept women from casting a vote more than once.

"That's a question for the future to settle. Housework is going to be systematized some day—so well systematized that a woman will be the mistress, not the slave, of her house. When she can spare more time for outside interests, she'll do more with her ballot.

"There was a meeting once which was a rare event in the country town where it was given. Afterward I met a woman who had not been present, and she told me how starved she was for a broader life, for some outside interest.

"'Why didn't you come to the meeting?' I asked her.

"'I wanted to so much!' she exclaimed. 'If only it hadn't been on Friday. I always wash windows on Friday.'

"And that meeting was the event of the year in her town. But her window-washing had her under its thumb."

Everywhere I found much the same opinion among the women who vote—that suffrage has by no means driven them from their home duties, but that home duties often prevent them from exercising their privilege to its fullest extent. At this point the Servant-Problem line of thought intersects the Emancipation-of-Woman-Problem line.

"The patent bread-mixer affects national politics," says Mrs. Harry Crain.

Mrs. Crain was attending to an exceedingly domestic duty when I called at her Cheyenne home, and she went on with it while we discussed what some consider larger matters. A little black Dutch-cut head had just come up out of a shampoo with as much delight and as many shakes as a shaggy little dog goes through when it comes up from the creek; and Mrs. Crain was drying and brushing and patting the funny little wet head very much as a non-voting mother might have done.

"We women don't do all we ought to do," she said. "We don't organize here in Wyoming as I wish we did. Housework seems to bind us so; but when we understand better how to lighten it, then you'll see that our influence will be felt more in politics. The bread-mixer, the carpet-sweeper, all those labor-saving devices, are emancipating us from drudgery."

She put the shaggy little head closer to the register and was absorbed in the drying process for seconds.

Reform, Not Revolution

"WOMEN want moral men in office," she resumed at last. "And to some extent they effect this; but they might do more than they do. A man who once pried off the door of a chicken-house and stole chickens would not have gone to the Senate afterward if the women were more awake, or had more time to attend to such matters."

Again there was a lapse, and more brushing; then:

"If women only knew that a mixture of one cake of soap, three tablespoonfuls of gasoline, and three buckets of water will save them from rubbing clothes on wash-day, we'd feel their influence more in government," she said with emphasis.

Many seem of the opinion that woman's influence is very much felt. Mrs. Theresa Jenkins of Cheyenne, who has lectured in other States on suffrage, says that the men no longer put up a candidate they know the women won't vote for—which means a man of low moral standards. "Suffrage doesn't work revolutions, but it does work reforms," she says. Mrs. Bartlett, prominent in club work in the same city, says much the same.

"Women's influence should be especially felt in laws that affect women and children," said Mrs. Bartlett.

"Have you regulated child labor in Wyoming?" I asked her.

"No, because we haven't any child labor in the State—there's no demand for it in mines and on ranches," she replied. "But we're taking up the matter in our clubs. We're studying it, so that if it ever does come we'll be prepared."

Which at first seemed rather humorous, but somewhat more practical at second glance.

Indifference of the Working Girl

THE interests of children have appealed to women everywhere. In Salt Lake City one is startled in the early peacefulness of its nine-o'clock hour by a stentorian blast; one learns that the curfew does not ring, according to tradition, but that it sternly blows juvenility in from the streets. What the women of Colorado did in electing a juvenile court judge is a well-known fact. Cheyenne women are working for a juvenile court, too. "We have been slow in this, but we are going to have that court before we get through," Mrs. Gibson Clark told me. I heard Mrs. Mary C. C. Bradford, who seems to be generally considered the woman orator of Denver, address the great Auditorium at the woman's rally: "The children, the children!" she cried, with a hand-to-heart gesture which recalled days when elocutionary methods were more in fashion than they are to-day. And despite the gestures the appeal must have rung true; for I saw her called back when her speech was done, heard her demanded again, clamored for by that great hall full—a thing which I saw happen in the case of no other speaker, man or woman, in a single one of those campaign meetings.

As for the working woman, who, it is generally assumed, will be the one most benefited by suffrage, the frankest seem inclined to own that not much has been done about her so far. Colorado women are responsible for a measure providing that no woman shall work more than eight hours a day at work requiring her to be on her feet; that seats for saleswomen be provided in the shops, and so on, a few similar items. But the fact is that the working woman is not so important a problem out there as she is in the East. Factories and shops are few, and from what I saw of the shop girl's condition it seemed not especially in need of "measures." In Denver I was told that the average girl-behind-the-counter, the one who receives five dollars a week in New York, is paid from six to eight; in Salt Lake City, from seven to ten.

And another fact is, she has not taken up the battle for herself. The average working woman is a fairly youthful and joyous creature despite all the long faces drawn over her condition. She is not much aware that she has a condition. She is aware of the peach-basket hat being in, of who is playing at the theaters, and of what the latest song hit is. She is not concerned about legislative measures.

"That's merely a question of youth, not sex," Mrs. Decker says. "Boys of that age are not concerned, either."

But it is a handicap to the would-be reformer. The matron of the Girls' Friendly, a Denver boarding club for working women, told me that the girls are indifferent to politics.

"But on election day the club women come in their autos and take them to the polls," she added.

I dropped in at one of the little coffee-and-waffle restaurants where such girls flock and engaged some of them in conversation.

"Are you interested in the election?" I asked one.

"I won't be old enough to vote till next January," she replied. "I don't feel like I'd ever care much about it, either. But my sister's old enough and she's tickled to death, so maybe I will be when the [illegible]."

"Do the girls study up much on the [illegible]?"

"Oh, I don't know," she said reflect[illegible] they don't hurt themselves thinking [illegible]

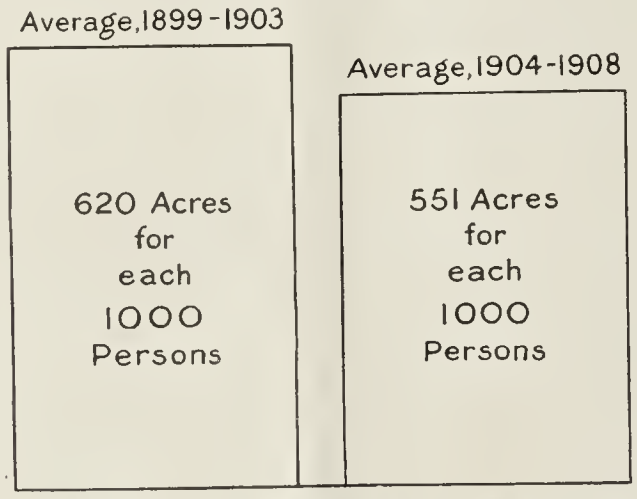
The Problem of the Hungry Stomach

The Patten Movement in Wheat Points the Moral of a New Era In American Industry

THE Patten "corner" in wheat, in the midst of which prices have risen to a point unprecedented in this generation, appears to be broken. At the date of writing, Patten is in process of unloading with profit to himself, and prices are falling. The smaller speculators who followed in the wake of his bull movement are winning or losing according as they "came in" early or late. This Patten movement was never a corner in the strict sense of the word. Leiter's famous bull operation of several years ago was a conscious attempt to control and manipulate the visible supply. It failed, as all other attempts to corner the wheat market have failed. Patten, a shrewd speculator who looks farther into the future than his fellows, took advantage of the natural conditions and made a heavy plunge on futures. Whether or no he directed conditions to his own advantage by manipulation is a question of veracity between him and Secretary of Agriculture Wilson. In its essence it was not a manipulative movement.

While the newspapers have been raging against Patten, while the State legislatures have been considering bills to prevent speculation in foodstuffs, the public in general has begun to perceive the significance of the conditions upon which Patten built his little operation in wheat. Briefly, the United States, once the granary of Europe, and especially of England, is nearing the point of actual scarcity of domestic supply. Our exports, which have been shrinking steadily year by year, are now shrinking month by month. The time must come when we will cease to export wheat, basis of all foodstuffs, and begin to import it. That time, the Patten movement warns us, is not very far away. As it is with wheat, so it may be later with other foodstuffs, notably meat. When that time comes, the whole economic attitude of the United States must inevitably change. England, in her transition from a farming nation to a manufacturing one, turned that corner in the first half of the nineteenth century; the United States will probably turn it in the first half of the twentieth.

England was the first nation of Europe to accomplish that transformation; France and Germany followed. Only Russia, the undeveloped nation of Europe, continued to produce more wheat than she could use. But the Russian supply did not make up for the shortage of Europe. England first, and afterward the whole continent of Europe, looked mainly to the United States to supply from its surplus the deficit. From the time of the Civil War on we steadily increased our acreage and our exports. Wheat production in the territory east of the Mississippi dwindled with the coming of a manufacturing era; but that deficit was more than supplied by the opening of the immense fields of Minnesota, the Dakotas, Kansas, Nebraska, and, later, California and Oklahoma.

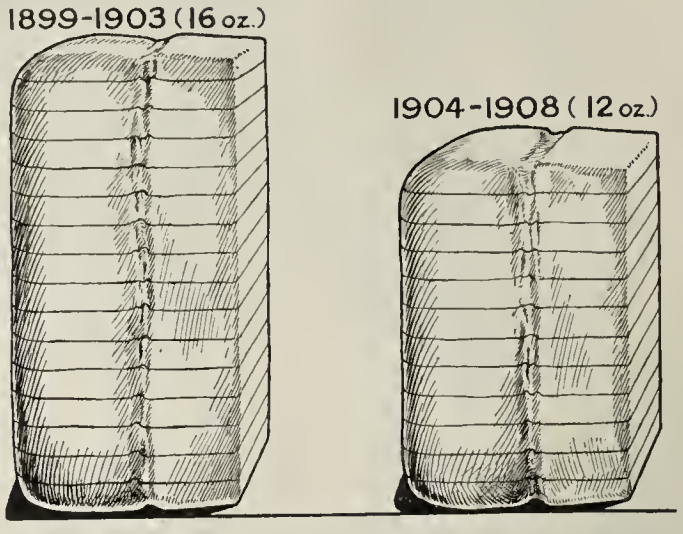


All this time the counter tendency was going on. The discovery of vast American fields of coal, iron, and copper, the influx of immigration, the encouragement of the protective tariff to "infant industries," were changing the United States from an agricultural to a manufacturing nation—following exactly in the wake of England. The great change did not make itself apparent until the industrial boom which followed the Spanish war. In 1898 our exports of foodstuffs amounted to $590,000,000; of manufactures to $323,000,000. Agricultural exports rose but slowly and manufacturing exports rapidly rose from that time forth. In 1904 the corner was turned—agricultural exports, $444,000,000; manufacturing exports, $523,000,000. And last year, with extra good crops, the balance showed: foodstuffs, $520,000,000; manufactures, $750,000,000. In twenty years the American exports of foodstuffs have increased 100 per cent, what with the general development of the country and the cumulative demand from European populations: but the exports of manufactures have increased 320 per cent. Crop and produce experts declare unanimously that the increase in food production has practically stopped. The United States may expect constantly diminishing agricultural returns from abroad. Indeed, the growth in recent years has lain not in the staple products by which the international economic relations are governed, but in certain special and "fancy" products, like raisins, wines, and oranges.

First product of all to be affected by this movement is wheat, primary food of the western nations, no less than gold the measure of economic conditions. An agricultural nation must first feed itself; the surplus only is for exportation. The population of the United States increases between fifteen and twenty per cent every decade. Further, the per capita consumption has increased. Once the Englishman was the greatest wheat-bread-eater in the world, the Frenchman second, the American third. The American lingered in the van, not so much because he did not need that packing which is a demand of the Occidental stomach, as because he supplemented his wheat bread by that humble Indian meal for which the European could never acquire a taste. In this era of prosperity and luxury, the individual American has been eating more wheat every year.

Not only has the planting of wheat lingered behind the increase of population and demand, but it has practically decreased in the absolute. Acreage—while that varies a little with the fluctuations of the market—is probably a better guide than total crop production, which is affected by epidemics and the weather. In the five-year period between 1899 and 1903, inclusive, the wheat acreage of the United States averaged 48,129,000 a year; in the five-year period just passed it averaged 46,400,000 a year. It is true that the total crop raised on this acreage in the latter period was greater than the total for the period of 1899-1903. Better methods of farming, a succession of better crop years, and the retirement of certain worn-out areas in favor of virgin soils account for this.

Figures Which Point a Moral

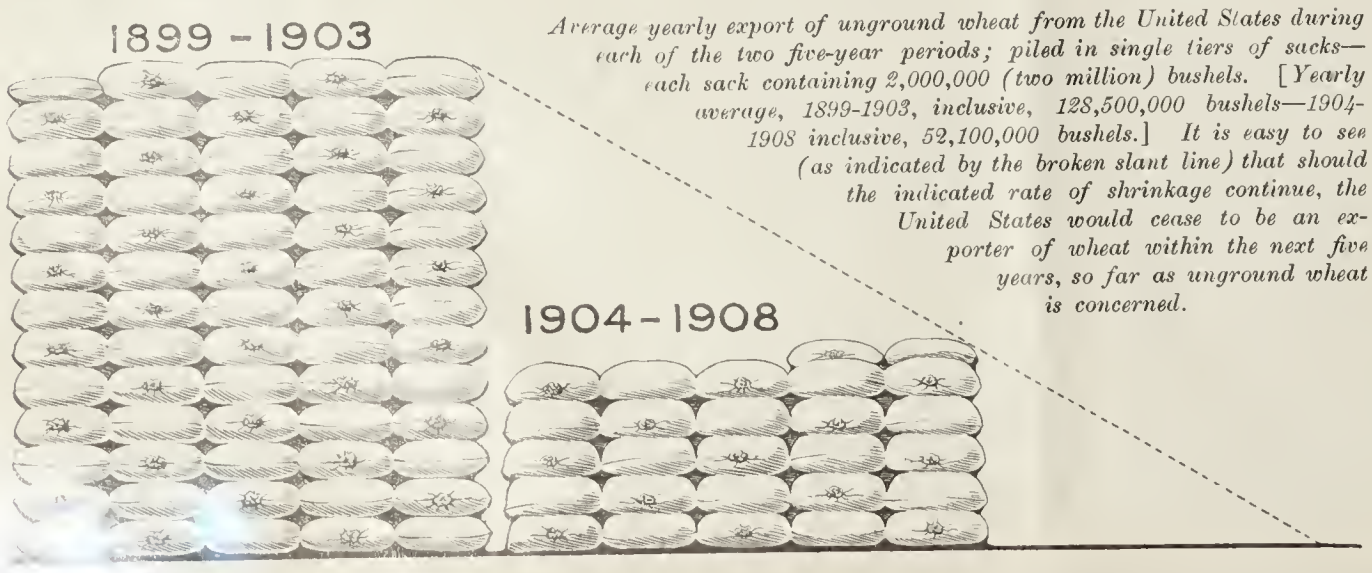


WHEN we come to exports, we reach the cream of the statistics, the figures which point the moral. The export was already falling in the five-year period between 1899 and 1903. Yet the average in bulk wheat, exclusive of flour, was 128,500,000 bushels. The export for the last five-year period averaged only 52,000,000 bushels. Still more significant are the exports to Great Britain, whose granary the United States has been in years past. In the five-year period, 1899-1903, she took from the United States a yearly average of 68,000,000 bushels of bulk wheat; in the last five-year period only 22,000,000 bushels a year. In the squeezed year of 1905 it went down to less than 4,000,000 bushels.

Yearly average acres in wheat on the basis of population. The yearly average acreage in wheat for the five years 1899-1903, inclusive, was 48,129,000 acres. For the five years 1904-1908, inclusive, was 46,400,000 acres. Meantime (taking the central years—1901 and 1906) the population had increased from 77,600,000 to 84,200,000—giving the results shown in the two diagrams.

That proportionate decrease of exports to Great Britain is significant not only because the diplomatic and commercial relations of the United States and Great Britain are closer than those of any other two nations, but because of the factor which has brought about that reduction. The United States has on its northern border an active competitor for the English market—a competitor which will one day become a helper. Canada, which formerly looked south of the border for her wheat, has been planting steadily on the rich virgin lands along the line of her new railroads. In 1899 she exported only 10,000,000 bushels of bulk wheat; in 1908 her export was 43,000,000 bushels. She has come to the point of surplus; and that surplus, following the flag, is going to Great Britain. Not large enough yet to become a great factor, it is on the increase; the time approaches when Great Britain will depend upon this part of her own empire to feed the vitals of the empire, as she once depended upon the United States. The time must come, later, when the United States will want Canadian wheat to supply her own deficit. That will mean the reduction or removal of our tariff—at present twenty-five cents a bushel. There are those in the produce business who believe that the reduction can not come too soon.

Indeed, the spread of the Canadian area is intimately connected with the shrinkage areas south of the border. The Americans as a people are still given to bonanza enterprises with quick returns. Wheat is not a crop which pays for intensive fertilization, at least under the conditions in which the western continent lives and farms. The first few years of a wheat area, while the soil is still strong with its virgin strength, is the period of great profits; the whole history of American wheat has been a history of the abandonment of farms which have lost that virgin strength. Now the wheat farmers of the Northwest are handing over to intensive cultivation and diversified farming the acres which have been longest planted in wheat, and are moving on to take the cream from the new Canadian fields. That the wheat area of Canada will increase steadily in the next decade no one doubts; there is little more doubt that the area of the Northwestern States will shrink, as the areas of Kansas, of California, and of Texas have shrunk with the increase of population, the working out of virgin lands, and the discovery of greater profits in diversified crops.



If the baker could furnish a full pound loaf (16 slices of one ounce each) under the average farm price of wheat at 63 cents per bushel during the five years 1899-1903, he could not afford as large a loaf when he had to pay the average of 82.8 cents during the next five years (1904-1908). Therefore, one of three things evidently happened: (1) a reduced cost of manufacture, through improved machinery and improved methods; or (2) a smaller loaf (12 ounces), as shown in diagram; or (3) an inferior grade of bread. There is little question that it was No. 1 that actually happened; for it is certain that the baker's bread of to-day is superior to that of five years ago in quality and weighs as many ounces to the loaf. How long improved methods can hold against increased cost of wheat is a problem for to-morrow—to-day the score is a "tie."

A British Bugaboo

NOW as to the international aspects of the case. The fear of famine, through the stoppage of her far-brought food supply, has been a bugaboo of British diplomacy and British politics for a century long. At any time in the last half-century an effective blockade of the English coast by a combination of navies would have beaten Great Britain in three months through famine. Parliament, in all its debates on foreign relations and the increase of navies, has baldly faced this fact. It had a powerful effect upon the attitude of the empire toward the United States. Once, indeed, the stoppage of the American wheat supply could have caused a famine in the British Isles; even now it would make infinite trouble for the empire. Ten years hence England will be looking to a part of her own empire as she looked once to the United States—a guarantee of security in case of war.

That is, if the United States does not wholly absorb the Canadian surplus. For when we come to consider the future, we run into many complicated things. With the removal of the tariff on wheat, as much of the Canadian surplus as the United States needed would flow to the near market south of the border instead of to the far market across the sea. If that should prove insufficient, the United States would have to look to South America. Mexico yields now only eight or nine million bushels a year, or not enough to feed her own people and those of Central America; and the climate makes it unlikely that she will ever have a surplus. The Argentine, with her great, new farms along the Rio Plata, doubtless will continue to send her surplus to feed the craving maw of

(*Concluded on page 30*)

Average yearly export of unground wheat from the United States during each of the two five-year periods; piled in single tiers of sacks—each sack containing 2,000,000 (two million) bushels. [Yearly average, 1899-1903, inclusive, 128,500,000 bushels—1904-1908 inclusive, 52,100,000 bushels.] It is easy to see (as indicated by the broken slant line) that should the indicated rate of shrinkage continue, the United States would cease to be an exporter of wheat within the next five years, so far as unground wheat is concerned.

Asia Minor Aflame.—*The Kurds, who for the last four weeks have been slaying Armenians in rapid sorties from their mountain home. These ignorant, brave tribesmen are one of the myriad tribal units—"infinitely repellent particles"—which compose the Ottoman Empire. It will be the problem of the Young Turks to harmonize these warring elements. Their attempt to win over the Kurds in March, 1909, failed. The left-hand picture shows the Agha on horseback leading his clan*

What the World Is Doing

A Record of Current Events

The Troubles of the Turks

THE position of the Young Turks is very similar to that of the three Turkish ladies described in Pierre Loti's novel, "The Disenchanted." The three "black phantoms" in that sentimental story were disenchanted because they had been awakened from the placid Oriental sleep of the harem and were yet made to live outwardly like western Europeans. They were familiar with German music and philosophy, English essays and French novels, yet were compelled to veil their faces and order their material existence as their grandmothers and great-grandmothers had done. The progressive party may depose Abdul Hamid II and put his long-imprisoned brother in his place, as it did on April 27, but the great fundamental barrier to any sweeping social change still remains. The Sultan is still the head of the Mohammedan Church, and to a Mohammedan his religion comes before almost everything else. To do violence to the Sultan, and thus to attempt suddenly to deflect the glacier-like movement of Mohammedan fatalism, is a far from simple proposition. Any extensive violence would bring interference from the Christian Powers, who, of course, can permit nothing to interfere with trade. And although the progressive Turks may want to take their place with others in the march of progress, a great mass of their countrymen remain, and must long remain, fatalists and followers of the Prophet rather than overseâ adventurers and hustling modern business men. And to-day business is business. A capable commercial agent may have more to do with international diplomacy than an accredited ambassador. Massacres and a fatalistic lethargy are alike out of date. And this the Turks must learn before the reformers have a fair chance.

Under the stimulus of the April revolution the wholly unauthorized hordes of Asia Minor rose and began to slay. Their religious frenzy spread over several districts in Asia Minor. It is estimated that ten thousand or more Christians, Armenians mainly, were killed by roving bands of Moslem fanatics. At Antioch and Adana the looting, burning, and murder were unusually cruel, and the towns were almost emptied by massacre of their men.

The Sultan's Dersim Kurds

THE Ottoman Empire is like a wholesale department of gunpowder—with samples in every grade and shape of combustible, but all bearing the common quality of high explosiveness. The races, religions, sects, and cults of the Sultan's dominion are in packets of various size, but most of them are ripe for uprising, and many of them have already begun to massacre. The Kurds are one of those most troublesome tribes who had been antagonized and driven into rebellion by the oppression of the old régime. For the last four weeks they have been massacring their neighbors, the Armenians, acting under the vague excitement of the Second Revolution.

The Kurdish tribes of that wild mountain region called the Dersim, at the forks of the Euphrates River, have never come into full subjection to the Turkish Government. The elusive tactics of these tribesmen have eventually worn down the strength of every army sent against them for the past three-quarters of a century. The Governor-General of the province has been trying to get the hostile Kurds to make terms and lay down their arms, and at last, early in March, 1909, it was reported that the Dersim Kurds were coming to the capital. The rumor spread terror in the hearts of the people, for these wild mountaineers had been in Harpoot before, and it was to plunder and burn at the time of the massacres of 1895. On the appointed day the Kurds appeared. They were marshaled by clans, the head of each clan on horseback, followed by his men on foot, in double file, with long flintlock rifles on shoulders.

The next day the city was early astir. With band playing and banners flying the great procession, now swelled to many thousands, with the Kurdish warriors at its center, swept down the road to Mezireh. At the head were the clan leaders, or Aghas, with long beards and eagle faces. In the midst of this group rode a man with green turban and jet-black beard and deep, fiery eye. On his head, covered by a black and gold cloth, he carried reverently what appeared to be a long book or scroll. This was their sacred book—not the Koran, for these tribes are not orthodox Moslems, but the book in which is recorded the genealogy of the sacred family of Ali, the great Prophet of these Kuzulbash tribes, from whom they boast descent.

They entered the town and swept through the center to the Government building. In a few minutes the Vali appeared on the steps, and was greeted with renewed cheering. He spoke to the marshal, who instantly laid his sword at the Vali's feet, and passed the word to his followers. First the Aghas and then their followers filed into the Government building; as each man passed the Vali, he stooped to kiss his hand, and the Vali threw his arms about the greasy necks of all those sunburned brigands and kissed each as though he were his long-lost brother. But it won the hearts of the suspicious, half-frightened rebels, who were thus received into the fraternity of the new national life.

It was reported that the visitors were to remain in town three days; but when the third day arrived, and special demonstrations and farewell processions were expected, not a Kurd was to be seen. They had vanished in a night. Gradually the reason leaked out. Some of the enemies of the Vali had been talking here and there about the folly of forgiving and forgetting the accumulated sins of these marauders for years past. Feeling had been aroused. It was at this juncture that some one passed the word around that trouble was brewing, and the mountaineers noiselessly took flight, to watch at a safe distance the ponderous machinery of the Government take what action it would.

It was the real effort of ignorant mountaineers to put themselves into a practicable relationship with a power whom they had never understood.

Patten and His Hunger Tower

THE man that broke the bank at Monte Carlo is always spoken of admiringly. He set himself a stern task, and carried it through. Not so James A. Patten, King (for a fortnight) of the Wheat Pit, who has abdicated his rocking throne, sold his non-existent wheat, and gone to a New Mexican ranch. He started to play the grimmest of jokes in the big black Book of Jobs—to corner the wheat of the world. If he had been as "nervy" as he was adroit, and had played his hand through till the last card dropped, he might have caught the "general public" as they have rarely been caught since air was at a premium in the Black Hole of Calcutta. No wonder the jest tickled his midriff for a few days at least, and that he traveled with a bodyguard, while the small bakers went out of business.

Mr. Patten had been able in a quiet way to obtain options on 23,000,000 bushels of Duluth and Minneapolis wheat. That gave him a cinch grip on the market, because it was one-sixth of the supply in the United States.

One of the results of that speculation in wheat superimposed on the general wheat situation was to drive up the price of spring wheat flour to seven dollars and over a barrel in large cities, and by forcing the bakers to reduce the size of a loaf of bread to advance the actual price of a loaf from five to six and a half cents.

At the height of the speculative flurry, when mass-meetings of bakers were passing resolutions and when the Ghettos of the great cities were buying less bread for more money, a cash grain dealer said:

"If wheat continues to go up and rye stands still, the poor people of this country will have to come to eating black bread like the peasants of Europe."

It was at this time that Mr. Patten was quoted as saying:

"All I have done is to foresee the condition of supply and demand, and take advantage of it. Wheat has advanced twenty cents a bushel, which is equivalent to an increase of one dollar a barrel on flour, but I am not to blame. Blame the farmer, who has not made his production equal to the demand for home consumption."

During the panic week a bill to prohibit dealing in the futures of wheat, corn, and other staples was introduced in Congress by Charles F. Scott, a Representative from Kansas.

The bull market began to slump on April 22, May wheat in Chicago selling at $1.21 instead of the $1.29¼ of April 15, and July wheat descending to $1.09⅝ from the $1.18⅞ of the week before. Promptly the situation for baker and consumer was eased.

If Mr. Patten's corner had remained intact and held back its supplies till the people starved and the prices soared, he would have brought to pass the dream of Dante, and made of the wheat elevator and its black shaft a veritable Hunger Tower.

The Beatification of Joan

THE beatification and canonization which the Roman Catholic Church confers on the best and wisest of the race answer to an element in human nature—loyalty to the dead. Before thirty thousand French pilgrims the beatification ceremonial of Joan of Arc was held in St. Peter's, Rome, on April 18.

The Basilica was hung with red velvet draperies, played upon by electric bulbs.

"Huge pictures, representing the miracles of Joan of Arc, and her statue, were placed over the high altar, but they were veiled. The ceremony began by the reading of the brief, at the last word of which the veils fell. The statue appeared framed with electric bulbs; the bells pealed forth and the massed choirs intoned the Te Deum, which was taken up by the vast throng. Many of the pilgrims, overcome, burst into frantic cheers, which were immediately suppressed."

So one more act closed in her progress toward canonization, which is expected in time for the five hundredth anniversary of her birth, the feast of [illegible] January 6, 1912. Then the world wil[illegible]

WINCHESTER

.22 CALIBER AUTOMATIC RIFLE

For camping, canoeing, automobiling or any outing, this novel little repeater affords more pleasure than any other gun. Being reloaded by recoil, it is only necessary to pull the trigger for each shot. It shoots clean and inexpensive cartridges, is easy to load and light to carry

IT MAKES AN OUTING OUTFIT COMPLETE

Winchester Guns and Winchester Ammunition—the Red W *Brand—are Made for Each Other and Sold Everywhere.*

and scarcely one among the sanctified will be more popular with the eommon people. and none more richly deserving of a tardy honor.

The eeremony just carried through establishes the quality of beatus or blessed. and allows invocation in specially authorized localities. For fifteen years Joan has been on trial of beatification and has been judged as woman, warrior, spirit. and saint. Among the suceessive tests whieh she has met at the investigation of the Church are those of reputation for sanctity, the heroicity of virtues, and for miracles. "Not only had it to be proved that Joan practised Christian virtues, but practised them to a heroie degree, and that no isolated fact of her life was of a nature to infirm her heroieity." Then, finally, the proeess of miracles—"at least two miraeles are required to prove that God allows the venerable to intervene as a saint." It was established to the satisfaction of the investigators that Joan in high heaven had healed one siek of the caneer. no longer ago than 1900, and two other glorious answers to prayer were proven in like manner.

In this year of her exaltation one of the fiereest of critieal battles has raged about her fragile person between Anatole Franee and Andrew Lang. France has found her largely a victim of delusions, good but simple and uminspired. With no such indeeency of attack as Voltaire lavished, France has played around her sad little life with an irony hardly the less insulting. Never did champion enter the lists more doughtily than Andrew Lang in lacing his helmet and setting his spear for the Maiden Knight. His voice, which we have eome to know as tired and languid, shakes with zeal, and the nonchalance of that lily among authors is engulfed in a rush of hot words. Pretty Fanny is at last in earnest. Pretty Fanny is a good deal of a man.

With two of the most gifted authors here below and the great Pope intent upon the life and works and tragic child's death, it is probable that the fame of the Virgin of Domremy is secure beyond that of most heroes and saints—even of those who, like her, died in agony.

"Plastic Surgery"

IN THE laboratories of the Roekefeller Institute for Medical Research certain very important things have been accomplished—notably, the discovery of a meningitis serum which has been tried thoroughly and has reduced the mortality from this disease, whieh dealt such appalling blows when it was epidemic a few years ago—more than fifty per cent. Dr. Carrel's demonstrations of the direet transfusion of blood by joining blood vessels, instead of using a glass tube as a eonduit, have been impressive and of real praetical result. His marvelous technique in such surgery. his ability to take a seemingly impossible number of stitches in a tiny circumference, are of course especially adapted to such operations. The obvious advantage of this method is the avoidanee of the danger of a elot forming in the tube and being carried on into the patient's blood, a thing which might in itself prove fatal. The life of a baby daughter of a well-known New York surgeon was saved by this operation last spring. The child developed *melæna neonatorum*, a disease of the first few weeks of life, whose mortality is from fifty to eighty per eent. A large vein back of the knee in the child's right leg was opened, an incision was made in the radial artery of her father's left wrist and the two sewed together. In a few minutes the baby's hemorrhages ceased, and to-day it is a strong, healthy ehild. It was proved, moreover, that instead of the cause of the disease being due, as had been supposed, to some defieiencies in the walls of the blood vessels, it was due to some deficiency in the blood itself.

"It is proved," says Dr. Carrel, "that the remote result of the transplantation of fresh vessels can be perfect and that arteries kept for several days or weeks outside of the body can be transplanted suceessfully, and that after more than one year the results remain excellent. It has been shown, also, for the first time, that transplanted kidneys functionate: that an animal, having undergone a double nephrectomy and the transplantation of both kidneys from another animal, can live normally for a few weeks, and that an animal which has undergone a double nephrectomy and the graft of one of his kidneys can recover completely and live in perfeet health for eight months at least. Finally, it has been demonstrated that a leg extirpated from a dog and substituted for the corresponding leg of another dog heals normally."

Experiments of this latter sort have scarcely yet demonstrated a practical application to the human body which can

Don't Throw Dull Blades Away-Strop 'Em!

NOT ONE MAN IN FIFTY

Strops his Razor properly. Not one in a thousand knows how to Hone a Razor. The almost invariable result is a "rounded edge" instead of the keen, sharp edge so necessary to a clean and satisfactory shave.

Shaving troubles are not caused by a poor Razor, but by the poor condition of the Razor.

A keen edge for a clean shave in a minute if you Strop and Hone with the

FLEMING RAZOR STROPPER AND HONER

IT STROPS AND HONES ALL RAZORS AND BLADES, OLD-STYLE AND SAFETY.

The Fleming Stropper and Honer firmly grips the blade of the Razor and lays it **flat** on the strop or hone. By an automatic reversing action, both sides of the edge are Stropped or Honed uniformly, without removing the Stropper from the strop or hone. You cannot press too hard, you cannot strop at the wrong angle, you cannot "round" the edge of your blade. It requires no skill or experience.

Purchase a **Fleming Razor Stropper and Honer** and *stop the everlasting expense of new blades!* The **Fleming** will last forever, and it will make your present blades last almost as long, and give you a clean, easy, satisfactory shave every time.

$2

Ask your dealer for the **Fleming.** If he cannot supply you, we will send it prepaid, on receipt of $2—cash, money-order or bank draft.

OUR ILLUSTRATED BOOKLET IS FREE FOR THE ASKING

FLEMING SALES CO., 253 Broadway, New York

This Cornell Cottage, $297.00

We will build you a handsome three room portable cottage, same as photo, complete in every detail and prepay the freight for $297.00.

Cornell Portable Houses are built in sections of first-class materials, painted inside and outside. Quickly and easily erected; only labor necessary being to bolt sections together. They are far better than what local contractors build and cost much less.

We build Cottages, Garages, Churches, Studios, Stores, Playhouses, etc., in many styles and sizes. We have the largest and best equipped portable house factory in America and employ only skilled workmen. Catalog upon request.

WYCKOFF LUMBER & MFG. CO.
415 Adams St. Ithaca, N. Y.

THE 20TH CENTURY GUN OIL

3 in One is the only perfect gun oil you can buy. Cleans out the barrels. Especially good when smokeless powder is used. Oils the mechanisms, polishes the stock, and positively prevents rust on the metal in any climate and any kind of weather. Use before and after shooting.

3 IN ONE OIL CO.
35 Broadway New York

The REFINED MOTOR

3 Horse-power and 6 Horse-power. Weight 60 and 110 pounds. All REFINED MOTORS are guaranteed against defective material or poor workmanship during the life of the motor and are also guaranteed the best Motor of their type in the world.

AMERICAN THERMO-WARE COMPANY

Sole American Distributors

17 Warren Street New York

The Plant that is Ready to Stand Back of Your Power Plant—the World's Largest Machine Shops Nearest the Center of Population of the United States.

The Dodge is the Only Line that Embraces Everything for the Mechanical Transmission of Power. All Made in One Plant.

THINK what it means to you, Mr. Manufacturer or Mill Owner, to have one shop standard in your power transmission machinery and that the best.

There is only one line which offers you this—only one line which is standardized—only one line which is interchangeable wherever feasible—

And that is the Dodge line.

That means that you can secure from your local dealer's stock, replacements on immediate order which in any other line could not be had except by special construction.

Dodge pioneered the Wood Split Pulley—the Continuous Rope, Multi-Wrap System of rope transmission—the standardized Split Friction Clutches with detachable extended sleeves—development of the Automatic Lubricating Shaft Bearings.

The development of a complete line of high grade appliances—interchangeable—standardized for the dealer.

The Dodge line is the product of organized engineering brains.

These brains—the correct advice of our corps of engineering experts—is yours to command free of all obligation. Whatever your transmission difficulties may be, write us about them.

We will not only suggest the proper appliances, but can give you valuable help and hints regarding installation, space economy, maintenance, etc.

THE Dodge line includes the famous Dodge "Independence" Wood Split Pulleys (perfect balancing 100% gripping efficiency). The Dodge "Standard" Iron Split Pulleys with interchangeable bushings to fit all shaft sizes. Dodge Adjustable, Shaft Hanging Pillow Blocks, etc.—with self-oiling bearings. Dodge Split Friction Clutches to control departments, independently.

The split feature means that Dodge appliances can be mounted on the shaft in 15 minutes, removed in five without disturbing other equipment already in place.

Dodge Power Transmission Machinery means the greatest efficiency—friction reduced to a minimum.

And eliminating friction means added profit just as actually as an increased selling price.

Write to us for advice on all transmission troubles.

Send for our catalog E-2 *and our special plan for guaranteeing delivered prices on Dodge goods giving you an exact price on transmission machinery complete, laid down in good condition at your nearest freight station. If you want this information, be sure to mention the fact when you write.*

Free for 6 Months—"The Dodge Idea"—A Magazine of Help

If you are even remotely interested in engineering and the general transmission of power, send this coupon for a free 6 months' subscription to "The Dodge Idea."

A live, interesting journal, covering all the principal features of shafting, journals, bearings, clutches, belt and rope transmission, driving gears, etc. Bright, understandable and interesting from cover to cover.

Dodge Mfg. Company
E-2, Mishawaka, Ind.

Gentlemen—Without obligation on my part, I will be glad to receive your magazine, "The Dodge Idea," for a free six months' subscription.

I am connected with .....

The Dodge Manufacturing Company

Largest in the World

Power Transmission Engineers and Manufacturers of the Dodge Line Power Transmission Machinery

Main Office and Works: E-2, Mishawaka, Indiana

Branches and District Warehouses: Boston; New York; Brooklyn; Philadelphia; Pittsburg; Cincinnati; Chicago; St. Louis, and London, England, And Agencies in Nearly Every City in the United States.

We carry large complete Stocks at all Branches for immediate delivery. For quick service, communicate by long distance telephone with agency nearest you.

Will you accept $5 a day for your services?

You can earn more than $5.00 a day at the start, and as **much more** as you care to make. You can establish yourself in a **pleasant, profitable** and **permanent** business that makes you independent.

You Take No Risk

You do not invest one cent in this business until you prove you make the money at it. You risk nothing, and are paid well for what you do.

You know the principle of the vacuum cleaner business, and how it has made housecleaning the work of **hours** instead of **days.**

What I want to prove to you is that you can make a fine income with the most **perfect** and **convenient** vacuum cleaner. The

Duntley Standard Vacuum Cleaner

embodies **every principle** and improvement known to the big wagon cleaners, and costly installed plants, yet it weighs only about 50 lbs.

You can take one of these machines into a house and remove **every** particle of dust and dirt from **every room** without taking up the carpets and without moving furniture, and do it **ten times as thoroughly** and **in one-tenth the time.**

The Duntley Portable Cleaner sucks the dirt **out** of the house. It does **all** and **more** than the big wagon cleaners can possibly do, and costs only a fraction as much originally and less to operate. This means **bigger profits** to you.

How The Business Increases

Every housewife who has a rug or room cleaned by the Duntley Cleaner, is so **thoroughly satisfied** that she wants a Duntley Cleaner for her own use—which **you** sell to her at a **handsome profit.** She tells **her friends** about you. You get **their** orders. **Their** friends give you **more** orders, both for cleaning and for machines. The more customers **you** get, the more customers **they** will get you.

My "Pay From Profit" Plan

I want one good, honest, active man or woman in every city or town—**no matter how small,** where houses are lighted by electricity, to write for my "Pay from Profit" plan. I **establish** you in business, show you **how** it is done, and assure you an **income** of at least **$5.00 a day** while learning.

Make me **prove** what I say. Don't spend one cent until you prove the **truth** of everything I say. Whether you want to go into the business for **yourself,** or whether you want to prove the **economy** and **satisfaction** of the Duntley Portable Cleaner in your own home, take advantage of my offer.

Write Me for the Plan Today

The offer is made to **you—now—today.** It is your **great** opportunity to start in a **new** business—in a **coming** business—in a **profitable** business—in a business of **your own** that will grow **bigger** each year. You simply write me and ask for my "Pay from Profit Plan." Do it **now—at once**

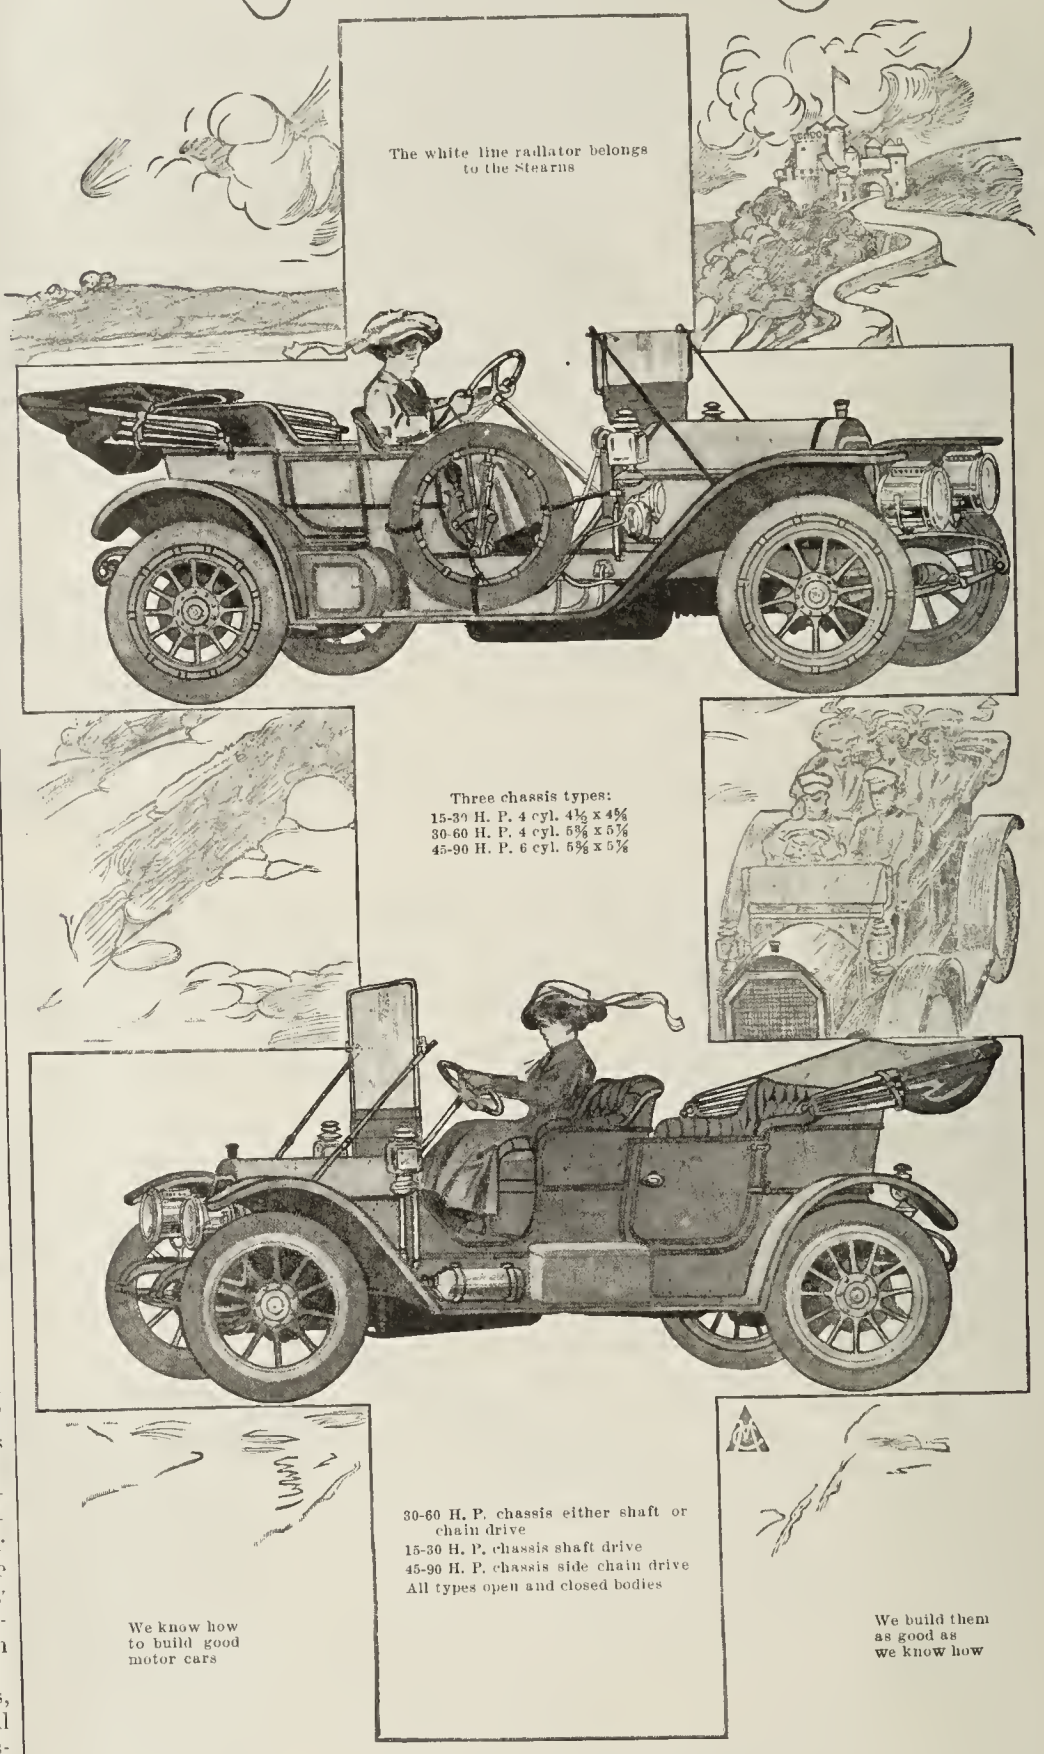
Roof Space

IT WAS in 1905 that the New York Public Library found itself cramped in quarters in its East Side branches. There were more readers than square feet of floor space. So Arthur E. Bostwick, head of the circulating library system, in finishing off the then new Rivington Street branch in the summer of 1905, erected enough coping around the roof to keep all classes of persons from falling off. The roof was then made into an open-air reading-room. This easy device added a floor to the reading capacity of the library, and it gave fresh air to the readers in addition to a certain wonder-sense at the open-air elevation. It was a little like reading a novel on deck in mid-ocean. This roof reading-room was so richly patronized that the experiment was repeated at the St. Gabriel branch. This time a roof was built, but the sides left open. Three new branches are now under construction, and in each of them the roof is being made ready for summer use. Awnings will be hauled over the roof space by day to prevent the sun from storing up heat inside the tin. In the evening the awning will be rolled back. These three branches are each in a crowded section—one is at Seward Park, one at Hamilton Fish Park, and one at Tenth Avenue and Fifty-first Street. This is an idea that other cities dealing with crowded areas will be sure to adopt. Already for several years Los Angeles, California, has had a library whose roof is used eleven months of the year. That is where climate cooperates with inclination.

Revivals

GIPSY SMITH, the evangelist, has recently added four hundred "souls" to the membership of the churches in Kansas City, Missouri.



Do revivals permanently revive the prostrate church? Do the crowds and the fervor mark a real gain in righteousness for the community? A statistician in the Springfield "Republican" has made a study of the Moody revival of 1877 in Massachusetts. He gives exact figures, and then says:

"Together Baptists, Congregationalists, and Episcopalians for the whole State, and Methodists for the Boston and Lynn districts, made a net loss in the four years, 1877-1881, over the preceding five years of 4,469, or over ten per cent. It would seem to be an open question whether on the whole the revival work of 1877 was much of a success in increasing the numbers of the members of these churches permanently, and whether they would not all have been better off if the Moody meetings had not been held. An examination of the statistics of the Congregational churches of Massachusetts and Connecticut points to a similar condition following the greater revival of 1758. Ten or twelve years after the 'Great Awakening' which added three hundred to his church in Northampton in a single year, Jonathan Edwards lamented that he had not received a single member in four years. These facts tend to show a social law of reaction with grave results."

In estimating Moody and his work, it would be fair to remember the public buildings with which he strewed the land—Y. M. C. A. buildings, churches, and the like—not by gifts of money from the outside, but by rousing the community to a concrete expression of their enthusiasm. Then, too, it might fairly be argued that joyous excitement is an excellent thing for a village or city.

The two admirable schools at Northfield and Mt. Hermon, founded by Mr. Moody,

Stearns

Three chassis types:

TASTE THE TASTE

REG. U. S. PAT. OFFICE

—the smackish, piquant taste of Underwood Deviled Ham! It's the delicious ham taste of salt and sugar and hickory smoke, mixed with the famous Underwood Deviled Dressing of 42 spices—a highly seasoned taste that arouses the keen edge of hunger.

Makes sandwiches delicate and delicious, deviled eggs, omelets, toasts, souffles, canapes, hors d'ouvres, croquettes, rarebits, salads, hashes, turnovers, scallops — all kinds of "choice morsel" cookery. And for stuffing chicken and turkey — just try it once.

OUR RECIPE BOOK, FREE, tells you how to make all these things in simple, easy ways.

Handy for picnicing, fishing, hunting, camping and all outdooring. Still handier for luncheons, teas, meal emergencies, and all in-dooring.

Nothing but tender, juicy ham, ground with spices. No preservatives. Made in a white, clean, sunlit New England kitchen—visitors always welcome.

Very economical. For example: A small can makes 12 large or 24 small sandwiches. Put up in 15c., also 25c. cans.

If your grocer doesn't keep it, send his name and 15c. to WM. UNDERWOOD CO., Dept. I, 52 Fulton Street, Boston, Mass., and you will receive, by return mail, a full size can of

should not be forgotten by the social scientists in estimating the permanence of his activities. Still another contribution is often made by the evangelist, reformer, crusader, and poet. And that is the conveyance to other men of a certain continuing fervor. Thus Mr. Moody gave Dr. Grenfell his first and most powerful impulse, which has resulted in excellent and enduring medical and social betterment work on the coast of Labrador. He taught King of Boston the methods which attract sailormen in port and hold them in a decent place instead of the river-front brothels. Mr. Moody raised Campbell Morgan from the semi-obscurity of a North-of-London suburban church to an international fame among church-going folk. These communications of personality, by which the next man is raised to an energizing level, which formerly was out of his reach, belong in any fair-minded estimate of a man's work.

Murder by Motor-Car

THERE has been an epidemic of motor-car murders in the last month. From many parts of the country come reports of women, old men, and children run down and maimed or killed by speeding, irresponsible chauffeurs. Little by little, laws and judges are beginning to deal with this menace to a quiet life. On April 15, in the Supreme Court of New York State, the jury held that the owner of a car is responsible for the chauffeur's acts, and must pay the damages incurred in such of the chauffeur's bursts of speed as cripple pedestrians.

Swinburne, the Improvisatore

ALGERNON CHARLES SWINBURNE, who for several years had been indisputably the world's greatest living poet, died at the Pines in Putney, England, on April 10. In person he was small and fragile, five feet two inches in height. He was a son of Admiral Swinburne, and was born in 1837. He received his education at Balliol College, Oxford. For all his days he was a writer. He had early mastered the Latin and Greek tongues. His classical drama of "Atalanta in Calydon" in 1865, and his "Poems and Ballads" of 1866, established his fame, though awakening bitter criticism.

By cable from London has come the fitting word on his strange gifts that were so often a puzzle to sober-hued readers and all a wonder and a wild delight to the ecstatic among his admirers. George Meredith is equipped both lyrically and critically to tell where the truth lies. He said of the funeral on the Isle of Wight:

"Then the earth will take to her bosom the most spontaneous singer of all her English children. As far as our language would submit to him, he was an improvisatore. Had Italy been native to him he would have borne the renown of a poet fired on the instant to deliver himself orally."

His gift, then, was in a flow of beautiful words, unfailing for a half century, that ravish the emotions but rarely reach the intelligence.

Certain of his moods were noble. In the presence of the sea, he reprodneed its thunders and immensity. Always he could convey vastness. Revolution, rebellion, the struggle for liberty anywhere on the earth, moved him to a large vague mood, out of which flowed rich tones and chords.

"I, last least voice of her voices,
Give thanks that were mute in me long
To the soul in my soul that rejoices
For the song that is over my song.
Time gives what he gains for the giving,
Or takes for his tribute of me;
My dreams to the wind ever-living,
My song to the sea."

No such swift mastery over musical words had been previously known in English literature whose artists had wrestled and groaned in beating their music out.

Of the qualities that gave him so early, immense, and continuing a fame, these are perhaps the dominant: In his political and religious beliefs he was a highly talented rebel. He recreated a sense of very pagan Rome with its decay, its satiety, and its tired beauty. In his handling of the love theme, he was daring for a North of Europe man. He had the gift of rendering again the classical themes, and as these possess inherently more of the stuff on which poetry is made than any other, it followed as the night the day that his supremely easy versitieation would recreate some at least of that ancient beauty.

As a critic, he was defective in cool judgment. His brain chambers ran hot and frenzied when either friend or foe among the immortals was named. He lauded and denounced like a revivalist. It was stimulating reading, and always his rare and splendid acquaintance with great literature shone out—but all too little at-

Real Ventilation

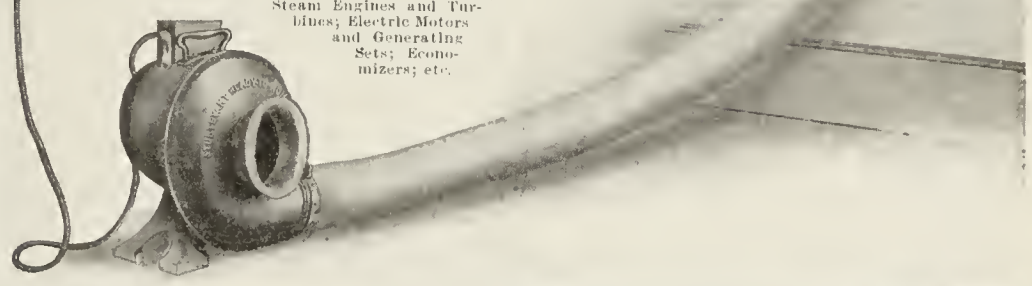
Desk and ceiling fans do not *ventilate*; they simply stir up the stagnant air and make you feel a little cooler because of the local air currents. Window ventilation is not effective unless a good breeze is blowing. The only *real ventilation* is that which actually *forces* the vitiated air and disease germs out of doors. There is but one way to do this effectively at reasonable cost—get a

STURTEVANT Ready-to-Run Ventilating Set

This little device can be run wherever there are electric lights. Simply screw the plug into a light socket, put the discharge pipe out a window or other opening, and turn on the current. The average size room can be completely ventilated in 10 to 15 minutes at a cost of 1 to 3 cents' worth of electricity, according to the size of the Ventilating Set.

Easily carried from room to room. Noiseless in operation. Mechanically and electrically perfect, as is evidenced by the fact that this Ventilating Set is built to meet the specifications and severe tests of the U. S. Government, for whom we have recently built 56 sets.

The **STURTEVANT Ready-to-Run Ventilating Set** is indispensable in the up-to-date home for driving odors and hot air from the kitchen; ventilating a room where "that man" has been smoking; in the cellar for forcing the draft of the heater, or ventilating and drying out some damp corner.



Useful for ventilating offices, sick rooms, toilets, photographic dark rooms, smoking rooms, ticket offices, telephone booths, motor boat cabins and scores of other places; for blowing dust out of machinery, etc.

Every up-to-date home, hospital, hotel, office and shop should have a **STURTEVANT Ready-to-Run Ventilating Set.**

Write today for Bulletin No. 106-C.

tempt was made to enter into the being of the author under examination. A page of Sainte-Beuve makes Swinburne in critical guise seem exclamatory and unveracious, and even superficial. His attaek was like that of a prairie fire, scorehing and terrifying, but hardly a eontribution to the harvesting of erops.

Other of his famous works are: "Songs Before Sunrise," 1871; "Songs of Two Nations," 1875; two other series of "Poems and Ballads"; "Tristram of Lyonesse," 1882; and a trilogy of Mary Stuart.

\+ \+ \+

The Problem of the Hungry Stomach

(*Concluded from page 24*)

Europe. Of late, the western countries of South America have been going into the wheat business: with the eompletion of the Panama Canal, the United States may draw some of the surplus from those lands. Still another factor, remote, uneertain, enters into the future caleulation. Years ago the Chinaman tasted wheat bread and liked it. The European residents of China, together with the Chinese who can afford the white man's food, have been getting most of their supply from the Paeific Coast of Ameriea. China, on her part, may raise wheat if she wills. She has, in spite of her large population, vast waste areas admirably adapted to this crop. What she lacks in virgin quality of soil she makes up in cheap labor. Lately, the Imperial Government and European entrepreneurs have been sending to the United States for samples and instruetions, that they may experiment with wheat. Should North China and Manchuria ever come to the point of a wheat surplus, it will more profoundly affeet the relations of China with the rest of the world than all the international agreements and treaties ever hatched. If that time of surplus ever arrives, the movement of grain trade will flow back toward the Paeific Coast; the United States in her time of need will take from China, as China now takes from the United States. That is remote and problematical; the new wheat surplus of Canada and the coming wheat surplus of the west eoast of South America are present and tangible. The world's wheat supply is a unit, an industrial faetor whieh rises above eonsiderations of boundaries and politieal divisions: no nation ean consider its own supply out of relation to the world's supply. Sir William Crookes prophesied fifteen years ago that the world would begin to feel a permanent wheat shortage in 1931. He was more aeeurate or more lucky than most prophets, it seems. The increase of populations and the spread of the bread-eating habit have gone faster than produetion. The permanent shortage, wheat experts believe, will arrive in the next twenty years; and by that time the United States will be an importing nation. Then Ameriea, drawn together in a solidarity of hunger with Continental Europe, must face the question whieh has been a keystone of British polities ever since the corn agitation of 1845—the question of the hungry stomach.

\+ \+ \+

The Turk

(*Continued from page 14*)

nature, and life ean be eondensed into a single word. The word is "*Kief*." "Kief" means seorn of the past, indifference to the present, and unconeern about the future. If you speak to a Turk about any danger, fear, or evil presentiment, he will merely reply: "Allah kerim"—"God is great"—which is to say: "Eat, drink, and dream, and leave the rest to Kismet (destiny). Trust Allah; the thing is all settled, and as I ean't ehange it, I won't give myself belas (headaehes)."

War is the one thing that ean rouse the Turk from his apathy. When the fight is over, the Mussulman returns at once to his "Kief." Why get exeited about polities, science, philosophy, and literature? Is not everything foreordained? Leave it to Allah. With a whole nation in this frame of mind, it is not strange that the Turk has neither thirst for knowledge nor any great passion. It is not strange that he has but little curiosity and no desire to travel, and that officials display such ignorance in regard to the most elementary things.

About fifty years ago a Turkish man-of-war received orders to go to Malta. A storm drove it far into the Mediterranean. A month elapsed, but not a word of news. After two months more friends began to

How To Avoid TIRE TROUBLES

Today automobile troubles are largely tire troubles. Eighty per cent of up-keep expense is tire expense. When you are tied up on a lonesome road 20 miles from nowhere—nine cases out of ten it's TIRES.

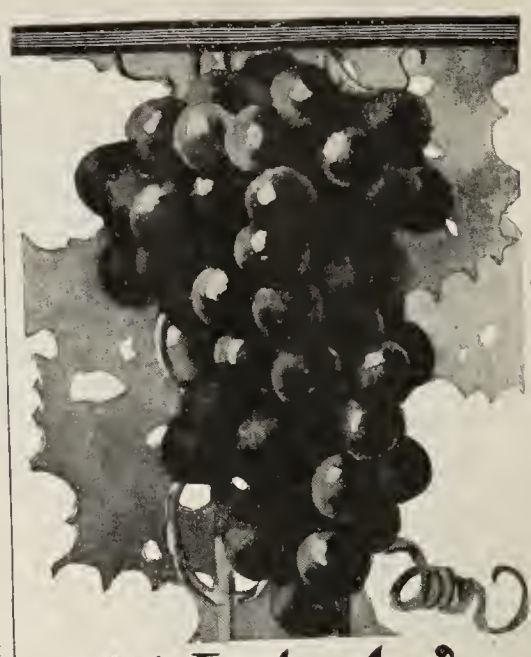
—And nine cases out of ten the blow-outs which waste money and kill pleasure were caused by *overloading*.

—Tops, glass fronts, gas tanks, searchlights, extra seats (an invitation for more passengers), storage batteries, extra casings and pounds of luggage are added to large and small cars alike.

—Before you know it your tires are carrying from 200 to 300 lbs. more than they were *ever built to carry*. The result is certain, quick destruction—heavy expense—trips of trouble instead of pleasure—and a world of humiliation for the man who owns the car. Rubber, strong as it is, has its limitations.

Goodyear Automobile Tires overcome these conditions because EVERY SIZE IS OVERSIZE. They are full 15% larger than any other automobile tire in the market sold for the same size. A Goodyear 4-inch tire measures almost 4½ inches. If a set of tires of another maker will safely carry 2000 lbs., Goodyear Tires of the *same size* will with equal safety carry 2300 lbs.

But even if your tires are ample for their load—even if your car is not weighted down with accessories—think what the extra 15% means to you as a "*margin of safety*," to say nothing of comfort.



Every bit of material in the car you drive has a "margin of safety" of 5 to 7—it must be capable of bearing a strain 5 to 7 times greater than *it will ever be subjected to*. Tires alone are expected to work to the *limit of their resistance*. When you overload them there is no "margin of safety." It has been exceeded. You are taking chances every minute you drive.

Think carefully what this *15% oversize* (to be secured only in Goodyear Tires) means to you.

cannot be made with poor material. To increase their profits many makers recommend materials which look well when new but are totally lacking in quality. To avoid these accept only GENUINE

Pantasote

LEATHER the material of recognized and uniform quality which unlike the "cloth on both sides variety" is fast in color, can be easily cleaned and has two layers of waterproofing gum.

A postal will bring samples and booklet of advice.

The Pantasote Co., *1633 Bowling Green Building,* **New York**

besiege the War Office for information. Finally the Minister of Marine was ordered to send out another boat. Just as this second expedition was ready to sail they beheld on the far horizon the ship that all had believed to be lost.

After the wanderer was safely anchored, the captain presented himself at the Ministry of Marine, where he was eagerly awaited by the Minister, who inquired:

"Well, Captain, what have you been doing these months? How was it we never heard from you?"

"Ah! my Pasha, we were very unfortunate. We were surprised by a terrible tempest and driven out to sea. When it was calm again we continued on our voyage, and since we traversed the Mediterranean from one end to the other, I must tell you that Malta does not exist, for we have not found it. We discovered Crete and Corsica, but Malta, no—there is no Malta."

The Turk is no Traveler

THE Turk has no love for travel. It is natural, therefore, that he should consider the Christian traveler stark mad. Once when I was journeying with a friend of mine on the coast of Asia Minor, we stopped one night at a village where we met an old Turk, who offered us hospitality. He was a splendid-looking chap, but, try as we would, we could never make him understand why the giaours left their own country to visit strange lands and peoples.

"Have you then no father, mother, brother, or sister?" asked Ali.

"Oh, yes," we replied.

"Allah! Allah!" he exclaimed. "You have a family and yet you have left them to come so far, so far." And he left us with indulgent pity.

As a rule, however, the European inspires in the true Turk only a feeling of contempt. He appears to the Ottoman eye only a frivolous and conceited being. Our mighty labors of mind and body are to them trivial and childish beyond words. To our civilization they are, therefore, always hostile, for they regard it as the influence of the evil one, forever on the alert to destroy them.

To change themselves, to accommodate their customs to the character of the Christians, is an appalling abomination. Indolence, pride, religion, contempt, all oppose it.

Likeable—When Not Cutting Off Heads

WHAT I have said here of the Turk does not, of course, apply to the more progressive element, and while some of these attempt to combine the virtues of two civilizations, yet it must be confessed that often the new Turk, despising the customs and traditions of his forefathers, apes the manners, imitates the graces, and, too often, copies the vices of the Christians.

Take it all in all, the Turk, with his sense of loyalty, his domestic affections, his kindness to animals, his reverence for his ancestors and for the dead, his unfailing courtesy and inclusive hospitality, his honesty and dignity, merits our admiration. He has his faults, but these are the defects of his qualities. Of him also it might be said: "To know him, when he does not cut people's heads off, is to love him."

* * *

The Woman Who Votes

(*Continued from page 23*)

me they just vote like they take a notion—or like somebody talks them into voting."

THERE is a great disposition on the part of the woman voter to deny that she votes with her husband. This is no doubt the outcome of much scoffing and the frequent masculine remark that suffrage only doubles each vote. I could not see, however, why these denials should be so indignant; I should think it would be quite as pleasant to agree across the table concerning who the next mayor ought to be as concerning how much the ducks should be uncooked. But it is interesting to know that there are many independent convictions in all classes. I heard of one scrub lady who, for the sake of these convictions, faced a daily wife-beating and stood by her ballot.

"Let him bate me as much as he pleases," she said. "Oi'll cast me own vote."

THERE is a general feeling, even among those who claim that women have accomplished results through the ballot, that they have not by any means taken advan-

Forget about the Price

of our

"TAKAPART"

$4.00 REEL

Judge it solely on its merits

We won't say a word in praise of our $4 "Takapart" reel in this advertisement.

We want *you* to turn salesman—to sell this reel to yourself—*on your own arguments.* We want you to be the *sole judge* of its merits, after you have compared and tested it with any other reel *at any price* on the market. Get your dealer to show you a "Takapart" reel. Look at the rigid tubular frame, drawn from one solid piece of brass tubing. Note the construction of the axle, spool, spindle and pinion.

Then take the reel apart. Dissect it without tools of any sort by simply unscrewing the ring at either end. Give every part of the reel your most critical scrutiny. Now spin the spool and test its running qualities.

While you are examining and testing it, keep our iron-clad guarantee in mind, namely, that you must be perfectly satisfied with the quality of workmanship and material and that the reel must be perfect in every respect *or your money will be refunded without a murmur.*

If you will do this you will buy the reel—and you will do the praising. We are willing to stake the success of our business on the honest opinion of any fisherman in America or the world.

"TAKAPART" REEL (Capacity 100 yards) $4.00
"TRIPART" REEL (Capacity 80 yards) 3.00

BOTH FULLY GUARANTEED

See that the name "Meisselbach" is stamped on these reels. It is put there for your protection

How to Get 4 PICTURES (IN COLORS) FREE

TO every reader of this periodical who is interested in nature or animals or out-door life we will send, without charge, these four beautiful pictures, which retail at 50 cents each. They are printed on heavy art paper, without lettering, and are unusually good examples of the art of color photography. Framed at moderate cost, they will make excellent decorations for your home, or they can be used just as they are. Exact size 10½ x 7½ ins.

WHY WE MAKE THIS OFFER

We send these pictures to advertise our **Standard Library of Natural History,** which has just been completed after years of labor and at enormous expense. It contains over 2,000 illustrations from actual photographs—secured in many cases by special expeditions to foreign lands. It is the only thoroughly readable and entertaining work of its kind in existence. The salient facts about animals are told in graphic, untechnical fashion by eminent authorities. *Experts and the camera have made this book, and in it "nature-fakers" have had no part.*

NO OBLIGATION

Your application for the pictures imposes no obligation to purchase the Library. We will forward the pictures, with a description of the book by mail postpaid. You will not be bothered by agents or canvassers.

As an evidence of good faith enclose 10 cents (stamps or silver) for postage and wrapping. This will be refunded if you request it after examining the pictures. Mail the accompanying coupon promptly, as the supply of pictures is limited.

THE UNIVERSITY SOCIETY
44-60 East 23rd Street
NEW YORK CITY

The University Society, New York

Please send me, postpaid, the four pictures you offer, with a description of the "Standard Library of Natural History." I enclose 10 cents for postage and wrapping, which you agree to refund if I am not perfectly satisfied. It is understood that the sending of this coupon does not in any way bind me to buy anything.

Strength
Finish

These three features of the perfect canoe are most highly developed in the RUSHTON creations. See famous "Indian Girl,"—light, strong, swift, and graceful. Perfect in every detail of material and workmanship. Write for handsome catalog of canoes. J. H. Rushton, Inc., 661 Water St., Canton, N. Y.

tage of it to the full. "But woman has been bound hand and foot for generations," a Salt Lake lawyer said. "She can't step forth into full powers all at once." In Colorado women are organized in energetic political clubs; in Salt Lake they have clubs, but less energetic; in Wyoming they have done private and personal work for certain favored candidates.

There is in Denver a very old house whose interior wood was brought across the plains by ox team. Here I found Mrs. John Pierce, who is the vice-president of the Woman's Equal Suffrage Association of Colorado.

"I came by stage in '62," she told me, "and we lived at first in a two-room wooden shack. Pioneer men had a hard time, but there wasn't a trial of pioneering the women didn't share. Seems to me," she said slowly, looking out over the bustling street that she remembered as a treeless wilderness; "seems to me, when we went through all that, side by side with the men, we ought to have the right to vote side by side with them, too."

"Do you think it unsexes women?" I asked her.

She laughed. "My dear, no more than education," she said. "Nothing can ever make us anything but women."

"But if woman is not unsexed—is still the same—what about man?" a Pennsylvania woman now transplanted to Colorado said to me one day. "Dear, dear! His bloom is off, his glamour's gone. It's right, and just, and advanced—I know all that—but alas for that fascinating veil of political mystery in which man once shrouded himself!"

✣ ✣ ✣

Baseball

(Continued from page 13)

"baseball"—since frontier times. In 1856 some late arrivals from New York brought their own game and formed the "Atlantics," stealing the name of a club already grown famous in Brooklyn. When they picked two teams to play their first game, they were short one catcher. John O'Neil—now "Uncle John," pensioned fireman—was a mighty catcher at the old game. They explained the rules and persuaded him to try. The first man up struck out, and John dropped the third strike. In the emergency he reverted by instinct to the game he knew. He picked up the ball and "soaked" the runner in the back of the head. That unfortunate, whose name is lost to history, lay for four days between life and death. It was the life of Chicago's favorite game which hung in the balance with him; but he recovered, and the boys played on. Next year they had a rival club; and by 1858 Milwaukee had learned the game from Chicago. Until the war the two cities played home-and-home matches every year. In 1859 New York pioneers organized a club, the Eagles, in San Francisco. The Red Rovers followed; the two clubs played their first game to a tie—33 to 33. The professional gamblers who infested San Francisco in those days bet heavily on this game; and it is recorded that "interested" spectators shot off their revolvers in unison whenever the first baseman was about to take a throw. Finally New York boys and "Beadle's Dime Baseball Guide" arrived in New Orleans in 1860 and brought the craze there. The boys founded a club, "ten cents entrance fee and ten cents a week dues to buy balls." It was spreading, but slowly. It might have remained a New York game for several decades had it not been for the war.

Meantime baseball was flourishing mightily in its birthplace. In 1857 the clubs had become so many and the problem of interpretation so puzzling that the Knickerbockers, still leaders in the sport of their invention, called a convention—sixteen clubs represented. Among those which shone preeminent then, or rose to future fame, were the Knickerbockers and Eagles of New York, the Putnams of Williamsburgh, the Eckfords of Greenpoint, the Unions of Morrisania, the Atlantics of Bedford, and the Stars of South Brooklyn. The Atlantics and the Unions later became national champions, and in the Stars was worked out the principle of curve pitching. In 1859, with forty-nine clubs represented, the baseball convention became the National Association of Baseball Players.

The first convention introduced many changes; the first meeting of the association added many more and elaborated them all in a code of rules, for a perplexing thing had arisen. They did not know what to do with the pitchers. Those mere feeders of the batters were beginning to copy the cricket bowlers and find a skill of their own. Even restricted as they were to an artificial delivery, certain pitchers had be-

gun to develop speed. That was not so bad; but others had the rudiments of puzzling delivery. Having no "called-ball" rule to hamper them, they tried to work the batter by sending balls to right and left of the plate. They would trifle thus for a quarter of an hour could they but persuade the batter to strike at a bad one. Already Harry Wright, a made-over cricketer, had mastered "change of pace"—practically the only artificial ruse the pitcher had before the curve came in. Under the rules as they stood, the first side making twenty-one points won the game. A weak team, seeing itself outclassed, could delay the game by refusing to strike at good balls until night made it a draw—"no contest." They stopped this last evil by a radical amendment. They changed the system of scoring to the present one—greatest number of runs in nine innings, one inning for each man. Immediately scores bounded up to three digits.

Pitcher *vs.* Batter

STILL—they must have felt dimly—this was not enough. Something should be done to stop all that fiddling between pitchers and batters. Handling it gingerly, they ruled that a batter who refused good balls persistently "should be warned by the umpire, and, if he persisted, the umpire should call a strike on him as though he had hit at the ball." Indeed, it would have been impracticable to enforce strict "strike and ball" rules then, for the umpire stood on the sidelines between home and first, and was, therefore, in no position to judge at the plate. By this time, notice, the two umpires and a referee had dwindled to one umpire. It was still "a position of great dignity." He usually sat on a camp chair near the first-base line with his feet disposed comfortably on a box.

The association recognized another feature which had crept gradually into the game, and which we of this generation know not. The batter had a right to call for a "high" or a "low" ball, and the pitcher was supposed to deliver according to his request. There was as yet no way of enforcing this rule; it was custom and nothing more. This, as much as anything else, shows what a hit-and-miss affair early-day baseball was. The younger and hardier delegates advocated the repeal of the "first-bound" rule, contending that it was a baby's game. The fogies, mindful of their crippled hands, rallied to preserve the good old way. Finally the two wings compromised. A fair-hit ball caught either on the fly or on first bound was out; but the base-runners could run as they pleased on a "first-bound" catch, while they must return to their original bases on a "fly" catch.

The association further reduced the size of the ball to 10¼ inches in circumference and 6¼ ounces in weight. The regulation ball of 1909 is 9 inches in circumference and weighs 5 ounces. Its composition was stated only hazily. As a matter of fact, those old balls were very lively. "If you dropped one of them from a house," says Will Rankin, oldest living baseball reporter, "it would bound back to you." Ross of Brooklyn and Van Horne of New York, shoemakers both, were the baseball manufacturers of the time. They sewed on the covers in four sections, shaped like the petals of a tulip. The seams were always splitting and "bunching"; this, the taboo on gloves, and the size and weight of the ball, made the hands of those early-day baseball players look like claws. And the New York "Herald," taking lofty notice of this new game, denounced it as "barbarous and injurious."

From Bat to Gun

THEN came the Civil War, and the place of the athletic New York and Boston boys was the ranks. The number of clubs in and about New York City dwindled from sixty-two in 1860 to twenty-eight in 1863. But the enlisted players took their game with them into the camps of Virginia and Tennessee. Whenever, in summer or fall, the Federal armies rested for a week, some one was sure to take a baseball out of his haversack and start a game. They played it on the Peninsula while the army of the Potomac waited for the latest incompetent general to replace the last incompetent general. They played it before Fort Fisher, dropping one game mid-innings to fall in and run to the firing-line. They played it in Confederate prisons, where they taught it to their captors. The Ohio, Illinois, Wisconsin, and Indiana regiments turned out to watch, and remained to learn. A young cricketer from Amsterdam, New York, who had enlisted in the ranks, saw the Eighth New York, recruited from Manhattan, playing a new game. It looked like the cricket for which his soul thirsted; he "begged into" the game. It was Nicholas Young, for a quarter of a century secretary or president of the National League. A volunteer private returned invalided to Rockford, Illinois, in 1863. He saw the boys

GIRLS

Mount Ida School
FOR GIRLS
Being only 6 miles from Boston, our students can enjoy the privileges of the city in Music, Art, Culture, and yet have outdoor life in the most charming residential suburb of New England.
We should be pleased to write anyone about our advanced, *elective*, general courses, and the life of our students.

batting up flies, and he told them that he knew a better game. He had learned it in the army. One tall, wiry boy took a special interest. It was Al Spalding, great pitcher, great manager, great organizer—prime figure in baseball from that day to this. On Roanoke Island, Hawkins's Zouaves formed two scrub teams. A young volunteer pitcher won for his side by a weak, puzzling delivery which baffled the batsmen. It was Alphonse Martin, first man consciously to put a "spin" on a pitched baseball, first in the line of great American pitchers.

The same leaven was working in the Confederate ranks. The New Orleans boys also carried baseballs in their knapsacks. A group of them found themselves in a Federal prison stockade on the Mississippi. They formed a club. Confederate prisoners from Georgia and South Carolina watched them, "got the hang of it," and organized for rivalry. In the "East and West" series which followed, the West won triumphantly by unrecorded scores.

The "Professional" Appears

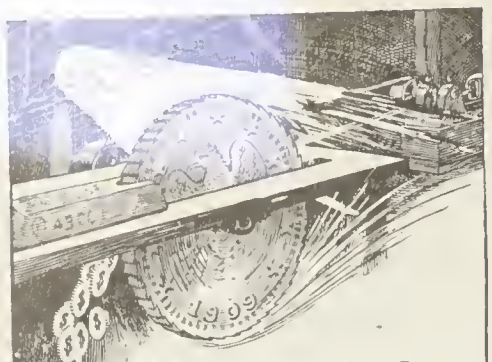
SO, WHEN the Civil War was over, the whole country was playing baseball. From the "National Game of the Manhattanese," it had become the national game of these United States. It had been going on, though with reduced strength, in New York all during the war; in 1864 the association formally abolished the "first-bound" rule for fair balls, so that to catch a runner out on a fair hit the fielder must take it on the fly. When, in 1866, the association issued its call for a convention, 202 clubs, for every part of the East and Middle West, responded. The South was preparing to come in. As soon as the guns of war were clean, the same Saltzman who introduced the "New York Game" into Boston went to Charleston, South Carolina. Baseball, it appears, had but to be seen by Americans to be loved; Charleston adopted it, and Savannah followed. In 1867 Savannah came up with many rooters and a band to play Charleston for the championship of the South. That was in the "reconstruction" period of negro domination. The big, buck black men gathered on the lines and openly scorned the white man's sport. The players, dropping their game, brandished their bats and charged them. It took a company of soldiers to quell the riot and get the Savannah team to its boat alive. In 1865 Harvard, combining with the town boys of Cambridge, formed the first college team; Tufts and then Yale followed. Baseball had arrived.

Then a slow tendency which suddenly crystallized itself, and a sudden event, changed the whole history and tendency of baseball. The professional baseball player, open or masked, sprang up in every corner of the country; and a young pitcher named Arthur Cummings, in a game between the Excelsiors of Brooklyn and the "Harvards of Cambridge," pitched the first recognized, controllable curve ball. Definitely and abruptly these two factors put an end to one period of the national game.

\+ \+ \+

Fact and Fancy

COLLIER'S published in the issue of March 13 an article by Will Irwin entitled "Tainted News Methods of the Larger Liquor Interests." He mentioned at length the "Modern View," a Jewish weekly published in St. Louis, from under whose wing proceeded a fake periodical used in the late prohibition campaign in Shreveport, Louisiana. We have since received the following letter, which we commend to all college instructors in logic as a model for sophistry:



"EDITOR COLLIER'S.

"*Dear Sir*—In explanation of the article in your issue of March 13 concerning the 'Modern View,' I desire to inform you that the anti-prohibition matter printed by us under the title of the 'Caddo Adviser' was published as a printing job by the mechanical department of the 'Modern View' Printing and Publishing Company. The only relation of the 'Modern View' as a journal to this publication was that the latter contained articles from the 'Modern View' indicating the fallacy of the prohibition movement as seen from the other side.

"We fail to see the enormity of the crime of having printed some anti-prohibition literature for those who do not coincide in the prohibition movement.

"The 'Modern View' should not be held responsible for any unauthorized statements which Mr. J. K. Baer, whom you mention, may have made without our sanction.

"The 'Modern View' is not 'backed by

Money Works Long Hours

YOU should have some money at interest working for you. It works long hours—night and day, Sundays and Holidays. By our savings plan—once every month, once every week, or every day, just as you please, you can start $10 working for you. New York City Guaranteed first mortgages are the security.

Our mortgages are a by-product of our title and loan business. Its volume and standing is shown by the fact that we have placed with our customers more than $600,000,000 in mortgages—enough, if the dollar bills were placed end to end, to go twice around the world and from New York to Pekin and back again, in addition.

Send postal or coupon below for our booklet "THE SAFE WAY TO SAVE." It tells the whole story and is a financial education in itself.

Let the Crops Pay for Your Home in Sunny Southern Alberta

On Our New Guaranteed Crop-Payment Plan

Cut or Tear Out this Advertisement and Send Your Name and Address

Don't delay to investigate. Don't confuse this with ordinary land offers or speculative propositions.

"No crops—no pay." If you can't come at once we will start operations on your farm under contract to break, cultivate and seed such parts of your lands as you wish and start the crops so that by the time you wish to come here your crop will be ready to be harvested so that you will get the profits. Or you can buy for cash and lease your land to others on crop shares. You would then own your farm outright and benefit by the rapidly increasing values per acre.

Chalmers-Detroit "Forty"—$2,750

Made as Touring Car, Toy Tonneau and Roadster

These Men Know

These are some of the buyers of Chalmers-Detroit cars.

They are men who investigate—men not easily deceived.

They are men whose special training, special ability, best fits them to judge a car.

They are men whose judgment other men prize on matters pertaining to mechanical things.

Each of these men, with the whole field to choose from, bought a Chalmers-Detroit car.

Mr. Geo. H. Helvey, the designer of the Corliss engine.

Mr. John B. Herreshoff, the famous designer of the several yachts which have successfully defended the America Cup.

Mr. Joseph Boyer, president of the Burroughs Adding Machine Co., one of the ablest business men in the country.

Mr. J. G. Vincent, head of the Inventions Department of the Burroughs Adding Machine Co.

Mr. L. H. Perlman, president Welch Motor Car Co., New York.

Mr. N. Platt, president Baker Electric Vehicle Co.

Mr. A. R. Shattuck, ex-president of the Automobile Club of America.

Mr. John F. O'Rourke, builder of the New York Subway and the Hudson River Tunnel.

Mr. Ezra A. Fitch, of the firm which furnished most of Mr. Roosevelt's African outfit.

Dr. Lee DeForrest, of Wireless Telegraphy fame.

Here Are Others

Here are some other buyers. Men who know motor cars unusually well from the standpoint of experience.

Men to whom price is the last thing to be considered, but men whose experience enables them to know values.

Men who have owned many cars, perhaps, and who know what owners want.

Men who demand the utmost in a car, both in style and service.

Each of these men has this year bought a Chalmers-Detroit car.

Mr. John S. Huyler, the world's best-known candy maker.

Mr. Arthur Brisbane, the editor.

Mr. Douglas Robinson.

Mr. Percy Rockefeller.

Mr. Craig Colgate.

Mr. Wm. Sittenham.

Mr. O. J. Gude.

Mr. W. S. Banta.

Mr. W. E. Harmon.

Mr. Chas. Hathaway.

Are They Wrong?

These men of inventive genius—these experts in mechanical things—do you think that they bought the wrong car?

These men of experience and men of wealth—do you think that they made a mistake?

They did not buy the Chalmers-Detroit "Forty" because it is medium-priced.

They did not buy the Chalmers-Detroit "30" because it cost $1500.

They bought them because, knowing cars as they do, they found no other cars to compare with them.

There are more than 2,000 others who have bought these cars this year.

Hundreds of them are men who know cars better than the average man.

Hundreds of others have employed engineers to investigate, and to compare them with other cars.

If you will thus go into the heart of the matter, you are bound to do as they did.

Please send us this coupon for full information, and name of nearest dealer.

$9.50 (Nickel Finish)

Triple Action is the only way to real revolver safety. This is the only Triple Action weapon made. After firing, the third or triple movement lifts the hammer up and above the firing pin, altogether out of the danger-zone, then keeps it against a wall of solid steel. Before you buy a revolver, have your dealer show you this one. You can see the safety-principle at a glance. If you're looking for an absolutely safe revolver—a weapon that shoots straight and hard when you want it to, and that positively cannot be discharged unless you actually pull the trigger—the Hopkins & Allen Triple Action Safety Police, is the revolver that you need.

The Walnut Army Grip gives a strong, firm handhold, and adds greatly to the weapon's effectiveness. 22, 32, and 38 calibre, nickel or blued. 4 inch barrel, blued, $10.00.

At all good hardware and sporting goods stores. If your dealer doesn't sell it, send us price; we will supply you direct, and guarantee safe delivery and satisfaction.

Our new 1909 Gun Guide and Catalog, shows the most extensive line of high-grade, low-price firearms made—revolvers, rifles and shotguns. Send for your copy of this TODAY. It's free.

the brewers.' Both the publishing and the printing departments are owned and conducted exclusively by the undersigned.

"The use of the portrait of Christ, to which reference was made, was not intended in any way as a reflection on the Christian Saviour, who was Jew as much as Christian by all the facts of history, and who is to-day regarded by the enlightened Jewish element as a great Jew who was in the completest sympathy with the highest ideals of Jewish thought and teaching.

"We are sure that it still remains the privilege of an American, be he Jew or non-Jew, to conscientiously differ from you and all good prohibition people on the logic and advisability of their arguments, efforts, and ideas.

"You have evidently been misinformed as to the standing of our journal. A closer investigation may prove to you that the 'Modern View' *does* represent the best thought and leading element of this community.

"Furthermore, it may be of interest to you to investigate the exact viewpoint of the rabbis and Jewish journals in the United States on the question of prohibition. You will learn that they are a unit in opposition to prohibition as a remedy for the liquor evil.

"Respectfully,

"A ROSENTHAL,

"Editor the 'Modern View,'

"St. Louis, Missouri."

✣

This is what the Modern View Printing and Publishing Company did:

During the local-option campaign in Shreveport nearly every voter received something which looked like a weekly periodical. It was called the "Caddo Adviser." Caddo is the parish in which Shreveport is located. It bore in large type the acknowledgment: "Modern View Printing and Publishing Company." In type, in "makeup," in size of page, in everything, it was a twin brother to the "Modern View." Its contents were half-argument against "the folly of prohibition" and half reprinted matter from the "Modern View." Mr. Irwin was in Shreveport that night, and he met J. K. Baer in the hotel. Mr. Baer introduced himself as assistant editor of the "Modern View," and presented his card with the legend "Modern View Publishing Company." He said that his periodical, under his direction, had published the "Caddo Adviser," and he seemed rather proud of it as a piece of work. In fact, Mr. Baer was eager to have COLLIER'S publish some notice of it. Later Mr. Baer wrote us, on behalf of the "Modern View," to enclose a folder picturing and describing the hellish effects of prohibition in Kansas City, Kansas. That also bore an unduly prominent signature of the "Modern View Printing and Publishing Company." He who runs may read how deeply the repudiated Mr. Baer must have betrayed the wronged Mr. Rosenthal.

In March, 1908, two trusted agents of COLLIER'S visited Mr. Rosenthal to inquire into prices and terms of publication for a paper like the "Caddo Adviser." Naturally, since our stand on the liquor question was well known, they did not state that they came from COLLIER'S. They were inquirers simply. Mr. Rosenthal accepted responsibility for the "Caddo Adviser." He seemed eager to get orders for it; he explained that he could "tool" the word "Caddo" out of the plate and substitute the name of any town or county in which the inquirers might wish to circulate it, and wrote out a schedule of prices per thousand copies, which schedule COLLIER'S has in its possession now. Further, he handed out a circular, headed "Modern View Printing and Publishing Company," which advertised the "Caddo Adviser" and recommended it to all liquor men in danger of prohibition.

When our representatives asked about the financial responsibility of his paper, Mr. Rosenthal made in German substantially this statement: "We have the backing of the brewers and we expect soon to be much more prosperous than we are now." Perhaps Mr. Rosenthal but boasted.

As for the picture of Christ decorating a liquor pamphlet, that is a matter of taste. It was not, as the result showed, to the taste of Caddo Parish, for the opinion of newspaper men on both sides of the question was that this feature of the "Caddo Adviser" turned the election for prohibition in Shreveport.

A PLEASING DESSERT

always wins favor for the housekeeper. The many possibilities of Borden's Peerless Brand Evaporated Milk (unsweetened) make it a boon to the woman who wishes to provide these delicacies for her family with convenience and economy. Dilute Peerless Milk to desired richness and use same as fresh milk or cream.—*Adv.*

PEOPLE IN EVERY WALK OF LIFE OF ALL AGES AND BOTH SEXES

Should Wear Heels of Live Rubber on Their Shoes

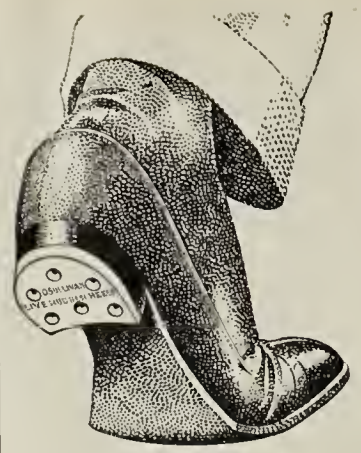
This Article is Supplementary to Editorial in

THE NEW YORK EVENING JOURNAL

The Multitudes of Young and Old People

Suffering From Weak Insteps and Flat Foot Acquired the Trouble Wearing Leather Heel Shoes That Run Down at the Side.

Prevention of diseases is the sublimest function of present-day medicine. Heels made of Live Rubber and of correct shape on your children's shoes will save much trouble.



It is good medical opinion that heels of Live Rubber help to prevent falling of the keystone of the instep arch and therefore aid in curing those symptoms, some of them most obscure, that are to-day known to be caused by the giving away of that little keystone.

Consult an exact drawing or an X-ray photograph of the foot, showing the normal arch and the keystone. The arch is supported and the keystone kept in place by the strong muscles on the back and front of the leg. The moment these muscles commence to suffer from fatigue and lose their tone the first stage of trouble begins. People whose occupations are such as to cause to become fatigued are almost sure to develop some degree of falling of the arch, unless they properly support the keystone by some substance that is springy and elastic and thus prevent overfatigue of the leg muscles.

This is all accomplished by using the heels of Live Rubber. The formation of this heel is such that it exactly supports the keystone, and by making walking easy prevents fatigue of the leg muscles.

When you cannot walk as far as you used without a feeling of fatigue, or your back aches, or you have an ache at the base of your brain; or a pain in your knees, ankles, or across the top of your feet, don't commence buying some patent medicine for rheumatism, but buy a good, substantial shoe that is straight on the inside and wide enough at the toes—that comes well up into the arch of the foot—then have a pair of Live Rubber Heels put on and save yourself all the pain and trouble that are bound to accompany a case of advanced falling of the arch of the foot.

On account of piracy in advertising, this short talk applies to the heels of Live Rubber made by O'Sullivan Rubber Company of Lowell, Mass., Orthopedic Dept.

The first heeled shoes your children wear should be equipped with long, low heels of Live Rubber instead of leather, because they are better than leather in every way.

1st, they make the child's play noiseless.

2d, they help to support the inner or weaker side of the foot.

3d, they cause the child or adult to step straight and normally.

4th, they prevent toeing out in walking, which is abnormal.

Leather heels won't do this. If they did, young people would not be afflicted with weak insteps as they are. Hospital statistics prove that the percentage of weak ankles is greater among young people than among middle-aged people and old people.

On the first heeled shoes that children wear a No. 2 thickness of heel, which is 11-32 in. thick, should be used. For people of mature age the one-half inch heel of Live Rubber should be used, because it has more wear and more elasticity.

The value of O'Sullivan's Live Rubber Heels to people in active life is now an admitted fact; and the reason why the great leading magazines recommend them is because they eliminate the jar in walking and give a noiseless, easy stride.

The great value of Heels of Live Rubber is more than this—**They encourage walking, making it healthful, fascinating and delightful.**

The name "O'SULLIVAN" on rubber is like "STERLING" on silver

If your dealer can't supply you, send diagram of heel and 35c. to the makers, O'SULLIVAN RUBBER HEEL CO., Lowell, Mass.

If you have not worn rubber heels, invest 50 cents in a pair, but be sure that you get "O'Sullivan's;" they are the only kind made of **Live Rubber.** Substitutes are not made of Live Rubber; they are partly old ground-up rubber and partly rags. Heels of Live Rubber have the endorsement of all thoughtful people; they fit in anywhere where noise is a nuisance, where people are afflicted with weak insteps, where one has a disinclination to walk, and where the daily grind is a thing to be met and overcome.

If every bit of delicate machinery that man produces carries with it springs, ball bearings, shock absorbers, and such like to lessen the wear and tear, why should mankind place a piece of hard leather paved with iron nails beneath his heel and stamp his way along rough walks with never a thought for his own well-balanced self? To be consistent, if you put a shock absorber on your automobile to save its machinery, do as much for your own body.

When you order Rubber Heels insist upon getting "O'Sullivan's," as they are the only heels made of Live Rubber. The price of O'Sullivan's heels is 50 cents of all dealers. Substitutes cost the same but give the dealer 8 cents more profit—that's why he tells they are just as good.

STERLING TIRES

Each Sterling tire is built as an individual job. Each layer of fabric and rubber is inspected before the next one goes on. Each tire is inspected from 8 to 12 times before it goes into stock. Each tire maker gets a premium for perfect work. Each tire is guaranteed.

STERLING BLUE TUBES

are absolutely superior to any other, and we say that, and back it, without reservation.

"Ask us why they are blue."

By WALDO P. WARREN

TO PREVENT DEFAULT

ONE of the saddest things in business is the failure of a bank. When we read of it in the papers, or hear of it from those involved, it impresses us very seriously. We hear of victims who have lost the saving of years, and who are left penniless in old age: we hear of sound and prosperous business enterprises going to the wall through no fault of their own. It seems very sad. But we do not hear all. We do not know or hear of the years of struggle which follow a bank failure. We forget the incident which made a prosperous man poor. We know nothing of the long heartaches, the broken hopes, and the despair which may follow the sudden loss of the savings or surplus of years of hard work.

But there is a sadder side still. It is the side of the man who has been placed in a position where the temptations are very strong, and where the suggestion of relief from personal financial pressure was daily whispered into his consciousness, and where the assurances of his detection were not made strong enough to support his moral conscience under the strain.

If it is wrong to place a man in a perilous position where he may be maimed or killed by machinery, it is even more so to place him in a position where a lax system of accounting subjects him to temptations and assures him that he will not get caught. It is the man who gets accustomed to taking chances who gets hurt by machinery, and nearly every accident can be traced to a lack of safeguards or caution. And the man who goes wrong in his accounts is always the one who takes chances—the one whose affairs are in such shape that he can conquer his fear of detection.

In the last analysis, the vital point to safeguard by a system of accounting is to be found in the time element. No man will falsify his accounts if he is reasonably certain of detection within three days. It is only when he feels secure for a long time before detection is probable that he allows himself to think of falsifying. Such operations usually begin with the idea of taking money as a temporary loan and the full expectation of paying it back by a certain date. If the assurances of detection were made certain by a system of checking up in which the time would be very short or highly uncertain, the temptation would be greatly lessened. The custom of checking accounts but once a month, and the assurance that the accounts will not be checked until a certain day, afford a margin of time sufficient to lure many a man to his downfall. Here is the point where real reform must begin in the prevention of bank failures and other kinds of defaulting. The final responsibility does not rest alone on the frail human nature that gives in under the strain, but rather on those who for the sake of economy neglect to apply such reasonable safeguards as will make detection certain and prompt. It is safe to say that nine-tenths of the instances of defaulting could have been prevented by the systematic use of such safeguards as are used by well regulated concerns.

HONORABLE DISCHARGE

IT IS coming to be rather generally understood that a man may sever connection with a firm—even at the firm's suggestion—without it reflecting especially on his own capacities. Men of spirit often disagree on matters of policy. Some men feel compelled to resign to spare their self-respect—which is usually a worthy procedure when it can be properly distinguished from touchiness. Others resign by request because they refuse to conform to an unscrupulous employer's low ethical standards. Some men who stand well in business and social life may be "regular devils" to work for—so unmindful are they of an employee's feelings and self-respect. To be discharged by an impulsive autocrat in a moment of displeasure is not necessarily to a man's discredit. Nearly every successful man has parted company with an employer at some time in his career—often by request. Many a man dates the beginning of his success from the time he got out

Any Steel that is good enough to Shave with is good enough to Strop

Why should you expect an unstropped razor blade to shave you twice with the same smoothness.

The barber doesn't—he strops and strops again and the shave that he gives you is like velvet.

Since stropping is an art that the average man has neither time nor patience to acquire, *real* shaving comfort would seem to lie between the barber and an

AutoStrop SAFETY RAZOR

from under the influence of an unsatisfactory employer. Whichever of them spoke first has little to do with the merits of the case.

COMPOSITE MIND

WHEN a man gets discouraged about his work he is often less than half a man. A word of encouragement will brighten him up. These are common facts which every employer knows. But every employer does not know—does not stop to appreciate—that five hundred men working together come to have a sort of composite mentality, and that that composite man can get discouraged and need brightening up. He does not see how one man's discouragement reacts upon another until the actual working efficiency of the whole organization is lessened. He does not see how putting new life into one man is, by the influence of example, putting new life into many others. He does not see that steps taken to build up, encourage, and inspire the composite mentality of his organization has an advantage to his business equal in proportion to the encouragement of an individual. These are things the employer of the future will deal with, and in which he will find his chief instrument of effective action. The employer of to-day—with a few exceptions here and there—is as lacking in adequate appreciation of the possibilities of stimulating the composite mentality of his organization, as Benjamin Franklin and his contemporaries were lacking in appreciation of the possibilities of the steam-engine, telegraph, and telephone. A new order of employers is as surely destined to come as that new inventions will continue to replace the old. Meanwhile, the world waits, and gets along as best it can with the methods of the present.

OUTWARD INDICATIONS

MANUFACTURERS of office furniture have frequently pointed out in their advertisements, through picture and text, the advantages of having fine office fittings—how it impresses the other man, how it commands respect and furnishes an appropriate frame for the genius that inhabits the office. It might be well if there were some advertiser whose interest it might be to point out and reiterate the idea that the appearance of an office—even after the fine furniture is in it—is what really affords an index to the general make-up of its occupant. The way the books are arranged in the mahogany bookcase, the way the papers are piled up on the tables, the way the pigeonholes bulge with uneven papers—all these things and many others go to make up the index to the man in the office. The furniture might be the same in the next office, or it might be what remains of a former régime. But the present standard of occupancy is what makes the impression. A difference, however, should be observed between the parlor-office and the workshop office, as what is good taste in one may be bad in another. The point is not so much that of making an impression that is not deserved, as in the ability to tell from the unconscious outward form the degree of inward grace—or lack of it.

TOUCH-BUTTONS

A new idea is a new-born child that needs the utmost protection from the poisoned shafts of cynical inappreciation.

Many a great idea dies on the lips because of the bitter memory of how cruelly its predecessors were received.

Pull away from current detail long enough to consider your work as a whole, and formulate more definitely your ideas for possible improvement.

To put personal comfort before duty is to miss the victory of self-mastery without which all else is vain.

A pat on the back may give new momentum to intelligent endeavor, while a sniff throws on the gear of discouraged inactivity.

Don't grumble at necessity; it is the only motive power some people will respond to.

Men are mirrors in which we often find reflected the moods with which we approach them.

An author blesses humanity, but a big share of the credit goes to the salesman who convinces humanity that it needs the blessing.

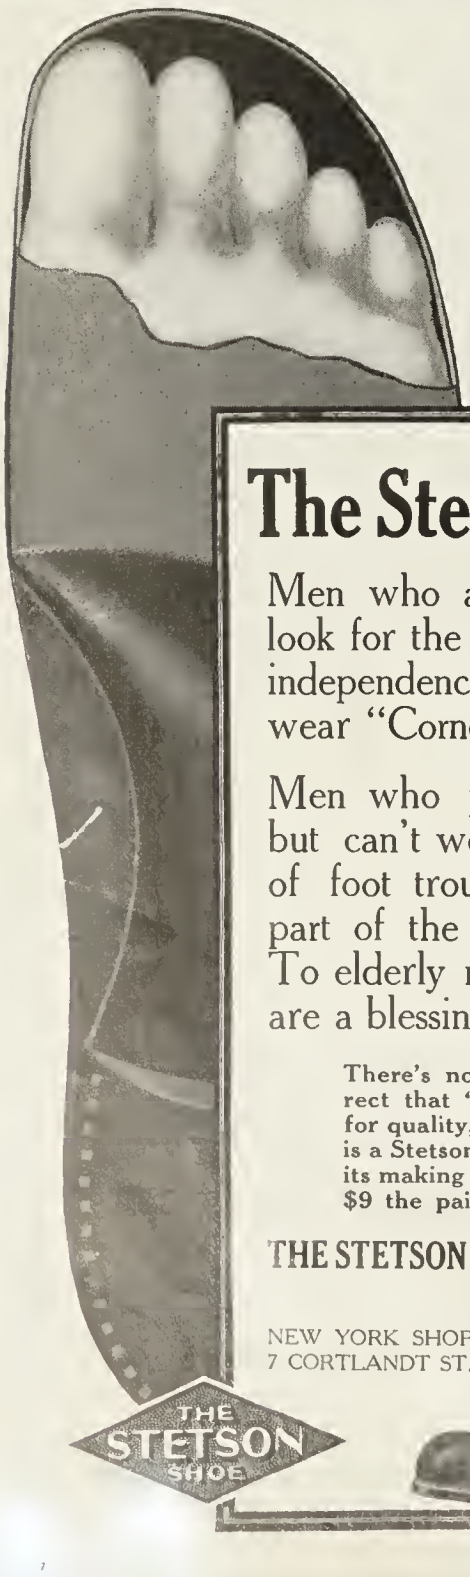
The House of Kuppenheimer

Copyright, 1909, The House of Kuppenheimer, Chicago

There's nothing in which a man can less afford to be half-way right than in his dress clothes.



Kuppenheimer Full Dress and Tuxedo suits have all the richness of fabric, all the perfection of tailoring and accuracy of fit, that the most particular garment requires.

They are always correct, beyond question. Yet they are not costly.

Our book, Styles for Men, sent upon request.

THE HOUSE OF KUPPENHEIMER

CHICAGO NEW YORK BOSTON

Look at the shape of this shoe. Think how good your foot will feel in it—standing or walking, running or jumping. All day—all the time.

The Stetson "Corndodger"

Men who are not sticklers for style, but look for the greatest foot-comfort and foot-independence a shoe can be made to give, wear "Corndodgers" always.

Men who prefer very fashionable shoes, but can't wear them steadily on account of foot troubles, wear "Corndodgers" a part of the time and their feet get well. To elderly men especially "Corndodgers" are a blessing.

There's no foot trouble that Nature can correct that "Corndodgers" won't set right. As for quality, wear and worth, the "Corndodger" is a Stetson, which means that its material and its making are the finest put into shoes. $5 to $9 the pair.

C.; Toronto, Ont., The Colonial Building, 47-51 King Street West. Copyright 1909 by P. F. Collier & Son. Entered as second-class matter February 16, 1905, at the Post-Office at New York, New York, under the Act of Congress of March 3, 1879. Price: United States and Mexico, 10 cents a copy, $5.20 a year. Canada, 12 cents a copy, $6.00 a year. Foreign, 15 cents a copy, $7.80 a year.

NOTICE TO SUBSCRIBERS.—Change of Address—Subscribers when ordering a change of address should give the old as well as the new address, and the ledger number on their wrapper. From two to three weeks must necessarily elapse before the change can be made, and before the first copy of Collier's will reach any new subscriber.

ADVERTISING BULLETIN

NO. 3

THE MAY 15TH ISSUE

THIS is one of our special issues for advertisers, the Men's Wear Number for Spring. You will observe that six advertisers who sell their goods through haberdashers, have full pages in this issue, and there are also many smaller advertisements of similar character. The object of these manufacturers in concentrating all of this men's wear business in one issue is not only for its effect upon you, Collier's readers, but for the benefit of dealers throughout the country as well.

Here is an interesting story of what such publicity accomplishes. February 6th we published a Hardware and Building Materials Number. Among others, a tool manufacturer in the number issued a circular, using his Collier page for a back cover, and sent it broadcast to hardware dealers. We wrote to a hardware man in Galesburg whom we know, asking how such matter impressed him. He replied: "We received the Irwin Auger Bit Company's circular and ordered an entire stock of Irwin Auger Bits. To be sure, we had carried them for several years but had let the line die out, but upon receiving this circular put in an entirely new line."

This May 15th issue complete goes not only to Collier's regular 500,000 circulation, but also to 12,000 men's wear dealers, whose names we select carefully. You can see what an effect such concerted effort will have and what the results will be for the manufacturers represented. Your local dealer in all probability carries these advertised articles. If not, ask him to order them.

And remember, these advertisers are making it possible for us to give you a better National Weekly every week.

PARIS GARTERS

No Metal Can Touch You

You Need Them with Knee Drawers

This garter conforms absolutely to the shape of the leg. PARIS is *the only garter that fits so perfectly you wear it unconsciously.*

25 and 50 cents at dealers, or direct if he is out.

A. STEIN & CO., 160 Center Ave., Chicago

Try This Soap for Massage

Here is a toilet soap so pure—so delicate—so delightfully soothing—that you can massage its satiny lather right into the pores of the skin and feel the benefits almost at once.

Palmolive is made from palm and olive oils shipped to us direct from the Orient.

These oils are nature's own beautifiers. Oriental women use them exclusively. We have blended them perfectly, after 36 years of experience, so in Palmolive they're better than ever.

The result is delightful. Don't miss it longer.

We use no artificial color. Palm olive softens and freshens the driest skin. We are proud of its delicate perfume.

Send us 4c for a generous sample cake and our free book, "*The Easy Way to Beauty*"—or buy a trial cake at your dealer's, price 15c.

See what the benefits are from a massage with Palmolive.

FASTEST SELLING 25c ARTICLE INVENTED. Costs agents $1.00 doz. 200% profit. Appeals to man and woman, drug, department, novelty stores. Selected territory. New England Sales Co., 85 State St., Boston, Mass.

PATENTS

PATENTS AND TRADE-MARKS PROCURED. Our Hand-Book for Inventors and Manufacturers mailed on request. Patent and Trade-Mark Causes. Beeler & Robb, Patent Lawyers, 74-76 McGill Bldg., Washington, D. C.

PATENTS. BOOKS FREE. RATES REASONable. Highest references. Best services. I procure patents that protect. Watson E. Coleman, Patent Lawyer, 612 F Street, Washington, D. C.

PATENTS THAT PROTECT. OUR THREE books for Inventors mailed on receipt of six cents stamps. R. S. & A. B. Lacey, Rooms 19 to 29 Pacific Bldg., Washington, D. C. Established 1869.

PATENTS THAT PAY. PROTECT YOUR Ideas! 2 Books free: "Fortunes in Patents—What and How to Invent"; 84-page Guide Book. Free search of the Pat. Off. records. E. E. Vrooman, 1152 F. St., Washington, D. C.

DON'T LET YOUR PATENT LIE IDLE—WE'LL make dies and tools and manufacture your article ready for market. Let us show you what we can do for you. Don't delay. So. Stamping & Mfg. Co., R. C. Nashville, Tenn.

MASON, FENWICK & LAWRENCE, PATENT Lawyers, Washington, D. C., Box B. Est'd 47 years. Booklet free. Highest references. Best service. Terms moderate. Be careful in selecting an attorney. Write us.

TYPEWRITERS, OFFICE SUPPLIES

TYPEWRITER BARGAINS: $10.00 TO $65.00. Many good as new; we guarantee them. Write before you buy. Have all makes. Ship subject to examination. McLaughlin Typewriter Ex., 401 Ozark Bldg., St. Louis, Mo.

ALL STANDARD REBUILT TYPEWRITERS, good as new, at ½ to ¼ the manufacturers' price. Large assortment. Price from $15 to $75. Shipped on approval. Plummer & Williams, 901-145 Van Buren St., Chicago.

FRANKLIN TYPEWRITERS AND NO. 2 REMington Typewriters rented three dollars for three months. Shipped anywhere on guarantee of your Bank that you are all right. Cutter Tower Co., 184 Summer St., Boston, Mass.

SEND FOR MY SPECIAL "NO-RISK" OFFER and description of All Standard typewriters from $10 up. Cash discounts or easy-as-rent payments. J. E. Grady, Pres. Rebuilt Typewriter Co., 96 N. May St., Chicago, Ill.

OF INTEREST TO MEN

WE RESHARPEN ALL MAKES OF SAFETY razor blades, 30c a dozen. 30,000 pleased men take this 70c saving. Better than brand new ones—try us. Keenedge Co., 239 Keenedge Bldg., Chicago.

MADE-TO-MEASURE SUITS, ALL WOOL, that fit and hang correctly, $12.00. Pants, $2.50. Style, cut, workmanship and trimmings guaranteed. Beautiful Spring samples Free. Bell Tailoring Company, Dept. J, Chicago, Illinois.

FISHERMEN, HUNTERS, TOURISTS, WRITE for particulars how to keep well when away from home. Why chance spoiling your trip for want of information we are glad to send free? Write today. F. E. Daigneau, Austin, Minn.

FREE TRIAL HAVANA CIGARS, HAND MADE, direct from Cuban operated factory here. Climate and labor are best. Write, giving business card or reference, for fifty, prepaid. Smoke ten. Then send $2.50 in ten days, or return cigars. Gonzalez Co., Box 284, Pensacola, Fla.

AUTOS—MOTOR CYCLES—SUNDRIES

"PAY AS YOU TRY THEM." KE-PA-GO-IN Tires will then speak for themselves. Shall we send you particulars? Beebe-Elliott Co., Racine, Wis.

M.M. 3½ H.P. MAGNETO SPECIAL FOR 1909. Equipped with Bosch magneto and dozens of other improvements; more speed and power than any other Motorcycles built. American Cycle Company, Brockton, Mass.

WATRES AUTO SIGNAL—A POWERFUL, compelling whistle blown by spent gas from storage tank—always available even when coasting. Not a freak nor a toy. Send for booklet. Watres Mfg. Co., 1139 B'way, N. Y. City.

OF INTEREST TO WOMEN

WE TEACH LADIES HAIRDRESSING, MANicuring, facial massage, chiropody or electrolysis in a few weeks. Tools given. Unusual opportunity to establish an independent business. Great demand for graduates. Moler System of Colleges, 435 Wabash Ave., Chicago, Ill.

"THE UP-TO-DATE HOME"—TESTS OF Labor-Saving Appliances, 48 pp., 54 ill., 10 cts. Bulletin on "Domestic Science"—home-study courses, 70 pp., Free. Am. School of Home Economics, 632 W. 69th St., Chicago.

BEST QUILTS FOR YOUR BEDS. BUY ALlendale Counterpanes, the staple for over 50 years. Fine in quality, beautiful in appearance. Recommended by physicians; sanitary, durable; laundered easily as sheets. Write Dimity Quilt Co., Providence, R.I., for description E.

E. Z. SEAL FRUIT JARS: THE NAME "Atlas" on any fruit jar is guarantee of quality. The Atlas E. Z. Seal is the best jar made. If this were not true we could not afford to advertise it in the leading magazines. Book of Preserving Recipes free. If your dealer will not supply, don't take a substitute but write us. Hazel-Atlas Glass Co., Wheeling, W. Va.

PHOTOGRAPHY

THERE IS DEPTH AND RICHNESS ABOUT plates, films and prints developed with Bingham Developers that make them seem as of a different character altogether. Circular on request. Address—Bingham Company, Dept. F, Binghamton, N. Y. (The Photo City).

GET BETTER NEGATIVES. TO DEMONstrate my system I will develop one 6 exposure film, any size, free. Booklet "Film Faults," price list and sample Velox print free. Send 2c postage. Pollard, Lynn, Mass.

EXPERT PHOTO.-FINISHING PROMPTLY by mail. Satisfactory work guaranteed. Courteous service. Film and prints returned postpaid. Enlarging a specialty. Fresh film mailed promptly, postpaid, upon receipt of catalogue prices. Write for sample print and prices. Robt. C. Johnston, 12 No. Main St., Wilkes-Barre, Pa.

MAKE YOUR OWN PHOTO-PRINT OUT paper and obtain more artistic results. Variety of tones and effects without toning. Solution to make one gross 4 x 5 prints, $1.25, including developer. Send stamp for booklet and print. Chemical Arts Co., Oak Park, Chicago, Ill.

MANICURING

ARE YOU GIVING PROPER ATTENTION TO the care of your finger nails and hands? Send four cents in stamps for our booklet, "Manicuring," which tells just why, what to do and how to do it, what to use and how to use it. The Lever Co., Thoroughfare Bldg., Broadway and 57th St., New York.

SHETLAND PONIES

A SHETLAND PONY IS AN UNCEASING source of pleasure and robust health to children. Safe. Inexpensive to keep. Beautifully illustrated catalogue sent free. Belle Meade Farm, Box 30, Bedford, Mass.

INVESTMENTS

REAL ESTATE MORTGAGES NET 5% TO 7%. $500 upwards. Absolutely safe, steadily increasing in value. Not affected by trusts, panics. Better than savings banks. Worth investigating. Write Bonds and Mortgages, Monadnock Bldg., Chicago, free sample copy. Tells all about them.

MISCELLANEOUS

"JUBILEE EDITION" OF PAGE CATALOG free—Issued in celebration of the Quarter-Centennial of Page Fence. Tells why over 800,000 farmers buy Page Fence, made of High-Carbon Open-Hearth Spring Steel Wire. Shows why it is the most economical fence on the market. Send today for Free "Jubilee Catalog." Page Woven Wire Fence Co., Box 3 Z, Adrian, Mich.

Posers for Prohibitionists

AUSTERE INVECTIVE is hurled at us by the "National Prohibitionist" because we accuse the Prohibition Party of practical forgery in circulating what purports to be a verbatim account of ABRAHAM LINCOLN'S stand in favor of prohibition. Their only defense is that one old man alleges that LINCOLN made this statement to him just before he died—a flimsy enough foundation, even if we had no real knowledge on the subject. From boyhood to age LINCOLN was interested in temperance, and yet he is nowhere on record, either in his own writing or in any authentic history, as speaking one word favorable to prohibition. Look, moreover, at what actual evidence we have. There is his famous speech in Illinois, explaining how much better than violence are education and persuasion. There is the liquor license which his own store took out. There is the ill-concealed impatience of his reply to the clergymen who bothered him about the drinking habits of General GRANT. There is also something much more conclusive. Our sweet friends, on the "National Prohibitionist," who call us such ugly names, have only to examine the records of the Legislature in Illinois. On December 19, 1840, it was moved to enact by amendment that "no person shall be licensed to sell vinous or spirituous liquors in this State." ABRAHAM LINCOLN moved to lay this amendment on the table. A week later an attempt was made to pass a provision that a liquor license could be refused if a majority of the voters in the town, district, or ward protested. ABRAHAM LINCOLN voted against this restriction. On January 13 he voted again to the same effect. We shall await calmly the "National Prohibitionist's" reply. ABRAHAM LINCOLN believed drink to be probably the greatest single curse upon the earth. How it should be decreased was a question of reason and experience. If he lived to-day, our guess is that he would, like most wise men, approve of prohibition in certain neighborhoods, condemning it in others. The present is not bound by our dead statesman's views. It is bound, however, not to state those views falsely; and we hope, therefore, never to see circulated by the Prohibitionists another document citing ABRAHAM LINCOLN as an upholder of their creed.

Gambling and the Press

THE WALL STREET COMMISSION has no easy task. One thing, however, the members of this commission well might do. The howl that gambling must be wholly eliminated from business has been loudest from certain yellow journals. Our proposal is that this commission report strongly in favor of suppressing fake financial advertisements, of which these very same yellow journals carry many. No simple and possible step would do so much to kill wildcat speculation. The commission, if it thought fit, might at the same time advise Legislatures everywhere to forbid the newspapers to tell their readers every day how they can be sure winners on the races. Such advice ought not to be printed, even in the same issues with noble editorials telling how very, very demoralizing and wrong it is to bet on horses or on the fluctuations of the market.

Hughes Again

DOMINATED BY CORPORATIONS, dictated to by money, the Legislature of New York, at the end of its session, shamelessly, almost gaily, threw off its mask. It passed the private grab bills with the same enthusiasm it had shown in putting to sleep the bills which had nothing behind them but the general good. This gross venality means that Governor HUGHES must run again. One year more will hardly be sufficient to clear the rascals out, and he can not drop his work with the Black Horse Cavalry in command. The people of New York State must be aroused to defeat the pirate crew, so-called Republicans and so-called Democrats alike. HUGHES must lead the fight, and the measures which he lost this year must be passed before he retires to private life.

The Theater Contest

PEACE, SO-CALLED, between the theatrical syndicate, on the one hand, and HARRISON GREY FISKE and DAVID BELASCO, on the other, followed hard upon open declaration of war between the syndicate and the SHUBERTS. With BELASCO the detached observer need have no concern. His record is not of a kind to encourage the discussion of principles with him. Mr. FISKE'S case is different. He and his wife have been the most intelligent "producers" in America. By sheer worth they have withstood the trust's exterminating wishes for many years. For Mr. FISKE to change his principles would be discouraging, and there is no evidence that he intends to change. ERLANGER, hard hit by recent doings, invites Mr. FISKE to play in his theaters. Mr. FISKE accepts. All so far is well. It is not a question between the relative merits of the SHUBERTS and the trust. It is a matter of liberty. Mr. FISKE ought not to allow SHUBERT to prevent his playing in Erlanger theatres. He ought not to allow ERLANGER to prevent his playing in Shubert theaters, whenever and wherever he may choose.

Conried

A SHARP ANTI-CLIMAX was the later part of HEINRICH CONRIED'S life. He conducted what was beyond comparison the best theater in the United States, but as the plays were given in German the theater existed in comparative obscurity. An offer from the Metropolitan Opera Company, therefore, seemed a dazzling advancement, because it meant notoriety and money. Actually it was the beginning of the downward slope. CONRIED had been prepared by his German training to manage a theater on better principles than are understood in our dramatic world, but nothing in him was especially fitted for grand-opera success, even if serious illness had not set in at about the time of his new venture. His more conspicuous office hurt his sounder fame. To appreciate the value of his life we must harken back to the days when his theater gave to a few Germans and fastidious Americans an opportunity to taste the drama in its better possibilities—a touch of what the playhouse means in Paris, Vienna, Berlin and many a smaller German town.

Gillette

IT IS TRUE, we fear, that WILLIAM GILLETTE will soon retire. His health for a long time has not been strong, and the actor's life is a severe test of strength. Mr. GILLETTE'S career began with a wide experience in all sorts of parts, a training which was necessary to the technical proficiency which he acquired. Later, as an actor, he became noted in a special line, which sometimes blinded observers to the sound and broad acquirement underneath. As a playwright he stands first among Americans for the ability with which he can construct scenes of tension and plots dependent upon action. It is no small accomplishment to have carried the technique of American drama to a higher level.

Holland's Baby

IN THE MIX-UP of Europe little of the world's sympathy goes to Germany. Who was it, when the child was mourning over the deer slain to meet the tiger's need, consoled her with a reminder of how pleasant the incident was for the tiger? Germany's ambitions are easy to understand. She is growing rapidly, and she has no room to grow. She is frightening England into hysterics with her naval program, and we could easily be alarmed about her intentions in South America if we were inclined. Poor little Holland, necessary to Germany's comfort, naturally took the birth of an heir to heart, since the new baby very possibly stands between her and absorption by her powerful and hungry neighbor. This is a universe in which, of two opposing interests, often both are just. We can't blame Germany for her restless wish to grow, and yet Holland is but one of several countries to whom that expansion seems a threat.

"Courtesy"

SMALL GOOD will come of political appointments to Federal offices until the foolish fabric of "Senatorial courtesy" has been cast into the junk-heap. OSCAR LAWLER, United States District Attorney for the Southern District of California, has been appointed, on the recommendation of Senator FLINT of California, Assistant Attorney-General of the United States, with special jurisdiction as the law officer of the Interior Department. Senator FLINT was the attorney of the Southern Pacific at the time of his election. LAWLER is a tool of the Southern Pacific political machine. In every State the finest types of ability and independent citizenship are blacklisted by this system of appointment. Draw a line north and south across the map at the western boundary of Kansas, and every Federal Senator who represents a State west of that line, with four exceptions, is a corporation Senator. These Senators are the political bosses of their States. They have stood for the exploitation

which has despoiled the West and taken from the pioneers the opportunities which lured them westward. Their appointees have made the consummation of these frauds possible. To recognize their selections is to continue the system.

Doing It Thoroughly

SAN FRANCISCO IS PROFITING by the lessons of her disaster. She is subterraneously barricading herself. Sixty-three cisterns in as many different parts of the city were provided in the pioneer days as a fire protection, probably before there was any regular system of water works. Forty of these were in passive commission, the remaining twenty-three were forgotten or had become disused in the unheeding, Capuan days before the fire. These have now been restored. In addition, one hundred more cisterns, built of reenforced concrete, have been erected, with a capacity of 75,000 gallons each. There will be three fresh-water reservoirs—one on Twin Peaks, 730 feet high, with a capacity of ten million gallons; one on Ashbury Heights, 510 feet high, with a capacity of one million gallons; and one on Clay Street Hill, 309 feet high, with a capacity of another million gallons. All three of these systems are interconnected with double lines of mains. They will be kept filled with fresh water at all times from pumping stations in the artesian belt. Ninety-three miles of the best water piping that can be secured, running from ten inches to forty inches in diameter, will connect with these reservoirs. These pipes will gridiron practically all of the city east of Devisadero Street and north of Twenty-ninth Street, covering four-fifths of the value of the city. Connected with this system of piping will also be two salt-water pumping stations. The failure of water pressure at the time of the great fire was due to a break or breaks in the main pipes. . The present piping system is so arranged with valves and by-passes that, should a break occur in any one block or combination of blocks, the break can be cut out and the remainder of the system continued in perfect working order. Already under construction are two of the most powerful of fire-boats. The water from them will reach all territory within a thousand feet of the water front. There will be an underground telephone system for the exclusive use of the high-pressure water system, connecting all fire-alarm offices, all fire stations, and all gate-houses. The present water system for the extinguishment of fires is owned by the Spring Valley Water Company, a private corporation. It is not capable of furnishing the quantity and pressure required for fire purposes in so large and growing a city as San Francisco. The new high-pressure system, which will be independent of the Spring Valley system, will be municipally-owned. The $5,200,000 which San Francisco has voted for the purpose will be well spent. It is an example of the enterprise and energy of which that town is full.

Buttonholing the Red Planet

TO HELIOGRAPH MARS is the spring-time suggestion of Professor PICKERING. By ten million dollars' worth of mirrors he would send a steady flash of light into the Martian eye. He schemes a dot and dash system, an interplanetary Morse code, by which Man and Martian can report progress, each to the other. Both planets are busy in canal-building. Tips from our friend aloft on the merits of the lock canal may soon vibrate through the infinite. Who knows but they are a year ahead on air flight, and even now may be holding a spring regatta in the airy blue? With a sunny wink or so, they can shed wisdom through the heavenly spaces. This side the Milky Way we will exchange gossip of the flight through the Midnight Sky. Will they in their fuller knowledge merge our little knowledge, like a pearl dissolved in wine, or shall we be pedagogue to the red planet and lead it to richer experience than its lonely circlings knew? Have they found the road to happiness, and is it a broad highway for the tread of a host, or just a brief and narrow trail, smothered in wild roses and moss, hidden from many? Will the stellar vocabulary which we two shall shortly devise suffice to tell of some new and finer art than cold sculpture and sad music, and fading paint and limping words—an art by which each Man or Martian relieves the hidden pain and stands revealed to his fellows, through no intervening veils, no darkling glass?

Robert Watchorn

THE EXIGENCIES of the Republican organization were such that ROBERT WATCHORN, Commissioner of Immigration, had to be sacrificed to the hungry machine. As those on the inside know, there were no charges against him. OSCAR S. STRAUS, Secretary of Commerce and Labor, in whose department of jurisdiction Ellis Island fell, appealed for Mr. WATCHORN'S renomination. The prime defect in this official was that he was no politician. He had feeble consideration for the desires of prominent statesmen, and he failed to relate civil service to the needs of district leaders. In his term of office he remodeled Ellis Island and made the act of entry to the United States easier, cleaner, and more human for 850,000 people in a year. He was honest and fearless and warm-hearted—a skilled executive with elements of pity and justice. Few were aware that his sudden and hushed exit on the *Adriatic* on April 28 was, save for possible brief temporary visits, a final good-by to the country where he had done service since he first came to us, an immigrant lad himself.

Bufo Lentiginosus

"THE OLDEST TOAD IS DEAD. He Was Probably at Least a Thousand—Immured That Long in Stone." Thus run the headlines of a newspaper report telling of the demise of Rameses II, the Oldest Inhabitant of a Zoo. It was avouched that this toad was originally discovered soundly sleeping in the very center of a large boulder five hundred feet below the earth's surface. Later this story was aspersed somewhat, and our force of muck-rakers have not yet brought in their full report. In the main, if it isn't true it ought to be, as the shyster remarked of his brief. Since he poured his poisoned words into the ear of the slumbering Eve the toad has enjoyed an impressive character. If he is cornered, he will spit blood. If you kill him, and one of your cows catches sight of the dead animal and smells of it, she will give bloody milk. He who handles a toad will soon have warts. Because of all these indisputable facts, added to his long life, there is impressiveness in the humble batrachian. It is something to lose Rameses II, who perhaps antedated RICHARD Cœur de Lion, CHAUCER, and COLUMBUS.

A "Friend" of Cervera

THAT BITTER AND SNOBBISH British paper, once intelligent and powerful, the "Saturday Review," emits the following:

"Outside America the world has given the palm rather to the courteous, chivalrous, doomed CERVERA than to the swaggering destroyer of unarmed wooden ships or to him who was to pave Hell with Spaniards."

If ever there was a chorus of praise for a stricken foeman, that chorus was raised for CERVERA in every town and hamlet of our land. TENNYSON sang how the Spaniards graciously entreated the captured English raider, Sir RICHARD GRENVILLE:

> "And they praised him to his face,
> With their courtly foreign grace."

We lauded CERVERA to his face and behind his back, and wished him a multitudinous Godspeed when he made his last and greatest voyage only the other day.

A Receipt for Happiness

H. G. WELLS, in his latest and perhaps greatest novel, "Tono-Bungay," sees modern life as an aerial observer, and sees it pass. He writes of the caste system in England, the relic of social inequality which still intrudes its presence wherever in the trim little isle two or three are gathered together, as if it were already among the dim unhappy things forgotten and far away. The bigotry of the narrow creeds and the creak of rheumatic ritual become melodious by distance. It is a gentle sway that he exercises over the mad world of daily living. Like a master of magic, he causes the hard structure to dissolve before your eyes, and with its angularities and discords to pass in music out of sight. He unfolds a succession of unlovely persons, of miserable episodes, but none troubles him. These thin ghosts smell the morning.

The Little Welsh Parish

FROM DIVERSE DIRECTIONS, one from Vermont, another from Florida, come letters anent the name of the Welsh town which the earthquake shook up, and both letters call our attention to a certain parish on the Anglesea side of Menai Bridge, Wales: "When I was a youngster," says one of our correspondents, "I walked over the pass of Dwygyfylchi, visited friends in Rhosllanerchrhregog and Llanfairmathafarneithaf, and walked the length and breadth of the little parish of Llanfairpwllgwyngyllgogery chwyrndrobwllllantysiliogogogoch." When that is translated, it means "The Church of Saint Mary in a hollow of white hazel near to the rapid whirlpool and to St. Tysilio's Church near to a red cave."

It Doesn't Follow

A TOUGH EXERCISE is reasoning correctly. Already rumors abound that COLLIER'S has embraced the theory that BACON wrote the plays of SHAKESPEARE. We accept an article because it strikes us as an interesting thing to read and a harmless amusement for the human brain. The tangent proclivities of the average intellect do the rest. We have given to the subject no such study as would lend any interest whatever to our opinion about the question of whether BACON contributed anything to SHAKESPEARE'S work, and if so, how little or how much. The Baconians think he did everything. Most scholars think BACON never worked at all with SHAKESPEARE, as FLETCHER and others did. Some, perhaps, may believe he did a little and busied himself arranging for extravagant later credit. Literary controversies have a never-failing interest. They are sporting events, like prize-fighting, baseball, and votes on the most popular actress or school teacher. The Bacon theory shows the same ability to crop up at intervals as does the argument about the ten best books. Mr. BOOTH is an intelligent man and an experienced editor, and his presentation of the argument will be at least discussed with more seriousness than the efforts of IGNATIUS DONNELLY and others. There is no reason why anybody should become irate. MARK TWAIN has just made a plunge at SHAKESPEARE. Where lies the harm? Nobody can dislodge the king of dramatists unless he can bring forth conclusive evidence, and it seems to us absurd to bristle angrily when a new champion lowers his lance, ready to charge the illustrious holder of the champion literary belt.

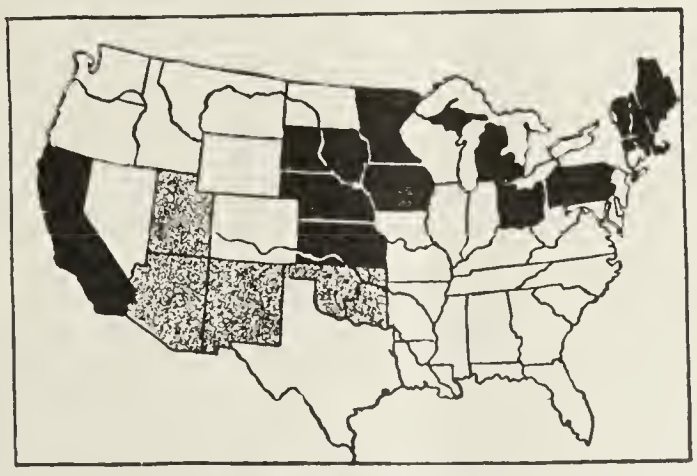
A Demoralized Party

By MARK SULLIVAN

TWICE in the history of the United States a great party has broken up and disappeared; for one period of twenty-four years there was but a single party. That was "a period of personal politics." Men, instead of following a party or a principle, separated into groups about several great leaders—Adams, Jackson, Clay, Calhoun, and Clinton. These men had much the position that Roosevelt, Bryan, Folk, Hughes, and Johnson have to-day. "We are all Federalists, we are all Republicans," said Jefferson in his famous inaugural address. As well could Taft have uttered an analogous statement. As majorities and statistics go, there are seventeen Democratic States; actually there are but nine in which Democratic principles can be said to find effective expression.

Some Figures

THE Democrats in the Lower House of Congress number 171. From that number must be deducted three conspicuous groups:



Democrats who voted with the Republicans in favor of a protective tariff on lumber (in defiance of the Democratic platform declaration for free lumber)	38
Democrats who voted with the Republicans in favor of a protective tariff on hides	29
Democrats who broke away from their party caucus and voted with the Republican organization against the modification of the rules	23
	90
Deduct for duplicates . .	17
Total	73

Here are seventy-three Democrats—only sixteen less than a majority of all the Democrats in Congress—who have deserted both the party organization and the most important of the party's principles. This before the present Congress is thirty days old. No one doubts there are others ready to go the same way. If the Republicans had needed more than twenty-three Democrats to save the organization, no one doubts they could have been got in the same way the twenty-three were got. If there had been a separate vote on sugar, or on cotton, or on iron, as there was on lumber and on hides, everybody knows that there would be but a mere handful of Democrats left defending the party's ancient position of opposition to protection. There may yet be separate votes on these schedules, and when the present Congress ends, twenty-two months from now, the number of members of Congress who, by any accepted definition, can call themselves Democrats may well be less than thirty-five out of four hundred, less than the number of Republican insurgents. Indeed, the thirty-one Republican insurgents are better entitled to be called a party, with definite principles, than the Democrats.

The Map of Democracy To-day

Black—*The States that went Republican last Fall.*
White—*The States that went Democratic last Fall.*
(Arizona and New Mexico are Territories)
✠—*The States in white marked thus are nominally Democratic, with Democratic delegations in Congress;* but in every case a majority of the Democratic Congressmen from each of these States **voted with the Republican organization for a protective tariff, either on lumber** *(in spite of the Democratic platform declaration for free lumber)* **or on hides**

Democracy in 1893

Black—*Republican.*
White—*Democratic and Populist.*
Gray—*Territories.*
At this time the President was a Democrat and the Democrats controlled the Senate by 44 to 38, and the Lower House of Congress by 220 to 128.

The Protective Tariff as a "Local Issue"

GEORGIA'S representation in Congress consists of eleven Democrats; seven of them voted for a tariff on lumber.

Texas has sixteen Democrats in Congress; fourteen of them voted for a tariff on hides; two of the fourteen also voted for a tariff on lumber.

Louisiana's delegation is six Democrats; all six of them voted for a tariff on lumber; two of them voted also for a tariff on hides; two of them voted consistently with the Republican machine on matters of organization, the consideration, presumably, being the high tariff which the Payne bill puts on sugar.

Florida has three Congressmen, all Democrats; two of these voted for a tariff on lumber.

Virginia has ten Congressmen, nine of them Democrats; five of the nine voted for a tariff on lumber.

North Carolina has seven Democratic Congressmen; all but one of them voted for a tariff on lumber.

The Repudiated Plank

THIS plank appeared in the Democratic platform made at Denver last July:

"We demand the immediate repeal of the tariff on wood pulp, print paper, lumber, timber, and logs, and that these articles be placed on the free list."

This plank is a rather heavy attempt to make it clear that the Democrats would, if placed in power, take the tariff off everything made out of wood. The clumsiness of the wording is due to the intention to be specific and forcible. This plank was the one most exploited by the Democratic orators in Nebraska, Iowa, Kansas—in all those States where trees don't grow and people do build houses. It was by virtue of this plank that Bryan carried Nebraska. The Hon. Claude Kitchin of Scotland Neck, Halifax County, is the one Democratic Congressman in the North Carolina delegation who voted against the tariff on lumber. His speech on this subject, and on the Democrats who repudiated the party platform, is easily one of the best five delivered in the present special session. When heckled by the Hon. Martin Dies of Beaumont, Texas, one of the Democrats who spoke in favor of a tariff on lumber, Mr. Kitchin said:

"I am not responsible for the gentleman's failure to understand my position. I have tried to make myself plain, that I do not advocate a thing as proper and right because it is 'down South' and oppose the same thing as improper and wrong because it is not 'down South.' [Applause.] In the matter of legislation which affects a whole people, I want to look beyond my district, beyond my State. I want to look at 90,000,000 American people; and, sir, if the people of my district wish their Representative to vote for a measure which will take, not by labor, not for value received, but by the dry, naked law, millions of dollars from all the people and put it into the pockets of a very few of my people 'down South,' I would say to them that they ought to send here not me, not a Democrat, but a Republican from my district. [Applause.]

"I wish to ask you, can you, as a Democrat, justify your position in advocating protection on lumber because it is your home industry? Does not the gentleman from Pennsylvania, in asking for a tariff upon the Steel Trust articles, put it upon the ground that it is his home industry? Do not the Representatives from the Woolen Trust districts come here and ask protection on woolen goods because it is their home industry? Does not every member from the districts of the trusts put their demands upon the ground that it is their home industry? [Applause on the Democratic side.]"

A campaign orator, using the full license permitted to epigrammatists, once said: "Democracy is a faith, Republicanism is an appetite."

The Democratic Press

THROUGHOUT the East, the North, and the Northwest, if there is any large daily newspaper that calls itself Democratic, except the one in Buffalo owned by Mr. Mack, the Democratic national chairman, it does not now force itself on the memory. The New York "World" would indignantly repudiate the label "Democratic." The Baltimore "Sun" left the Democrats last summer. In Boston, Philadelphia, Pittsburg, Cincinnati, Cleveland, Chicago, Indianapolis, St. Paul, Minneapolis, Seattle, or Portland, where is the paper that calls itself "Democratic"? Colonel Watterson's "Courier-Journal" is still orthodox, and Congressman Hitchcock runs the Omaha "World-Herald" as a Democratic paper. In the South there are papers that are Democratic—in the same sense as most of the Southern Congressmen who voted against free lumber. They have not rebuked their Congressmen for breaking faith.

Collier's

Facts About Francis Bacon And Some About Shakespeare

"For the third vice or disease of learning, which concerneth deceit or untruth, it is of all the rest the foulest; as that which doth destroy the essential form of knowledge, which is nothing but a representation of truth: for the truth of being and the truth of knowing are one, differing no more than the direct beam and the beam reflected."
—"Advancement of Learning," · Bk. I

By WM. LEAVITT STODDARD

William Shakespeare

Francis Bacon

NOTHING can withstand facts. Darwinism, at first a theory, conquered at last because facts supported it; the Higher Criticism won its victory, too, by facts; tuberculosis and disease are vanishing because facts as men handle them are against them. Facts can upset old systems of belief and overturn the habits and badly built works of men. Great are facts, for, as a poet said, they are the sons of truth.

It is a fact, though a newly known one, that the name of Francis Bacon is signed, by a simple acrostic, in the poems and plays known to the world as those of William Shakespeare. This fact has been discovered by William Stone Booth of Cambridge, Massachusetts (not of Harvard University). He has proved it true that Bacon's name is written into the immortal Plays, where it has stood, a sign manual, unseen till this day.

This fact is an astonishing fact. It recalls other and unsuccessful attempts to produce similar facts—notably those of Ignatius Donnelly and Mrs. Gallup. It leads us to reread with circumspection the biographies of Shakespeare, and to pull down old school and college lecture notes on the subject. It should lead us eventually to conclude that the life of William Shakespeare and much that appertains thereto, which we have been taught as fact, is an idle tale, bulwarked up by unconsidered and very recondite trifles, and is, in short, no fact at all and that Francis Bacon is responsible for this great English poetry. It leads us, incidentally, to recall the intolerance of those who have got into currency poor jests about an exceedingly brilliant theory of authorship. It leads us, finally, to marvel at the ingenuity of the man who, by sheer experiment, uncovered this cipher, and blew the dust of three centuries from it and set it up for us to see. Here, then, is an exposition of this Fact.

Acrostics

THE valentine plan of making the first letters of the lines of a poem spell a name is familiar to all. The puzzle columns of the magazines furnish examples of such elementary acrostics. They call for a trifling skill in the maker and for little or none in the decipherer. The drawback about this variety of acrostic for the purposes of secrecy is that it is perfectly patent to any one. It can not be said to conceal. Suppose, for example, the following words to be the first words of the lines of a poem, signed in this way with the name Francis Bacon:

Free.....
Rules.....
And.....
Now.....
Come.....
Is.....
Sweet.....
But.....
A.....
Choir.....
On.....
Never.....

The acrostic is evidently in sight, and is obviously found by a definite rule; that is, you read on the initials of the first words of each line, starting at the top line and ending at the last. It is clean-cut and precise. It is an acrostic because the name begins and stops at a logical point.

The Baconian Acrostic

THE method used in the signatures of Francis Bacon has its germ in this simple device. But in the Baconian scheme the name is not spelled on the initials of the lines. *The significant letters are out of plain view, in the body of the text.*

Furthermore, the Baconian acrostic is read throughout the text, in this manner: One reads to the right on the first line; then back, to the left on the second line; then forward again, to the right, on the third line; then back again, to the left, on the fourth line, and so on. The path of reading threads the lines with a string, as it were, disregarding the meaning, and using the text only as a row of letters. The type form of such an acrostic is represented by the figure below. The dashes in the diagram stand for the non-significant letters—*i. e.*, for those not used in spelling the name. The arrows indicate the direction of reading.

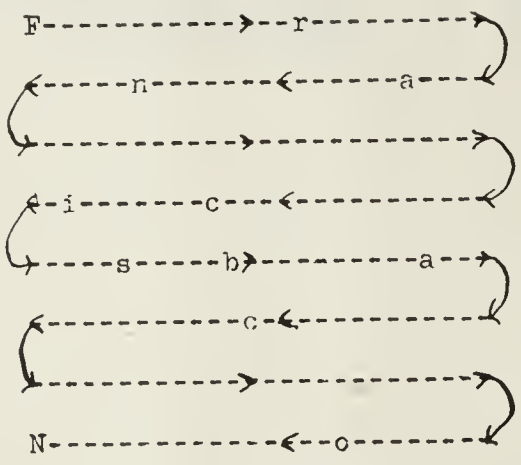


Figure I

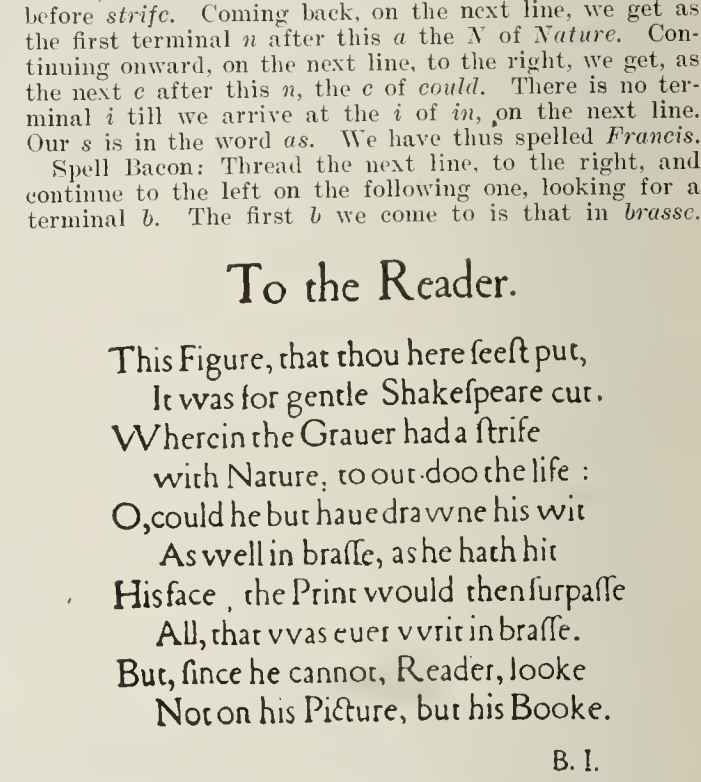
This diagram is but a skeleton. It exhibits solely the significant letters. Suppose, next, that we have a sonnet, a paragraph, a page, a single speech, or a column to be signed in this fashion. How are the significant letters determined? In the case of the acrostic where the significant letters were the initials of the lines, the rule was obvious. Here matters are different.

To put it briefly: The name, say, Francis Bacon, will begin at some prominent place, such as a corner initial. To read the signature, you start with this *F* and pass along the lines, to the right on the first, back to the left on the second, and so on, taking the *first r* after that *F;* the *first a* after that *r;* the *first n* after that *a;* and so on, choosing always the *first desired letter in the spelling of the name.* Thus, the first *n* after the first *o* after the first *c* . . . (in the word Bacon) will close the acrostic. This *n* must fall at a perfectly definite place, such as a corner opposite to where the signature began. If it fell at an indifferent spot, there would be no acrostic. Such, reduced to its simplest form, is the method used to fix Francis Bacon's name to the works of William Shakespeare.

Before passing to an actual specimen, it is well to bear in mind a few variations. Often, instead of reading the acrostic on all the letters, the cipherer, for the sake of convenience, limits his choice. Thus, the acrostic may be made only on the *initial* letters of the words. Again, it may be read on the *terminal* letters; that is, the first and last letters of the words. Again, on the capitals. Once this selection is made, however, the acrostic reads inflexibly according to it.

An Example



THE verses in Figure II were photographed from the page facing the title-page of the First Folio edition of "Mr. William Shakespeare's Comedies, Histories, and Tragedies," dated 1623. This poem is supposed to be by Ben Jonson. Besides thirty-six plays, the Folio contains a dedication, a preface, and a number of poems to the memory of William Shakespeare. In one of these occurs the term "Sweet Swan of Avon," which, together with a reference in a second poem to the monument at Stratford, has helped lead the world to identify the playwright with the actor Shakespeare. All this prefatory matter and all the plays contain acrostic signatures made on the general plan just described.

The acrostic in this first poem in this first collected edition of the wonderful dramas begins with the first *F* on the first line, and runs to the first *N* of the last line, having passed through the whole composition.

Read on the terminals—the first and last letters of each word—spelling *Francis Bacon.*

On the top line, starting to the right, we find simply the *F* of *Figure.* There is no *r* at the beginning or end of any word on this line. We now read back, on the second line, to the left. We light on the *r* of *for* as the *first terminal r* after the *first terminal f.* We must now seek the next terminal *a.* Continuing our thread-like course, on the third line, to the right, we get the *a* just before *strife.* Coming back, on the next line, we get as the first terminal *n* after this *a* the *N* of *Nature.* Continuing onward, on the next line, to the right, we get, as the next *c* after this *n*, the *c* of *could.* There is no terminal *i* till we arrive at the *i* of *in*, on the next line. Our *s* is in the word *as.* We have thus spelled *Francis.*

Spell Bacon: Thread the next line, to the right, and continue to the left on the following one, looking for a terminal *b.* The first *b* we come to is that in *brasse.*

To the Reader.

This Figure, that thou here ſeeſt put,
It was for gentle Shakeſpeare cut.
Wherein the Grauer had a ſtrife
with Nature, to out-doo the life :
O, could he but haue drawne his wit
As well in braſſe, as he hath hit
His face, the Print would then ſurpaſſe
All, that was euer writ in braſſe.
But, ſince he cannot, Reader, looke
Not on his Picture, but his Booke.

B. I.

Figure II—*A photographic reproduction from the page opposite the portrait of Shakespeare in the First Folio, 1623*

The *a* we get from *all.* Going to the right, again, we find that the first *c* after this *a* is the *c* of *cannot;* continuing on the last line, to the left, we find the *o* in *on*, and the final *n* is the initial of *Not.* Thus, on the last word (in the order of reading) of the last line of the poem, the acrostic is concluded. We have spelled Francis Bacon.

→ This **F**igure, that thou here seest put, ←
→ It was fo**r** gentle Shakespeare cut; ←
→ Wherein the Graver had **a** strife ←
with **N**ature, to out-doo the life:
→ O, **c**ould he but have drawne his wit ←
As well **i**n brasse, as he hath hit
→ His face, the Print would then surpasse ←
All, that was ever writ in **b**rasse.
→ But, since he **c**annot, Reader, looke ←
Not **o**n his Picture, but his Booke.
B. I.

Figure III—*The heavy letters show the letters used in the first acrostic of Bacon's name—Francis Bacon—and the arrows indicate the path of reading*

Let us take the edge words of the poem, thus:

This Figure, that thou here seest put,
It cut;
Wherein strife
with life:
O wit
As hit
His surpasse
All brasse.
But, looke
Not on his Picture, but his Booke.

If you read on the *initials* of these words, beginning at the *B* of *But*, and going straight up, then across the top line to the right, then down; then back, to the left, along the last line, you will read *Bacon*, concluding the acrostic at the *N* of *Not.*

If you read simply on the *outside letters* of the poem, in the same direction, beginning as before, you will read

Bacon, ending as before. If you read on the last two lines alone, on *all* the letters, to the right on the first line and back to the left on the second, you will read *Bacon*, beginning and ending as before.

This poem is supposed to be by Ben Jonson. If you read from the *B* of the signature *B. I.*, to the right, upwards, in and out on alternate lines, as before, this time considering the *initials* of the words only, throughout to the first line of the poem, and back again, you will finally come to the *N* of *Not* in the last line, having spelled *Ben Jonson*. (The letter *i* is, of course, the same as *j*; the reader should beware the "long s"—f.)

Bacon's name is signed to Shakespeare's works in various forms, and sometimes with one of his titles. Francisco Bacono (that is, possibly, "by Francis Bacon") is a frequent spelling. This spelling lends itself with peculiar aptness to the acrostic form. For instance, the surname and given name may be started from opposite corners and meet on a common O. Again, the name may turn on the O as on a pivot, backing out to the end, thus, *FrancisconcaB*. In each case, however, the same method is used, and the whole section of type is transversed.

"The Tempest"

"THE Tempest" is the first play in the Folio. In it over ten signatures have been found. One of the neatest is in the epilogue, a facsimile of which is printed herewith (Figure IV).

EPILOGVE,

Spoken by *Prospero*.

Now my Charmes are all ore-throwne,
And what strength I haue's mine owne.
Which is most faint: now 'tis true
I must be heere confinde by you,
Or sent to Naples, Let me not
Since I haue my Dukedome got,
And pardon'd the deceiuer, dwell
In this bare Island, by your Spell,
But release me from my bands
With the helpe of your good hands:
Gentle breath of yours, my Sailes
Must fill, or else my proiect failes,
Which was to please: Now I want
Spirits to enforce: Art to inchant,
And my ending is despaire,
Vnlesse I be relieu'd by praier
Which pierces so, that it assaults
Mercy it selfe, and frees all faults.
As you from crimes would pardon'd be,
Let your Indulgence set me free. Exit.

Figure IV—*Epilogue to "The Tempest"*

Read from the *f* of *free*, the last word on the last line, to the left, upward, alternately on the lines, to the right and to the left, spelling, on the initials, *Francisco*. You will arrive at the *O* of *ore-throwne*. Read from the *b* of *be*, the last word of the next to the last line, upward, to the right, spelling on the initials *Bacono*. You will arrive at the *O* of *ore-throwne*. The acrostic is therefore "keyed."

THE RAPE OF
LVCRECE.

FRom the beſieged Ardea all in poſt,
Borne by the truſtleſſe wings of falſe deſire,
Luſt-breathed TARQVIN, leaues the Roman hoſt,
And to Colatium beares the lightleſſe fire,
VVhich in pale embers hid, lurkes to aſpire,
And girdle with embracing flames, the waſt
Of COLATINES fair loue, LVCRECE the chaſt.

Hap'ly that name of chaſt, vnhap'ly ſet
This bateleſſe edge on his keene appetite:
VVhen COLATINE vnwiſely did not let,
To praiſe the cleare vnmatched red and white,
VVhich triumpht in that skie of his delight:
VVhere mortal ſtars as bright as heauēs Beauties,
VVith pure aſpects did him peculiar dueties.

B

Figure V

"The Rape of Lucrece"

"THE Rape of Lucrece" was published in 1594, about the time that Shakspere was making a go of his acting. It was dedicated to the Earl of Southampton, an intimate friend of Bacon's. Figure V is a facsimile of the first page of this book. The acrostics are as follows:

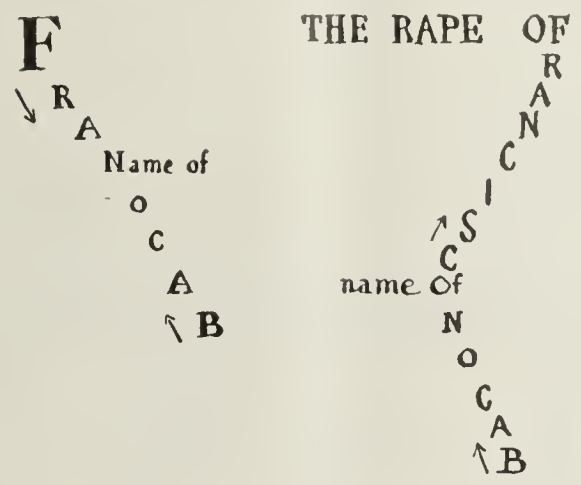


Figure VI

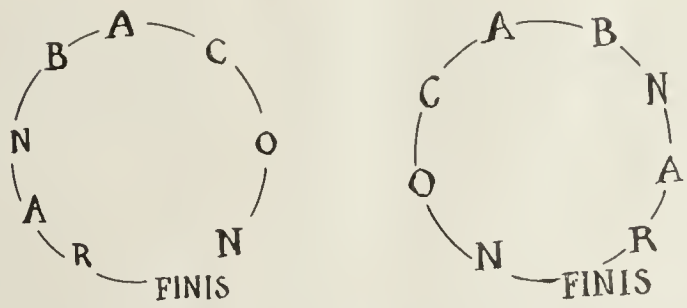
Read from the *B* which stands by itself on the bottom of the page, below the last stanza, to the right, upward, spelling on the *terminal* letters *Bacono*, and then, turning on the *o*, *ocsionarF*, that is, *Francisco* backward, you will arrive at the *F* of *Of* on the first line of the title, having read through the whole page.

Note the F $\frac{R}{B}$ at the beginning of the poem. Read from the *F* on the *initials* of the words to the right, downward, spelling *Fran* (Bacon often signed himself with this abbreviation). You will arrive at the *n* of *name*, in the first line of the second stanza. Then read from the *B* at the bottom of the page, either to the right or to the left, upward, spelling also on the initials *Bacon*. You will arrive at the same *n*. The *name* Fran Bacon is thus keyed.

It is interesting further to note that you can spell the word *Bacon* on the initials to this same *n*, beginning with the *B* of the second line of the poem, and going to the right, downward. Figure VI shows these acrostics graphically.

THE RAPE OF LVCRECE.

This ſayd, he ſtrooke his hand vpon his breaſt,
And kiſt the fatall knife to end his vow:
And to his proteſtation vrg'd the reſt,
VVho wondring at him, did his words allow.
Then ioyntlie to the ground their knees they bow,
And that deepe vow which BRVTVS made before,
He doth againe repeat, and that they ſwore.



VVhen they had ſworne to this aduiſed doome,
They did conclude to beare dead LVCRECE thence,
To ſhew her bleeding bodie thorough Roome,
And ſo to publiſh TARQVINS fowle offence;
VVhich being done, with ſpeedie diligence,
The Romaines plauſibly did giue conſent,
To TARQVINS euerlaſting baniſhment.

N

FINIS.

The acrostics on the last page of "The Rape of Lucrece" are as follows:

Read from the *b* of *breast*, the last word of the first line (to the right or to the left), downward, spelling, on the *initials*, *Bacon*. You will arrive at the capital *N* just above *FINIS*. It looks as if this *N* had been set there to attract attention to the cipher.

Again read from the *F* of *FINIS*, to the right or to the left, through one or through both stanzas and back, spelling continuously on the *terminal* letters *Fran Bacon*. You will end at the capital *N*. The above diagrams show these acrostics graphically. The first and last pages of this poem are, therefore, signed through and through with Bacon's name.

Considerations

THE "First Folio" contains, roughly, two hundred of these acrostics. They occur on the first and last pages of the plays with few exceptions, and practically always on the wrongly numbered pages, of which there are many. In modern editions of Shakespeare the acrostics are lost, since they are purely typographical, and must have been adjusted, if not inserted, in proof. "Venus and Adonis," "The Passionate Pilgrim," "The Phœnix and the Turtle," are among the books where these acrostics exist. Bacon's name is also signed by an acrostic to a book of "Essayes, Religious Meditations, Places of Perswasion and Disswasion," as well as to a "Translation of Certaine Psalms," both volumes bearing his name in the dedication.

Can these signatures be accidents? It is possible that one might be an accident. In fact, an excellent signature of Francis Bacon has been discovered on a page of a book of poems by Shelley. This is an indication of the truth that it is possible, though unlikely, to find one anywhere by accident. If a certain train from New York encountered a cow on the track, say one mile out of each important station on the way to Boston, we should be driven to the conclusion that human design was at work, for cows are not noted for concerted action. In regard, more particularly, to these acrostic signatures in Shakespeare, a mathematician has stated that one from corner to corner on the first page of a book and a second from corner to corner on the last page of the same book (as in the case of "The Rape of Lucrece") utterly removed all doubts as to the accidental nature of the cipher.

Fortunately for Bacon, however, Providence does not work haphazard. The question now comes: Does not the making of the acrostic seriously hamper the writer? Let me answer with a practical specimen. I am writing this paragraph to state a definite idea. I wish at the same time to sign it with an acrostic of the name Francis Bacon. If, therefore, the reader will read on the terminal letters, beginning at the first letter of the paragraph, and spell in the regular way, weaving in and out as before, alternately, to the right and left, he will find that he will conclude with the last letter of the last word of the paragraph, thus closing the acrostic. After the first draft of this paragraph, the changes I had to make so that it would embrace the cipher came to about seven.

Some Facts About Shakespeare

WHAT are *commonly accepted* as the facts of the life of William Shakspere (note the spelling of the Stratford man's name) of Stratford are as follows:

He was born in 1564. He was married in 1582. A child was born in 1583, and twins in 1585. In 1593 the name of William Shakspere is mentioned in a list of actors in the Lord Chamberlain's company. In 1597 he entered into a contract to purchase New Place. His name appears from 1598 on in various legal documents, one of which is an application for a grant of coat armor to his father. His name further appears on assessors' books and the parish register, from which we may safely deduce that he was a taxpayer and a property holder. About 1610-11 he is thought to have retired to Stratford. In 1616 he died.

"On April 25 Shakespeare was interred," say two biographers in chorus, "in the parish church, and honored with a tomb in the chancel, not as a poet, but as impropriator of tithes. His grave was covered with a flat stone, bearing the inscription known to all ['Good friend, for Jesus' sake,' etc.]—artless indeed, but adapted to the capacity of the sextons for whose admonition it was designed." Probably this is as detailed a record of the funeral as is extant.

William Shakspere left no books, no manuscripts, no correspondence. His second best bed he willed to his wife. His children apparently could not sign their names. The gleanings of nearly three centuries have ascertained no evidence that a court would admit other than tradition, and some one's say-so, concerning the incidents of his life, his personal friends, or his career. As an actor the ghost in "Hamlet" seems to have been his best part. Of his handwriting we have nothing but five signatures and (perhaps) the words "by me."

Out of these facts and conjectured facts, out of contemporary references, and uncontemporary references, both real and inferred, to Shakspere the actor and Shakespeare the writer, and out of the mention in the Folio of Stratford and the "Swan of Avon" (in poems which contain acrostic signatures) has grown the most learned, positive, and untruthful mass of biography.

The Stratford Sentiment

"THE country around Stratford presents the perfection of quiet English scenery; it is remarkable for its wealth of lovely wild-flowers, for its deep meadows on each side of the tranquil Avon, and for its rich, sweet woodlands. The town itself, in Shakspere's time, numbered about 1,400 inhabitants; a town of scattered timber houses, possessing two chief buildings—the stately church by the riverside and the Guildhall, where companies of players would at times perform when the corporation secured their services. . . . Here and probably in a low-ceiled room of a house in Henley Street, William Shakspere was born, in April, 1564. Upon what day we can not be certain; but upon the 26th he was baptized, and there is a tradition that the date of his death was the anniversary of his birthday."

Dowden's condensed biography prints sixteen pages of the same placid tenor under the head of "Life." Facts are few and far between. The bulk of the reading matter is plainly guide-book stuff, or else taken down at the dictation of a lively historical imagination. Other popular authors who have produced the same kind of literature are Mr. Sidney Lee and Mr. Hamilton Mabie.

What is true of one of the Shakspere biographies is, in general, true of them all. Dusty papers have been assiduously examined, collated with the philosophy of the thought of the era, and ponderously guessed over. The grand result is an extraordinary mingling of tradition, illogical deduction, and very wiseacre speculation. It emanates from the schools and colleges, and it is taught, not as conjecture, but as fact. Shakspere of Stratford is a religion with most people, and all are dubbed heretics who pry into it. Sentiment has thus egged scholarship on to outdo itself, and the country bordering the Avon, with its local anecdotes and charming landscapes, testifies even to-day to the fact that shrines can be made to pay. The Shakspere Shakespeare

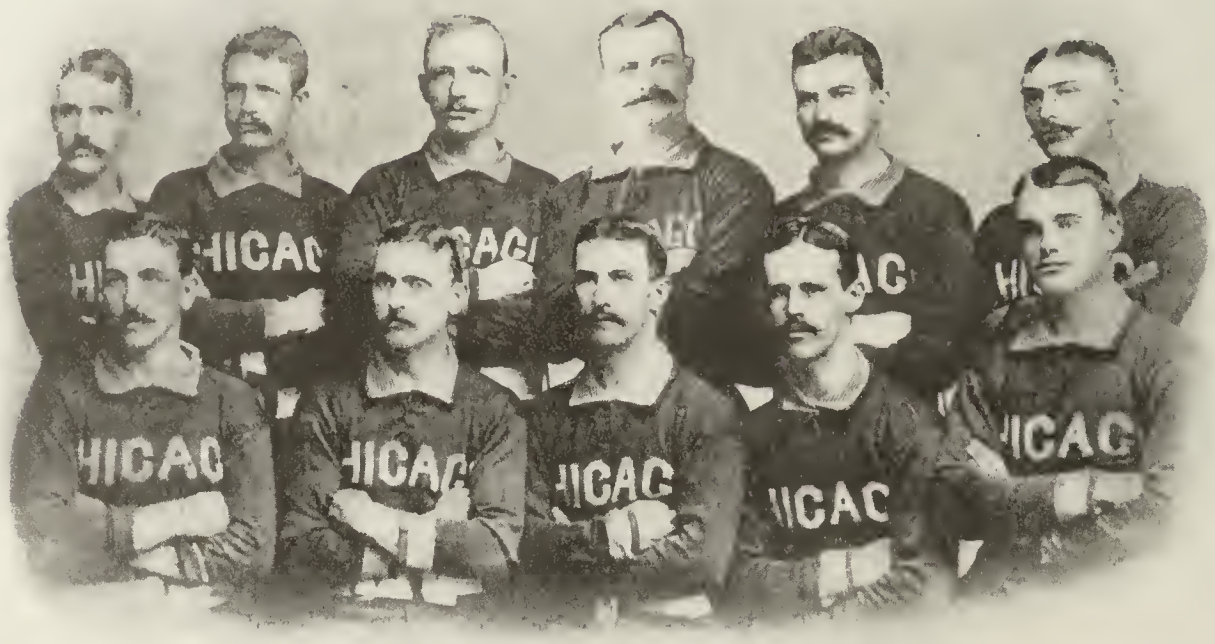
BASEBALL

II

Working Out the Game



By

WILL IRWIN

¶ *The first article in this series,* "Before the Professionals Came," *appeared in the issue of May 8*

"The American public wants its exeitement rolled up in a package and handed out quiek."
—*Christy Mathewson.*

"Boys, you've heard the new rules read. Now the question is: what can we do to beat them?"
—*Annual address of "Buck" Ewing upon opening the season.*

Anson's Chicago Team of 1886.—"*The Heroic Legion of Baseball*"

George Wright.—*From a photograph taken when he was shortstop of the Cincinnati Red Stockings. Now a rich sporting-goods manufacturer, he was the greatest fielder of the middle period of baseball*

WHEN the Civil War spread baseball to every corner of the country, it was still, nominally, an amateur game. But professionalism had been working in the structure of the old National Assoeiation of Baseball Players. In 1867-69 Harry Wright, the first manager and elub owner, was gathering his great team, the Cineinnati Red Stoekings—out-and-out professionals all. In 1871 the amateur assoeiation practically gave up the struggle. The first professional association, formed in that year, became the high court of baseball authority, the arbiter of rules; and so the professionals have governed ever since.

In another article I shall deseribe the business side of baseball; tell how the game fell among gamblers, how the formation of the National League saved it, why it has remained a elean sport. The pertinent thing here is that the professionals worked it out to a perfection impossible under amateur eontrol. Playing the game for money, they must please the publie—and the American public wants quiek action. Playing the game to win, because winning means heavy gate receipts and large salaries, they have put their best brains into learning the possibilities of every department. Further, they have set and established the spirit and ethieal east of the game, whieh is: Get all that you ean out of the rules. In this it differs from the ethieal spirit of sueh a game as ericket, which has remained about the same for fifty years beeause there are eertain things in erieket, not forbidden in the rules, which "no fellow will do." The college president who, upon seeing his first curve ball, denouneed it as an example of trickery in athleties, took a position that was the antithesis of the baseball attitude. Alertness—getting everything possible within the law—is the spirit of baseball, as it is also the spirit of America. This is our ethical flaw, but our praetieal virtue.

Let us consider now the state of the game in the late sixties, the game whieh Harry Wright found when he established the Cincinnati Red Stoekings. It was already twiee as fast as ericket, but only half as fast as the game we know. Matches sometimes lasted four and five hours. When the Atlantics of Brooklyn and the Athletics of Philadelphia met in 1866 for the second national championship, they began at two o'eloek and quit at the end of seven innings on aeeount of darkness—score, 33 to 33. They were still playing without gloves or defensive armor of any kind. The pitcher was now confined in a box six feet square. The batter straddled a line drawn from the home plate at right angles to the line from home to seeond base. In theory, the pitcher was still limited to the old-fashioned "bowling" delivery. It was twenty years before he was fully freed from artificial restraints. He must swing his arm, "as nearly as possible perpendicular and without jerk or throw." Pitchers, as a matter of faet, were already conspiring to beat this. Alphonse Martin—"Old Slow Ball"—of the Brooklyn Eckfords, had developed a puzzling delivery which broke down at the plate and which was first eousin to the modern curve. To do this he had to stretch the rules. Arthur Cummings had discovered that he eould give additional veloeity to the ball by a smart whip of his wrist just as it left his hand. So he accidentally put a horizontal spinning motion on the ball, and invented the first outcurve. By 1870 Bobby Matthews had the trick, and the curve was eoming in.

There was no regulation baseball. The size, a little greater than that of the one we now use, was regulated by the rules; the composition varied to suit the fancy of individual clubs. Harry Wright believed that no sharp fielding was possible with the very lively ball then in general use; he insisted always on a dead ball. The modern "figure eight" sewing and the horsehide cover, eoming in about then, saved many a hand from splitting. As a matter of faet, every club had its favorite ball—lively for teams of heavy hitters, dead for teams of smooth fielders. This led to mueh joekeying between clubs. Suppose that two teams, one good at batting and the other at fielding, had decided to play with a lively ball. When the good fielders were "out," the piteher, did the umpire not wateh him like a deteetive, would try to substitute a dead ball.

Fielding was strenuous, but eomparatively rudimentary. The first and second basemen remained frozen close behind their bases; the shortstop eovered only the territory between seeond and third. Team play was a hit-and-miss affair. Certain erack infields had begun to signal among themselves for attempted double plays, but this was uncommon. The thing, however, whieh distinguished the fielding from that whieh we know to-day was its eomparative slowness. To take a fast throw or grounder without gloves—and espeeially if the ball is elastic and heavy—one must give to it, must "ease up on it." And that delays the throw. On the other hand, it was more graceful. Old-timers are never tired of praising George Wright's ease and smoothness at shortstop. His hands, his arms, his whole body yielded to the impact; his "set" for his throw was only a continuation of the movement by whieh he eaught the ball. As for the eateher, working behind the bat without mask, glove, or ehest proteetor, he had to be as graeeful and quiek as a eat, even to live. The best of them had a system of proteeting their heads and breasts with their arms. Yet even at that, no football player ever stood in greater danger than the old-time eatcher. "Unele John" O'Neil retired in 1870 beeause a foul tip caught him in the hollow of a shoulder, just where the modern catcher is heavily protected, and spoiled his throwing forever.

The batter slugged and slugged and slugged. He held his bat tightly by the extreme end, planted himself squarely on his two feet, and swung with all his might. Bunting was not yet practised, but they did have a maneuver now lost to baseball on aeeount of a change in the rules—the "fair foul." To Dieky Pearce, the man who made shortstop a real position, belongs the honor of its invention. He was a rather weak hitter, but he used his head. One day the piteher served up a good slow ball to Dicky. He reaehed forward as far as he could, and struek it smartly to the ground in front of him. The ball hit fair, but it bounded foul, far beyond reach of the third baseman. Dicky ran to first yelling, like the Greek philosopher: "I've got it!" It was all right under the rules of that day. If a ball hit fair at the first moment of eontaet with the ground, it *was* fair, no matter where it went afterward. In 1874 a Boston player hit a fair foul which went back over the catcher's head and rolled out of the gate behind him. The umpire gave him his home run, and the final judgment of history holds that the umpire was right; but he nearly lost his life.

But the main thing whieh differentiated the old game from the modern was the matter of balls and strikes. "Nine balls take your base" had been the rule since 1863; but the umpire began that terrible count only after the piteher had persisted in throwing bad ones. The batter ealled for a "high" or "low" ball, and a piteh over the plate, if it went "high" when he demanded "low," or "low" when he demanded "high," might be a ealled ball. "Three strikes" was out: and in ease the batter persistently refused to strike at good ones, the umpire might eall a strike on him.

The history of improvement in baseball is mainly the history of certain great teams and great leaders. Harry Wright's Cincinnati Red Stockings of 1868-70, his Boston team of the early seventies, the Providence team of the late seventies, Anson's Chieago team of the eighties, Hanlon's Baltimore team of the nineties, and Chanee's Chieago team of this period—from them or through them, in one fashion or another, have come the great ehanges in the game.

Harry Wright played erieket before he saw a baseball. His was a great athletic family. The first of the American line was a mighty ericketer both here and in England. His two sons, Harry and George, were phenomenal baseball players in their generation; and Beals C. Wright, the son of George, is the American tennis player who won both his single matehes last year in the International Tennis Tournament at Melbourne. Harry, learning our game on the old Elysian Fields before the war, brought to his playing a erieketer's comprehension of team-work and batting. When he founded the Red Stoekings he tried to put team-work into his men. "Play for seores, not hits," he told them; and his team really praetised saerifiee hitting, though they did not eall it that. The old-time baseball players had always slid to bases feet first. In the sixties a Boston player named Mose Chandler electrified the erowd by diving into home head first for a steal. Wright inеorporated that maneuver into his team-work.

The First Bunt

TIM MURNANE, now writing baseball from Boston, laid down the first bunt and beat it out. He was a great first-baseman, quiek as a eat in his fielding and fleet as a stag on the lines, but weak in hitting. He tried to master the fair foul; and one day he rolled off from his bat a little, weak tap which died in front of the pitcher's box. At that time pitchers in general did little fielding. Before this one had gathered himself together, Tim Murnane was on first. This eaused him to experiment. He flattened off one side of his bat, against the rules and regulations of the game, and praetised until he could "lay them down." It appears that bunting beeame a lost art after Murnane passed his best baseball days; as late as 1889 we find the newspapers referring to it as a "freak play."

In 1874 the National Assoeiation of Professional Baseball Clubs, then the governing body, took eognizance of the managers who wanted to shorten up the game for the benefit of attendanee, and passed charily and experimentally the first striet "ealled-ball" rule. The umpire *must* call all bad balls; for now he was "standing up by the plate when the pitehing was not too swift," and was in a position to judge aeeurately. If the piteher failed to put the ball over the plate, the umpire must, upon first offense, warn him. If he persisted, the third failure was to eount as "one ball." Three more and another ball; and so on until he had three balls ealled upon him, when the batter might take his first base. If the batter was hit by the pitcher, that eounted as a ball. Praetieally, the batter had twelve balls and an indeterminate number of strikes—that lay in the discretion of the umpire.

Pitchers were growling against the restrictions on their play. As the rule stood, the piteher could use only the straight, underhand heave, the motion by which one handles a bowling ball. Strietly interpreted, this would have made eurve-pitehing impossible, since to produee a curve one must first produee a spin. As a matter of faet, it was almost impossible, with swift pitehing, to tell whether the piteher did jerk his elbow. So in 1872 the legislators of the game amended that rule. At first they allowed him to jerk or throw so long as he kept his hand below his hip. Later they removed all restrictions on the piteh, exeept that it must be delivered underhand. So the modest outcurves of Bobby Matthews and Cummings, the dying fall of Martin, and the light drop of Bond grew into the modern repertoire of eurves

The Baltimore Team of 1894.—*From them, more than from any other team, came the inside game. The all-America five-year team of this period contained eight Baltimore players. This team invented a system of play—the "hit and run" game; not strictly new but the Baltimore team brought it into general use. For many years this method was invincible*

The Original St. Louis Browns (1875).—*Anson's stumbling-block; their first baseman, Comiskey, played "deeper" than man had ever played before, and all the Browns stood well off their bases. The Chicago team imitated their St. Louis rivals in this vital improvement*

and shoots. Before 1883, when all restrictions were taken from the pitcher, first-class baseball knew every curve except the rare and disputed rise, which must be delivered overhand. About these things I shall write more fully when I come to describe the theory and praetise of pitching.

The Coming of Anson

THIS period of important baseball legislation and improvement came in the middle and late seventies, or coincidental with the troubles which led to the organization of the National League. Though the progress of the game was steady from that time forth, though players were learning continually the finer points of fielding and batting, nothing revolutionary happened in the way of rules until Anson got together his great Chicago team, the heroic legion of baseball.

One important improvement, however, came outside of the rules and began outside of the profession. Catchers in the old game rather expected broken fingers. "Silver" Flint, at the end of his career, announced officially that every joint in his fingers had been broken at least once. But they did object to having their noses broken; their teeth knocked out, and their foreheads pushed in, by fast foul tips. An amateur of parts introduced the first defensive armor to guard against such accidents. He cut out of soft rubber a mouthpiece, which protected at least the teeth. This served for several years.

In 1877 Thayer, the Harvard captain, tried to introduce one Tyng, a good, all-round player, to catch behind the bat. Tyng demurred. He had some regard for his life and his manly beauty, he said; he'd be doggoned and several other things if he'd go in there without any protection for his face. One day as Thayer stood in the gymnasium chewing on his troubles, his eye lit on a feneer earrying a mask. It was a falling apple for Thayer. He borrowed the mask, put it on, and caught a few balls experimentally. He found that the wire covering over the eyes was an obstacle to perfect technique. So he took the mask to a tinsmith and asked him to cut out eyeholes, large enough for a man to see and small enough to obstruct a baseball. The tinsmith, who played himself, had something better to offer. Why not a contraption made like a fencing mask, but with a wide, firm mesh? They trimmed and tinkered until they had built on the frame of the fencing mask a thing which contemptuous Yale opponents, in the series which followed, called a "bird cage." But the professionals saw it, the sporting goods stores took it up and improved it, and it came to pass that a man could catch without danger of a twisted nose.

The permission now given the pitcher to "jerk" or "throw" the ball split so many palms behind the bat that players and audiences permitted the catcher to do something for his hands. Although underhand delivery as a general rule does not produce the speed of overhand, Joe McGinnity of this generation has shown us how fast a ball a man may send in from below the shoulder. Timidly, tentatively, catchers began to wear fingerless gloves, with light padding on the palms. This did not prevent broken fingers. The catcher, if he expected to take first-class delivery, still had to learn "easing off." Next came the first body protectors, crude affairs of hair, worn shamefacedly under the shirt—as the first football players to use shin-guards put them under their stockings. With all these improvements, it became possible for umpires to stand up behind the bat; and at last strict strike and ball rules could be enforced.

It was in 1883 that Arthur Irwin, playing shortstop for Providence, broke the third and fourth fingers of his left hand—and revolutionized the fielding game. He still shows a little finger bent in almost at right angles, and says as he shows it: "That did it."

Then a club was a team, not two or three teams. They entered the struggle with ten or, at the most, eleven men—a full team and one or two substitutes. If there were two pitchers, the one not in the box served as an outfielder. A man took a day off only for serious cause. So Irwin, star infielder, had to devise some way of beating his injuries. He consulted a glover. They took a buckskin driving glove, many sizes too large, padded it, made a fastening at the back, and sewed the third and fourth fingers together to make room for bandages. The crowd, Irwin knew, would forgive him because of his mangled condition. From the first time he took a grounder with that glove, he noticed that he could now "meet" the ball solidly. He did not have to "ease off," and he could get away his throw quicker than any other man on the infield. John Montgomery Ward of the New York team observed this. With monumental moral courage he got a glove like Irwin's and used it in a game. No one hooted him for his cowardice. Within two weeks after Irwin and Ward first took their gloves around the circuit, a sporting-goods firm had orders from professionals for a hundred like them. By the next season nearly every professional was wearing one of the "Irwin gloves." Denny, the rugged old third baseman, was a conspicuous exception. To the end of his days in baseball he played barehanded.

In one respect this improvement came in the very nick of time. In 1883-4, after long years of experiment and argument, the pitchers had got their liberty. They could now throw the ball overhand and free-armed. Having a box to get a running start and a shorter line to the plate than at present, they developed unprecedented speed. It needed more catchers than pitchers for a first-class team, so hard was this delivery on hands. The catchers took up the new-fangled glove with enthusiasm. Manufacturers made them larger and larger; but still the fingered glove did not quite serve the purpose. In 1888, Jim White, a third baseman, sewed a leather plate on the face of his infielder's glove and got thereby good results with hot liners. Immediately the big catcher's mitt, claimed by two or three different inventors, became a feature of the game.

It was revolutionary, this improvement. It let into first-class baseball hundreds of quick, active, hard-throwing men who did not have the rugged hands and mighty forearms necessary for barehanded fielding. The old-timers have another name for it. "Hundreds of men are playing big league baseball now who aren't natural players," they say. "Take away those pillows and see how long they'd last!" An infielder had no longer to devote a part of his attention and courage to "watching out for his hands"; he could now put his attention on the game. Because one need no longer "ease off" on the ball, it quickened fielding immeasurably. It made modern pitching possible; for few catchers could have taken barehanded, or with palm gloves, the swift shoots and spitballs which we know in this period. One may say that the glove is the father of improved "inside" baseball.

All the changes of that period were revolutionary, for the "high" and "low" ball was abolished in 1886-87. This and the new pitching rule altered not only the spirit of baseball, but also its personnel. Batters who had been accustomed to judge balls which rose to them from the ground could do nothing with balls which dropped on them from the sky. Men who had hit only at one height found themselves unable to cope with pitchers licensed to put the ball anywhere between the hip and the shoulder. An old generation went forever out of the game.

From Big to Little Scores

I AM ahead of my story chronologically. In all the early years of the National League—founded in 1876—the duel between the batsman for large scores and the pitcher for small ones was going on; and always, as from the beginning of the game, the pitcher was winning. That tendency has been persistent, from the sixties when the Red Stockings trimmed opponents by scores like 103 to 14, and when two Iowa teams registered 287 to 86, until the twentieth century, when big league teams rarely score more than ten tallies to a side.

It has seemed an inevitable tendency of the game. Time and again the rule-makers have tried to introduce improvements assisting the batter and base-runner, only to be beaten off the boards by the progress of pitching and fielding. And as their futile part in this struggle, year by year the legislators have reduced the number of called balls. Incidentally, a relic of the 1850 game long lingered in the strike-and-ball rule; a third-strike taken by the catcher on the first bound was an out; an out, also, was a foul taken on first bound. That was not abolished until 1880, in which year the number of called balls went down to eight. The next year it was seven. "Hit by pitcher" was still a called ball, but the rules provided that a pitcher who intentionally hit a batsman was amenable to a fine. The year 1884 saw six balls and three straight strikes. In 1887 it became five balls and *four* strikes, and "hit by pitcher, take your base," made its first appearance. It went back next year to three strikes and five balls; and in 1889 we came at last to

The Cincinnati Red Stockings (1869).—*The pioneer all-professional team. In this season they won every game—a record which will doubtless stand. The man with side whiskers in the center of the standing group is Harry Wright. The other one similarly provisioned as to beard is Asa Brainard, the pitcher*

The "Forest Citys" of Rockford, Ill.—*Principal Western rivals of the old Red Stockings. The tall young man holding the baseball, third from the left of the group, is A. G. Spalding, then one of the great pitchers. A commercial rival of Chicago, Rockford was first to have a good baseball team. Chicago is now the "best baseball town." Rockford is in the [illegible]*

A suffragette team drawing Miss New and Mrs. Leigh after their release from prison. These two women broke the window of the Prime Minister's official residence in Downing Street

Mr. Asquith's Prisoners

Mrs. Pankhurst and Her Daughter, England's Suffragette Leaders—Two Energetic Fighters for "Votes for Women" Who Worry the Government

By MARY HUTCHESON PAGE

OF ALL the politicians in England, certainly Mrs. Pankhurst and her daughter Christabel have the largest following of loyal supporters to do their bidding without question and without regard to consequences to themselves. Scores of respectable women have gone to prison and suffered solitary confinement in prison garb on prison fare in order to support the Pankhursts' war on Mr. Asquith's Cabinet. There must be strong reasons for such loyalty.

Soon after Sir Henry Campbell-Bannerman was called to the Premiership a delegation of sixty women waited upon him by appointment and made the reasonable request that he would agree to bring in some time during his seven years of probable incumbency, as a Government measure, a bill to grant the suffrage to women on the same terms as men. The delegation was representative of the best women in England, and the request was reasonable because Parliament had been for fifteen years in favor of votes for women, as shown by the large majorities on such bills. They had been, however, private bills, and few measures not backed by the Government are likely to pass. The Premier replied that he could give no encouragement that the Government would offer such a bill. Immediately one of the women present exclaimed: "This means 'war.'" Her fellow delegates applauded her with enthusiasm, and bitter "war" it has been ever since.

On October 13, 1905, a very large meeting was held in Manchester to celebrate the return of a Liberal Ministry to power, already completely assured at the coming election. Sir Edward Grey was the chief speaker. At the close of his speech Annie Kenney, a mill-hand, arose in the middle of the hall and asked the speaker whether the Liberal Government would do anything for the working women and give them the vote. She got no answer, although several men received courteous replies to their questions from the floor. She therefore stood up and pressed for an answer. Several men near her forced her down into her seat, and a steward of the meeting ran up and held his hat over her face. A babel of shouts arose: "Sit down." "Be quiet." "What's the matter?" "Let the lady speak." The chief constable of Manchester came down from the platform and asked Miss Kenney to write out her question. This was done and signed by her as member of the Oldham Committee of the card and blowing room operatives, representing 96,000 organized women. The chief constable agreed to have the question answered from the platform. Sir Edward smiled when he had read the question, but failed to answer it in his reply to a vote of thanks.

With flushed cheeks and eyes blazing with earnestness, Miss Kenney again rose and stood up in her seat, calling: "The question! the question!" a trembling representative of thousands of struggling women. The Liberal leaders on the platform refused to reply, and thousands of angry men about her were shouting, gesticulating and threatening her. The stewards came hurrying to drag her down. Miss Christabel Pankhurst put one arm about the little woman to support her, and with the other warded off the blows of the angry men who were howling fiercely: "Throw her out!" Scratched and bleeding, they were dragged down the central aisle and past the platform, always calling for the question, and thrown into the street. There they attempted to hold an indignation meeting, and started to speak to a great crowd, but were summarily arrested for obstruction. Miss Pankhurst was further accused of assault on the police and sent to jail for ten days.

Meanwhile a revulsion of feeling had come over those within the hall, and the meeting broke up amid cries of: "Shame." Sir Edward Grey attempted to explain that he had not replied to the question because he did not think it likely to become a party question.

This was how Miss Pankhurst discovered the efficiency of the militant tactics in making woman suffrage a party question in spite of the Cabinet. It was the beginning of the "Suffragette" movement. When denounced for resorting to unbecoming action, Miss Pankhurst replies that "milder methods had failed; the new methods which we had been forced to adopt were moderation itself compared with the deeds of men reformers; and, finally, the militant methods have been justified by their success in bringing woman suffrage to the forefront of British politics."

The campaign of the Suffragettes, as outlined by Miss Pankhurst, was designed (1) to arouse public opinion, (2) to weaken the prestige of the Cabinet Ministers at public meetings, (3) to defeat all Liberal candidates at the polls whether they believe in votes for women or not, since a theoretical conviction avails nothing when they are not able to force their leaders, the Cabinet, to support a bill actively. Mrs. Pankhurst has spoken with great frankness upon this point. After the defeat at Newcastle of the Liberal candidate, a delegation made up of the managers of the Conservative campaign asked permission to wait upon her and formally thank her for the aid she had given, a most significant recognition of her power. In receiving their thanks, Mrs. Pankhurst told them courteously that they were under no obligations whatever, because when the Suffragettes had turned the Liberals out of office, if the Unionist Party did not give women the vote, they would proceed to turn that party out in its turn.

An Inheritance of Aggressiveness

IT WOULD be enlightening to describe Mrs. Pankhurst after the Russian fashion as one of the "Intellectuals." Her grandfather narrowly escaped with his life during the electoral reform riots in the first half of the last century. She herself was a schoolmate at Paris of the daughter of Henri Rochefort, the irreconcilable Republican whose principles she imbibed. Her husband Dr. Pankhurst, drafted the Married Woman's Property Act which became the law, and had been associated with John Stuart Mill in the early movement to improve the condition of women. Left at his death with four small children to support, she has held a municipal office of responsibility and built up a business of her own, which she recently sold out, turning the proceeds into the funds of the Women's Social and Political Union, of

which she was the founder and which is the organization commonly called "the Suffragettes." This union is distinct from the older and less militant women's suffrage societies and the Women's Freedom League. It is the bogey that is striking terror to the hearts of the Cabinet and forcing Mr. Asquith to live an almost subterranean life, habitually leaving buildings by the back door and sneaking from one official burrow to another by the darkest and least obvious path.

Mrs. Pankhurst's influence is largely spiritual. Her policy of obstruction to the Government is only comparatively "militant." No one has ever been injured. With the exception of a broken window, no property has been destroyed. When she announces that she intends to go to the House of Commons at a certain time to present her grievances, and the Government calls out five thousand policemen to prevent her delegation of thirteen women from assaulting Parliament, she intends to make only a formal attempt to enter. She turns back before a superior force, having accomplished a moral victory by attracting a hundred thousand sympathizers to the scene. She has proved the Government wrong in denying that she has the support of the people. At the same time, she approves of her daughter's policy of active protest. She sees that in order to make the old, ridiculed, unromantic issue of woman suffrage a practical, political question it must be advertised. The attention of the electorate must be caught before its interest can be aroused. She wants the help of the men voters and she is getting it in a large, effective way. When she goes down to a borough to defeat a Liberal candidate at a by-election, she persuades hundreds of Liberals to vote against their party as a simple matter of justice to women.

A flood of light is shed on the character of Miss Christabel Pankhurst by this statement of policy: "Words," she says, "serve but two uses in our militant movement. They serve to announce what we are going to do and, afterward, to explain why we have done it." She is tired of words, of unfruitful argument, and resolving to engage the politicians in their own game, has repeatedly worsted them, and, unless all signs fail, will eventually drive them out of office or wring from them a reluctant support of her cause. Her admirers do not hesitate to claim that she is better equipped to be Prime Minister of England than Mr. Asquith.

She has converted every daily newspaper in London from an enemy to a supporter, with the exception of the "Times." She has gained the sympathy of a large part of the electorate and defeated the Government candidates again and again. The press and the local Liberals have repeatedly warned the Government that the women would win the election if they did not "watch out," and the women have not only won, but are more and more getting the credit of these by-election victories. Miss Pankhurst now claims that she can win any by-election in England. She is stronger in England than elsewhere, and at by-elections she can concentrate her forces on a limited electorate. She feels, no doubt, that later she can carry the day in Scotland and Wales and perhaps in Ireland. Her supporters firmly believe that when a general election comes she will have her organization in shape to win in that greater struggle and "turn the Liberals out."

The suffragettes prefer to go to prison rather than practically recant their dearest convictions; namely, the right to demand the vote in a way that they consider necessary and legal.

Miss Pankhurst's Militant Style

AT HER trial Miss Pankhurst proved that the Home Secretary, Mr. Herbert Gladstone, had unconstitutionally instructed the court just what sentences it should mete out to suffragettes. You may be sure that the women are using this gross injustice with the utmost effect on public opinion. The same Mr. Gladstone who dictates to courts what justice is, disclaims at one time any power to mitigate the rigors of prison discipline to these gentlewomen, and is forced later to acknowledge in the press that he has the power and that the responsibility is his. This puts the odium of the special tyranny invented for the suffragettes right where it belongs—at the doors of the Cabinet.

Fortunately, Mr. Gladstone's inconsistencies are not without features from which his enemies, the women, can take the comfort of humor. A sympathetic member of Parliament arose and asked the Home Secretary if there was not some way by which a woman of Mrs. Pankhurst's antecedents could be allowed more than one towel a week. Mr. Gladstone solemnly replied that he understood that she was allowed both a face towel and a bath towel every week, and that he had no power to interfere, adding that the women could escape from the punishment by giving bonds to keep the peace. But [illegible] Mrs. Drummond fainted in her cell from lack of air, he hurriedly interfered by releasing her at once without bond or promise, for fear that she might get ill and die on his hands and thereby make trouble in the country.

Mrs. Pankhurst and her daughter are supported by a large number of able women. Besides their late companion in jail, Mrs. Drummond, who is known as "General," owing to her astonishing capacity in marshaling vast crowds like the meeting in Hyde Park in June last of a quarter of a million souls, there are the two younger daughters of Mrs. Pankhurst and scores of fearless and eloquent speakers. But the one who stands at Mrs. Pankhurst's left hand is Mrs. Emmeline Pethick Lawrence. With Mr. Lawrence, she edits "Votes for Women," the backbone of the movement, and an able, militant weekly. As treasurer of the union, she raises a hundred thousand dollars a year for the work. Her editorials are models of vigorous, persuasive reasoning. Her consistency and her moderation are admirable ballast for the flights of eloquence that are not infrequent. She speaks without antagonism of "our men children who have so much to learn."

Mrs. Pankhurst's plea at the trial was a powerful and impassioned speech that will linger in the memory of all who heard it. She dwelt upon the heavy injustices the laws place upon women, especially laboring women, and traced their sorrowful condition to their political impotence. It was evident that she was not thinking or acting for herself, but for those who needed her sacrifice. As usual, she lifted the question to the level of human sympathy and justice for the helpless. "We are not unwomanly," she said. "We have tried every constitutional means. We have tried feminine influence and have had insult, abuse, and contempt. I have myself spent five weeks in Holloway Jail, and there were women there who had broken no law, but who had not been in a position to defend themselves adequately. I do not want you to think that we are women who enjoy this sort of thing. We are driven to it. We are determined to go on with this agitation cost us what it will. Only through legislation can an improvement be effected in the position of women, and that legislation can never be secured unless we have the same power as men."

Mrs. Drummond, Mrs. Pankhurst and her daughter kept their promise to the police to submit to arrest at six o'clock on a convenient day after important work was done

The Wright aeroplane making a flight at Pau, and the inventor giving directions on the field

"Veelbure Reet,"—American

The French are Now Worshiping Wilbur Wright as a Hero, and They Pronounce His Name as it is Spelled Above

By FREDERICK PALMER

PARIS, April 2, 1909

ONE must leave his own country in order to appreciate how mighty a prophet we possess in our fellow citizen of Dayton, Ohio. Benjamin Franklin and his hat tickled the fancy of France in something the same way, but that was before the days of the postal-card craze and the three-color process. He had nothing like such an audience as the elder Wright and his flying machine.

As a photographic celebrity Wright is a pacemaker for the kings. Tiny figures of him seated in a miniature aeroplane are suspended in the shop windows from the Pyrences to the Rhine. The clean-cut, smooth-shaven face, so transatlantic to French eyes, forms as easy an outline for the caricaturist's pencil as the beard of Leopold or the mustache of the Kaiser; and in another aspect he is taken as seriously as the theater-goers takes Edmond Rostand and Rostand takes himself. By all the criteria of the Boulevards and the country-side he is the man of the hour; while the supreme subject of the hour throughout Europe, now that the Balkan crisis is past, is aerial navigation.

In remote villages when you ask who is the President of the United States, and the peasant's doubtful answer is: "M'sieu Taf', is it not?" the people know all about "M'sieu Veelbure Reet." He is the wonderful American, the ingenious Yankee, who really flies. His machine does not wobble, m'sieu; it does not break down. All the world might see for itself day after day in the heavens at Pau that it did not; and in the name of France, M'sieu, he is beating the Germans.

The native aeronauts only serve as a background for his fame. He has the cup and the honors. Europe associates dependable and controlled flight in a machine heavier than air with his name as surely as that of Marconi with the wireless. Historically, then, the triumph of having fulfilled the envious wish of leaden-footed humanity which began with the first longing look of primitive man at a bird in flight is to an American on foreign soil. It is all very well to say that he flew at Dayton before he ever saw France, but nothing of the kind occurs to the French.

The personality of the practical mechanic, with his distinctly American mannerisms, no less than the marvel of his feat, has captured the Gallic imagination. The French discover in him what does not occur to us. He is the *vrai type Americain;* the sum of our predominant national qualities.

Royalty may honor this man from home and nobility and millionairedom may come in processions of automobiles to watch him cut circles over the tree-tops, and he remains the same matter-of-fact, dry, centered, good-natured Wright—or Wroight, as they get it in Paris or wherever they have heard the English pronunciation of the name.

"He has made a business of flying," as one French aeronaut said, "just as the Americans make a business of everything they undertake. They do not know how to be dilettantes."

That is the secret of his success; the keynote of a career, the romance of which appeals to every one except Wilbur himself. He simply made up his mind, back in his shop in Dayton, that he was going to fly.

France is the home of aerial navigation; France is the market for his wares, and hither he came. By perfecting the gas motor the French led the way in automobiles. In all the finer mechanical arts, as in dress-making, they have genius. Without the gas motor, which to Wilbur's wings is what muscles are to a bird's, neither dirigibles nor aeroplanes would have been possible. Every improvement on this score means speed and stability. Besides, flight is here a living problem of national defense. With us it is a novelty which will become commercial when—and this before long—a man may own a machine for his own amusement or carry passengers in Seeing-the-Clouds Cars.

The first customer for an aeroplane was bound to be a European Government. But staff officers are steeped in the Missouri training. They grow stale from repeated inspections of another epoch-making invention which fails to function except in the dream of the creator. Even when convinced they do not always appear to be; and in the absence of a patent to prevent the honorable theft, they secretly make a facsimile, and thereby gain a march on rival nations. They steal from one another with equal depravity and with overwhelming politeness. In this way France had the plans of her new rapid-firing field guns filched some years ago. Moral, if you have anything to sell to a European army first see that your international patents are nailed and riveted and your name publicly associated with the device. And Dayton is not so far from the Mississippi but that it has heard of Missouri.

A popular post card for sale all over Europe

While most of their Parisian rivals kept the curtain up on all their experiments, the Wrights kept it down. For a long time, as everybody knows, they were the mystery of the aeronautical world. Some reports said that they were a "fake"; some said that they had done wonderful things in private.

In the Early Days of Experiment

ON THE sand dunes of Carolina they kept ferret watch for any prying eyes that might see them in the air. They guarded their machine from all investigation of its parts. Reporters plied a taciturn pair of mechanics who seemed as ignorant of anybody in their neighborhood trying to fly as a Japanese general pretended to be of the movements of his own troops. With infinite patience and tenacity, Wilbur and his brother Orville—who still limps from his injury at Fort Myer—kept at the game, hiding their failure and lack of funds, determined not to disclose their hand until they were ready. No matter what the boulevardier fliers were doing, this pair would not hurry. And they had the advantage of mystery. Once they were ready to take the public into their confidence, Orville's flights at Fort Myer and Wilbur's far more remarkable performances this past winter had the effect of dramatic revelation. Now that the patents are fast and the victory won, the whole bag of tricks is on view. A capable manager promotes publicity and the sphinxes of the sand dunes give exhibitions of their capability in talking as well as flying.

At the recent aerodrome show in Paris the crowd filed by an artistic Gallic facsimile of the Wright aeroplane, exact in every detail of imitation, even to its worn and weather-beaten appearance. Of all the many exhibits of ingenious invention, including nightmares of complexity, it was the simplest, with a single exception.

This, surprising in resemblance and, indeed, practically a counterpart, was one of the earliest heavier-than-air

The Black Cabinet of the Modern Nero

The Passing of the Spy System—The Second of Two Articles on the Turks

By NICHOLAS C. ADOSSIDES

THE Terrible Turk has fallen. The crafty eyes and the cunning face have ceased to haunt the conscience of the civilized world. With Abdul Hamid dies the most odious of modern tyrannies. The Turkish military revolution in putting an end to the Hamidian régime has swept away the spy system which for thirty-three years was the most shameful sore of the Ottoman Empire.

All despotic and barbarian governments have practised espionage, and Turkey is no exception to the rule. The Turkish spying system has in it something of tragedy and of comedy; it is in turn burlesque and inexpressibly sinister, tragic, and grotesque. Abdul Hamid is a spy born. He ascended the throne under particularly tragic circumstances. Once on the throne, he attacked all the popular men, all the men of heart and of noble aspirations, all those that professed, or simply were suspected of, liberalism, and he began with Midhat Pasha, the great liberal Prime Minister of that time and Father of the First Constitution of Turkey. Midhat Pasha was captured one night at his mansion by Abdul Hamid's executioners, who took him on board a man-of-war with all his entourage—secretaries, aids-de-camp, chaplains, and servants—but, of course, without his family. His destination was Taifa, a small town of unhealthy climate in a remote province, where they incarcerated him in a fortress. At last the order came from Yildiz Palace to get rid of him, for the Turkish people began to feel very angry because Midhat Pasha was being treated worse than a criminal. Several attempts were made to poison him, but they failed, as the prisoner practically lived on eggs and fruit. Violence, therefore, was the only recourse, and they choked him one night in his own bed. But the Sultan could not believe it unless he saw his head. The palace executioners cut off Midhat Pasha's head and placed it in a luxurious casket, upon which they wrote the following address:

"To His Majesty Abdul Hamid II,
Yildiz Palace, Constantinople.
Fragile—with care—ivory teeth."

At the beginning of his reign espionage was confined to some courtiers of Yildiz Palace, four or five only at first. Among those who distinguished themselves particularly were Ahmed-Djelaleddin Pasha, Chief of the Black Cabinet of his Majesty, and Behram-Aga, Chief of the Eunuchs of the Seraglio. Each of these personages was charged to inform the master of the events of the day, the deeds and the moves of the dignitaries and functionaries of the empire, of the foreign diplomatists, of the Young Turks, of the officers of the army, etc. The suspected, thus signaled to the master, became immediately the objects of special surveillance. At once the spies would try to seize correspondence or listen to conversation, to have at last the proof, and upon this they arrested them and imposed upon them a minute interrogatory, and according to each case, being more or less grave, they were thrown into prison.

It was Yildiz that centralized the denunciations. It was there that secret reports arrived daily by the thousands from all the corners of the empire. There, each courtier directed a special service. First of all, there was the Black Cabinet, of which the chief was named officially *Ser-Hafie;* that is to say, Spying Chief. But apart from the Black Cabinet there were other Black Cabinets, independent of each other and each subjected to the exclusive authority of the Padishah. The chamberlains that directed these special services maintained each a legion of spies and disposed for that work special funds. Every day these chiefs of service, after each had become familiar with the reports of his agents, would make a selection and submit to the sovereign those of the denunciations that appeared to be the most serious or the most apt to frighten the suspicious monarch.

The spies had no scruples about deceiving the Sultan. What interested them was to attract to themselves the attention, the favors, and the confidences of his Majesty. It was necessary, therefore, to report at all cost, especially as the competition was so terrible. During thirty years in Turkey it was a sort of race of espionage. The rewards usually fell to the one who served the master with the gravest of plots, the one able to draw up the most frightful calumny, the one who could excite the most the Imperial apprehension.

Those that were gifted with a fecund imagination found a great delight in inventing a good conspiracy, full of daggers and poison, in the romantic fashion. Zia Bey confessed to me once that he spent hours torturing his imagination to appear before the Black Cabinet with a good plot. Anything was good to report. One word—an unhappy little word: "liberty," "revolution," or "dynamite"; even the word "nation"—would have sufficed; for it was forbidden to say "the country" or "the Ottoman nation," one might only say "the Estates of the Sultan," or "the subjects of the Sultan." This war against these words attained ridiculous proportions. A certain Tewfik Effendi, who was giving an elementary French course in a Turkish school, was denounced and severely punished for having given to his pupils for dictation an example which contained the following passage: "The butterfly flies with freedom."

Under the late régime, three or four people could not gather together and talk without minute precautions. A festival evening, a gathering of friends, an exchange of visits between two functionaries, were enough for the preparation of a good report. Everything was good material for denunciation; even a bow made in the street, in a certain manner, would have been an excellent cause for suspicion.

Inundation of Spies

TWO years ago the Sultan, after receiving a very sensational report from one of his favorites, prevented the publication of the word "stars," or the form of a star from being reproduced. The report denounced to him the labels of the bottles of the Cognac Martel, the biscuit boxes, and the spools of thread on which were stamped some stars, which represented the trade-marks. It is important to explain that the Sultan's palace is called "Yildiz," which means "Star," named after one of his Circassian favorites. Therefore: Stars on the cognac bottles! What a profanation for the Commander of the Faithful! An Imperial order was promulgated interdicting the importation of products with such trade-marks. Another time the spies reported to him that the Armenian women often wore red blouses, a color which symbolized, they told him, the massacres in Armenia. He issued another Imperial order (May 30, 1905) preventing the Armenians from wearing such symbolical toilets.

The reader might recall that in October, 1905, an attempt with dynamite was made against the Sultan—which the spies had not foreseen—during the ceremony of the selamlik. Following that attempt, Abdul Hamid received thousands upon thousands of reports, among which one explained that the explosive matter, being chemical products, it was necessary to forbid the study of chemistry. Immediately his Majesty ordered the directors of all Turkish schools to suppress the teaching of chemistry.

Abdul Hamid had transformed his country, and particularly his capital, into a large mutual society of espionage. There is a proverb: "That in Constantinople one can not make a step without either falling on a dog, in a hole in the street, or on a spy."

The Sultan was not satisfied to inundate the city with his spies, but allowed them to cross his threshold, to be seated at his hearth; he allowed them also to be concealed in the tapestries and hangings, to be ensconced in the recesses of the walls. He violated the sanctity of any seraglio, and many a chosen favorite of his, whose youth and beauty lingered in the golden fetters and bars of his Imperial harem, was sent on her journey of espionage, yielding to her new lord the grace of her charms. This was often interpreted by many as a sign of honor and distinction, but it might well prove an omen of some terrible disgrace and stigma. It has often occurred that pashas on whom such an honor was conferred have been seized with terror on the arrival of such a gift under the form of a beautiful female whose commission it was to discover the secrets of her new lord and master, and from time to time reveal them to the Padishah. These women, gifts of unspeakable terror, were not always content with their mission of silent spying and eavesdropping, for their dainty fingers often brewed a malignant poison.

Days of Death

IT IS related that a number of fishermen of the Bosphorus, in drawing their nets, were horrified at finding numerous corpses around whose necks were fastened bags containing heavy stones. Of this I am skeptical. However, I may state with certainty that during a massacre of Armenians the water of the Bosphorus and of the Sea of Marmora yielded countless bodies of Armenians slain in the fray. It is recorded that a number of Young Turks surrendered their lives to the late Sultan, who, indifferent to their existence, killed them in order to insure his own safety. Abdul Hamid is not a murderer by instinct. His was not an insatiable greed for bloodshed and massacre. He killed with the sole desire of safeguarding his own existence. His cruelty was overshadowed by his intense cowardice. The amalgamation of these two known faults made of him the type of villain with which we are familiar. Within the space of thirty years, condemnations, banishments, and public as well as secret executions have been an important factor and almost normal condition in the history of Turkey. However, Abdul Hamid issued a proclamation abolishing capital punishment. But this proved powerless before the assaults of riotous revolutionary Armenians. Vulgar assassins and professional banditti found in him a most lenient protector and friend. As a result of such flagrant inconsistencies, none but the virtuous and honest incurred his disregard. His was a tyranny of such pale cast that the tragedies which daily unfolded themselves became to all a matter of ordinary importance. If perchance a friend, an acquaintance, should disappear, it was impossible to trace him. It was even unsafe to mention his name. The air was permeated with mystery, and the days that followed were spent in timorous wondering and supposition. Every new dawn brought new anguish.

Abdul Hamid trembles with all the unsimulated terror of a guilty coward. For wherever he turns his hunted eyes, he sees a bristling front of antagonisms. If safe to-day, he fears the terrible to-morrow, that inevitable end which in his heart he knows to be the result of causes projected by himself. He will drag with him to the abyss the souls of many thousands.

The Story of How Mr. Van Dorn Meets an Obligation, and of the Sea Fog Dispelled by a Paris Dinner

By ELIZABETH JORDAN

Illustrated by DAVID ROBINSON

Her eyes fixed on remote space

IT WAS his second morning on board the *Columbia*, and Arthur Van Dorn, as he drooped listlessly over the deck rail, reflected anew and with exceeding bitterness on the unwisdom of a man capable of sailing for Europe alone, in midsummer, without at least previously satisfying himself that he would find acquaintances on the ship. He had made his decision to go abroad rather suddenly, as he was prone to make such decisions, and within an hour of his arrival on board he had given himself over to unavailing regret and a strongly disapproving study of the passenger list.

No names he knew were there save those of old Dr. Maxwell, who was eighty and in his dotage, and Ralph Henshaw, a youth Van Dorn disapproved of and disliked to a degree that imperiled his mental poise. He had not exerted himself to conceal these sentiments from the person who aroused them, and Henshaw passionately reciprocated them and lost no opportunity to show it. Obviously nothing agreeable was to be looked for from him. Van Dorn eliminated both men from his mind, shutting them up, as it were, in a memory-tight compartment from which he did not intend that they should escape during the voyage. Then he turned an earnest and hopeful eye upon the women passengers.

There were few, and, even to a companionable and lonely gentleman, of singularly unalluring appeal. Some of them wore blue veils and read Baedeker, and dozed in their steamer chairs with their mouths open. Others had begun to exchange confidences concerning the symptoms of various maladies which were sending them to German baths. The only fresh and pretty girl on board Van Dorn discovered to be utterly absorbed in another man. Else how could she have failed to observe her baby brother who was sprawling on the promenade deck, and light-heartedly flattened him into more intimate contact with it, as she and her escort walked over him, to the delighted horror of observers.

All these things Van Dorn drearily reviewed, and wrathfully wrapped himself in garments of depression. Seven days more, he reflected, before the *Columbia* could reach Cherbourg, and no one to talk to during that dreary interval but the deadly uninteresting lot in the smoking-room. He drew a long and irritated sigh, which was promptly echoed behind him. Then a voice spoke:

"Ain't it terrible lonesome?" it said.

Van Dorn turned sharply. Behind him stood a new figure—a girl he had not seen before—young, slender, and bewitchingly pretty. She could not possibly have been more than nineteen—she was probably a year or two short of it—and she had fair, curly hair of exquisite fineness, the complexion of an infant, and vividly blue eyes which looked straight into his now with a childish film of trouble over them. Her lips were trembling babyishly. With a quick glance Van Dorn took her in, from her shabby tan "pumps" to the faded blue ribbon on the straw hat which was turned back so jauntily from her forehead. She wore also a blue suit, not new, and a pair of gloves from which one finger-tip unabashedly protruded. She quite looked what she was—a very homesick little girl, a very poor little girl, but a nice little girl. Van Dorn's heart warmed to her, though his ears still tingled unpleasantly under the shock of her grammar. Her voice, however, had been fresh and sweet and appealing. He smiled on her cordially, raising his steamer cap as he turned to face her. She, too, was languishing against the deck rail, her elbows resting on it, her chin now pensively settled in her hands after her eyes had left him. She seemed almost to have forgotten him and not to care at all whether he responded to what, direct as it was, had hardly been an advance.

"It *is* lonesome," Van Dorn agreed, continuing his study of this new acquaintance. "Don't you know anybody, either?"

The "either" was a master-stroke. It expressed sympathy, asked comfort, and put them on an equal footing at the start. She responded at once in a tone revealing her, however, as still wrapped in a thick fog of depression and not cheered in the remotest degree by the interest of the kind gentleman.

"No," she said, gloomily, her eyes still fixed on remote space, "an' I'm travelin' all alone, an' it ain't a bit like I thought it would be."

"What did you think it would be?"

Van Dorn's voice was more sympathetic than his words. He looked down on her, too, from his fine height, with a positively human expression in his handsome eyes. She responded to the voice as much as to her question.

"Why, I expected it was goin' to be gay an' cheerful," she explained confidentially, "an' that everybody would get acquainted an' be friendly. But I spoke to two ladies this mornin' an' they just said 'yes' and 'no,' an' walked off like I wasn't there."

Her lower lip trembled again. She looked like a child whose innocent advance had been misunderstood and rejected. Like the gallant and true squire of dames he was, he went without further parley to the rescue of this lorn damsel in distress.

"I'll tell you what we'll do," he said, cozily. "We'll be gay and cheerful all by ourselves, you and I, and 'get acquainted and be friendly.' I am alone, too, and horribly glum. You came at exactly the right moment. I think I was going to cry."

She regarded him with entire seriousness.

"So was I," she confessed candidly. "Mebbe I will yet."

Van Dorn shook his head at her and laughed, oddly reminded of his favorite niece, aged four, and the awesome threats with which she sometimes favored him.

"No, you won't," he said, positively. "You won't shed a tear on this voyage. You're going to have a beautiful time. You're going to tell me all about yourself and I'm going to tell you all about myself. While I'm talking you can remember that your turn is coming soon. We'll walk miles on deck, and if we don't like the other passengers better before we get through, we'll put them in a lifeboat and set them adrift."

He found himself talking to her as he would have talked to his little niece, and she responded in much the same spirit.

"That'll be nice," she said contentedly, her face beginning to show the dawn of a faint hope. "An' we'll play games, too, wun't we?"

Van Dorn was in for anything now, and he plunged forward with whole-hearted abandon.

"Of course we'll play games," he promised recklessly, "any games you like. There's a big collection of them on board, from parlor croquet to bridge."

She shook her head, and every bright curl under the sailor hat seemed to take a vital part in the action and then curl up crisply after its exertion.

"I don't play no cards," she explained. "Ma wun't let me. She says bad habits is formed that way. She's awful partic'lar what I do." She dropped her arms to her sides and turned abruptly to face him, her eyes wide under the shock of a sudden memory.

"You wun't make love to me, will you?" she asked with keen anxiety. "They 'most always do, so ma said I wasn't to speak to no man on board. She made me promise. Oh, de-ar! I forgot!"

The final exclamation was so like a sob that Van Dorn, who had felt both his face and his heart hardening under this unprovoked attack, relented. She was a queer type, this girl—something wholly new in his experience, but surely all the more interesting for that reason.

"I won't make love to you," he said, quietly, knowing he would keep his promise. For indeed she was not "his sort," as any one who knew him could have told her. He was sorry for her, and they were both lonely—that was all.

Her face blossomed into the beauty of a full-grown pink rose.

"Then it's a-ll right," she cried, delightedly. "An' I know ma wouldn't mind if she just knew how awful lonesome I was. My, but it was terrible. You see—" she leaned against the rail again, and it was quite evident that she was about to launch without further delay into the life-story he had suggested—"you see, it's like this: I ain't never been to Europe before. I ain't never been anywhere alone without folks I knew. When I went on the road I knew Carrie Brice; she got me in, you know, an' soon I knew the hull company. I'm in the perfession," she added simply. "I'm in the chorus of 'The Giddy Girl of Gotham,' an' us girls has to be awful careful or we'll get misunderstood. Ma says so."

Van Dorn regarded her long and earnestly, without speaking, while various little labels he had mentally pasted on her faded into nothing. A chorus girl! He knew very little about chorus girls, but he knew this was not the chorus girl he had read of in fiction and had seen in plays.

"You don't look like a chorus—er—a member of the theatrical profession," he said, lamely, sparring for time, as it were, and trying to readjust his theories along the new lines suggested. Her next words helped him.

"I guess that's so," she murmured, regretfully. "Maybe it's because I ain't got no good clo's. I ain't been on long enough. I've only been in the perfession two months, an' now I'm goin' into vaudeville. That's why I'm goin' to Paris. I'm goin' to do a turn next winter on the road with Bert Wagner, the great song writer. You know about Bert. Sure you do. He says they's the makin' of a artist in me. He's goin' to write the songs an' I'm goin' to sing them, an' he'll play the 'companiments. I can do the singin' all right now. But I got to study in Paris two months an' learn fancy dancin' an' stage business. I'm goin' to work with Madame Veiller. Bert says she can teach a green one more in a month than any one else can teach in a year. Bert bought my ticket, an' he's comin' on another ship, because we're engaged an' he don't think it would be c'rect to come on the same one. He sailed the same day I did. Bert's awful partic'lar, jest as partic'lar as ma. I'm goin' to live with his aunt in Paris, an' in the fall—" her voice dropped a little and the words came more slowly, but she looked at Van Dorn with the clear unconscious eyes of a child—"in the fall, Bert an' me is goin' to get merried before we go on the road. I'll be eighteen then. Ma thinks I mustn't get merried before I'm eighteen. We got the hull season booked a'ready."

"And yet you were lonesome," said Van Dorn reproachfully. "All those delightful things to think about and Bert himself following you on this very ocean."

Then an inspiration came to Vevie

She blushed guiltily, but rallied to voice a simple philosophy whose truth Van Dorn could not combat.

"It's worse when you've had some one you care about, an' then leave 'em, than 'tis if you ain't had 'em at all. Bert wanted to send ma, too, but he couldn't afford it, an', besides, my little sisters needs her. So Bert got me a dress instead, to cut a dash in Paris. Say, it's a beaut. It's red, with a red hat. I'll put it on some day. Say, will I put it on now? I'm saving it, an' wearin' my old clo'es, but I'd like to have you see me in it. Bert says I look just like Billie Burke when I got it on."

Van Dorn hastily declined this generous offer, avowing that he liked her very much as she was. Then he suggested a brisk walk on deck, and they took it, with

the result that Mr. Henshaw, beholding them, was so overcome by the situation and its possibilities that he was forced to retire to his stateroom to give full vent to his emotions. Incidentally he extracted from his steward all of that excellent servant's information on the subject of one Miss Genevieve Hildegarde de la Tour, by which high-sounding pseudonym Van Dorn's new acquaintance was known in "The Giddy Girl of Gotham" company and on the passenger list. Miss de la Tour herself explained to Van Dorn her reasons for the selection of a name which she freely admitted was something it was hard to live up to.

"Bert wanted me to have a French one," she said simply, "but it's awful long, so folks calls me Vevie. You can, too," she added handsomely.

Van Dorn did not immediately avail himself of the privilege so promptly extended him, but his fellow passengers did. As "Vevie" his new friend was known from end to end of the *Columbia* before she had been on board three days. This was due in part to the efforts of Mr. Henshaw, but Van Dorn observed with appreciation that the gentlemen who so freely used the chorus girl's name among themselves were somewhat chary about bestowing it on her in her presence. She had a rather surprising amount of dignity, and a crisply direct method of discouraging any one she considered "fresh"—to use an expression frequently on her lips. Moreover, she consistently repelled all social advances from the other men.

"I promised Bert an' ma I wouldn't have nothin' to do with none of 'em," she confided to Van Dorn. "They wouldn't mind you, but the others ain't goin' to be in it for a minute, an' any one that tries gets the frosty mitt."

Flattered, if chastened, by this openly avowed trust, Van Dorn exerted himself to carry out the promises he had made during the first hour of their acquaintance. Together, he and "Vevie" played games. Together, they walked miles every day. Together, they chatted for hours. Together, they danced blithely on deck when the German band discoursed. Already Vevie danced divinely. Van Dorn wondered what even the gifted Madame Veiller of Paris could add to such perfect art. She sang for him, too, in a voice that pulled o d d l y at his heart strings. And as these unsophisticated i n f a n t s t a l k e d and walked and danced and played along their innocent and care-free way, Baedekers were laid aside, veils were removed, and symptoms were forgotten by their fellow passengers, that the little comedy might have undivided attention. During this time, Van Dorn again adjusted the labels he had prepared for Vevie in the first moments of their meeting. She was all he had thought her—frank, honest, unspoiled, true-hearted—a loyal and delightful little comrade.

"You are now able, my friends," he said quietly, "to tell any and every inquirer just how Vevie is!"

Two days after Van Horn reached Paris he was called upon to admire the energy and skill with which Mr. Henshaw had qualified as a dispenser of news.

"How's Vevie?" asked an old friend, addressing him in the Champs Elysées, and bridging with this casual question an interval of five years which had elapsed since their last meeting. Van Dorn laughed and explained briefly.

"How's Vevie?" asked the first man he met at the club later the same afternoon. Van Dorn explained, but did not laugh.

"How's Vevie?" chuckled Aiken and Harding and Ballou and Stirling and every other man he met during the week that followed. "How's Vevie?" became the password of Van Dorn's friends, the rallying cry of his enemies, the unescapable salute of every one who knew him well enough to salute him at all. Van Dorn expected Paris sweepers to stop him with the question as he scurried across the streets, and Paris cabmen to bend from their boxes with the same solicitous inquiry. In the midst of this he received a little note from Vevie.

"I wish you would come and see me where I live now," she wrote concisely. "I herd some things that makes me feel offul. We live on the fourth ectarje."

The address followed. Van Dorn went. His heart ached when he saw Vevie's worried little face.

"Ain't it terrible?" she asked with her first breath. And "Ain't it terrible?" she repeated when they had talked matters over like the good, sensible friends they were. "Bert's just about crazy. Of course, he knows it's all right"—her little figure straightened with the dignity she had shown on the ship—"but it makes him wild to have me talked about. He said he thought you ought 'a do somethin'."

For an instant Van Dorn wondered if Bert, this unseen force in Vevie's life, was perchance trying to do a stroke of business in a peculiarly unpleasant way. His face hardened as the reflection came to him. That anything that trod the stage should shrink from being "advertised" was taxing on the brain; but that a chorus girl and her young man should be agitated because Paris was gaily chirping her name simply beggared the imagination. Vevie's next words, however, enlightened him.

"He thinks you better come to dinner with us to some big swell place where every one knows you. Then they'll see us together an' they'll know Bert's your friend an' it's all right."

"I'll be very glad to," Van Dorn said simply, "but I think it would be better if you would both dine with me at the Ritz. Shall we say to-morrow night? I'll call for you at seven. There is very little a man can do to straighten out such a foolish tangle without making things worse instead of better, but you may be sure I'll do all I can. And I needn't tell you, Vevie, how sorry I am to be the cause of annoyance to you, need I? It was horribly thoughtless of me. I should have remembered how little it takes to start idle tongues. But you forgive me, don't you?"

Genevieve Hildegarde de la Tour regarded him.

"You bet I do," she replied inelegantly, but with deep feeling. "Say, there ain't many like you, Mr. Van Dorn; I know that, too. You're a gentleman—you are—the real thing. I—I didn't know they was your kind of men in the world. We don't see 'em often in our business. 'Course I'm new in it," she ended, reflectively, "but I've heard the girls talk."

Van Dorn went away, more determined than ever to kill the silly gossip he had so thoughtlessly evoked. An inspiration had come to him during his visit to Vevie, and he lost no time in following it. He went straight from her to his sister, Mrs. Dick Caswell, a woman whose sense of humor was equaled only by the breadth of her charity, the depth of her understanding, and the height of her social position.

Mrs. Caswell lived in Paris, but her brother, during his many visits there, put up independently in a hotel, dropping in upon his sister, however, at all hours and in all moods. To-day she was recovering from a heavy cold, and received him in her boudoir. She was reclining languorously on a couch when he entered, but the sight of her brother made her languidly sit up and beg to be told how Vevie was. Van Dorn took the question without resentment.

"That's exactly why I'm here," he explained, "to tell you how Vevie is. Vevie is all right. And I want you to help her out of the absurd position I've put her in."

He explained at length and Mrs. Caswell listened with flattering interest. At the end she made reply with gratifying absence of hesitancy.

"Of course I'll come," she said. "I think it will be fun. How many do you want me to bring?"

Van Dorn told her, without undue modesty. All he demanded, it appeared, was the presence of the duchess who held French society in her plump and capable hands, the marchioness whose virtue and piety were as noted as the number and size of her pearls, two or three exclusive leaders of the American colony, Lord and Lady Yarrowdale of London, who were in Paris that week, and, he carelessly added, an archbishop or two—an assemblage, in short, whose mere presence at the same dinner-table with her would be to Genevieve Hildegarde de la Tour as a certificate of character.

"I'll ask the Yarrowdales," he ended, "and Mrs. Braide. Can you get the others?"

Mrs. Caswell nodded. "I think so," she said, slowly. "I think it can be arranged. I'll tell them the facts and they'll understand. Besides, most of them are the right sort. They will be interested. Leave the details to me. Seven o'clock you say, at the Ritz?"

IT SEEMED considerate to give Vevie a hint of the social glory awaiting her, and Van Dorn did so, calling on her the next morning for that purpose. Far back in his brain lay a haunting memory of the red gown, whose full glories he had beheld the last evening on the *Columbia*, at the captain's dinner.

"I'd dress very quietly if I were you," he ventured, when he had casually mentioned that he had asked his sister and a few friends to meet her and Bert. "Something—er—plain and severe. Nice gloves and slippers and that sort of thing, but no bright colo[illegible] if you've got anything else."

He felt a brute as he spoke, and the disappointed droop at the corners of Vevie's mouth did not lighten his remorse. But she was sweetly docile. It must be added that she was also wholly unimpressed. She and Bert were going to dine with some of Mr. Van Dorn's friends, instead of Van Dorn dining with Bert and herself. That was nice, but that was all. Miss de la Tour had never planted her innocent feet on the lowest round of society's ladder.

That night, however, in the brilliant setting of the Ritz dining-room, things looked different. True to her promise to Van Dorn, Vevie was dressed very simply, in a little black gown whose severity was relieved only by a few deft touches from the capable hands of Madame Veiller, whose interest in the whole affair had been feverish from the beginning, and whose admiration for Monsieur Van Dorn had temporarily deprived her of breath—a serious inconvenience for a stout lady living on the "fourth ectarje." Vevie was bewilderingly pretty, charmingly modest in appearance, and almost breathless. For with Vevie at the table sat great ladies who, lacking Mr. Van Dorn's interest and deprived of his advice, had gowned themselves in the most gorgeous creations of the b e s t *couturières* in France. Vevie looked at the Marchioness's famous pearls and Lady Yarrowdale's diamonds and the wonderful gowns of all the women, and thought of her red robe and sighed. If only she were wearing *that*, they would have realized that she knew something about style and she would have felt more in keeping with the scene.

Around her conversation sparkled, changing from English to French and back to English, as some of the guests remembered that all did not speak French. It was during a discussion of world periodicals that Vevie made one of the three remarks which were her contribution to the talk of the evening.

"Ma says 'The Ladies' Fireside Gazette' has fell off somethin' terrible," she remarked cheerfully to Lady Yarrowdale during a pause in the conversation. "I never read it, m'self."

The Englishwoman heard this d r e a r y fact, which seemed to hint that periodicals, like men, "have their little day and die," with a somewhat questioning smile. She had never imagined—much less met—anything feminine quite like this, and she had a sense that it was not likely to occur again. Mrs. Caswell, however, had given her a good idea of why she was invited "to meet Vevie," and she had come, as a motherly woman with a big heart, to do it.

"Neither do I," she agreed cordially, and smiled again on Vevie before she turned to answer a question of the man beside her. Vevie's second remark was not so felicitous in its effect at the time, though it has since won imperishable fame as a quotation in the circles Mrs. Dick Caswell adorns. Vevie's fellow guests were discussing a youth whose exploits during one brief visit to America had kept American journalists busy. Vevie recognized the name. Any member of her profession would have done so. She leaned forward eagerly. It was pleasant to know for a moment or two what they were talking about, and to be able to say something herself.

"I know about him," she said, addressing the company generally. "I never met him, but I heard he was awfnl nice, some ways. Still"—this with a heavy sigh—"o' course he's awful wild, an' ladies is his curse."

Lord Yarrowdale was swallowing his port just when Miss de la Tour alluded with delicate regret to the stumbling-block her sex had proved to the young man, and the combination threatened fatal results for a moment. Mr. Bert Wagner, however, sitting at Mrs. Caswell's right as the man guest of honor, and hence envisaging his fiancée, who was occupying a corresponding position at Van Dorn's side, smiled in a complacent, man-of-the-world fashion, having decided that the little ripple over Vevie's comment had nothing derisive in it. Heartened by the conviction that what she had said, and Bert had evidently approved, could not be wrong, Vevie beamed with guileless joy. She was very happy. It had come to her, somehow, who these people were. She had heard several titles mentioned. Moreover, it was easy to see that the table at which she sat was the center of interest in the great dining-room. She had drunk no wine, but she was temperamental and young, and she felt intoxicated by the music, the lights, the flowers, the company, the new fascinating atmosphere around her. It was written that in the future years Miss De la Tour would find herself in many brilliant assemblages, for Bert was right in his theory that she had in her the "makin' of a artist." Sitting there, an obscure member of a brilliant company, she felt a sudden premonition of the triumphs of those days to come; but she felt, too, that no other dinner would ever seem to her so wonderful, so perfect as this first one, and she was right. While these thoughts filled [illegible] Mrs. Caswell had safely eliminated the youth

After a Century

Vice-President Sherman delivering the oration in the rotunda of the Capitol, April 28, over the body of Major Charles Pierre L'Enfant, the French engineer who laid out the original plans for the City of Washington. The body was moved from Reed Hill, Maryland, where it had lain almost a hundred years in an obscure grave, to Arlington Cemetery

The "Nathan Hale" of the South

A HEROIC bronze statue of Sam Davis (the work of Zolnay, the sculptor) was unveiled at Nashville, Tennessee, April 29. Sam Davis of the Southern army, like Nathan Hale of the Revolution, was sent as a scout on a dangerous enterprise, and, like Nathan Hale, was captured and hanged. The last words of each are identical in spirit.

Hale said: "I only regret that I have but one life to lose for my country."

And Davis said: "I would die a thousand deaths before I would betray a friend."

Davis was transmitting to General Bragg at Missionary Ridge important information concerning the Federal army. General Dodge of the Union forces offered leniency to young Davis if he would tell how he obtained it. But he resolutely refused.

Accordingly, he was tried by a court-martial, sentenced to death, and executed November 27, 1863.

The pathetic story of Sam Davis is known among all the Federal as well as the Confederate veterans. In fact, the monument just erected is the gift of contributors from every State in the Union.

Comrades of the Confederacy

Parade in Atlanta, Georgia, on Southern Memorial Day, April 26. The ranks of veterans were noticeably thinner than in former years, while many of the infirm were borne in wagons. The streets held the largest crowd of spectators that ever turned out in Atlanta upon such an occasion. Other Southern cities observed the day

What the World Is Doing

A Record of Current Events

Japan at the Golden Gate

TWO Japanese cruisers have been visiting San Francisco. From May 1 to May 10 the city has directed its customary hospitality at the officers, men, and cadets of the *Aso* and *Soya*—training ships for the cadets of the Japanese Naval School. On May Day, Admiral Ijichi steamed into the harbor from San Pedro, and he and his vessels were welcomed by Admiral Swinburne, General Weston, Mayor Taylor, and mercantile and civil committees. The harbor was gay with the flags of both nations. The city itself was interested and even enthusiastic at the visit, as the affair was rightly felt to have an international importance.

With the infallible tact of his race, Admiral Ijichi said:

"The United States and Japan are anchored on as firm a basis of friendship to-day as they have ever been in the past, and I can not foresee any possibility of an interruption or breach of the sacred relations. These two great nations of the Pacific are not going to war with each other for any cause that we of to-day can predict."

Banquets, receptions, automobile rides, minstrel shows, band concerts, and many sight-seeing tours were among the items of hospitality lavished on the cadets and officers.

To show how warm-hearted and methodical was the preparation made by San Francisco for the peaceful invasion, we cite an editorial of the "Chronicle":

"It is conceded that the reception given to our battleship fleet in Japanese waters was perhaps the most munificent and magnificent entertainment ever given by the people of one nation to the representatives of another. That debt can not be repaid except on a similar great national occasion. It is too big a job for one city of moderate size. We can, however, and shall, to the extent of our capacity, exhibit something of this spirit in the reception which we shall give to these two national ships.

"The Japanese are our most formidable competitors in a great many things, but there is one line in which we can not afford to let them beat us if we can help it, and that is in courteous and abounding hospitality. California hospitality has come to have quite distinctive characteristics of its own, and we must give our visitors a first-class exhibition of it."

An Exciting Budget

NAVY expenses and old-age pensions have helped to bring Great Britain face to face with a deficit of $80,000,000. In meeting this acute situation, David Lloyd-George, Chancellor of the Exchequer, on April 29, presented a fascinating budget, full of daring proposals. The friends of Mr. Lloyd-George call it "a great democratic budget." His opponents dub it an "extreme Socialist budget," a "gambling in futures."

Motor manufacturers, distillers, and brewers denounce it. The suggested levy includes a supertax on incomes of over £5,000, a tax on mining royalties, a tax on urban undeveloped land, a tax on the ungotten mineral valuation of land, a tax on the unearned increment, increased death duties, a tax on Stock Exchange speculation.

Kansas, the Provider

ONE more of the unfailing record-breaking wheat crops is promised from the fertile and dependable State of Kansas. The Secretary of the Kansas State Board of Agriculture says: "It appears that Kansas has a vast area of prospering wheat safely past the perils of winter." Six million and ninety-two thousand acres are sown and standing. There is a crop condition of 88.05 per cent on those six million acres. With favorable weather, the wheat crop will be one hundred million bushels. So there is a happy summer in prospect for such of the unemployed as are able to reach the wheat fields at harvest time, and for college boys getting ahead on the winter term.

Is Our Architecture All Wrong?

THE remarks of Mr. J. Stewart Barney on American architecture and the École des Beaux-Arts can not fail to strike consternation into many a complacent bosom. To the majority of the public who think about architecture at all, the École des Beaux-Arts is one of those Gibraltars of taste which the mere untutored American has no right to criticize, much less attack. It is said of promising young men that they have gone there to complete their studies, as it might be said that they have gone to Germany to sing Wagner, or to Uganda to hunt big game.

Now comes Mr. Barney—himself an architect of wide experience—with the assertion that we have been carried off our feet by academic Beaux-Arts waves. Our eternal "monumental" buildings—libraries, railroad stations, and the like, with their rows of Corinthian columns—get on his nerves. He admires the Corinthian column, of course, but he objects to plastering it against the side of a building in what seems to him an untruthful manner. Classic forms tossed aimlessly about the fronts of office buildings, shutting out the light from the workers inside, do not seem to him a truthful and logical expression of what is needed. True, many American architects are thinking, and thinking hard, but the "importing firms," he says, "do not consider that necessary as yet. And as long as there remains one building in Europe which has not been transplanted to our shores and misused in every possible way, they probably will not think and will continue to gather inspiration in the fields of ancient art. I believe we are beginning to realize the incongruity of such buildings, and the worst is over. Some of the older firms will continue to import a few fragments, and now and then a completed building for some Western gentleman's country house, but they are fast passing away. We shall not see Italian palaces used for shoe shops nor Spanish cathedrals converted into hippodromes."

Nearly Two Million Dollars of Real Money.—*The banknotes pictured on this table totaled up to one million eight hundred thousand dollars of good United States currency. This sum was turned over to the State of Texas by the Waters-Pierce Oil Company April 24 in payment of the fine imposed upon it for violating the anti-trust law. At Austin, Texas, the banknotes were rushed in coffee sacks on motor cars from the banks to the Capitol. The erect package contains $1,200,000 in ten-thousand-dollar bills*

Special point is given to these observations by the number of huge "monumental" buildings now being erected. The new Educational Building at Albany, the new Post-Office Building in New York, the enormous new Pennsylvania Station in New York, are among the buildings almost entirely surrounded by rows of enormous Corinthian columns.

It will also come as a surprise to many that it is no longer considered desirable to disguise the height of skyscrapers. Instead of breaking them up by horizontal lines, or making a pseudo three-story building of one that is really seven or ten stories high, architects now frankly admit the beauty possible in towering structures. They emphasize by means of vertical lines the height and perpendicularity of the whole composition. In other words, they tell the truth instead of disguising it in classic forms. Even this, however, Mr. Barney declares was not done until visiting European critics pointed it out to us.

Other architects, more conservative than Mr. Barney, among them Mr. Whitney Warren and Mr. Francis H. Kimball, do not feel that his objections are well grounded. An American style of architecture can only be developed in time, they say. It can not be invented offhand. And it is their belief that our evolution is as rapid as could reasonably be expected.

Honoring the Gray

MEMORIAL DAY, April 26, for soldiers of the Gray, was widely and fittingly observed in several of the Southern States. In Wilkes County, Georgia, seventeen veterans, each over eighty years old, still survive. "They attribute their advanced age," says the Atlanta "Constitution," "to the hardening they received in the four years spent in the open, when they were following Lee and Jackson."

At Rome, Georgia, a monument on Myrtle Hill was unveiled. Atlanta enjoyed choice spring weather for the procession of veterans, whose ranks are thinner and whose step is slower each year. In huge express wagons, veterans of the Georgia Soldiers' Home, unable to walk in the line of parade, were carried to the cemetery for the Memorial Day ceremony.

The Three Ottoman Mysteries

THE Young Turks are conducting themselves as if they had a leader of no mean gifts. We await his name with interest. Is he in command of troops? Or does he do his thinking in the background? Each move of theirs has been so sure, with a mixture of tact and strength. They have protected the Legations at the very time they were deposing the Sultan and carrying him across country to Salonica. They have put to death two hundred and fifty mutiny leaders who helped to incite the anti-Constitutional movement of April—but they have performed this wholesale assassination without throwing an excitable city into tumult. Who is the sure-stepping leader of the Young Turks?

The next point on which the world waits enlightenment is the sort of person that the new Sultan is going to be. The famous prisoners of history and tradition had many things done to them—some of them were flattened off into gentle nonentities by such a term of surveillance as Rechad has undergone. Others were embittered into strength by the protracted injustice.

Asia Minor is the third unknown quantity. If the Young Turks are throwing off orthodoxy in their program, they will have no power over the tribes and races of the empire. The forces of reaction can at any time stir revolt on a religious appeal. In similar times of disturbance a savior has often arisen—a fanatic with a new and fuller revelation, and one adapted to the local situation. If a savior were now to come down out of the hill country, it is probable that he could cut in two the Ottoman Empire.

Singeing the Sugar Trust

THE Sugar Trust has just completed paying the $2,000,000 which the United States Government agreed to accept in settlement of $9,000,000 of fines and claims against the trust for systematically stealing from the United States from 1901 to the close of 1907. In a period of six years the American Sugar Refining Company of New York—one of the companies composing the trust—landed on the Brooklyn docks seventy-five million pounds of sugar on which no duty was paid. In those six years it stole from the Government just under a million and a quarter dollars in short duties. By a clever device in the seventeen scale houses where incoming sugar is weighed—a spring exerting force on the levers and so causing the registering beam to show less weight—the company smuggled in its suger in short weight.

Señorita Huidobro

IN THE little old hotel at Fourth Avenue and Eighteenth Street—a remnant of old New York which was Thackeray's home when he first visited America and which has sheltered many strange and interesting persons in its day—Señorita Carolina Holman Huidobro lived when in New York. Here, in one of the gaunt old chambers, whose dinginess her exuberant personality, masculine vigor of thought and speech, and unquenchable humor made fairly radiant, she dispensed hospitality to her friends. Cooking with her own hands marvelous Chilean concoctions of honey and cheese while she told stories of the west coast, of Chilean revolutions and Balmaceda, and discussed fluctuating currency, nitrates, battleships, and international peace—those were memorable evenings for the fortunate few who shared them.

A larger audience knew Señorita Huidobro through her lectures on South American countries. Hundreds who may have heard of her but once would remember her description of the "Christ of the Andes," the monument which marks the boundary between Chile and the Argentine, and her repeating, in Spanish and English, of the inscription on it: "Sooner shall these mountains crumble into dust than Chileans and Argentines break the peace which at the feet of Christ the Redeemer they have sworn to maintain."

Señorita Huidobro was born in Talca, Chile, fifty years ago. Her father was Mr. George Holman, a Pennsylvanian and American consular agent at Valparaiso. While north on business in connection with his flour-mills in Chile, he married Miss Marion Atkins of Provincetown, and the young people returned to Chile. Carolina grew up as a Chilean, speaking Spanish as much as English, roughing it with her father, and learning about revolutions and the hazards of fluctuating currency when other little girls were still playing with dolls. At the age of forty-nine the father died suddenly, and, as the family fortunes were somewhat shaky, Carolina at once set to work as a teacher and governess and journalist.

In 1897 she and her mother returned to this country. The Spanish War stirred up an interest in Spanish America which with characteristic energy she at once made practically useful. She started to teach Spanish, and for purposes of business adopted, first informally and later legally, the name of her Chilean godparents, Huidobro. Señorita Huidobro was allied with the Unitarians of Boston, and she was the friend of many representative women, among them Julia Ward Howe and Edna D. Cheney. At Mrs. Howe's request she translated the "Battle Hymn of the Republic" into Spanish. She began giving lectures on South America for church societies and women's clubs, and in 1901 she was engaged by the New York Board of Education as a lecturer in their winter courses. She continued in this work up to her recent sudden death, and she also gave lectures before many peace organizations and suffrage leagues. The cause of Pan-Americanism had no more sincere or tireless advocate.

John Bull's Remorse

THAT eminently respectable, rather kindly, middle-aged gentleman who typifies for the rest of the world the British nation, continues to exhibit a morbid introspection and hectic distrust of the future almost painful to see. The very word *Dreadnought* must have become a weariness to the flesh wherever British journals are read. The matter has gone much deeper however, than a mere agitation for more battleships. A feeling of melancholy introspection [illegible] seems to have seized the whole British [illegible]

Quick Action for One Cent

A Postal Card Brings You Oliver Typewriter Art Catalog and "17-Cents-a-Day" Selling Plan

A postal card request for the Plan will quickly pave the way to the purchase of the Oliver Typewriter for "17-Cents-a-Day."

You'll say when you get the details that never was a cent better spent.

This Plan appeals alike to the man who needs many machines and to the one whose bread-and-butter is earned by operating a typewriter.

And it is influencing thousands who have hitherto written with pen to enjoy the convenience of "*The Oliver in the Home.*"

We are willing to wait while you pay at the rate of "17-Cents-a-Day."

We take the risk—you take the typewriter! Isn't that an attractive proposition on the world's best $100 machine?

The OLIVER Typewriter

The Standard Visible Writer

America rings with praise for the Oliver—the Typewriter that Excels.

They praise its splendid strength—its marvelous speed. They appreciate its multiplied forms of service. They like its easy action—its beautiful printing—its amazing simplicity.

That's why it holds a dominant position regardless of the combined opposition of "57 varieties" of typewriters.

The Oliver *originated* successful "*visible writing*," and is the only visible writing typewriter that has demonstrated its efficiency by years of satisfactory service.

It operates on the only scientifically correct principle, the downward stroke—LIKE THE BLOW OF A HAMMER.

The visible writing of other machines is done with upward stroke—AGAINST THE FORCE OF GRAVITY.

The *downward* blow is the *strongest*, hence the Oliver is a heavier manifolder than any other typewriter.

The *downward* blow is the *easiest*, hence the wonderfully light touch of the Oliver.

Get in touch with the Oliver! Send for the Plan today. Learn how easy it is to own the machine that makes work like play.

The Oliver Art Catalog—sent free on request—is brimful and bubbling over with typewriter information. Ask for it.

For quick action, just send a postal and get the Art Catalog and "17-Cents-a-Day" Selling Plan by return mail.

leading article, entitled "A New Way of Life," the "Spectator," quoting the Elizabethans, believes that England has been "too long 'nuzzled 'twixt the breasts of happiness,' is too near to being 'drowned in security.' While we do not deny the continuous need for higher moral ideals, what we specially desire to emphasize is the need for a greater seriousness or, if you will, hardness of outlook. We have got in future to face the world not as we should like it to be, but as it is—the world of blood and iron, controlled by men who are not humanitarians and philanthropists. . . . We must realize that in public as in private life business is business and that we are not engaged in a pleasant game of bridge. . . . We must strain every nerve, not merely to provide the material needs of defense, but also to brace the nation as a whole for the great patriotic struggle to which, in all human probability, it will be exposed in the next ten or fifteen years, if not before."

And this, in view of the Briton's well-known complacency, leads to the most interesting phase of the whole matter, the apparent conviction that the "new way of life" must not be confined to naval or military preparations, but "go deep into the fiber of the people. Every man, whether he is tilling the soil, hewing coal, laying bricks, or writing books, must accustom himself to feel that he is doing it, not for himself or his family alone, but partly for his country." To bring out this point more strongly, the writer quotes a German professor's statement that such is the attitude of his own countrymen, who do "not look for reward in relief from work, but in its more complete accomplishment." "Our new way of life," continues the "Spectator, "must copy the German spirit in this respect. It ought not to seem the most natural thing in the world to say that a man is going to give up work, not because his health and energy are exhausted, but because he has earned the right to go and amuse himself. Hitherto Englishmen have thought that rather a fine thing and a noble thing to say and a proof of how little they care for money and material concerns. We trust it will not be so regarded in future. . . . Our new way of life must be a way of preparing ourselves morally, intellectually, and materially for the coming struggle—a struggle which, by the paradox of life, may be avoided by the perfection of such preparation, but in no other conceivable way."

A Neighbor's View of Crazy Snake

FOR several weeks, Crazy Snake held the attention of the American public because of his alleged disturbance of the Oklahoma peace. He was listed as a "bad man" to be hunted down with guns. Now comes a neighbor of Crazy Snake's, a citizen of Newkirk, in Kay County, Oklahoma, and what he tells us follows:

"Mr. Chitto Harjo is a fine old-school country gentleman who owned estates in lands in Oklahoma, secured to his ancestors and himself through solemn treaties with the United States, guaranteeing him in peaceable possession so long as 'grass grows and water runs.'

"Mr. Harjo deported himself as a well-behaved citizen all his years, and risked his life in the service and defense of the Government that had pledged itself to protect him in the enjoyment of his ownership.

"One cold day when the grass was brown and the streams frozen, the Government demanded that Chitto Harjo, who had become Wilson Jones, should give up his rights under the treaties and accept something he did not want and did not know how to use, a thing that usually results in plundering the Indian of all his earthly possessions and leaving him nowhere to lay his head. Mr. Harjo-Jones refused, stood on his right, and advised his people to the same course.

"Then the Government deprived him of his benefits under the treaties, and when he made dignified protest he became the mark of shallow editors and mendacious correspondents, and known as 'Crazy Snake.'

"A bad reputation was manufactured for him and shudders furnished the readers of Associated Press reports concerning Indian uprisings headed by 'Crazy Snake.' It would not sound so well to say Mr. Jones, which shows there is something in a name after all.

"When somebody was killed in his vicinity a hue and cry was raised for the immediate capture or extinction of the terrible old hostile, Crazy Snake. Then the military arm of the Government was invoked and covered his warm trail with press bulletins and militia, at considerable expense to the State, for Mr. Harjo had taken to the hills in the belief that immediate absence is preferable to explanation made after one has been shot.

"Geronimo, who festooned the trees with little girls, received annuities and consideration, but Chitto Harjo, who has not raised his hand against any but the enemies of the Government, is proclaimed a cause of war and chased through the woods by military geniuses and tin soldiers."

Of Interest to Those Seeking Divorce

THE decision of Mr. Justice Pike of Nevada refusing to grant a divorce to Virginia Harned Sothern, the actress, from her husband, E. H. Sothern, the actor, is likely to be of considerable importance to those contemplating obtaining an easy divorce in some of our Western States. If public opinion is beginning to protest in Nevada—the most sparsely populated State—against a too casual procedure in these matters, similar changes may be expected in other States. Mr. Justice Pike's decision was based principally on the fact that neither party to the suit had established residence in Nevada, or had proved a bona-fide intention to remain there. Mrs. Sothern apparently signed her petition in the East and forwarded it to Reno, where it was served on Mr. Sothern while he happened to be acting there. The particular point settled is that on complaint filed by a non-resident plaintiff, with process served on a non-resident defendant who happens to be temporarily in the State, no jurisdiction is secured on which a justice may allow a divorce decree.

✣ ✣ ✣

Baseball

(*Continued from page 15*)

three strikes and four balls, where it has remained for twenty years, where it is likely to remain.

With the perfection of strike rules and the development of protective armor, the game was practically completed, so far as external features are concerned. The later changes have been comparatively unimportant after all. The pitcher, who has been receding farther from the batsman in all the history of the game, has been definitely placed on a line between first and third. His box has been replaced by a mound. The catcher, solely to "speed up" the game, has been required to stand up to the bat all the time. Finally, for the same general purpose of sharpening and quickening, uncaught fouls, up to third strike, have been made strikes. The fifty years' war between pitcher and batsman has ended in favor of the pitcher, who has beaten all rules made to increase batting. The principle has definitely been established that a tally is a hard-won guerdon. This may be a bad thing for the game as a spectacle, but it is the only thing for the game as a science.

What the "fans" call "inside baseball," which means nothing more than team-play and getting everything out of the game, was fairly under way even before defensive armor came. We owe much of it to Anson's great Chicago club. The prime of Anson was one of the heydays of baseball—great players in the field, a great audience in the stands. Every one who was any one in Chicago attended to root for the "boys" and to roast the umpire. The team is immortal. Any good fan, to this day, can name off that mighty infield of muscle and brain which played for Chicago in its second championship period: Anson, first base; Pfeffer, second; Williamson, short; Tommy Burns, third; Sunday, Gore, and Dalrymple in the outfield. And Clarkson and Kelly, the "ten-thousand-dollar battery"—every schoolboy knows of them, although it is nearly a quarter of a century since they fooled the batters for Chicago.

Solving Modern Batting

IN THAT combination were three men who played with their heads—Anson himself, Tommy Burns, who deserves more credit than he has ever taken for his quiet work in developing team-play, and "King" Kelly, "Mike" Kelly, "Ten-Thousand-Dollar" Kelly, as great a king-figure in baseball as the heroic John L. Sullivan in pugilism. It was Anson who worked out much of the modern theory of batting. He did not believe in place hitting, but he did believe that the old, accepted theories were all wrong. The primeval player used always to swing at the ball. Anson taught his men to "stop down" the bat and meet the ball square in the nose for successions of short, choppy hits. The St. Louis Browns were consistently Anson's stumbling-block. Charlie Comiskey, their first baseman, played "deeper" than man had ever played before, and all the Browns stood well off the bases. Anson took a leaf from their note-book. He made his infielders play farther off than ever infielders had dared play before. More, he introduced the "fielding pitcher." Before

This picture is from an actual photograph of A. T. Mosher's car stalled in a Florida swamp. Mr. Mosher writes that his car was submerged in water aver his Remy Magneto and motar far 4 hours at a time. Yet after being pulled aut, the motor would invariably start from the magneto on the second turn of the crank.

This Picture Shows Why

More Remy Magnetos are used on 1909 American cars than all others combined.

This is the ignition system that can be literally flooded with water without injury.

You probably will not have to subject your ignition to any such test as this—but you want a system that you can **be sure of,** under any and all conditions.

You want the Remy—the **American** magneto designed with the broad margins absolutely **required** by automobiles used on American roads.

Too frequent oiling cannot hurt it. It will stand more neglect—abuse—mud or sand than any other ignition system made.

These are only a few of the reasons why the

Remy

High Tension Alternating Current 1909

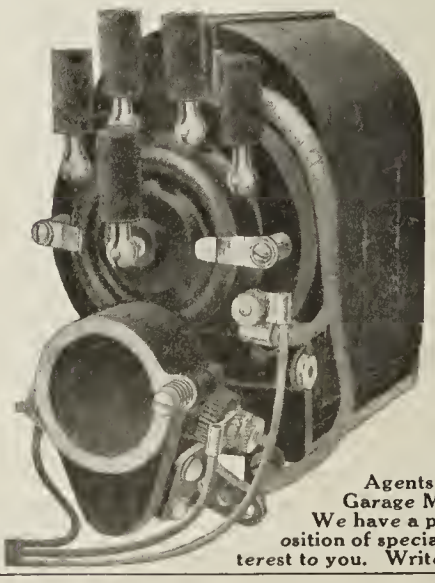
Magneto

will be used on more than 30,000 American cars this season—three out of every five American cars using magneto ignition, according to the most careful estimates.

This is the magneto that can be installed, used or repaired by the most inexperienced motorist. It has no brushes—no moving contacts—**NOTHING TO CAUSE TROUBLE.**

The Remy construction makes the **hottest spark** increasing the horse power from 5 to 25 per cent by **actual brake test.**

It provides for double ignition—magneto and battery without additional wiring.



We make and keep in stock fittings for attaching the Remy Magneto to many old models.

We can equip your car, **old or new,** at a cost so reasonable it will surprise you. It will pay you to address

When a Big Man Sizes You Up

There is no better asset a man in this age can possess than a clean-cut, well-dressed personal appearance. Many a man has *tailored* his way into the confidence of absolute strangers—has *tailored* his way through coldness and distrust—has *tailored* himself into life opportunities through sheer attractiveness of good hand-tailored clothes.

Good clothes are not necessarily expensive clothes, but they are tailored-to-order clothes—they are clothes that fit;—

you, your body and your personality; clothes that agree with every line and curve of your physique. Only a tailor can *make clothes like these!* And here is a world-famous organization of tailors waiting to tailor clothes for you. A local dealer near you will take the measures. Shall we send his name?

The Two Thousand headed Tailor

In Chicago and New York we operate the two largest and best organized tailoring establishments in America.

These shops are tailor shops in the fullest sense of the term; for every Royal garment is cut and draped to fit the measure and the order of the man who is to wear it.

It is a matter of common knowledge among clothes-makers everywhere that these shops are managed by the two cleverest and highest salaried designers in America. We pay more for the services of these designers alone than the entire gross income of twenty average local tailor shops.

Yet our business is so systematized that every garment we make up, either in Chicago or New York, is tailored to the customer's order under the direct supervision and inspection of these famous designers.

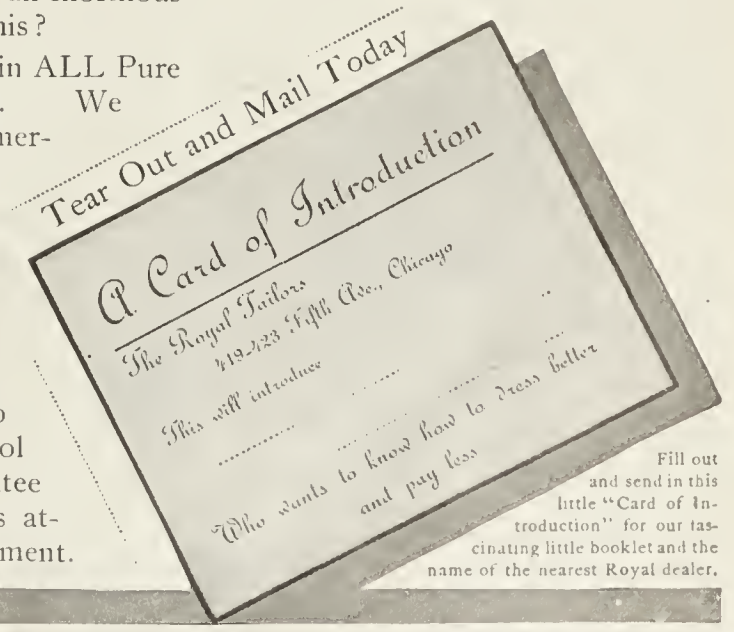
The Clothes and the Prices Fit You

If we tailored for a few dozen men as the local tailor does, we would have to charge his exorbitant prices. We would have to ask an immense profit from a few customers, instead of a very small one from thousands.

But we are tailoring for a nation—not a locality. We are making a thousand suits to the local tailors one.

That is why we can put into your suit or overcoat, at $25 to $40, the same irreproachable style and exclusiveness that the Fifth Avenue local tailor has to sell at $60 to $100 in order to exist.

500 Beautiful All Wool Patterns



There is a dealer near you waiting to take your measures. And in his store there are 500 strikingly handsome and exclusive cloth patterns awaiting your inspection. Think of that—a half a thousand samples of cloth, in every imaginable design, weave and coloring.

Can even the most exacting man fail to suit his taste in an enormous cloth collection like this?

And every pattern in ALL Pure Wool, mind you. We stand alone in America today as the only tailors or clothes makers in the world who legally guarantee each and every garment to be absolutely free from cotton—to be Wool and wool alone. A legal guarantee card to that effect is attached to every garment.

We want to make your Spring suit. We want to make it even if we must risk its whole cost on the chance of being able to please you.

Will you send the coupon today for our local dealer's name, our fascinating booklet and a copy of our unparalleled legal guaranty?

Fill out and send in this little "Card of Introduction" for our fascinating little booklet and the name of the nearest Royal dealer.

The Best 6% Bonds That We Know

We have written a book of information on the most attractive bonds that we know.

It is based on fifteen years of active experience with these bonds. We may rightly claim, therefore, very wide information.

The book is unbiased.

We sell many kinds of bonds, and our purpose in calling attention to one kind only is that you also may know about them to our mutual advantage.

These bonds pay 6% interest. They are first liens on valuable farms. Some are tax liens—Municipal obligations.

They are issued in denominations of $100, $500 and $1,000, so they appeal to both small and large investors.

They are today the most popular bonds that we sell. They will be ten times more popular when the facts about them are ten times better known—for no other large class of bonds offers equal security combined with so large an interest rate.

This book contains information which every investor should have, whether he has little or much to invest.

Cut out this coupon as a reminder to send for the book today.

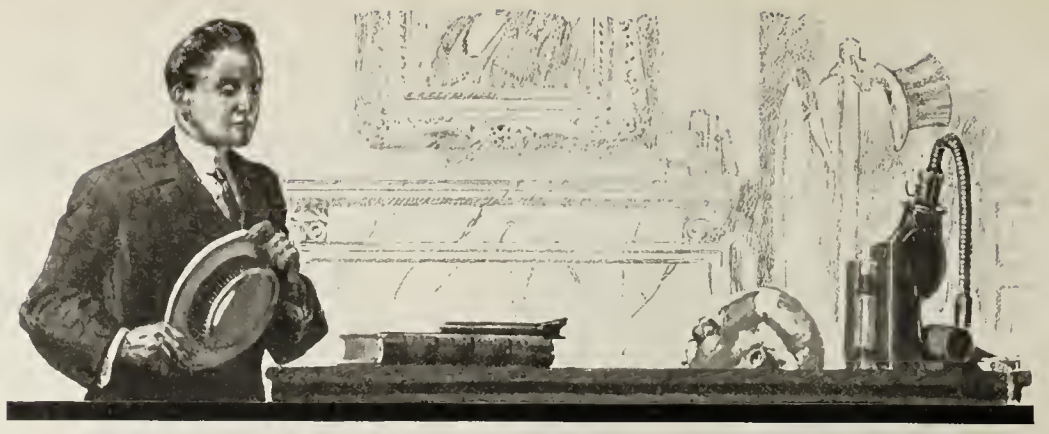
that time the box artists had considered their hands too precious to be risked on grounders and liners—that was for the infield. Anson made them venture from their boxes both to field balls and to back up the bases. Perceiving that three-quarters of the play in baseball came in the area bounded by home, first, and second, he shifted the whole arrangement of the infield. Formerly the second baseman had covered equally the territory to both sides of his bag, the shortstop guarding only the ground between second and third. Anson sent the second baseman away over toward first, and taught him to back up the first baseman all the time. He made the shortstop practically a second baseman. These are only a few of the things Anson did for the game.

The Trickery of Kelly

AS FOR Kelly, the tricks which he learned and taught are going yet. Every year the baseball legislators had to pass some new rule to fill a hole which Mike Kelly discovered in the accepted code. Once, while he was acting captain, a temporary indisposition kept him on the bench. As the rules ran, the captain might, at any stage of the game, substitute a player. In a critical period of the eighth inning, a pop foul came over the third baseman's reach, straight toward the bench. Mike Kelly rose up. "Hey!" he yelled to the left fielder. "You're out of the game. I'm in your place"—and Kelly reached up and caught the foul. It was an out under the rules. When he was playing with Boston, his team met Detroit for a decisive game. Kelly, running bases, was on first. The next man up hit to the shortstop, who fielded it for a hair-line decision. The umpire ran to first, that he might watch the play there. Quick as a flash Kelly scooted across the field just behind the pitcher's box, and made third before the umpire had stopped looking at first. Every spectator saw it, but the umpire did not; and Kelly kept his base. This led to the experiment with the "double-umpire" system.



However, Kelly's service to the game was not bounded by mere trickery. He was naturally slow on his feet, though quick with his hands; base-running had always troubled him. He studied that department of the game, learned by a hair's-breadth how far he dared play off, when it advantaged him most to slide feet foremost and when hands foremost. He, more than any other player, introduced the element of team-play between the batter and the base-runner. As I have said, Anson did not believe in place-hitting. But certain batters hit naturally to right field and certain to left. Kelly knew all the peculiarities of the team's batting. When on bases he maneuvered, by pretending that he was going to steal, to draw the baseman to right or left so as to "uncover" the probable area of the hit. In this way he manufactured many a run for Chicago.

Kelly played more games as an outfielder than as a catcher; yet it is as a catcher that he is remembered. Behind the bat he was a tower of intellectual strength to his pitchers. Old-timers are still wondering how much of Clarkson's great success was due to Kelly. Until the catcher was placed definitely behind the bat at all stages of the game, signaling between pitcher and catcher was a matter of individual agreement—sometimes the pitcher decided what ball he was going to send in, and sometimes the catcher. Kelly did the deciding for his pitchers. He was always talking to the batter, scheming to throw him a little out of his batting pose and then to signal for a ball just where it could not be hit effectively. When Mike Kelly entered the league, teamwork was haphazard. When he left Chicago for Boston on the ten-thousand-dollar purchase, inside baseball was on the way.

The Inside Game

FROM the Baltimore team of 1890-4, managed by Ned Hanlon, came the great impetus to the inside game—came, in fact, *the* inside game. We have added little to it since. Hughey Jennings, McGraw, and Willie Keeler were players of unusual "head." Old-timers would say that not one was a great "natural" player like George Wright, Fred Pfeffer, Al Spalding, or their team-mate, Dan Brouthers; one and all had to supplement a comparative degree of speed and baseball instinct with a superlative degree of headwork.

First, almost primarily, they rediscovered the bunt. The rule moving the pitcher back helped them in that. In two or three years they were all bunting; and they drove opponents to every device for meeting this improvement. It will seem strange to the boys of this generation that premeditated sacrifice hitting was practically unknown when the "Hanlonites" took hold of the game; but so it was. The Baltimore team began to sacrifice, even at the

For Ambitious Young Men—

What would it mean to you to feel that you were looking your best all the time?

To feel that you could look every man in the eye with never a doubt about your appearance?

A good appearance means much to you in your business and social possibilities. In the garments of only one maker can you be certain that you will *always* look your best. For in

Kaufman "Pre-Shrunk" Campus Togs

the shrink is removed from the cloth by the exclusive Kaufman "Pre-Shrinking" Process. There is no shrink left in the garments to cause trouble and dissatisfaction later.

Our "Pre-Shrinking" Process keeps Kaufman Campus Togs shapely and pleasing for months instead of days. We *guarantee satisfaction* in every garment.

If any Kaufman garment is not satisfactory, money will be refunded.

We could not make such a guarantee were it not for our "Pre-Shrinking" Process, controlled solely by ourselves, which alone makes it possible.

* * *

Your dealer will gladly show you Kaufman Campus Togs or other "Pre-Shrunk" garments in any of the popular fabrics for Spring and Summer at $15.00 to $30.00 the suit.

Our handsome *Style Book* shows the correct styles for Spring and Summer. Ask your dealer for it—or send to us, if you prefer. It's FREE. You should have it before deciding.

Chas. Kaufman & Bros., Chicago

Keepkool UNDERWEAR

TRADE MARK

"KEEPKOOL" is the *only* elastic, *ribbed*, *porous* underwear.

We emphasize this fact—because we don't want you to confuse "KEEPKOOL" with the ordinary porous underwear.

The ordinary porous garment is merely a flat, dead, rigid, shapeless knitted cloth, punctured with holes.

It's the *springy*, *elastic*, *ribbed* knit of "KEEPKOOL" UNDERWEAR, that makes "KEEPKOOL" so *different*, and so much *better*.

The *ribbed* principle, gives *life*, *fit* and *comfort* to "KEEPKOOL" UNDERWEAR. It stretches with every movement—yet retains its shape despite the roughest washing and hardest wear.

If you want the daintiest, coolest and most comfortable and healthful summer underwear, ask your dealer for "KEEPKOOL."

It is obtainable in knee length or ankle length drawers, short or long sleeves and athletic shirts.

MEN'S "KEEPKOOL" UNDERWEAR 50c a garment

BOYS' "KEEPKOOL" UNDERWEAR 25c a garment
MEN'S "KEEPKOOL" UNION SUITS - - $1.00

Booklet illustrating the various styles of "KEEPKOOL" UNDERWEAR upon request.

FULD & HATCH KNITTING COMPANY
ALBANY, N. Y.

Well Dressed Men

who would not think of wearing an *ordinary* Waterproof collar are delighted to find in our Challenge Brand a collar so perfect in fit and finish as to be admirably suited to every requirement.

CHALLENGE
Brand
WATERPROOF
COLLARS & CUFFS

are just the thing for dusty train trips and the hustle of business. They are always nobby and fresh in all kinds of weather—no bother and worry over a soiled collar—no laundry bills.

Challenge Collars and Cuffs are made in all the latest, most up-to-date models. They have the perfect fit, dull finish and dressy look of the best linen collars—our new "Slip-Easy" finish permits easy, correct adjustment of the tie.

Challenge Collars and Cuffs are absolutely waterproof, never turn yellow, can be cleaned with soap and water. You can't tell them from linen.

Sold by first-class haberdashers everywhere. If your dealer does not carry Challenge Brand Collars and Cuffs, send us 25 cents, stating size and style of collar you desire, or 50 cents per pair for cuffs, and we will see that you are supplied at once. Our new booklet gives valuable pointers about New York customs—what to wear and when to wear it. Let us send it to you.

Financing An Enterprise

A practical book by Francis Cooper, telling how money is secured for enterprises. Capitalization, prospectus writing, methods of presenting, etc., discussed fully. The only successful work on promotion. Endorsed by best business men. 540 pages. Buckram binding, prepaid $4. Send for pamphlet and list of business books.

The Ronald Press, 227 Broadway, N. Y.

expense of lowering their own batting averages.

Then they went further and invented a whole new system of play—a system disputed, so that one manager bases his teamwork upon it and another will have nothing to do with it—the "hit-and-run" game. That, like bunting, was not new; Arthur Irwin and John Ward had worked it, after a fashion, with the old Providence champions; but the Baltimore team brought it generally into the game. The principle is this: With a runner on base and less than two out, the coacher gives the signal for "hit and run." The man on base, as soon as the pitcher's arm goes back, starts a steal; the batsman strikes at that pitched ball whatever it may be, trying to hit it on the ground. If he sends a fly into a fielder's hands, it is all off with both him and his runner. They simply look foolish and walk to the bench. If he hits a grounder to the infielders, it is odds on, what with the start which the runner has, that they will both get their bases. And if he misses the ball completely, the runner has at least an excellent chance for a straight steal. In Hanlon's day, before opponents had found ways of beating this play, it figured on the rule of percentages as a consistent winner. The "squeeze" play, of which we have heard so much in the past two or three years, is the method of scoring a man from third base on the hit-and-run system. The Baltimores of Hanlon's time did not specialize on this play; it remained for the New York Americans, before their awful disorganization of 1908, to perfect it. The great advantage of the "squeeze" is the fact that the runner, starting home, draws the third baseman in toward his base. That leaves an uncovered space, into which a clever place hitter may often send a straight single. When Elberfeld and Chase used this play, they scored with it about eight times out of ten.

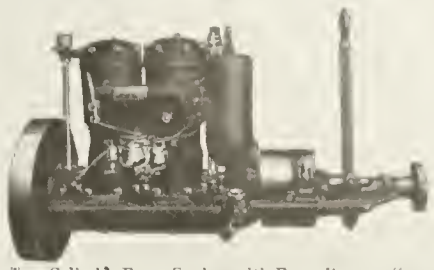
Those Baltimore batters, working the game for all there was in it, fouled as a policy, waiting until the pitcher sent a ball to their liking. That and their bunting, spreading among the other hitters of the league, caused two of the latest changes in the rules—first, a foul attempt to bunt became a strike, and later all uncaught fouls before third strike became strikes.

Signals and the Catcher

THE year 1894 saw the end of the great Hanlon Baltimore team as an entity. Progress since has gone mainly in the direction of signaling. The old books of rules of the fifties and sixties emphasized the position of catcher; he was then the real star of the team. That era passed; but the rule keeping him behind the bat has brought him to his own again. It has put him into a position to see and to study not only the pitcher, but the whole field; he is the keystone of team-work. Intelligence is at a premium in that position; the "head" of Johnnie Kling is what makes him the greatest catcher in the game to-day.

From the catcher radiates a system of quiet signals nearly as elaborate as the noisy signals of football. Watching the batter, understanding his peculiarities, the good catcher knows what every man in his league can and can not hit—he is the arbiter of pitching. He signals the curve, speed, and direction of every ball. The infielders all get that signal, and they pass it on to the outfielders. In response the team shifts—if not position, at least attention. For certain pitched balls are likely to be hit into certain definite places in the field. This probability is modified by the individual peculiarities of the batter—and the good team knows the whims and tricks of every opponent. For example, a slow ball, which the batter usually meets before it gets clear to the plate, travels almost inevitably into the territory of the third baseman and the left fielder. A wide outcurve, being a slow ball on account of its motion, is likely to take the same direction. A fast, breaking outshoot or a very fast straight ball, which the batter naturally hits "late," goes naturally to first and right; a straight, fast ball of moderate speed or a straight drop is most likely to enter the territory of the second baseman and the shortstop. Some teams do not shift position nor feet in response to this signal lest they "give away the ball" to the batsman; they only shift attention. That attention may mean the fraction of a second that divides a hit from an out. Others take the risk; frequently the whole outfield will move a few steps toward right field when a pitcher with a fast, breaking curve is about to pitch an outshoot.

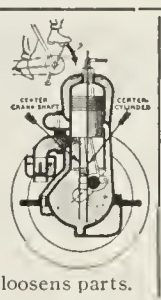
These are not the only signals. The basemen know absolutely in advance when the catcher or pitcher is about to throw to bases to catch a runner—no chance about that. The coacher, keeping up a fire of noise in his box, is only concealing the stealthy signals of hand and foot and eye



THE W. H. Mullins Co., of Salem, O., largest manufacturers of pressed steel boats in the world, bought 300 Ferro engines in 1907, 500 in 1908, and 1,000 to date for 1909, amounting in all to a quarter of a million dollars.

What better proof does anyone want of the satisfactory performance of an engine than this? When Mr. Mullins says—"We adopt this engine because of its many superior features, viz.: simplicity, ease in starting, operating reliability, and unequaled power for its size and weight," he is repeating the praise of thousands of Ferro owners in all parts of the world. You will be enthusiastic if you run a Ferro.

FERRO
Marine Engines



Made in 1, 2 and 3 cylinders from 3 to 25 H.P. Jump Spark Ignition

Two Cylinder Ferro Engine with Ferro Reverse Gear

1 and 2 cylinders, 4 to 15 H.P. Make and Break Ignition. Just the engine for any boat for work or pleasure.

Attractive Prices—Best Quality

Offset Cylinder—
An improvement found in the highest priced automobile motors and Ferro engines. Force of explosion exerts all turning effort on Crankshaft. Gives greater power efficiency, reduces and equalizes side thrusts of piston on cylinder walls. Eliminates "knock" which loosens parts.

Ferro Engine Embodies Most Advanced Improvements
Counter Balanced Crankshaft.
Successful Cooling System for any climate.
Positive Pressure Oiling System.
Efficient Ignition—Jump Spark & Make & Break.
Accessibility of Working Parts.
All Parts Interchangeable.
And others too lengthy to mention.

SPECIAL—5000 3 H.P. FERROS AT $60 EACH. Good as money can build. All improvements of standard Ferros, quantity brings down the price. Just the thing for launch, canoe, dingey or auxiliary yacht.

Biggest Value in Reverse Gear on the Market. Ferro Gear gives positive control and a neutral point where engine runs free. Get a catalogue.

YOU CAN SHOOT THE NEW

10 Shots Quick

SAVAGE

10 Shots Quick

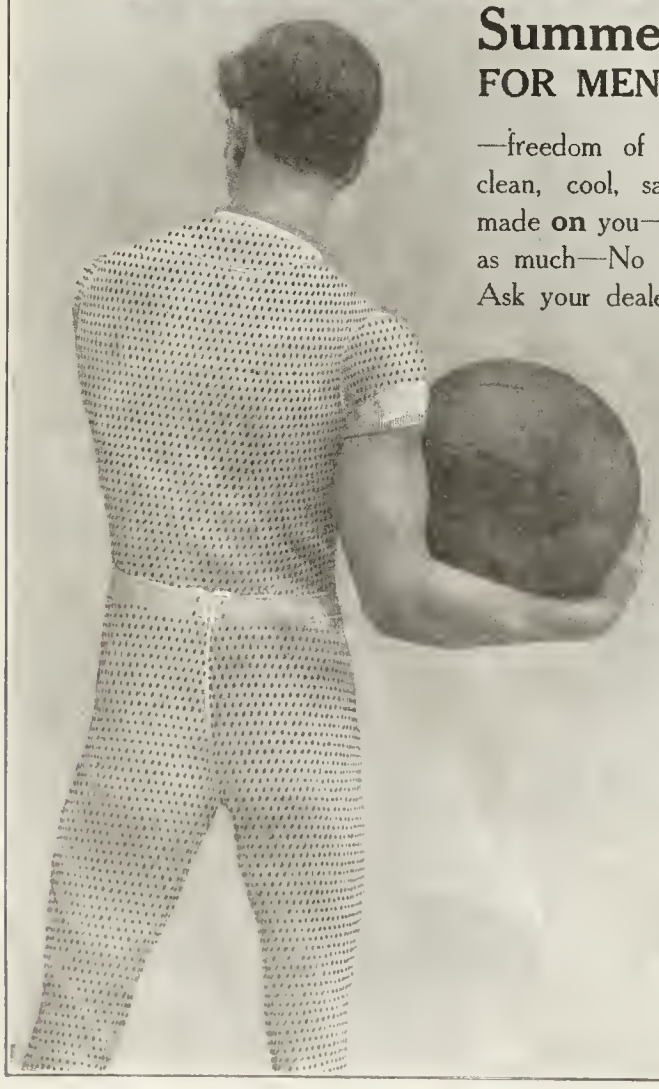
.32 Caliber Automatic Pistol

QUICK, QUICK AS LIGHTNING

quicker and straighter with either hand than any other pocket arm you ever saw. No time need be wasted taking aim; you point it straight instinctively, just as you do your finger, because it fits the hand naturally and balances perfectly. The Savage will get in the first shot every time.

And you can follow up that vital first shot with 120 shots a minute. You have ten shots instead of five or six, and can reload in a flash. Can be carried anywhere—only 6½ inches long.

SPECIAL FEATURES WHICH WILL APPEAL TO YOU:



Ten Shots: Double the number in an ordinary revolver and two more than other automatics. *Accuracy:* The only automatic which locks at the breech while the bullet traverses the barrel, insuring extreme accuracy, as well as freedom from fouling. *Simplicity:* Fewer parts than any other automatic pistol. Completely dismounts by hand without the aid of tools. *Safety:* Breech automatically locked during time of discharge. Cannot be fired unless the trigger is pulled. Safety positively locks it against discharge. *Weight:* 19 oz., including magazine. *Price* $15. No wide-awake dealer will offer you a clumsy, old-fashioned, slow-as-molasses substitute. If he does, write us. Write us anyhow for descriptive pamphlet.

by which he directs the runner to steal, or the batsman and runner to "hit and run." For those tricks and trap-plays, thought out in the dressing-rooms and elaborately prepared before certain games, the fielders have their own private code. And, finally, each side is trying always to detect and intercept the other's signals.

A system of "mental counting," like that practised by professional mind-readers, has arisen lately. For example, the pitcher, sweeping his eye over the field before he starts his wind-up, sees that the runner on second is a little too far off. As he turns back toward the plate he gives a signal. He and the second baseman begin silently counting together. When they both arrive at "six" the second baseman starts toward the base, and the pitcher turns and throws the ball—not at the player, but at the base, which will be covered when the ball arrives if their rhythm has been perfect. This is, perhaps, the last cry in finished, scientific baseball—this perfect coordination of two bodies and two sets of brains.

The signal system, used by all first-class teams, has been worked out to its greatest perfection in the Chicago Nationals, three times league champions and twice world's champions. In that respect, as in others, Chance's Cubs represent the latest development of baseball as a science.

* * *

Facts About Francis Bacon and Some About Shakespeare

(*Continued from page 13*)

case, all in all, has a character not unlike that of those romances of chivalry which, we learn, are the result of centuries of mouth-to-mouth relations, and of frequent and highly ingenious fabrications. Both are heroic myths. Both, as history, as facts, are false.

A Poet

THIS is not the place to discuss Bacon's intellectual right to poetic laurels. His biographer Spedding says he could have been a poet. Such diverse and competent judges as Lord Macaulay and Shelley call him a poet. His intellectual stature is so conceived that it could do a giant's work in prose or verse. Furthermore, Elizabethan dramatists, as every one knows, were a kind of literary highwaymen who rewrote old plays and made them better than they were before. "Doubtless" Bacon did this and hired men to help him. Such was his method with some of his acknowledged books.

When, therefore, we consider that Bacon's name is written into the plays of "William Shakespeare"; when we learn that Bacon's name and title is signed in the inscription on the Stratford monument; when we know, as Mr. Booth[1] in his book has shown, that Ben Jonson, Bishop Hall, and John Milton are among those who used exactly the same acrostic device for purposes of identification; when we realize the insufficiency and untruthfulness of the orthodox Shakespearian biography; and when we recall, furthermore, the studies of such scholars as Edwin Reed, Walter Begley, Judge Webb, and Mr. G. G. Greenwood—scholars who have suffered the whips and scorns of the pundits who believed otherwise because they had not read, and often would not read, their books—when we consider these points, one conclusion persistently presents itself: Bacon is Shakespeare.

Theory

IF WE balk at saying that a man conceived the writings in which his name is secretly signed, we must exercise ourselves considerably to account for the secret signatures. To make a modern instance, if Mr. Taft, instead of playing golf, had written musical comedies, he would not wish to be known as their author; for we are a practical people, and would never elect a musician to the office of President. Bacon could not have attained or maintained the dignity of the chancellorship if he had been recognized by the people as a writer for the theater in a time when actors and dramatists were among the lowest social orders. Simply, then, because it would have ruined the career of an English public man to acknowledge poetical and dramatic prowess, it may be that Bacon used the common name of Shakespeare as a mask. An actor bearing the same name was got, let us suppose, to aid the deception. Ingenious Ben Jonson, at one time Bacon's literary assistant, without doubt willingly helped. He at least, as we have seen, lent his name. Possibly merely to amuse them-

selves and to give posterity a chance to test its wit, the conspirators devised the acrostic which Mr. Booth has so amazingly disclosed.

I do not, let it be understood, offer these last statements as facts, but as—so it seems to me—very plausible conjectures. There's mystery in it yet.

Now that so much that has been hidden is published and brought to light, we may be allowed to hope that more secrets may be exposed to the sun. At any rate, one old ghost is forever laid, and into the shadows, to become ghosts in turn, go those conjectures and opinions which have been murdering the simple truth.

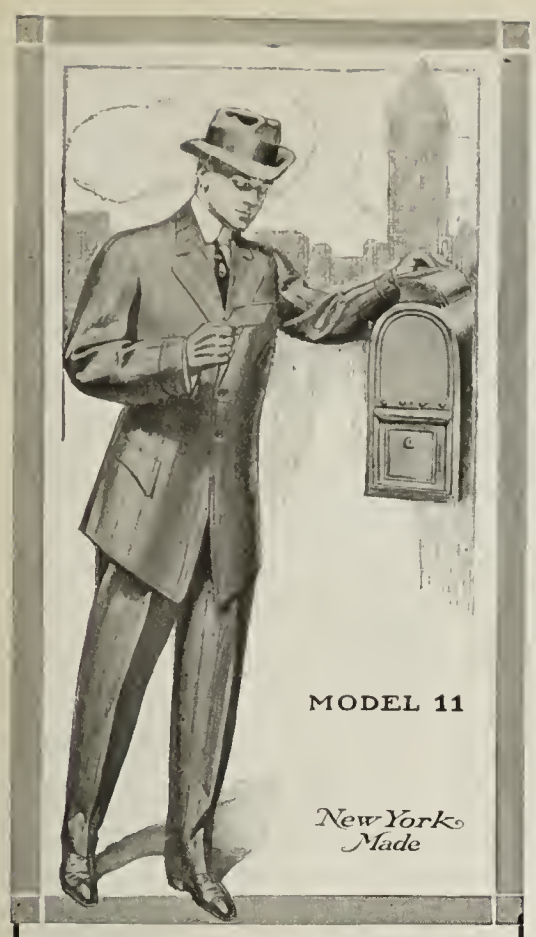
✣ ✣ ✣

"Veelbur Reet,"—American

(Continued from page 18)

machines built. It had the same principle which formed the great mystery, now patented. By raising and lowering the planes the effect of the tilting of the bird's wing surface when it cuts a curve was gained. The inventor, right in theory, exhibited his machine prematurely before a number of French army officers with an assistant as driver. It fell to the ground after a few flops and the officers returned to town disgusted. So the Wrights' success was not in their idea, but really in making "flying a business," as the French say; in the patient, skilful practise of two determined mechanics.

All the other aeroplanes have been uncertain of remaining in the air any length of time. They have been of unstable equilibrium, while the course of the Wrights' under the hand of the master, as shown at Pau, was as steady as a sailing cutter's under a steady wind from the after quarter. The others have been unable to maneuver. Therefore they could not return even if they saw the enemy's position. A dirigible might, and while the armies kept watch of aeroplane experiments, they pinned their faith to dirigibles.



The machine with which Wilbur convinced the French army is the same one that he used at Dayton and in the Carolinas. It has been continually repaired and improved, and the French have provided a better and lighter motor. Judging by what he has done already, he might cover the length of the German frontier in an afternoon, returning to staff headquarters before dark. Not only this, but any first-class automobile chauffeur, after practise, could do the same. Wilbur has already trained pupils; and France has ordered fifty machines. Meanwhile he is ready to sell as many more to any rival nation. He is as guiltless of favoritism as Maxim was with his rapid-fire gun; and after Pau it is Rome, with other exhibitions to follow.

War in the air ceases to be a novelist's dream. The armies of Europe secretly, watchfully, apprehensively are adjusting themselves to a revolution in tactics. No one willingly reveals what it is doing, and every one seeks to know what the others are doing. If the Russians had had the services of our fellow citizen from Dayton on February 26, 1905, the Japanese cavalry could not have screened Nogi's advance on the left and Japan would have lost the battle of Mukden.

The success of this, as of every great battle, depended on turning the enemy out of his position by throwing overwhelming forces against one of the ends. The ancient principle of Alexander, Cæsar, Napoleon, and Grant, which Oyama practised, still holds, but its ancient adjunct is gone. Military secrecy becomes a myth. The only screen for an offensive general's strategic disposal of his forces is a thick fog hanging close to the ground.

Not even a regiment may take up the march or a battery of artillery take up its position unseen until all the enemy's aerodromes are put out of commission. Star shells will illumine the cover of the night. Security of information, spies, scouts, and cavalry patrols are relegated to the archaic world of chain mail.

The innovation is all for peace. It promises, in the event of a big European war, the stalemate of prolonged fighting on the frontier without either side gaining any

"Sampeck" Clothes

for

Young Men

THEIR style is just as *inherent* a part of *"Sampeck"* Clothes for Young Men, as the fabrics from which they are made. Many virile "touches," not found in any other clothes, which stamp *youth* and *sprightliness* upon the wearer.

Thirty-three years of *good* tailoring in the centre of the *best* tailoring—and all in our own studios—is what the *"Sampeck"* mark means.

Demand the brand, *"Sampeck"* of *your* clothes-shop. Our label is in *every* garment. The fascinating "COLLEGE ALMAMAC" "B" of Dress and Sports sent *free* for a postal.

SOLAR

Quality in Motor Lamps

YOU are long considering the car to buy. You examine the QUALITY, construction, designs and material. How much consideration do you give the LAMPS WITH WHICH THAT CAR IS EQUIPPED? Remember that perhaps half your touring will be done at night. Remember that your comfort and safety WILL THEN DEPEND ON THE QUALITY OF your lamps! Be sure they are

Solar Lamps

you will then have the satisfaction of knowing that you have the BEST. If your car hasn't Solars, put them on, or gently insist upon getting them with your new car.—They are STANDARD. They are in a class by themselves.

BADGER BRASS MFG. CO.

Two Factories:
Kenosha, Wis.
437 11th Ave. New York

IN ANSWERING THESE ADVERTISEMENTS PLEASE MENTION COLLIER'S

THE Detroit ELECTRIC

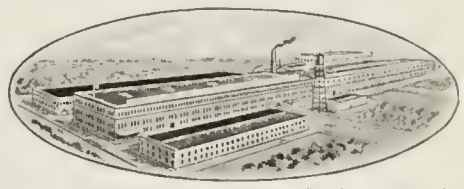
IF you enjoy any considerable knowledge of electrical and mechanical engineering the likelihood that you will choose a *Detroit* Electric becomes almost an absolute certainty. A little inquiry on your part will reveal the fact that in almost every community, eminent engineers—designers and builders of gas cars—are owners of *Detroit* Electrics.

You will decide on the *Detroit* because your experience will say to you: "This carriage embodies the best practice I have yet encountered in any electric carriage."

You will find it furnishing greater speed and more mileage. Seeking the explanation for this excess-service, you will find it in

The larger battery; larger and more powerful, yet the car weighs 125 pounds less than the electrics with lighter, less powerful batteries;
The high efficiency motor;
The perfect poise and balance of the pressed steel frame;
The use throughout of Hess-Bright and Timkin Roller bearings;
The manner of mounting the motor in the center of the car, attached to the frame and relieving the rear axle of excessive dead weight; and
The power-saving properties of the Palmer web tires.

Your acquaintance with the subject will point out to you in the *Detroit* fully fifty features for which you will search in vain in any other electric carriage.



And you will find that these features are vital and valuable, because they contribute directly to the efficiency of the carriage; its slighter cost of operation; its elegance and its longevity.

Yes, if you approach the question of owning an electric equipped with knowledge and experience, it is almost absolutely certain that the *Detroit* is the car you will buy.

Consult your *Detroit* Electric dealer or write direct to the factory for the literature and other information.

Learn how splendidly the *Detroit*—the first electric to attempt a long-distance, cross country tour—covered the 1060 miles between Detroit and Atlantic City, surmounting every obstacle.

THE ANDERSON CARRIAGE CO.
Dept. H, DETROIT, MICHIGAN

The Anderson Carriage Company's plant at Detroit—the largest in the world devoted to the manufacture of electric carriages. A plant which represents years of successful vehicle manufacturing experience.

BUSTER BROWN'S GUARANTEED STOCKINGS

Hosiery for Man, Woman and Child that is guaranteed *not* to need darning, is the kind wives and mothers are buying nowadays.

But, if you want *good-looking, good-feeling* and *good-fitting* as well as good-wearing hosiery, you should buy

Buster Brown's Guaranteed Hosiery

Read Our Four Guarantees Carefully

(1) New pair for any pair that *wears* through in heel or toe within four months. (Equivalent to six pairs guaranteed six months.)

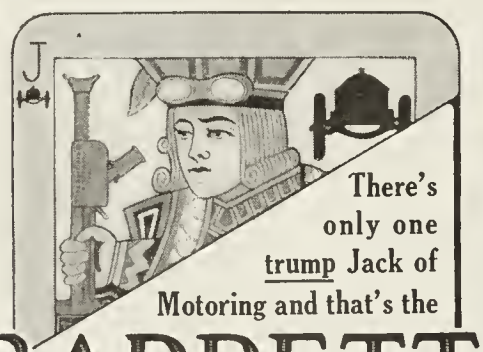
(2) Money back if you don't find Buster Brown's better quality of material and finer weave than any other 25c stockings.

(3) Money back if you don't find Buster Brown's softer, silkier and better looking than any other 25c stockings.

(4) Money back if the dye hurts the feet or rots the fabric.

These four guarantees protect you against every possible cause of dissatisfaction, so why not try a box at once and *prove* their superiority?

Buster Brown's Guaranteed Stockings are made in Black and Tan for Women and Children; Black, Tan, Navy Blue and Gray for Men—in all sizes. They are sold



FOUR PAIRS FOR $1.00

by high-grade department stores and dealers. Ask *your* dealer to show them to you. If he hasn't them don't accept inferior substitutes, but send us a dollar bill *and the dealer's name*, stating whether for Boys, Girls, Men or Women and giving size (or size of shoe) and color desired, and we will send you a box of four pairs by return mail, post-paid.

Write us for FREE Copy of Buster's Latest Funny Book

BUSTER BROWN'S HOSIERY MILLS, 514 Sherman Ave., Chattanooga, Tenn.

To Dealers: The 1908-1909 Advertising Campaign on Buster Brown's Guaranteed Hosiery is the *biggest* advertising campaign on a 25c brand in the whole history of the hosiery business. If you are *not* already selling Buster Brown's Guaranteed Hosiery—write us at once for full particulars. Better write to-day—you're losing quick, easy, profitable sales every day—perhaps *customers*, too!

There's only one trump Jack of Motoring and that's the

decisive advantage or result except heavy slaughter. It requires a far greater majority of battalions for turning a position than ever before, because forces thrown by the offensive to one point or another will be discovered in time to be met. The French, who have led the world in artillery and in aerial navigation, with the gift of invention plus mobile columns, as they watch the growth of German population and solidarity, welcome, as the hero of their affections, any man who develops human skill at the expense of mass of numbers.

They have several dirigibles and the Germans one, on which Count Zeppelin spent his fortune before the Government came to his aid. It is now manned by German officers and soldiers, and armed. In recorded length of flight and in size it surpasses all others. The coming August maneuvers of the German army will see it playing a destined part, while high-angle guns recently finished by the Krupps will pursue it from the highways in mimic attack.

The dirigible might be called the artillery of the air and the aeroplane the light cavalry. The dirigible may carry guns, but for reconnaisance the aeroplane answers far better, with all the opportunities for development in its favor. At the side of the operator may sit the expert military observer sketching, and, if he pleases, he might drop a few sticks of dynamite in passing. One shot into the gas bag of a dirigible and it is out of commission. It is an enormous target, elephantine in its maneuvers.

A Wright flying machine in order to escape attack can shoot upward at a pretty sharp angle and be out of range in a few seconds. A shrapnel might explode fairly into the planes without disabling them or injuring the operator. As a target it is small and swift, difficult as a bird in flight to the sportsman with a rifle. An army may have aeroplanes by flotillas as the navy has torpedo boats, hoping that some will return from any flight. Though they may do little killing, they can see what the enemy is doing—and this one factor means in all the work of an army staff as radical a change as to eliminate the post-office from the functions of government by the substitution of thought transference.

France, always on the lookout for new sources of revenue, will hereafter tax all foreign balloons which light within her borders; and, moreover, the drivers must carefully explain their business. A German officer clinging to a tree among knotted guy-ropes will have the question shot at him: "Are you doing it for science or pleasure or on the Kaiser's service?"

✣ ✣ ✣

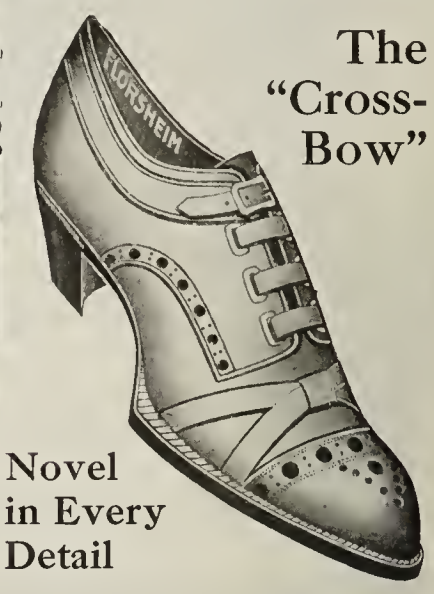
Vevie

(Continued from page 23)

books were women's looks," and the talk went on about less mournful things.

Van Dorn carried off the dinner with the ease and address of a diplomat. If it had not quite the careless ease of his knight-errantry on shipboard, it had an added charm in its more sophisticated exercise. Vevie felt his support now as she had felt it then, though without the same acute need of it. Her moral base and comfort was over there at Mrs. Caswell's side.

Toward the end of the dinner Yarrowdale, with rather heavy gallantry and a somewhat florid air, proposed the health of "the fair guest of the evening." The others drank it cordially. Vevie, smiling and flushed, flashed a grateful glance at the Briton who had cast a new pleasure her way, and wondered if she ought to stand up and make a speech. Before she quite realized what she was doing she was on her feet, raising her full glass as she had seen it done on the stage. For a moment she hesitated, while Mrs. Caswell and Van Dorn, regarding her, experienced an uncomfortable prickling of their scalps. Then an inspiration came to Vevie.



"I want you to drink the health of Mr. Van Dorn," she said. "Can you beat him? You can't. For there ain't another man as nice in the whole United States—except Bert Wagner!"

This time Vevie certainly had made a hit. The ice was broken. What ice, indeed, could have withstood Vevie's artless assaults? The health was drunk with enthusiasm, and Lord Yarrowdale was with difficulty restrained from also making a speech. Vevie, basking in the approval around her, would have remained at the table until cockcrow; but Mrs. Caswell, recognizing her toast as a felicitous climax, caught the eyes of her women friends and brought the dinner to a close. Left behind for a few moments with his men guests, Van Dorn looked from one to the other with his singularly winning smile.

"You are now able, my friends," he said

The Oil Stove with a CABINET TOP

Do your summer cooking on a New Perfection Wick Blue Flame Oil Cook-Stove and have a comfortable kitchen. Its principle of concentrated heat at the burners prevents the kitchen from overheating, so that the work can be done in comfort never before experienced.

The "New Perfection" is the oil stove of new principle and design. It is built like a modern steel range, being the *only* oil stove made with a CABINET TOP, including two drop shelves on which the coffee pot or teapot may be placed after removing from burner. Shelves fold back when not in use. Also two nickeled towel racks. The commodious top shelf of the cabinet provides a means for warming plates and keeping food warm after it is cooked. All this makes the

NEW PERFECTION
Wick Blue Flame Oil Cook-Stove

a stove of unusual convenience. It does anything and everything any other stove will do, regardless of fuel.

Whether for heating the wash boiler or cooking a large meal, the "New Perfection" is without equal. Ready at moment of lighting. Can be turned "high," "medium," "low" or "out" as required—another decided advantage over the coal or wood stove. Makes no dust or dirt. Makes the kitchen no longer a room to dread.

Made in three sizes. Can be had either with or without Cabinet Top. If not at your dealer's, write our nearest agency.

The **Rayo LAMP** is everybody's lamp. Its beauty, safety, economy and brilliancy are not surpassed by any known system of artificial lighting. Because of its substantial construction and great simplicity it is especially adapted to all purposes of home illumination.

If not with your dealer, write our nearest agency.

quietly, "to tell any and every inquirer just how Vevie is!"

When the farewells were being said Mr. Wagner bustled to Vevie's side to lend her his moral support. It was not needed.

"I ain't never had such an elegant time in my life," she remarked fervidly as she pressed Mrs. Caswell's hand. "You've been terrible nice to me. But I ain't surprised at that when I think whose sister you are."

She punctiliously shook hands with all the guests. Then she left the room with the faithful Mr. Wagner following in her wake, and the happy pair gave themselves up to reminiscences in the cab. What Bert had heard and said and thought at the dinner was told to Vevie. Vevie's impressions and reflections were confided to Bert. At the end she cuddled up to him adoringly.

"We can't never forget it, can we?" she asked.

"Not if we live to be a thousand," said Bert, emphatically. "Why, it must have cost him two or three hundred dollars, Vevie."

Vevie leaned against his shoulder with a sigh of deep content. Life could offer her nothing more. She was young, she was in love, and her lover was with her. Beyond the cab windows lay Paris, and all the brilliance and beauty and inspiration of a Paris night. She was in this wonderful city to work, and she had already discovered that she could do what was expected of her, and more.

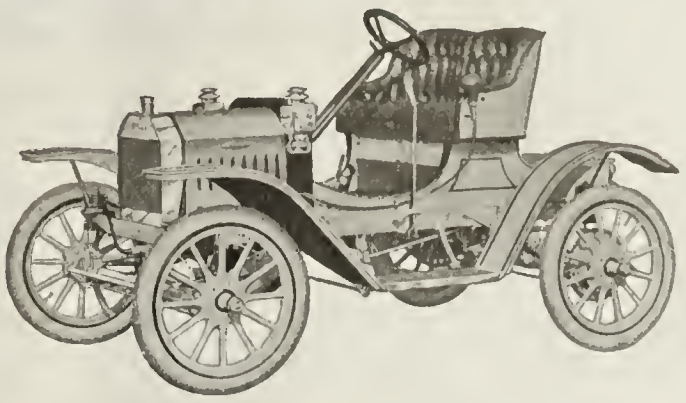
She was aroused from her reverie by the voice of Bert in her ear. It held a new note of uncertainty.

"Say, Vevie," he asked slowly, "would you like me better if I was like Van Dorn?"

Vevie laughed. "You silly!" she cried. "How *could* I like you more'n I do? It ain't possible." Then she hesitated. "Just the same," she continued, "I guess you better be as much like him as you can. We shan't never see him again, I s'pose, you an' me, so we might forget him if you ain't enough like him to remind us sometimes. I shouldn't like to forget him," she added slowly, "and one thing's sure, anyway: I ain't never goin' to forget that there's his sort in the world!"

✣ ✣ ✣

The Chimera—Bellerophon Watching by the Fountain



(Frontispiece by Maxfield Parrish)

HAWTHORNE *tells how, at sunset, Bellerophon drew near the Fountain of Pirene gushing from the hillside; he sought the famous winged horse Pegasus that had haunted the fountain in days gone by when the great-grandfathers had faith in the existence of such animals. Bellerophon had promised the King of Lycea that he would rid the province of the great monster Chimera or perish in the attempt, and he desired the aid of so wonderful a beast as Pegasus to save Lycea from being made a wasted desert. He met an old man, a middle-aged man, a boy, and a maiden at the cooling stream and told them his quest. The men mocked him, but the faith of the child and the maiden prevailed in Bellerophon's heart. The skeptical tales of manhood he met with the wonderful neighing that the maiden had heard near the stream, and with the assurance from the child that he had seen the image of a great white beast with wings as he searched the basin for pebbles. Bellerophon sat at the fountain waiting for Pegasus to appear; in his hand he held a golden bit that was fastened to a bridle ornamented with bright gems. His watch was a long one and filled with doubts that were daily dispersed by the faith and encouragement of the child. Fears assailed him for what might be accomplished by the dread Chimera while he kept watch by the fountain in far-off Greece. At last Pegasus appeared, coming from the clouds in a great white cloud himself, and touched the earth by the Fountain of Pirene as Bellerophon and the child hid themselves in the bushes. The wonderful animal drank at the fountain and then frisked about, making a dainty meal from the clover. As he approached Bellerophon's hiding-place, the young man jumped from the bushes and leaped upon the horse's back and was borne to the skies and then to earth again by the enraged animal. At an opportune moment Bellerophon slipped the golden bit between the horse's teeth and he became instantly subdued, acknowledging the rider as his master.*

PURITY ESSENTIAL

In no other form of food is Purity so absolutely essential as in milk products. Richness is also necessary, as without richness, milk is of little value as a food. Purity and richness are the embodiment of Borden's Eagle Brand Condensed Milk. As a food for infants or for general household purposes it has no equal.—*Adv.*

The BRUSH RUNABOUT

$550

Completely Equipped as Shown in Illustration

No car in the world compares with the Brush Runabout in **low cost of maintenance**; nor in **simplicity, convenience, reliability** and **ease of riding.**

These aren't idle claims. They are facts we have proven during the many years we have been connected with the automobile business.

You may be surprised to know that there are almost 2000 Brush Runabouts in use in the United States, and eleven foreign countries.

Maybe you haven't even seen one of our cars. When 2000 are distributed over such a large territory, they can't be thick in every locality—

But we're running our factories 21 hours a day now and in a few months you will see the Brush everywhere. Watch for the little gray car with black stripes—and watch it deliver the goods every time.

Please understand this isn't a speed car—one of the mile-a-minute kind. It's not an imitation of a big automobile, with the complications left in and the strength left out.

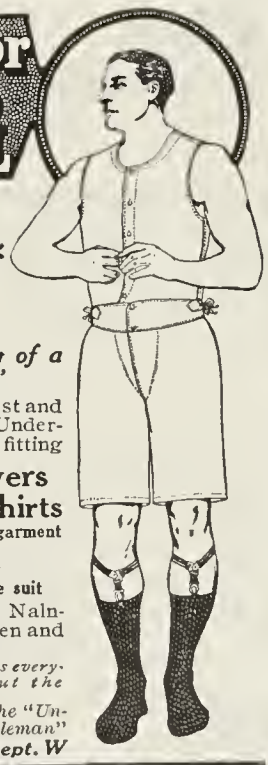
It's a Runabout—a tried and proven automobile that you can buy for $550—

A car that will carry two passengers and baggage over any kind of roads (up Pike's Peak if you want to go)—one you can maintain for less than half what it costs to keep a horse and two-passenger vehicle.

If it were possible, we would like nothing better than the opportunity to take you through our factories and show you how the Brush is made. This, with a chance to demonstrate the performance of the car, would settle the question to our mutual satisfaction.

Since this isn't possible, we want to send you a book, which illustrates and describes everything but the performance of the car—our nearest dealer will do that.

No matter whether you want a car for business or pleasure or both, you will always find the Brush on the job. Its uses are legion. Let us show you what it will do for **you.**



You know we can sell you exactly the same car on solid rubber tires for $500.

"The Straw Without a Flaw"

What a surprise it would be—
To find a great tailoring establishment right at your gate.

Yet—the Great Western System is there—no matter where you live.

It offers you **good clothes**—made to your exact measure. Better than any local tailor makes—for less money.

Good clothes mean—Fabric, Style, Workmanship and Fit—the best of each.

But fabric, style and workmanship are useless details without fit—for **Fit** is the greatest essential of **good clothes.**

The Great Western System of Measurement is founded on a law older than clothes themselves. This is it:

Nature makes no duplicates.

You have certain lengths, breadths, girths, hollows, bulges, curves and angles which **no other** human being has.

So if your clothes really **fit** you, they will fit **no other** man.

Great Western System Clothes fit **only** you because they are cut to **your exact** measure, and **your exact** outline.

We Make Suits From $18 to $40

Our dealer in your town has 400 samples. Choose a fabric. Let him measure you by our exact system for the best fitting suit you ever wore. If you don't know him, ask us. Handsome style plates will be sent free.

Your Local Tailor Charges You $15 or $20 More

We guarantee the Fabric—the Workmanship—and the Fit. If you are not satisfied, you get your money back. Our dealers are instructed to do this.

WHEN you get only the guaranteed mileage out of a tire, you pay the *very top price* for tire service; when you get less mileage you pay the very top price, *plus* the vexation of tire troubles and adjustments under the guarantee.

IF, through continuous tire failure and the operation of the endless replacement chain, you find yourself tied to one make of tires—*regularly paying the guaranteed top price*—it's time for you to ignore the guarantee, break the chain and change to the superior service and economy of

"Firestone" TIRES

The mileage due on your tire failure will be more than made up by Firestone *super*-service. Even with our policy of utmost fairness in guarantee matters, we are called upon for a *less* percentage of replacements than *any other* tire manufacturer. So much superior is the service of Firestone tires.

Firestone tires will never be made to compete in *price* with popular-priced tires; popular-priced tires will never be made to compete in *service* and *economy* with Firestone tires.

Devoted to Facts, Observations, and Thoughts Concerning Common Industrial Methods, Products, and Influences

By WALDO P. WARREN

GRAFT AXIOMS

THERE is more graft in buying and selling than is dreamed of in our philosophy." This is the verdict of men who are familiar with current methods in the purchase of supplies, equipments, and made-to-order purchases between business houses. Certain observations are tending to become axiomatic among those who are trying to stamp out petty graft in common business relations.

The buyer, the seller, and the grafter, all lose by the process—nobody wins.

The honest buyer suffers by having to pay prices which are large enough to cover the graft paid to others.

An incentive is given to graft where purchasing is scattered through every department of a business house.

For a business house not to have an authorized channel for trade purchases is to foster possible misdealing and increase expense.

To admit salesmen to free converse with others than an authorized purchaser is to invite disorder.

It is seldom wise to trust a man who has once tried to bribe you. The fact that you transact business with him at all may cause him to insinuate that you are with him on the same terms as others. If you want his goods, ask his house to send another man.

A buyer is quickly classified as straight or crooked, and salesmen in allied trades freely exchange the information the grafting buyer thinks is confidential.

Many a manufacturer loses valuable business by allowing crude salesmen to insult possible buyers by offering cigars, drinks, etc., while negotiating.

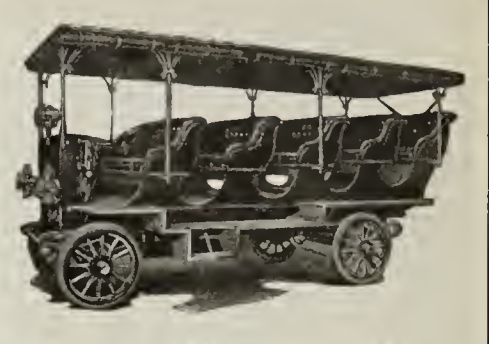
No self-respecting buyer will allow himself to be bought for a cigar, and no honorable salesman will affront a man with such a petty attempt to influence him.

About one man in a thousand is a born trader. To have the buying done miscellaneously by a man who isn't a trader is to pay a great deal more in a year.

A buyer who sees only price, and is impervious to the claims of quality, service, and durability, is an expensive man.

The value of a reasonable equilibrium of competition among sellers can hardly be overestimated.

Accessible records with occasional checking up by a disinterested department prevents laxity and affords no reflection on the man who has nothing to hide.



The man who uses the goods is seldom the man who can drive the best bargain—especially if "the house" is paying the bill.

If it be true that manufacturers and their representatives are usually the first to propose a graft, it is also true that most of them would gladly omit it if they were sure of fair treatment without it.

THE PUBLIC MEAL

TO BE able to get a public meal that is without a flaw—a meal that is beyond criticism—is a practical impossibility. No matter how elaborate the menu, nor how competent the chef, nor how sumptuous the appointments, there is almost always something that mars the harmony of the whole. It may be the waiter who has neglected to provide you with a fork and has gone beyond your reach for fifteen minutes. It may be the soup that is served with a tablespoon. It may be the delay of a dish that should have been served as an accompaniment. It may be the unnecessary quantity that takes away the appetite. There are scores of things that might go wrong, and one or more is almost sure to do so.

The two greatest faults are lack of common sense in the detail of cooking and lack of refinement in the details that are left to the waiter. The most conspicuous fault in the cooking is the lack of the home touch—a condition perhaps due to the innate inability of men cooks to do a work that is essentially feminine, and the fact that most men cooks learn the business from other men cooks, and, like a deficit that accumulates the longer it runs, the faults rather than the virtues

YOU Can Make Big Money with Rapid Passenger Traffic Cars

These cars earn $100 to $500 per week for their owners and you can earn more money with a Rapid Pullman Sight Seeing Car every day in the year, than you can in any ordinary position, trade or small mercantile business, requiring an equal amount of capital. Some owners of Rapid cars have earned as high as $700 in one week. Look into this profitable business. Get our book "The Rapid Way of Making Money." It is free to those who are truly interested.

For Interurban Service. Rapid Passenger Traffic Cars are now filling a long felt want in the interurban passenger and freight business. Cars like the above carry nine passengers and about 1400 pounds of freight. This is a very profitable vocation. Requires no experience and is a clean cash-in-hand every-trip business. As feeders to steam and electric railways, Rapid Combination cars are coming into great prominence and favor as factors of no mean importance in solving vexatious traffic problems.

For Stage Line Service. The above car is one style of Rapid Passenger Traffic Car which has met with great success in transporting passengers between small towns, country clubs, hotels and depots. It is beautiful in design, handsome in appearance, and luxurious to a degree unknown to any but owners of Rapid Passenger Traffic Cars. Summer resort owners are respectfully asked to write us about this car.

For Hotel Service. Here is a Rapid Passenger Traffic Car that meets the most exacting and discriminating demands of the best class of hotel patrons. It is beautiful in design, comfortable and luxurious. No up-to-date hotel can afford to offer its patrons anything but the best, which is found in Rapid Passenger Traffic Cars of the above design. Can be used for transporting guests from depots or for opera use as well as other lines of service too numerous to mention here.

Attention Tourists

Rapid

When you travel this year look for this name plate on the front of the sight seeing car in which you ride. The name RAPID is an assurance that you will see the sights aright; that you will enjoy a comfortable, pleasant trip and that you will be charged only a reasonable fare for high class service. Look up the man with a Rapid Sight Seeing Car. "You don't miss the return train when you ride in a Rapid."

IVER JOHNSON
TRUSS BRIDGE BICYCLE

Today, there are a score or more different makes of bicycles.

Yet the Iver Johnson is in a class by itself.

The others are all about alike except in name plates.

One of the distinctive features of the Iver Johnson is the Truss Bridge—the same principle employed in bridge construction. This holds the frame absolutely rigid—all parts in perfect alignment. This elimination of "give" and "play" makes the Iver Johnson wonderfully easy-running. Then, the extra strength given by the Truss Bridge adds immensely to the safety. Think what that means to you.

THE AMERICAN

The American Traveler—Underslung Frame; 40-inch wheels;
4 cyl., 50-60 H. P. motor $4,000

The Car with Dash and Individuality

Expect much of the American but be prepared to find in the car realization of each and every one of your highest hopes.

Because the American is an exceptional car — exceptional in mechanical and body design; exceptional in material and workmanship; exceptional in actual service—performance.

Individuality is stamped in every line.

ake the wonderful Traveler, for instance—with its underslung frame and its 40-inch wheels.

e underslung frame is the development of a marvelous idea.

ou will find in the American Traveler a magnificent responsiveness and pliancy, the like of which you have never experienced in any other car—due to the underslung frame.

This underslung frame further gives an absolute straight-line drive—practically eliminating friction and permitting the engine to deliver every ounce of its tremendous power to the rear wheels; Immunity from skid and the perilous rear-lash in rounding curves at speed; Spring action the reverse of ordinary—upward instead of downward recoil, minimizing shock and jolt, and tire wear.

Arrange for a demonstration. Learn at first hand the tremendous power generated by the American; its wonderful capacity for picking up speed instantaneously; the 60 to 80 mile speed available.

Write for the catalogue illustrating in color the Traveler and six other American models—each as uniquely individual in appearance, as superbly superior in operation—as the Traveler itself.

"No Noise but the Wind"

A Gillette Safety Razor

That Fits in Your Waistcoat Pocket

A GREAT welcome has been given our New Pocket Edition — men everywhere are talking about it—thousands of them are buying it.

Live dealers everywhere are showing it.

The man who does not use the GILLETTE probably has no conception of its tremendous vogue or the enthusiasm of its users.

If you were to put down the names of the fifty leading Americans in public and private life the majority of them would be GILLETTE users.

It is the policy of the GILLETTE Company never to use testimonials, nor to print the names of its customers. Yet they could arrange a list of GILLETTE patrons that would read like "Who's Who in America"—beside some world-famous names and a few crowned heads in other countries.

We mention these facts merely to show that it is not economy alone, but convenience, that counts most with the men who use the GILLETTE. They respect it as a remarkable invention. It meets a world-old necessity in a new and better way.

The pocket-case is made in gold, silver or gun metal. Plain polished or richly engraved. Handle and blade box each triple silver-plated or 14 K. gold-plated—*the blades are fine*. Prices, $5 to $7.50, on sale everywhere.

You should know GILLETTE Shaving Brush — a new brush of GILLETTE quality—bristles gripped in hard rubber: and GILLETTE Shaving Stick—a shaving soap worthy of the GILLETTE Safety Razor.

tend to express themselves. Nothing shor of feminine domination of policy and d tail can ever turn back the wrong te dencies of masculine crudity in cookin And as for the detail of serving a me without offensive omissions and comm sions on the part of the waiter, nothi short of strict and exacting supervisi on the part of some one who really ca can free the public-meal service fr those touches of crudity which in greater or lesser degree offend every fined person who must take occasi meals in public places.

In many lines of industry the purv to the public sets the standard. The lic needs to be educated up to the improvement. But the reverse is t regard to the table service in hotel taurants, and clubs. The table needs to be brought up to the sta of the average refined person who izes them. This statement will do be disputed by those who think th pense can take the place of refin But it can not be disputed by thos know that good taste is one thin showy pretense quite another.

SALARY SECRECY

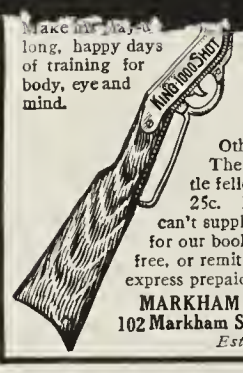
THERE is a fundamental reaso employees should be required t to themselves the information as amount of salary they receive. Whe ployees talk over such matters with other it is very difficult for an employ be fair, and reward individuals acco to merit. One well-deserved "raise" means, not merely an increase in the s expense account, but a clamor for sin recognition from twenty or more other ployees whose claims are based on the formation that one of their number "just got a raise." It is not merely the interests of the house, but of ployees as well, that many employers quire that the financial arrangements w employees be treated as confidential, consider a breach of such confidence as occasion for censure if not dismissal. usual alternative for such an arrangem is that of limiting the positions to a c tain sum—a system that has all the fau in the calendar. Another alternative, wi much to recommend it, is the custom ranking employees as first, second, a third assistants, and so on, even whe such ranking must be largely hypothetica Both of these methods, however, are le desirable for employer and employee than the plan of confidential arrangement wi h the individual, based on individual merit, and without regard to those doing similar work. This observation, of course, applies chiefly to such work as can not be reduced to definite figures and where quantity alone counts.

OFFICIAL MEDIOCRITY

THERE is a great deal of mediocrity in high places. A colored print in a sumptuous gold-leaf frame, with a shaded electric-light over it, may look like an original by a great artist—but it isn't. Men get into positions that are away beyond their attainments, or the practicability of their growing up to them, and hold them for a while. Our ideas of merit and reward get seriously warped if we fail to recognize that the tenure of inefficiency is temporary, and that in the long run it is only worth that counts. Many a man's faith in a "pull," instead of in the principle that merit wins and holds its winnings, can be traced to the superficial observation of some one whose "pull" put him in a place he could never have attained by open competition, and which he at length fails to retain for the same reason. Thinking that life is unjust because such things are often conspicuous in it, a man loses greatly from his own force, turns his efforts in wrong directions, and makes himself unhappy, if not a failure, when a little sober reflection, and a little foresight, would give him an assurance of his security through actual merit that nothing could take away.

TOUCH-BUTTONS

A granite pillar loses no strength by being polished.



In what particular can I improve my work to-day?

It is even an astronomical fact that the sun is always shining on the other side of the clouds.

Every great work has been preceded by a dream that some one thought would never come true.

Originality usually begins back of popular precedents.

Make his days long, happy days of training for body, eye and mind.

tend to express themselves. Nothing short of feminine domination of policy and detail can ever turn back the wrong tendencies of masculine crudity in cooking. And as for the detail of serving a meal without offensive omissions and commissions on the part of the waiter, nothing short of strict and exacting supervision on the part of some one who really cares can free the public-meal service from those touches of crudity which in a greater or lesser degree offend every refined person who must take occasional meals in public places.

In many lines of industry the purveyor to the public sets the standard. The public needs to be educated up to the latest improvement. But the reverse is true in regard to the table service in hotels, restaurants, and clubs. The table service needs to be brought up to the standards of the average refined person who patronizes them. This statement will doubtless be disputed by those who think that expense can take the place of refinement. But it can not be disputed by those who know that good taste is one thing and showy pretense quite another.

SALARY SECRECY

THERE is a fundamental reason why employees should be required to keep to themselves the information as to the amount of salary they receive. Where employees talk over such matters with each other it is very difficult for an employer to be fair, and reward individuals according to merit. One well-deserved "raise" often means, not merely an increase in the salary expense account, but a clamor for similar recognition from twenty or more other employees whose claims are based on the information that one of their number has "just got a raise." It is not merely for the interests of the house, but of employees as well, that many employers require that the financial arrangements with employees be treated as confidential, and consider a breach of such confidence as an occasion for censure if not dismissal. The usual alternative for such an arrangement is that of limiting the positions to a certain sum—a system that has all the faults in the calendar. Another alternative, with much to recommend it, is the custom of ranking employees as first, second, and third assistants, and so on, even where such ranking must be largely hypothetical. Both of these methods, however, are less desirable for employer and employee than the plan of confidential arrangement with the individual, based on individual merit, and without regard to those doing similar work. This observation, of course, applies chiefly to such work as can not be reduced to definite figures and where quantity alone counts.

OFFICIAL MEDIOCRITY

THERE is a great deal of mediocrity in high places. A colored print in a sumptuous gold-leaf frame, with a shaded electric-light over it, may look like an original by a great artist—but it isn't. Men get into positions that are away beyond their attainments, or the practicability of their growing up to them, and hold them for a while. Our ideas of merit and reward get seriously warped if we fail to recognize that the tenure of inefficiency is temporary, and that in the long run it is only worth that counts. Many a man's faith in a "pull," instead of in the principle that merit wins and holds its winnings, can be traced to the superficial observation of some one whose "pull" put him in a place he could never have attained by open competition, and which he at length fails to retain for the same reason. Thinking that life is unjust because such things are often conspicuous in it, a man loses greatly from his own force, turns his efforts in wrong directions, and makes himself unhappy, if not a failure, when a little sober reflection, and a little foresight, would give him an assurance of his security through actual merit that nothing could take away.

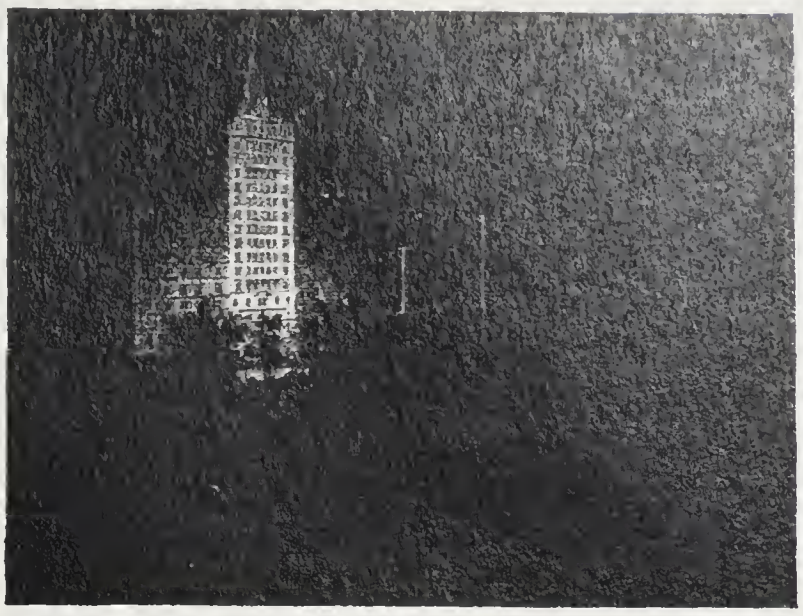
TOUCH-BUTTONS

A granite pillar loses no strength by being polished.

In what particular can I improve my work to-day?

It is even an astronomical fact that the sun is always shining on the other side of the clouds.

Every great work has been preceded by a dream that some one thought would never come true.



Originality usually begins back of popular precedents.

PERFECT CLEANLINESS

is easily maintained in a

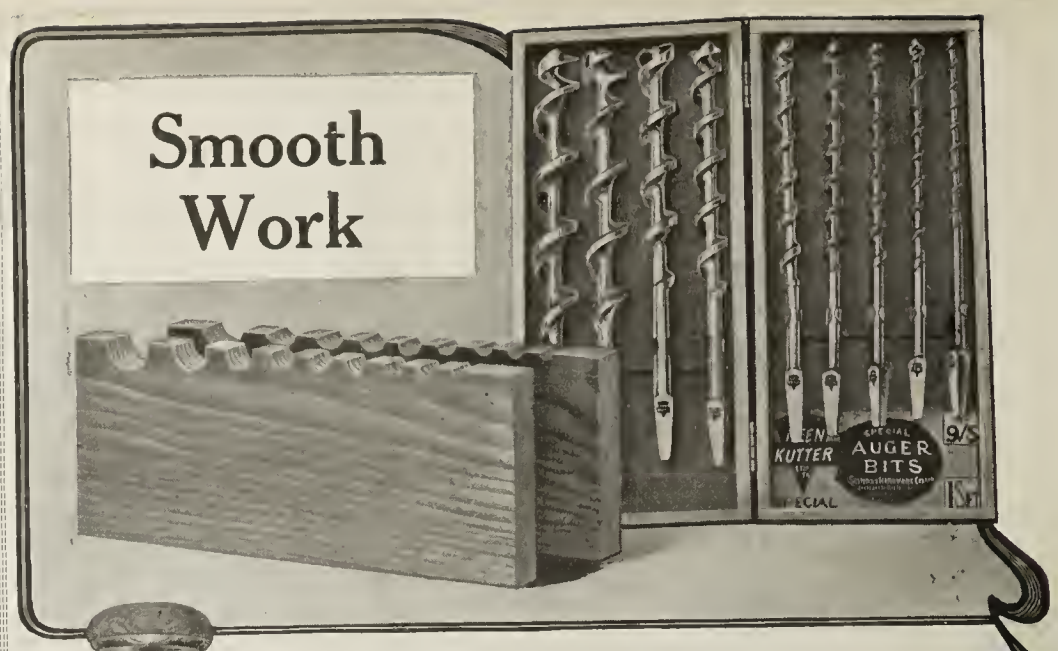
BOHN SYPHON REFRIGERATOR

(GENUINE PORCELAIN LINED)

¶ No pipes and tubes to clog and become breeding spots for countless germs—no hidden parts difficult to reach.

¶ Every part in sight and easily accessible.

¶ The Bohn Syphon System produces an enforced, vigorous circulation of air in the refrigerator. This condenses all impurity-laden moisture on the ice, which then drains off. It dries the air and produces a temperature 10° colder than in any other refrigerator and thus insures the perfect preservation of the food.



¶ *Adopted by the Pullman Company and all American Railroads as standard.*

¶ *Send for "Cold Storage in the Home." Free.*

Idle Hour Picture Puzzles

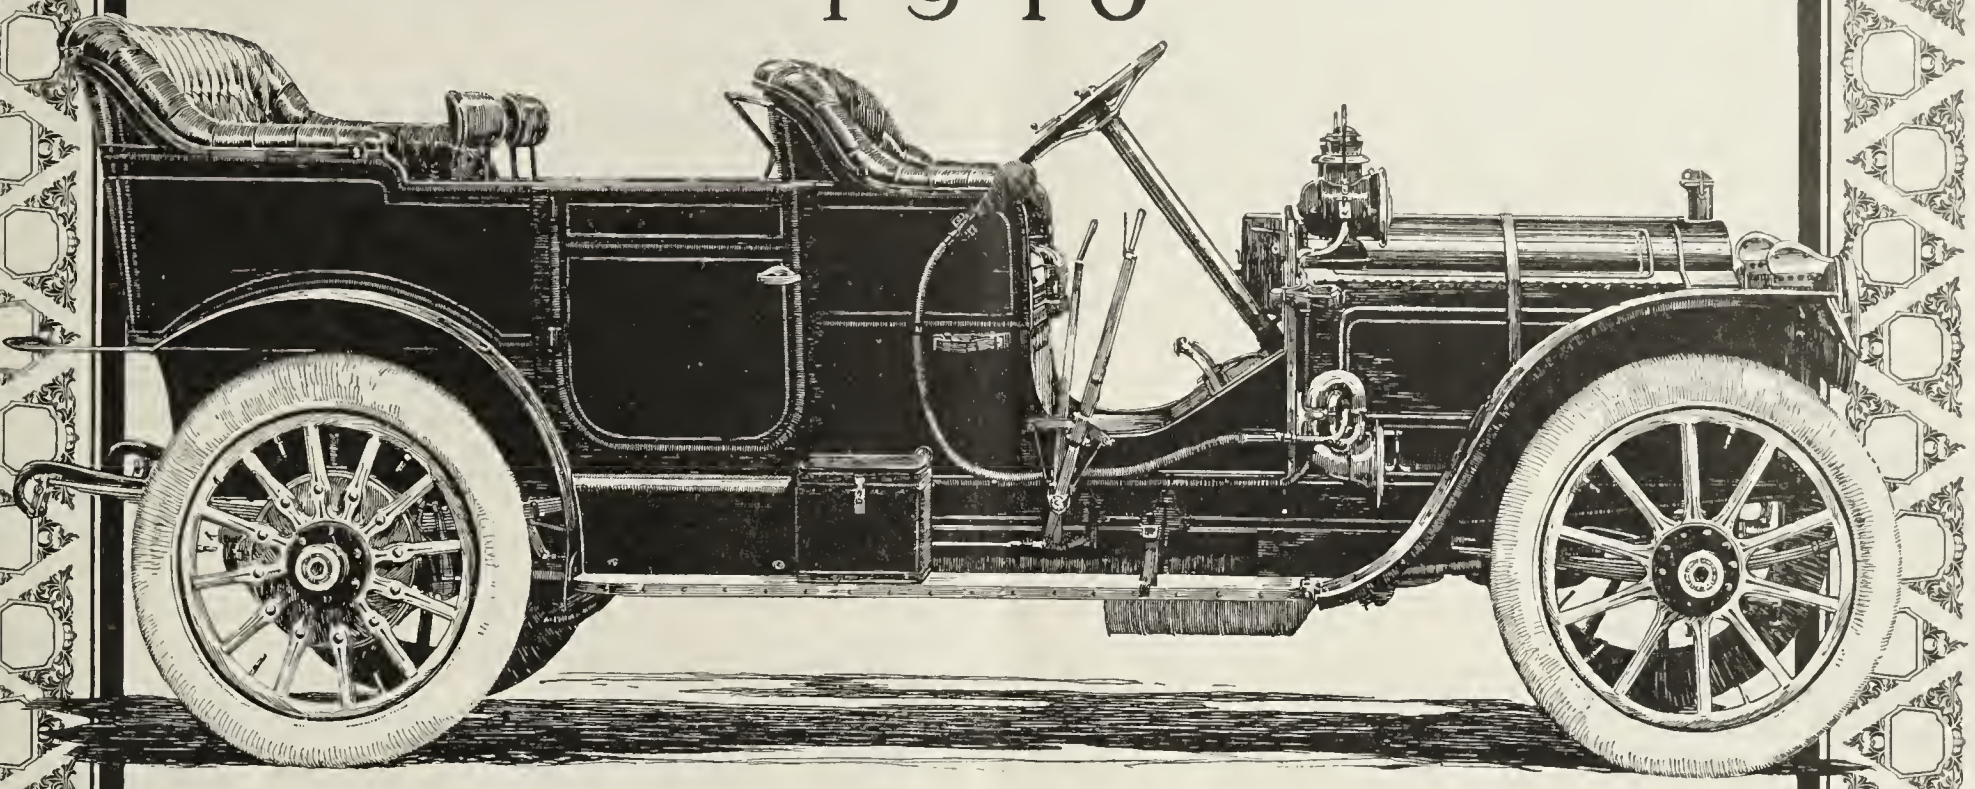
Stand for PERFECTION in PUZZLE-MAKING

The Sleeping Beauty

P. F. Collier & Son announce the publication of a line of Picture Puzzles including such famous pictures as Maxfield Parrish's **Old King Cole** and Arabian Nights series; Frederic Remington's Paintings of the Far West, and Jessie Willcox Smith's Modern Fairy Tales.

All subjects have been selected for their extreme brilliancy of color and their special adaptation to puzzle-making.

Scroll Cut Animal Pieces



Every Collier puzzle will contain pieces cut in the shape of animals and various unique devices which add human interest as well as intricacy to the working of the puzzle. The number of animals and devices will vary according to the size of the puzzle, but every puzzle bearing the Collier imprint **will contain not less than four such devices.**

Particular attention has been given to the Collier puzzle box and it will be recognized everywhere for its appearance of quality. The box is of a rich blue color, square in shape (no matter what the size) and of a uniform depth. Puzzles may be had from 75 cents to $12.00.

If your dealer can not supply you with "Idle Hour" Picture Puzzles send direct to us for Catalogue of 60 different subjects, sizes and prices.

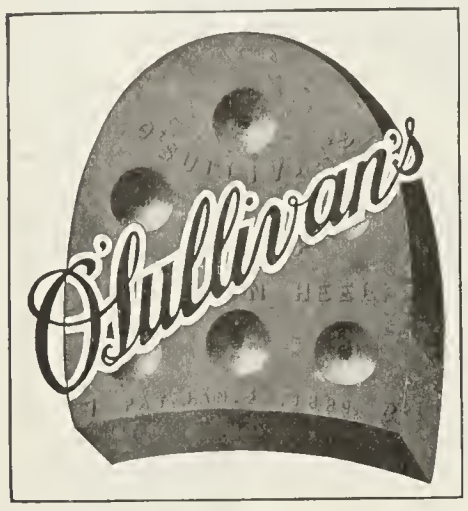
"ASK THE MAN WHO OWNS ONE"



ONCE upon a time a Man stood before his Desk and thought deeply. Neath his feet a kindly "Boss" had placed a Rubber Mat, for you see the Man was a Good Workman laboring from early morn 'til late. A Wise Boss knows that long hours and press vibrations cause a nervous strain that even a Good Workman cannot stand—Hence the Rubber Mat. But the Workman realized that he did not stand on the Mat all day, that he moved about a great deal—so the Rubber was of little worth in one spot. Ruminating thusly, he conceived the Idea, could he but take with him the Rubber Mat on his short journeys about the room, all would be well. But how to do it?

The Elimination of Microbes by the Use of Live Rubber

When the Idea Germ enters Brain Cells of a Real Thinker, usually stray threads of thought are soon knitted into a Spider's Web of Results. Next morning the Man appeared bright and early in his old accustomed place, but the Rubber Mat was not there! Yet the Man moving about noiselessly, beamed his complete satisfaction, causing much speculation among his fellows. Prevailed upon to tell his secret, he showed upon the Heels of his shoes, two well formed pieces of Rubber, cut from the absent Mat. These were the first Rubber Heels—and Mr. Humphrey O'Sullivan had solved his problem! Back in the days when Humanity walked the green Earth barefoot, there was no need for Rubber Heels. But in this Era of Cement, Iron, Glass, Hardwood floors and Macadam Roads, the Human Frame is laboring under a Great Disadvantage.

It is Sin against Humanity to slight one's Body. Your responsibility does not end with yourself, Posterity demands that you help preserve the Race.

Every bit of Delicate Machinery that man produces carries with it springs, ball-bearings, shock absorbers, rubber tires and such like to lessen wear and tear, yet Man—the Inventor of things—places a bit of hard leather beneath his Heel and stamps his way along asphalt walks with never a thought for his own well-balanced Self. Be consistent! If you put a Shock-absorber on your Automobile to save its machinery, do as much for your own body.

O'Sullivan's
New, Live Rubber Heels

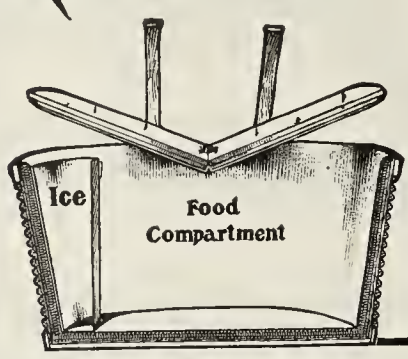
The man that founded the Rubber Heel Business has been in the Shoe Trade since '77 and is one of the few men in this Country that understands the fitting of feet. He wrote about it in a book which will be sent upon request for a two cent stamp.

O'SULLIVAN RUBBER CO., Lowell, Mass.

On Trips or at Picnics This Basket Keeps Food and Drink Cool-Fresh-Delicious

With a Hawkeye you are assured a better lunch than you ever tasted from old style baskets. This basket is also useful for small families instead of an ice chest. Invaluable for the sick room and for travelers. Sportsmen can carry home their catch in empty basket and keep the fish fresh. Valuable in many ways.

The Hawkeye Refrigerator Basket



keeps the food dainty, moist and cool and enables you to have ice cold drinks. A small piece of ice in the compartment provided for it, lasts 24 hours and keeps temperature in basket down to 58°.

It's like a refrigerator. Inside is white enamel, then layers of asbestos and heavy felt—best non-conductors of heat. A felt piping runs around the edge to keep air out. Outside is of imported rattan, strong enough to last a lifetime.

Here is a Cross Section

Note the scientific construction—no heat, dust, air nor insects can penetrate.

Hawkeye Refrigerator Baskets come in several sizes, from the small hand basket to the medium sized De Luxe or the large sizes for automobiles.

Recipe Book Free

Write for prices and recipe book containing new lunch recipes. If your dealer does not carry the Hawkeye Refrigerator Basket, we will supply you direct. 30 days' free trial.

ADVERTISING BULLETIN

NO. 4

THE COST OF ADVERTISING

VERY few readers of Collier's, or of any national publication for that matter, know how advertising is placed or what it costs. Advertising is becoming an art and the advertisements in the best publications are an embellishment. Without advertising the splendid periodicals of to-day would be impossible and readers are the ones most vitally interested. Reverse the tables: Let publishers withdraw from accepting any advertising and again the readers would be affected. The advertiser and publisher bring the reader in touch with the latest and best of everything in every nook and corner of the country. That is why you, as a reader, ought to be interested.

A one-inch advertisement in Collier's, one time, costs the advertiser $35. A quarter page costs $400, a page in black and white $1,600, and color pages all the way from $1,800 to $2,500, according to the colors used. When a merchant or manufacturer spends $400 for a quarter-page announcement or $1,600 for a page, he is pretty certain in his own mind that he is making a wise investment, for it surely is an investment, for the immediate or distant future. If he is a mail-order advertiser, he must get immediate returns in the form of cash or replies from prospective customers. In other words, *he must make money* on every advertisement else he suffers a distinct loss.

The publicity advertiser is building for the future. He rarely expects and seldom gets any inquiries, but by keeping everlastingly at it, he makes his product known and many times a by-word: a well-known camera manufacturer has advertised his cameras so thoroughly and consistently that the word "kodak" has actually become synonymous with the word "camera." *Advertising costs, but it pays, and the readers reap the benefits.*

The Hartford Fire Insurance Company
and
The National Association of Credit Men

The National Association of Credit Men representing the leading mercantile houses of the United States in addressing merchants throughout the country on the need of adequate and responsible fire insurance protection, says:—

"Through the guarantee which it has given you an insurance company may suddenly become your debtor. Might it not be well to know ahead of time what kind of a debtor it is likely to be?"

The points which the Credit Men say ought to be considered in selecting a fire insurance Company are given below. See how well they describe The Hartford.

What Credit Men Ask	What The Hartford Is
1—"What is the net surplus above capital and all liabilities?"	1—The Hartford's surplus January 1st, 1909, above capital and all liabilities—$5,061,592.
2—"Has it (the insurance company) a record of paying its debts (losses) promptly and without unjust deductions?"	2—After San Francisco in putting The Hartford on its Roll of Honor, this same National Association of Credit Men said, "Considering that its gross loss was the immense sum of $10,275,000, the company is worthy of the highest commendation."
3—"Are the men who manage its affairs men of character and high standing in the community, upholding the principles of business which assure a long and honorable existence?"	3—The Hartford's reputation for commercial honor is its most cherished asset, and its continued observance of good faith with its policy-holders is attested by its popularity and success. It is 99 years old and does the largest fire insurance business in the United States.

The service which The Hartford affords the public continues throughout the year and is not limited to payment of losses. It has published a book "Fire Prevention and Fire Insurance" with separate chapters for Householders, Merchants and Manufacturers, showing each how danger of fire may be reduced in his particular property. The book also gives valuable advice concerning insurance and may save you thousands of dollars no matter in what company you are insured. It is free if you mention Collier's.

The bride's wise choice

"From our new cottage
"home I shall omit the
"useless inner doors,
"mantles, extra chim-
"neys, fancy lamps that
"are never lighted,
"books which are never
"read, vases which con-
"tain no flowers, etc. Let us first
"purchase an outfit of

AMERICAN RADIATORS & IDEAL BOILERS

"because they save much coal, need no repairs, keep all ashes, smoke,
"and soot out of the living-rooms, are safe, and will last long as the
"cottage shall stand. These savings and economies will help in time
"to pay for the finer furnishings."

"The cottage will be kept cozily warm all over, and the family health thus protected.
"If we prosper and move to a larger house, we will get our full money back, or 10%
"to 15% higher rental to cover cost, as IDEAL Boilers and AMERICAN Radiators
"do not rust out or wear out."

Those who know that happiness depends so much upon the comfort and healthfulness of the home, whether newlyweds or longweds, are urged to write us at once.

A No. 3-22 IDEAL Boiler and 600 ft. of 38-in. AMERICAN Radiators, costing the owner **$245**, were used to Hot-Water heat this cottage.

A No. 22 IDEAL Boiler and 240 ft. of 38-in. AMERICAN Radiators, costing the owner **$110**, were used to Hot-Water heat this cottage.

At these prices the goods can be bought of any reputable, competent Fitter. This did not include cost of labor, pipe, valves, freight, etc., which installation is extra and varies according to climatic and other conditions.

Our outfits are as quickly put into OLD buildings as in new—farm or city—and this is just the season to get the services of the most skillful Fitters. *Prices are now most favorable.*

Simpler To Control Than An Automobile

Mullins 1909 Motor Boats

Designed by the world's greatest naval architects—Whittelsey & Whitaker, of New York, N. Y.

These remarkable new models are perfect in construction and detail. **The One Man Control** makes them simpler than an automobile. **Mullins Underwater Exhaust** makes them noiseless and eliminates odors, dirt and grease. **The Improved Reversible Engine,** the celebrated "Ferro," is the simplest, most dependable marine engine built.

Mullins Boats are built of steel like government torpedo boats. They cannot leak, sink, water log or warp—never require calking, bailing or drying out—always dry, clean, comfortable and absolutely safe.

We are the largest builders in the world of Launches, Motor Boats, Row-Boats, Hunting and Fishing Boats. **Write today for complete Catalog, and learn all about these wonderful boats and their low cost.**

June Fiction Number

¶ *In the Fiction Number for June, which appears next week, there will be three stories,*

"Where Thieves Break In"

By

JOSEPHINE DASKAM BACON

¶ *From the moment when the little heroine of Josephine Daskam Bacon's story "Where Thieves Break In" wriggled her plump person into the deserted house, and met the engaging stranger with the Yale pin and the leather suit-case full of Aunt Edith's forks and spoons, things happen. He was a handsome, well-dressed man, and when Caroline first encountered him he was eating—daintily poising a bit of jelly on some bread. With a network of cobwebs upon her shoulders, she assured him he was not a burglar, and yet he had "two thousand dollars' worth of stuff" in the suit-case. Like Caroline, he said he had been "just pretending" to rob her aunt's house. There is plenty of excitement and a little tragedy before the tale is ended.*

The King of Cocoanut Island

By

FREDERICK UPHAM ADAMS

¶ *A cannibal king and a Yankee are leading men in this whimsical South Sea Story. The Yankee owns a traveling circus, and has his menagerie along with him when he lands on the shores of the royal domains. William Simms was a man who yearned for adventure. "If I can tote this bunch of animals on this sailin' tub through all them islands on the map without nothin' happenin', why, I might as well give up huntin' fer trouble." This story follows and continues "The Trouble Hunter," which appeared in the May fiction number, although the reading of the previous story is by no means essential to the complete enjoyment of this.*

The Thread of Gold

By

STEPHEN FRENCH WHITMAN

¶ *"The Thread of Gold" is the romance of a gentle-souled bookseller who cherishes an unsuspected dream for thirty years, and then sees it come true. He lives in a trifling and timid bustle among old books, dry books and defunct books. Out of one of them drops a yellowing photograph of a rather superb woman, as she must have been, graceful in a voluminous ball gown. Starting from that picture, the bookseller tells his story—the romance of "peering from the doorway, watching and waiting." As in all appealing romances there is a veritable villain, "a tall fellow with black, curly whiskers, a big red-faced brute."*

Baseball Up-to-Date

¶ *The series of articles on Baseball by Will Irwin will continue in Collier's for June 5. The modern game will be described in its picturesque, intricate, and popular phases.*

SEWER PIPE MAKING

is the easy way of getting started in the concrete business. Concrete Sewer Pipe is preferred over vitrified clay pipe in thousands of localities because cheaper, more durable and home manufactured.

THIS SIZE PIPE

is made for 35c a ft. Same size in Vitrified Clay costs (average) $1.20 a ft.

Independence

ATTENTION EVERYWHERE in the United States will be given to District Attorney JEROME'S fight for another term. When he ran last there was not a State in the Union which failed to number thousands eagerly interested in the outcome. Men and women everywhere cared, because they believed he stood in American politics for a better day. They liked drama, to be sure, but it was the independence and the freedom from partizan incumbrance that gave the drama life. When Mr. JEROME, a few weeks ago, called attention to the fact that his only answer was to the people, not to any party, he showed the center of his strength. He makes his decisions for himself. No organization creates his obligations for him. No boss tells him what to do or explains to him what is right. He has opposed great powers often, in politics and outside of them. He has displeased strong leaders of finance. He has stood at times against the public. He is standing at present against the two most powerful yellow journals in the country. The Hearst and Pulitzer papers hate him for a number of reasons. He has frequently refused to take their orders. He has regarded his office as judicial, not personal or political. He has shown his willingness to punish both of those great newspapers for certain of the many libels which they constantly inflict upon the public. Our prophecy is that the leading elements this time will be JEROME'S campaigning ability, on the one hand, and, on the other, the furious hostility of the yellow press. In August he will be nominated by petition. In September Tammany and the Republicans will decide whether to endorse his record or oppose it. If both machines come out against him, the difficulty of his task will be terrific. Not improbably, however, neither party will care to risk defeat by nominating another candidate, with the chance that the opposition will nominate JEROME. It would be more amusing if parties could be eliminated from this fight, so that the test of strength might be clear—the solid opinion of the community against the fiercest efforts of the yellow journals. We by no means underrate this power of BRISBANE, PULITZER, and HEARST. It is a mighty weapon which they wield. Against them will be the general belief of the bar, sound business, and educated men in other walks, that the District Attorney has earned another term; that his election will be an encouragement to independence; that his defeat will be a tribute to forces which are revengeful and malign. It would be a pretty struggle, this, between these demagogues and the general fairness of the town, but unfortunately it can not be isolated. The outcome will be determined largely by the party conventions in September, and they will be guided partly by their conception of what the general public thinks, but partly also by those hidden wires which few men understand.

Austria

THE PROPOSED APPOINTMENT of Mr. KERENS to the Court of Austria would be outrageous. Although the explicit reports are not denied, the cheerful course is to regard such an appointment as impossible until it is actually made. From the standpoint of social fitness Austria has recently been treated tactlessly enough by us. In manners Mr. KERENS would be as absurd as in record he is undeserving. The only motive would be to get him out of the way of other Republican politicians in Missouri. This exquisite reason is insufficient ground for insulting the United States and Austria.

Song and Matrimony

MME. FREMSTAD, one of the most genuine artists on the opera stage, believes a husband and children would be inconsistent with adequate devotion to her art. Mmes. HOMER, SCHUMANN-HEINK, and GADSKI, finished and thorough singers, have made the experiment with success. The argument has had centuries of life. BACON took sides on it as applied to every kind of public life. Many have believed matrimony a foe to art, but usually, like Mme. FREMSTAD and Mr. HENRY JAMES, they have been unmarried. Temperament has no universal rules. Sometimes human responsibility is a curb to creative thought. More often it gives nourishment, exercise, and the ability to grow richer and more efficient with experience.

Mush

THE HAINS TRIAL has again echoed through the land. The cheap and false in public sentiment is often brought to light by murder trials. Women especially flock to the scene of some brutal murderer and betrayer, because his young life is threatened with extinction. Journalists, not only of the Hearst and Brisbane type, play loudly upon this responsive chord. A demoralized and pretty girl commits unlimited perjury at the expense of a dead architect, in support of a living murderer; the country echoes with eulogies of the "child wife" and "angel child"; and COLLIER'S is flooded with protests and cancellations because we point out that her testimony is false. The Hains murder belongs in the long list of melodramas. The murderer was a man of poor character moved by motives undeserving of respect. Thousands of readers, encouraged by the yellow press, have smothered the case in a mush of emotion, gregarious, ignorant, and untrue.

Harriman and the Coast

HERE IS A STORY of interest not only to the Pacific Coast, but to all who follow government in the great American republic. Let it be introduced by the letter of one Senator to another:

"WASHINGTON, D. C., April 8, 1909.

"HON. M. N. JOHNSON.

"*My Dear Senator:*

"I beg to acknowledge receipt of your favor of yesterday, containing the enclosed letter from one of your constituents, who charges that 'HARRIMAN has a lease for ninety-nine years on every foot of shore line, and no shipping can be made from this port [San Pedro] except by the grace of the Southern Pacific Railroad.'

"In reply, I would say that I was engaged in operating steamships for many years from coast ports both north and south of San Pedro, and we landed all our ships at that port, as did hundreds of other vessels engaged in the shipping business, at a public wharf, the rates of dockage being fixed by the Board of Supervisors of Los Angeles County or the trustees of San Pedro or Wilmington. There are other wharfs in that port owned by the San Pedro, Los Angeles & Salt Lake Railroad Company and other terminal companies separate from the Harriman lines; there are half a dozen lumber companies that have wharfs, and the Banning Brothers also own wharfs there, and the city of Los Angeles owns a strip of land a half-mile or more wide, extending from that city down to San Pedro Harbor, where the Government has expended about three millions of dollars in building a breakwater. I feel sure, therefore, that your correspondent has been misinformed as to the ownership of the property fronting on the harbor of San Pedro or the ocean; but, be that as it may, the water-front, as you know, on the ocean is subject to the control of the Government, and the Board of Supervisors, City Trustees, etc., fix the rates of wharfage tolls regardless of ownership of the land.

"I submitted your letter to my colleague, Senator FLINT, who for many years has been one of the leading lawyers of Los Angeles, and who for four years or more was United States District Attorney, and he informs me that there is not a word of truth in the charge made by your correspondent—to wit: that Mr. HARRIMAN is the owner of all the land at San Pedro. I remain, Very truly yours,

"(Signed) GEO. C. PERKINS."

This sounds firm, does it not? Well, the Senator is correct in just one part of his denial. The ninety-nine-year lease does not exist. The other charges are in all essentials true. The rates of dockage are fixed by the Board of Supervisors, but it is under instructions from the Southern Pacific Railroad. Over fifty-one per cent of the stock of the Banning Brothers corporation is owned and controlled by the Southern Pacific. The city of Los Angeles owns a strip of land extending to the cities of San Pedro and Wilmington, but it is cut off from the harbor by the proprietorship of the Southern Pacific. Certain rights on the harbor are owned by electric lines, but these are also controlled by Mr. HARRIMAN. The Government owns some pieces of land on the harbor, but they are not yet improved, not extensive, and not favorable to commerce. The lumber companies referred to secure their privileges from Mr. HARRIMAN. There is, then, no frontage to-day on the harbor where a ship can tie up, not owned or controlled by the Southern Pacific or its affiliated corporations. The city of Los Angeles is now engaged in an effort to break the title to certain tide lands, under the control of Mr. HARRIMAN, for the purpose of making that port, if possible, free, but even should the city be successful, Mr. HARRIMAN will probably find some way to annul its victory.

Are They?

ARE PINK WHISKERS educational? The question has been propounded to a jury. The case turned on the legality of a certain "turn" at a music hall on a Sunday evening. To be within the law of the State where the trial was held a Sunday night "concert" must have a religious or an educational trend. At such a concert pink whiskers

were born. Hence the query: Are they educational? According to the logic of the theatrical manager, education consists in the promulgation of facts hitherto unknown. As we glance up from our page and out of the window there is in sight not a solitary spear of pink. If this color occurred in the music hall it was novel, and therefore educational. The theatrical manager's logic will do no harm. It serves to remind us that the trouble in people's reasoning is usually not in the logical process. The conclusion is likely to follow from the premises. It is in general the premises which are wrong. In this whisker case the logical process is correct. The flaw is in the definition of what makes education.

Take a Broader View

OPPOSING JUDGES for reelection merely because these judges have sometimes issued injunctions in labor disputes is too narrow a policy for unions to pursue. If an individual judge is unfair, he may reasonably be opposed, but to endeavor by a sweeping policy to influence the bench is certainly unwise. Judges are bound by precedent. They can not change the law to suit themselves. Our own preference is for a considerably more restricted use of injunctions, but we dislike to see the unions themselves unfair. In Chicago they are fighting, among others, Judge MACK, whose record happens to be particularly good, both on the bench and off. His sympathies are popular, and he has been closely connected with Hull House work. His services have been of special value to the Juvenile Court. The best opinion in Chicago is strongly in his favor, and if he is beaten by anti-Semitic prejudice and by an undiscriminating attitude in the unions there will be one more blow landed against intelligent liberalism and intelligent independence.

Plenty of Wet

THE INTER-MOUNTAIN COUNTRY is astir with divers irrigation projects. Interest also stretches from coast to coast, since the various projects depend for pecuniary support largely on Eastern money. At the present writing one of the largest private irrigation enterprises in the history of the West is nearing completion at the doors of Denver. It is known as "The Standly Dam Project." The dam is eight miles north of the city. This dam will provide a lake of 125,000 acre-feet. It is to be supplemented by numerous other lakes, bringing the total enterprise up to 250,000 acre-feet. The land to be reclaimed reaches to the very doors of the city, and the main impound is one of the largest in existence anywhere in the world. There has, by the way, been so much moisture in Colorado this winter that it is frequently remarked that irrigation seems a sort of joke. From September 15 to March 15 there was nine feet of snow on the level. This does not of course refer to the mountain fall, which is indefinitely greater. The conditions regarding moisture this year are exceptionally encouraging in Colorado, Kansas, and Western Nebraska.

Rubbing It in

THIS IS GOING SOME. It is so cruel it really makes us laugh. Here is this weekly busily engaged in ridding an indifferent world of wildcat finance and get-rich-quick ingenuities, when along comes one concern, with brazen cheerfulness, annexing us to their project. The Old Gold Salvage and Wrecking Company would make even a typical "sucker" smile. It is described as "a $10,000,000 treasure," and it intends to find the cargoes of the kind of gentlemen of which Captain KIDD is the most notorious. "The recovery of the treasure would yield a dividend of four thousand per cent on the entire capital stock." Four thousand! And this amount "should be available this summer." Was ever anything more profitable than that? Well, in the announcement appears in large letters the name of this paper. "COLLIER'S, the National Weekly, September 23, 1905. The Lure of the Pirate's Gold," with two and a half pages following. Nerve? It is almost justified by the audacity. Of the victims caught we wonder how many are lured by the name of this periodical. Let us say, none. Let us suppose that all COLLIER readers are too clever for any scheme promising better than three thousand per cent in six months.

Controlling Motors

AMERICANS FAIL thus far in their grappling with accidents from automobiles. Every day women and children are maimed or killed, and the noble-minded drivers often run away. In many cases of arrest no penalty is inflicted. In other cases it is a fine, which often makes the culprit laugh. Any one who has motored in England notices the difference there. Where are the accidents in London? There are very few in all the island. Chance counts for almost nothing. When a policeman holds up his hand the speeder stops. The most daring would scarcely run away. His recapture would be certain; his punishment severe. Policemen are incorruptible. Judges know the law and apply it with evenness and rigor. What we need in this country, before we can succeed in handling reckless individuals, is a bench and police force free from politics. Licenses to run motor-cars should be more difficult to obtain. They should be taken away for every serious breach of conduct. Jail should be the lot of any man who is guilty of criminal recklessness, of attempted bribery or "influence," or of endeavor to escape.

Come to Stay

SENATOR WARREN raises horses on his Wyoming ranch. When they stray too far from the ranch house, the Senator's "wranglers" mount their trusty automobiles and round the horses up. On a horse a man can cover only forty or fifty miles of range in a day; the automobile will carry him from one hundred and fifty to two hundred. After a hard storm in the Northwestern range country the sheep will be scattered, and suffer severely if they are not quickly brought in. For innumerable purposes automobiles are beginning to show their worth. About two hundred thousand of them are running in the United States. Hard times did not lessen the demand. For pleasure and for business the machine increases in appreciation. It needs a little sensible regulation, but it has added to the ease, pleasure, comfort, and economy of living, and it has come to stay.

Tolerance Commended

"A REFORMING AGE is always fertile of impostors," wrote MACAULAY. Hitched to the star of every wholesome reform are the petty venders who have a prescription for every outbreak of popular folly. They are the camp followers of the army. Whatever of intolerance is ascribed to every good reform too often grows out of this chorus. Perhaps it was as a tribute to the activity of this element that one disgusted voter in a Western city laid down this epicedian platform for all reformers: "Make it a crime to smile; close up all the theaters; don't allow dancing, make every one go to church for his soul, and to the cemetery for his recreation." Reform has its infancy and its measles. One may smile and smile, and be a reformer, and one may go to church without becoming intolerant. The virtue which the world wants is noble-minded and noble-hearted virtue. Statues are not chiseled to little fault-finders, though they are raised often to reformers of a larger cast. "Deal mercifully with the man beside you, for he, also, has a hard battle to fight." Perhaps the light he sees is as pure and clear to him as yours to you.

International Episode in Porcelain

WHATEVER THE PROVERB, imitations themselves are likely often to be unflattering. Commercially, the imitation usually is a reproduction, derived by less laborious methods, of an article wrought under inspiration. In such short-circuits, which furnish the least good to the greatest number, the United States has earned a reputation for cleverness combined with ruthlessness—for appreciation more of profit than of beauty. We are not alone, however. The English consumer has his reservations about things "made in Germany"; and we know the Japanese skill in flooding Western markets with tawdry imitations. An ancient and world-wide art-craft, and one most sensitive to these modern influences, is that of the potter; and a suggestive episode may now be observed in every American metropolis where the department store flourishes. There is a favorably known product of an American pottery bearing the honored name of Dedham ware, of good Massachusetts parentage. The designs are original, the execution admirable, the technique legitimate, the form and texture honestly derived. The result is commercially available, well suited to modern use, attractive, and a credit to an American art industry. Naturally, plates and cups and saucers thus made must be paid for. However, our taste in these things has been formed by the vast displays of foreign-made "china," good, bad, and not so bad, upon which, bearing the mark of brush or stencil, the citizens of the United States pay tribute in the guise of a substantial duty. Under protection of said duty, and not notably restrained by inconvenient scruples, we also proceed to satisfy the more popular taste by making the foreign product at home. Those who can afford it enjoy their breakfast served upon a Copenhagen service; the less fastidious break their fast upon "Copenhagen" that is of Trenton-upon-Delaware. Austrian-made "Dedham"—a cheap imitation, produced by factory-inspired processes—is now offered to complacent shoppers of these penetrating States, and is apparently acceptable, since it undersells the true American product, even when the purchaser has paid the duty and the freight. Whether the American pottery could have prevented this encroachment upon its preserves by proper protection of designs is a question not easily settled in retrospect. The American pot and the Austrian kettle have here a chance for repartee. The boldness of this return invasion may offer reflections to our critics abroad, who may learn the fresh fact that nowadays we are sinned against as well as sinning.

Father to the Man

TO KNOW CHILDREN, study their toys. At least in the earlier years the toy gives many hints. What is the meaning of the great rush into the market of mechanical chickens, ducks, pigs, jumping rabbits, plush rabbits with celluloid faces, and all the rest? Merely that the child early develops a passion for everything which he recognizes as life. Later his abstract interests come. Indeed, the abstract interests are to be seen early too. One child, for instance, had among his earliest developments the word "gone"—abstract enough, in all conscience, but the keenest and most universal interest, at first, is for life, in its most concrete embodiment, and hence the great charm of the actual animal, and, when that is unattainable, its mechanical equivalent.

Carrying the wounded to the hospital after the attack on the Sultan's palace

Crowds of Europeans and Turks cheering the soldiers of the Constitutionalist Army on their way back to the Taxim Barracks, after the surrender of the guards of the Yildiz Kiosk

The Young Turks in Action

A Brief Account of the Overthrow of Abdul Hamid

When the Sultan cast aside the Constitution, Mr. Palmer started for Constantinople, arriving the day the Constitutional troops entered the city

By FREDERICK PALMER

CONSTANTINOPLE, April 27

IN THE window glasses of the American consul's house the fight of the morning had drilled small holes the size of a ten-cent piece, which will serve the double purpose of souvenirs and ventilators in the future. The outer line of barracks taken, the Young Turks troops had moved on. For the afternoon our host promised his guests the climax of a drama which had run its course in lethargic Turkey with the swiftness of a panic on the Stock Exchange. At four either Yildiz was to surrender or to be stormed. Against their brothers, and in behalf of their master, would the Sultan's garrison fight to the last ditch with the courage of their race? For the answer we waited on the consul's roof.

Through the streets leading toward Yildiz Hill, Abdul could watch the squads working their way forward, much as a hunter approaches game.

The nearby firing stopped; and we knew that this task of street-cleaning was over. There was dead silence except for the rattle of the wench of some tramp steamer in the harbor whose captain proposed to work, war or no war. Then, at half-past four, an eye clearer than its fellows made out a white flag over one of the barracks in front of Yildiz. Only twelve hours after the Young Turks had entered the city the lone old tyrant had decided to take the advice of thirty thousand bayonets. A mob put Louis XVI off the throne. Three disciplined army corps passed the word to Abdul Hamid.

He was not thinking of dying in a manner worthy of a Padishah who believed in himself as the defender of the faith against rebels. He was thinking of saving his own life. Meanwhile the soldiers were singing constitutional hymns and cheering a youngster of twenty-eight, and men double his years were throwing their arms around him in ecstasy most un-Turkish. The embraces by the Old Turks who had been on the political fence were particularly warm. When asked what was to be done with the Sultan, this youngster, speaking French to the French and German to the Germans who came to congratulate him, answered all according to the book he had learned abroad: "That is for Parliament to say. The army was only the instrument"—and this from a pyramid head under a fez.

Enver Bey, Leader of Men

This young officer is one of the youngest of the so-called Young Turks,—that is, one of the youngest in high places. He is the type of officer who made the movement which overthrew the tyranny of Abdul Hamid. His was the first regiment to revolt last July. He was Military Attaché in Berlin and hastened south when the trouble began, to direct the advance of the Young Turks

The next day the Greek venders were making up for loss on stocks of Abdul Hamid's by selling his picture in the streets. There must always be some young hero. In this event the lightning of sudden fame struck Enver Bey. He is a type of the younger army officers who have been the inspiration of the movement: the Young Turk incarnate.

The one modern institution in Turkey was the army. As a threatening factor in playing one European state against another, Abdul kept it well equipped. The instrument which in other countries puts down rebellions here produced the leaders of reform. In order to be up-to-date, the young officers had to study abroad. Thus, in what was to be a people's movement, the agitation began from the top. The troops were the pupils, the officers the teachers, and the schoolroom Macedonia.

In July last occurred the real revolution. Young Enver Bey's was the first regiment to raise the banner. Fire ran from regiment to regiment along a well-laid fuse. A movement fully organized sprang out of the darkness. An order of Odd Fellows, which had no real lodge meets, sprang into control of the country. The Sultan had to revive the Constitution.

Parliament met on the 17th of December. But Parliament did not rule. The Young Turk Committee of Union and Progress—a hierarchy holding no office—ruled.

The Sultan turned to faith as the ally of his intrigues. His is the cunningest hand that ever led Oriental diplomacy on tracks new to its own imagination. The clergy went about preaching that the sacred laws were being broken. Religion and the distribution of largess from Yildiz formed a plot. Its culmination was the murder of their officers by the troops in Constantinople.

The Sultan's Special Prayer

BANDS of soldiers roamed the streets firing their rifles at pleasure; then, tired out, returned to their officerless barracks. All the members of the Cabinet were seeking cyclone-cellars not down in the City Directory. Yet when he went to mosque the crafty Sultan offered a special prayer for the Constitution, which he loved as dearly as a woolen manufacturer loves free trade.

It was all over, Europe thought. The "ins" were out and the "outs" were in. But the Young Turks were prepared for just what had happened. The Sultan put his head in the noose which they had slung for him

By a [illegible] régime they had kept the softas [illegible] agitating in Macedonia. For months they had been putting the soldier through exercises in constitutionalism as well as military drill. He was taught the real source of Christian power. His sense of military faithfulness had been played on to make him faithful to the new ideas.

Rifle-Fire and Marching Columns

WITH Macedonia the closed preserve of the Young Turks, the forces there were theirs. Chevket Pasha and all the older commanders were Young Turks. Two trained army corps, with the latest weapons, long preparing to attack Bulgaria if need be, about-faced to move on their own capital. Their celerity and precision caught the world with the same sense of surprise at the early operations of the Japanese against the Russians. While German diplomacy had been playing with the Old Turks in the name of concessions, the methods which overthrew the Sultan were also "made in Germany." In three days the corps were before Constantinople. That problem of the entrance was a train despatcher's and hotel clerk's combined. With a map of the city on a table, these "made in Germany" officers had to tell of their attacking parties and their patrols, and when they were ready to occupy the city according to plan.

Among other texts in the Teuton book, military secrecy was not overlooked. All Constantionple, including the embassies, which try to be "in the know," went to sleep Friday night assured that there would be no action on Saturday. The first they knew of the occupation was the sound of rifle-fire and the sight of marching columns. Those in command had been extremely polite in every way except to warn you that you might have volleys under your bedroom window for an alarm-clock. How well the maneuver was carried out, my personal experience incidentally attests. The Orient Express, on which I arrived while the fighting was in progress, was delayed only half an hour from its schedule time. Along the railroad embankment we witnessed scenes reversing all precedent and political calculations. Bulgarian volunteers were mixed with the Turkish soldiers waiting in reserve in the suburbs; Christians and Mohammedans, who had made the Balkans the cockpit of seemingly eternal racial feud, were comrades in a common cause. Turkish officers leading the cheers, they shouted together for Turkish liberty as we passed.

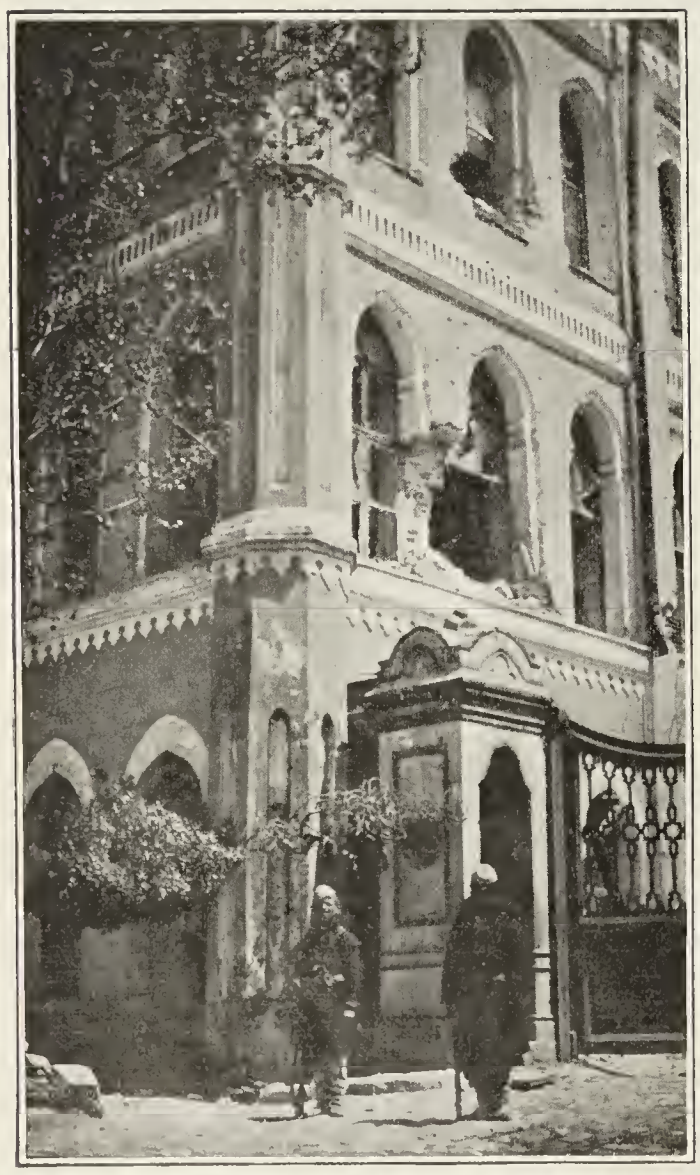
At dawn, when the streets were empty of all traffic—so that an awakening population should find them with the nine points of possession—the Young Turks dashed across the undefended bridges into Pera. Among them you looked in vain for the insignia of any rank. The officers were dressed as privates and carried rifles, in intimate watchful association with their men, and unidentifiable by any fanatic who would seek favor in Paradise by killing a heretic. One thing you noted that was new in Turkish soldiers. The men of the Second Corps were in good khaki rather than patches. Another thing you noticed that was old. The rifles showed the cleanliness and polish of a tool of which its owner is fond. For the Turk is a fighting man. The men in the barracks on the hills, loyal to the Sultan, had killed their officers in the April uprising, and now the brothers of the dead were advancing for vengeance. These were fanatics without a plan; Turkish soldiers used to blind obedience without any one to tell them what to do. They paid a heavy tithe in killed before the surviving ones fled as a child flies before the storm.

Mutineers Find Refuge in the Harem

CHASE followed in the streets where long-range bullets fired at close range sought out non-combatants who would see what was going on. In some cases prisoners were, indeed, taken; other fugitives threw away their rifles and uniforms and sought hiding-places. More than one hard-pressed mutineer doubtless found refuge behind the lattices from which the women of the harem looked out, unseen, on a spectacle which they could not understand.

Death in their ranks did not seem to convince the Turkish spectators that a bullet could kill when you saw no smoke or the man who fired it. They would fall back only to press curiously forward. They helped move the guns; they showed the soldiers the way.

And immediately that Yildiz was taken, Chevket Pasha, that shrewd old commander-in-chief of the Young Turks—who well knew his polyglot Constantinoplians from Greeks, Jews, Armenians, Arabs, Kurds, Circassians, and Syrians, to the softas droning their prayers in the mosques and whispering sedition in the name of the Sacred Laws—ordered that all shops should be opened and every one should go about his business as usual.



In the center of the new bridge a rapid-fire gun, cartridge-belt in position, was ready to play a spray of bullets at the first inflammable sign. At every turn you met coursing patrols. In front of the banks and embassies, and at frequent corners, were squads on guard. Constantinople was plotted with watchful muzzles.

A Correspondent Shot

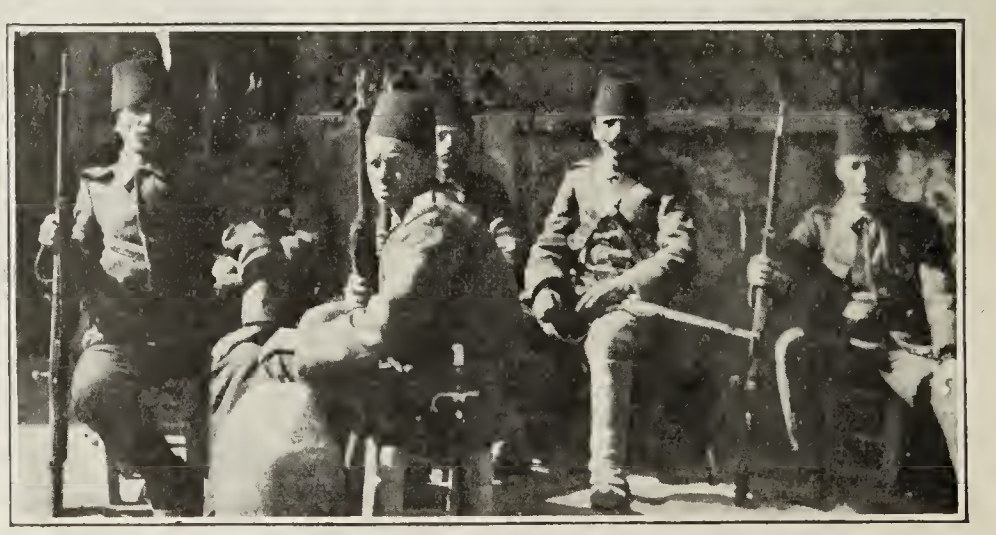
THE soldiers seemed to have word to protect the foreigners. They were good-natured; even willing to be photographed, against all Mohammedan tradition. No foreigner was wounded except as he pressed forward in his eagerness to observe the fighting. Thus the correspondent Frederick Moore was shot in the cause of his work. The Young Turk has the good opinion of the outside world in mind. He would play the game of the nations even as the Japanese have played it. To fermenting Asia Minor—where any row in the capital means offering up the Armenians as tickets to Paradise for the fanatics—word was sent holding governors responsible. Some of the governors were in almost as bad a position as the Armenians.

On Sunday, the day after the occupation, no military pass was needeed. Freely you rode through Pera and Stamboul, passing patrols which brought from their fine house-to-house search prisoners, in crestfallen, dogged march, on the way to trial before a court-martial grinding out sentences of death with the summariness of a police-court's disposition of drunks and disorderlies. Somewhere behind the walls firing squads were telling off the victims.

A part of the garrison at Yildiz would not trust to the mercy of their captors. They succeeded in crossing to Asia Minor, and at last accounts were still in flight. But this garrison, which guarded his person, had not been incited by the Sultan to kill its officers. It was quite safe. It will go out to patrol the railroad instead of the harem.

Effects of shell-fire on one of the barracks

A patrol of Albanians. They wear white caps instead of fezes



The Young Turks had the most up-to-date equipment, including armored automobiles mounting rapid-fire guns, which after the fight were used for carrying messages.—The guard at the American embassy As the troops marched in, guards were detached for the embassies and the banks

Eunuchs of the Sultan's (Abdul Hamid's) harem, outside the harem gate the morning after the surrender. They all wear European ambassadorial frock coats

After the occupation perfect order was kept. Prominent street corners were carefully plotted with rifle muzzles ready on an instant's call

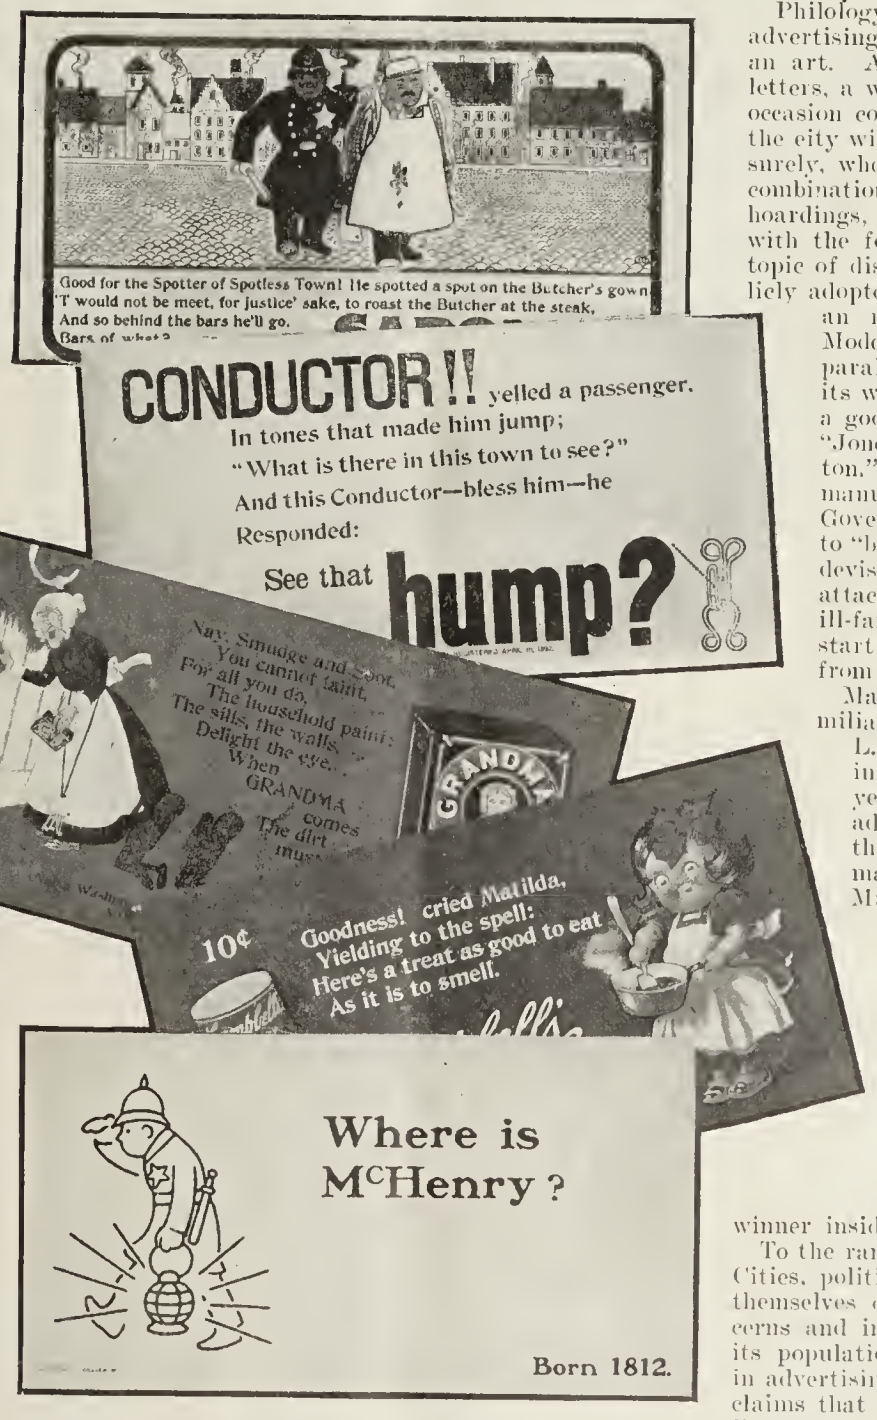
The New World of Trade

I—The Art of Advertising

¶ This is the first of a series of four articles. The second, "Fair Trade and Foul," will appear in the issue of June 19, 1909

By

SAMUEL HOPKINS ADAMS



Advertising for the gullible Some of the curiosities of the paid columns

ADVERTISING is the universal appeal. It is the merchant, the purchaser, the laborer, and the town-crier all packed into print and made one. Thanks to its expediencies, the employment-seeker need no longer tramp wearily from door to door. He can send his message for a few cents to hundreds of thousands of possible employers. Should I lose my watch, I do not send out a man with a bell to cry it; instead I despatch a newspaper with a paragraph. Have I something new in merchandise to offer? The whole world is my market-place, and I can sell by bill-board in Havana, while, at the same time, creating a demand through the street-car spaces of Amsterdam, and sounding the virtues of my wares throughout all the Americas in the pages of the magazines. Wherever the printed or painted word goes, there supply and demand meet and merge in the revolutionized field of trade.

How great the outlay is on the new salesmanship must be, for the present, a matter of conjecture. Even guessed at, the figures have a certain picturesqueness due to sheer size, like the new tower of the Metropolitan Life Building on Madison Square, New York City, which is, itself, a species of advertisement. Perhaps $125,000,000 is spent yearly in the United States in the field of print alone. Dailies charge as high as eighty cents per "agate" line per issue, or about two dollars for the space represented by a single one of these lines. One magazine runs to eight dollars per line. In another five thousand dollars is charged for a single page. The National Biscuit Company has expended as high as a million dollars in one year, popularizing its products. Adequately to introduce to one locality a new five-cent cigar—that is, merely to impress the name upon some section of the country, such as New England—the American Tobacco Company thinks nothing of laying out $150,000. The mere launching of a table sauce or brand of canned goods, in a national sense, requires an initial advertising investment of $100,000. Thus the sum of money used in exploitation has become an important economic factor. Advertising supports our elaborate publications, increases the dividends of street-car corporations with space to rent, helps pay off the mortgage on the farm which can furnish a site for bill-boards abutting on a railroad track, paints the farmer's barn at the expense of Trixter's Cough Mixture, blotches the face of nature in the Adirondacks and at Niagara Falls, and makes it possible for Mr. Roosevelt to get his dollar per word for rhetorically pursuing the startled rhinoceros through the African jungle.

We live surrounded by the advertisement. There is no hour of waking life in which we are not besought, incited, or commanded to buy something of somebody. Our morning paper is full of it; our walk to the nearest car bristles with it; the transfer which we take blazons it. We jump off the car and are butted by a sandwich man who is simply a perambulating whoop of the latest theatrical success. The mail at the office is crammed with offers of twenty per cent stock, high-spiced books, and cures for baldness. When the shades of night fall, a portentous heraldry of trade leaps in living fire from the darkness, exhorting us to drink Boozer's Whisky or perish in our shame. And if we flee to the country for a day's communion with nature, we find sermons in stones, with "Digg's Spavin Cure" for text, and books in the running brooks, all full of testimonials to Enameline Tooth-Powder; and, like as not, the shining sun of heaven is cut off from us while a gentleman in a balloon drops at our feet an invitation to come in on the Home-Hunters' Real Estate Investment Company and get a palatial home, only ninety-nine minutes from the City Hall, for thirty-seven cents down and a postage stamp on account every other February.

All this persistence can not fail of some psychological influence. Our notions of art, and even of literature, must be insensibly modified by this enormous mass of unescapable display. Certainly our memories are impressed with it, though unconsciously or subconsciously. The average man will say: "I never pay any attention to advertisements," and think himself well within the limits of truth. But in nine cases out of ten the mere weight

"They are companionable myths, these folk of Ad-land"

of iteration has produced its unnoted effect. Lives there a man with soul so dead that he can not supply many of the blanks in the following phrases, or answer at least part of the questions? "Let the —— —— Twins Do Your Work." "—— Soap: It Floats." Upon what "Road of Anthracite" does "Miss Phœbe Snow of Buffalo" travel? With what was "Spotless Town" kept clean? "You press the button—" and who does the rest? What is Sunny Jim's last name?

Philology preserves the tradition of a notable feat of advertising performed before the art was recognized as an art. Among some young Scotch bloods, discussing letters, a wager was made that a word invented for the occasion could be introduced into the common speech of the city within a brief time. The test word was "quiz"; surely, when one considers it, an uncouth and artificial combination of vocables. That night the walls, the hoardings, even the sidewalks of the city, were covered with the four letters. In the morning it was the sole topic of discussion. By the week's end it had been publicly adopted and a meaning found for it. Now it holds an unshakable place in the English language. Modern commercial advertising affords at least one parallel in the word "kodak," which has forced its way into our dictionaries. Dividends inhere in a good catchy trade name or an attractive phrase. "Jones, He Pays the Freight. Jones of Binghamton," not only made a fortune for the scales manufacturer and lifted him to the Lieutenant-Governorship of New York State, but also served to "boom" his city appreciably. Could some genius devise a word, phrase, or number to which should attach a beneficent significance, analogous to the ill-fame of the number 13, for example, he could start almost any advertising enterprise with it, from a baby food to an air-gun.

Many a proverb goes wrong in advertising. "Familiarity breeds contempt" is a case in point. W. L. Douglas used some eight thousand mediums in his three-dollar shoe advertising campaign years ago, and put his own picture in every advertisement. As an agency for selling shoes, the picture might appear dubious. There's many a face which a shoe would fit better than Mr. Douglas's. But the exploitation sold the goods and made Mr. Douglas so conspicuous that he was nominated by the Democrats for Governor of Massachusetts. Whereupon he filled the public prints with engaging accounts of his boyhood life, his business career, and his personal character, paid for at regular rates, and literally advertised himself into the Governor's chair. For the normal Republican majority of comfortable proportions was wholly blotted out, and the three-dollar shoes simply walked in, with an easy winner inside them.

To the range of advertising there is no apparent limit. Cities, political parties, and traction companies exploit themselves or their causes, as well as mercantile concerns and individuals. Does Buffalo desire to increase its population? It appropriates $100,000 to be spent in advertising. "South Bend: Find it on the Map," proclaims that enterprising community to the reading public, being desirous of attracting new manufacturing enterprises. For months in the Cleveland traction fight the public-service corporation used columns of the newspapers' advertising space in which to present its arguments, paying for it honestly with money which in another city, would have been employed to [illegible]

...legislators. In the last Presidential campaign the Republican National Committee appropriated ... for the promulgation of the party's doctrines in the magazines. A Syracuse church advertises, ... actively, for attendance upon its services. A convivial gentleman of Milwaukee, having forsworn the Demon Rum and all his ways, saves himself the boredom of repeated explanations by advertising in the local press that he is no longer amenable to the plea of "Have one with me." What would the average reader suppose to be back of the heavily-typed query: "Are you a coward?" It merely cloaks an offer of "penny classics," by the perusal of which courage will be inspired (so the advertiser would have us believe). The story has become classic of Barney Barnato's ingenious reprisal upon a landlord with whom he had quarreled. "Wanted: Ten million lively black beetles, by a gentleman who agreed to leave a house in the condition in which he found it." Once in a while an advertisement fairly springs out at you from the page by virtue of its intensity. C. C. Hopkins, himself perhaps the most persuasive writer of advertisements in the business, told an incident, in the course of his speech before the Sphinx Club, of a man who, coming to New York with but five dollars, advertised for work as follows:

"Wanted: Any sort of work by a man, aged 31; honest; good references."

This paragraph ran, without result, being surrounded by hundreds of similar appeals, until the man found himself with but half a dollar left. Then he struck fire. This is what he wrote:

"Is there any work on God's green earth for a man who must have it?"

Next day he had sixty jobs offered him. The cry from the heart had gone to the heart. It was advertising of the highest type.

Geomancy and the Black Arts

OFTEN advertising of the lowest type, morally, is effective. There are dealers who for years have exploited, in high-priced medicums, Confederate money, as if it could be passed for good money. Crystal balls and other devices for fortune-telling, marked cards, loaded dice, and divining rods are among the curiosities of the paid columns. Suppose such a paragraph as the following, clipped from a magazine of enormous circulation, to have been discovered by some antiquarian of the year 3000 A. D.:

"Magic needles—rods, goldometers, chronometers, etc., for treasure-seekers. Millions of wealth under your feet. Guaranteed the best made. Interesting booklet free for two cents postage. P. & M. Agency, 24 Elm Street, Palmyra, Pa."

Can we not imagine that savant of the future addressing his absorbed class as follows: "Despite the vaunted spread of education and the claims of universal intelligence put forth by the patriotic champions of the United States of America at that period, geomancy and the black arts were not only practised, but also made the basis of commercial dealings well into the enlightened twentieth century."

For the benefit of those interested in the vagaries of advertising, sundry further instances might be cited. There is the case of the English publishing firm which achieved a temporary sale for a book called "Parsons and Pagans" by privately informing (per post) every clergyman in England that he had been personally libeled in it: "See Chapter III, pages 15-16." When called to account, the perpetrator of this scheme had the immitigable cheek to refer to it as "an American form of advertising." A concern in New York advertises to write and post intimate letters from foreign parts to clients who wish to plume themselves among their neighbors upon having friends scattered about Europe, Asia, and Africa. It takes some skill in guessing to make out that: "Wanted: A badly freckled young woman, between the ages of eighteen and twenty-two," is the appeal from a skin-lotion concern for a "before using" exhibit; or that the business opportunity offered to "a venerable-looking physician, preferably with a white beard," comes from a quack firm desiring a "confidence inspirer," whose photograph and M.D. degree can be used in its circulars and advertising matter. A New York church holds out this inducement, none too complimentary to its pastor's preaching abilities: "Attractive music; short sermons." But perhaps the most singular bit of advertising that the writer has ever encountered is the following appeal from a trade paper published in Baltimore: "The owner of this space is a sinner; he has found a Saviour; he is now a Saved Sinner. . . . If you want to talk about personal salvation, address Saved Sinner, this office."

There is no route map of success in advertising. The most experienced practitioner can not tell what will be successful, and what a failure. Like a play's, an advertisement's sole and final test is public presentation. Sometimes it happens, as in the cited instance of the man who *had* to have work, that the tyro will hit the bull's-eye. The writer and designer of the inimitable "Spotless Town" series, which not only sold Sapolio enormously, but incidentally brightened life for a few million people, was a youth fresh from college. A quiet, commonplace, and lonely Colorado stockman once inserted in half a dozen publications a "Wife Wanted" advertisement, which rose to such sun-kissed heights of self-description that for two weeks he received his mail in barrels, while the local postmaster, dancing with fury amid a blizzard of scented letters, swore that he would kill the advertiser on sight. No one had much faith at first in the Victor talking machine's design, "His Master's Voice"; yet the phrase has become a household word, and the quaint little fox-terrier at attention before the megaphone-horn is familiar to more Americans than any of the world's great masterpieces. Caricature has set the final seal of success upon it, "His Master's Breath" having attained a wide vogue through its amusing mock fidelity to the original. "Smiling Joe," one of the most skilful appeals to charitable sentiment ever made, as well as a genuinely charming and attractive "display," was the work of an expert in charity work, who had no technical interest whatever in advertising.

Nevertheless, nine times out of ten, the man who thinks, dreams, and lives "ads" is the man whose work tells. He sells the goods. In the recent pronunciamento of an advertising firm, which is at present advertising itself widely, occurs the following passage:

"We live surrounded by the advertisement. There is no hour of waking life in which we are not besought, incited, or commanded to buy something of somebody. To the range of advertising there is no apparent limit, and where all are tooting the loud bazoo, the problem of any one to make himself heard is no slight one"

"Good copy is simply good salesmanship. It has little to do with phrasing—little to do with display. . . . It is not literary work—this ad-writing."

The exact reverse is true. Ad-writing is, in its best development, literature of the most expert and technical, though not of the highest, type, and no one knows the fact better than the author of the admirably compact essay from which the excerpt is taken. In any extensive advertising campaign, letters of the alphabet are more expensive than pearls, and words than diamonds. The composer of a "national" advertisement is dealing with words which cost his principal at the very least one hundred dollars apiece; very possibly ten thousand dollars each. It behooves him to say the very most that can be said, to say it with the highest degree of explicitness, to give to it the quality that adheres to memory, to make it appeal, to make it arrest, to make it convince, and all within the briefest possible compass. If that isn't literary work, I don't know what is. To a certain man having this quality highly developed a salary equal to that of the President of the United States is paid. He earns it. Few men in the "legitimate" arena of literature earn or make more. Few do their "stunt" so well.

Where all are tooting the loud bazoo, the problem of any one to make himself heard is no slight one. He must contrive something new and strange to attract attention. Hence, the "teaser." A "teaser" is a display designed to arouse public curiosity and prepare it for what is coming. The single word "Pegamoid" spread like a weed through all the street-cars of New York a decade ago and then vanished. That was a "teaser" which was never followed up adequately; for I have found no one, outside of the firm which put out the "ad," who could tell me what Pegamoid was. As a matter of fact, it was a leather substitute. Recently a swarm of advertising bees descended upon the public hoardings, together with the announcement: "Bees are coming." This—not too appropriately, as it seems to me—indicated playing-cards. The effect of mystery was achieved recently in placards displaying unattached human hands and strange, dim designs, with the legend: "There are surprises coming." The "surprises" were the "follow-up ads" of Twenty-Mule-Team Borax. More effective still was a series of "teasers" beginning with: "McHenry is Coming. Born 1812." On the day of its appearance the agency which put it out was kept busy at the 'phone answering people who wanted bets decided as to whether "McHenry" was a shaving-soap, a new kind of motor-craft, or a whisky. Doubtless the success of this exploitation was due as much to the quaint illustrations as to the text. It is an axiom of the trade that an illustration, while directly related to the article vended, should be almost meaningless until the text is read. Omega Oil's really decorative posters of the goose-herd failed of their purpose because they were unrelated to the goods advertised and drew attention away from rather than to them. "Spearmint Gum's" advertising, now running, in which all the figures are made up of little spears, fulfils the requirements of this theory. Text-matter, too, must be "close to the goods," and must hold the attention to them. What is there in the "Mogul Cigarette's" parodies of Poe's "Raven" to suggest inherently tobacco rather than tombstones?

On the other hand, the famous "See that Hump?" jingles of the "De Long Hook and Eye," amusing as they were, never for an instant wandered from the point, and one can not think of the verses without also remembering the article. These contributions to the gaiety of nations have disappeared because they did their work so well that the De Long device has about seven-eighths of all the trade there is.

The Catch-Line Wins

SENSATIONALISM will often gain the end. The Quaker Oats Company is now heralding "The Foods Shot from Guns." At first sight, the advantages of food shot from guns over food which, for instance, had fallen off a skyscraper, aren't obvious. But at least the attention is arrested; held up, as it were, at the point of the weapon, which is one kind of advertising. If the advertiser can hitch his wagon to the star of popular, though perhaps temporary, interest, he may "make a hit." Hence the outbreak, some years since, of Dewey Cigars and Hobson Chewing-Gum; and, in this present time of trust encroachment and trust unpopularity, the appearance of the catch-line, appended to sundry articles: "Not made by the Trust"; or, "Outside the Trust." Inevitably the struggle to make an impression produces some weird results, as when an advertising expert named Cooper coins, to describe his "Unique, Breezy Little Ads," the verbal curio "Cooperosities," which, however "unique," is about as "breezy" as a safe-deposit vault.

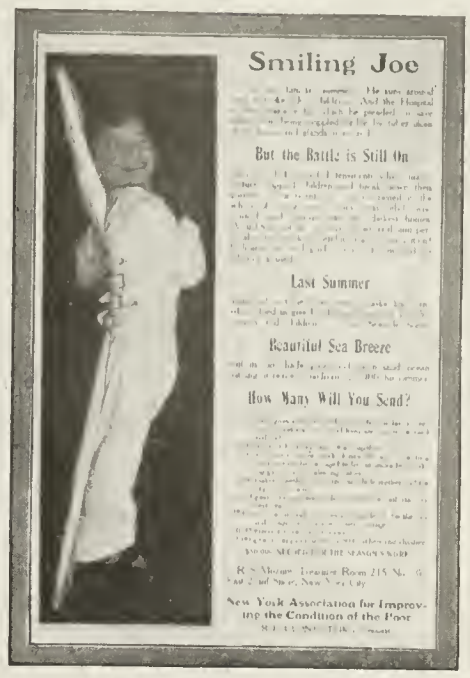
As a rule, the advertiser plays fair. His copy and his designs are his own, though ethics of the business do not forbid his taking advantage of some opening left by a competitor. There is a legend to the effect that some years ago every other step in a long flight leading up to a public bridge was inscribed: "Good Morning, Have You Used Pear's Soap?" whereupon a rival firm adorned each intervening space with the retort discourteous: "No; but I've Used Plum's. *Good* Evening!" Stress laid upon the virtues of imported goods, together with the enthusiastically exploited fact that Emperor William recently ordered a certain American musical instrument, inspired White Rock with an enlivening bit of satire for street-car and publication use.

Advertising is more than advertising. Even were "ads" not essential as revenue producers to the newspapers, they would be highly important as news. For in them is found matter of daily information which can not be obtained elsewhere. For example, the stranger, coming to the city, wants to know what amusements are available. To him the baseball and theatrical announcements are news. The housewife wishes to know what particular bargains are offered for the day or week. To her the department store space fairly teems with news, often news that she reads exhaustively before going back to the first page to discover that Japan has found a new *casus belli* under the bed or that Mrs. Paresis Blubb's pet monkey was robbed of its diamond necklace on Riverside Drive yesterday.

Some years ago the New York "Commercial Advertiser" became involved in a quarrel with the Theatrical Trust, arising from the trust's attempt to dictate its criticism of plays. Thereupon all the play advertisements were withdrawn. A friend, condoling with the publisher, said: "The loss of all those ads must make quite a deficiency." "Pshaw!" said the publisher, "the seventy dollars or eighty dollars a week doesn't matter.

What worries us is the loss of circulation. People nowadays want all the news, and that's part of it."

By force of importance or novelty an advertisement may become the news of the day. When the New York "Ledger" was wavering on the brink of failure, Robert Bonner, the proprietor, sent to the New York "Herald" a brief advertisement, to be set up in a single line. So Greeleyesque was Mr. Bonner's handwriting that the advertising manager interpreted the directions as ordering that the copy be run in full page, which instructions he obeyed, though marveling greatly. The "Herald" came out the next morning with one whole page devoted to the crisp adjuration to read the "Ledger's" new story. The effect upon Mr. Bonner was almost fatal, first from chagrin at the thought of the possible bill, then from amazement as subscriptions began to pour in, and finally from satisfaction, as they continued to flood the office, until the fortune of the publication was made. The novel, though accidental, device had struck the public fancy. Mr. Bonner was hailed as the pioneer of a new and daring theory of exploitation, and the advertisement gained tenfold currency by being commented upon as a feature of the news. Only two years ago Mr. Thomas W. Lawson's brilliant stock pronunciamentos, though published as advertisements, were quoted as news because their effect upon the market was such that they could not be omitted from any comprehensive consideration of the day's financial history.



Aside from news worth, there is a distinct entertainment value in the best of advertising. Think how much duller your ride to business would be if the car hoardings were blank, instead of being filled with color and print. They are decent and companionable myths, these folk of Ad-land; the smiling chef of Cream of Wheat, the frolicky Gold-Dust Twins, the gaily youthful, toothful Sozodont girl, the round-eyed chubs who fatten to bursting on Campbell's Soups, and the hale old Friend of Quaker Oats. Whether or not I buy my clothes of Rogers, Peet & Co., I find equal enjoyment in their sprightly little newspaper ads, to which I frequently turn with relief when the news of the day chances to be dull and stodgy. The man who confines himself to the "reading matter" of a modern, high-class magazine is getting only part of what he pays for. The best experts of the day are striving, in a hundred phases of endeavor, to find something that will attract and amuse him, and he flings their work into the scrap-basket without so much as looking to see whether it hasn't something to say to him. To cite one instance, when the "Old Dr. Goose" advertisements of sincerity clothing were running, I used to look for them with avidity, because of the intimate hand-on-your-shoulder, finger-in-your-buttonhole style of talk, although I was in no manner interested in the goods offered. Even the illustrations for the advertisements are not inferior to those of the fiction or articles, being, in many cases, the picked work of the same artists. Kipling, on receiving a batch of magazines from a friend who had torn out the back pages, to save postage, wrote:

"Next time *you* keep the front part and send me the ads. I can write stories myself."

So in a sense, the ad-man is a public entertainer, only too eager to do his share toward the world's enjoyment, gratis. Says that prince of unconscious quacks, Clem Sypher, in Mr. Locke's "Simple Septimus": "Have you ever thought what anxious thought, what consummate knowledge of human nature, what dearly bought experience, go to the making of an ad? You'll go miles out of your way to see a picture or a piece of sculpture that hasn't cost a man half the trouble and money to produce, and you'll not look at an advertisement, though it is put before your eyes a dozen times a day." There is the lament of genius, all unappreciated. Here is its lyric rapture, quoted from a leading exponent of the "Art of Universal Salesmanship":

"It's the greatest business in the world. From our desks we sway millions. We change the currents of trade. We populate new empires, build up new industries, and create customs and fashions. We dictate the food that the baby shall eat, the clothes the mother shall wear, the way in which the home shall be furnished. We are clothed with no authority. Our very names are unknown. But there is scarcely a home, in city or hamlet, where some human being is not doing what we demand. The good advertising man comes pretty close to being an absolute czar."

Truly, the ad-man runs the whole gamut of human emotions and attributes. Ambition, cupidity, dishonesty, fear, the social instinct, envy, superstition, prejudice, affection and loyalty, pruriency, and charity; each of these is a key for the skilled psychologist of print to play upon. Ambition, as exemplified in the encouraging, "You can double your present salary"; cupidity, in the "Free" advertisements, something for nothing; dishonesty, in the marked cards, loaded dice and counterfeit money offers; fear, in the threat of the quack, "That Burning Pain Means CANCER"; the social instinct, in the recipe of the etiquette-book, "How to be a Lady, by Mail"; envy, in the temptation of the instalment diamond vender, "Outshine Your Neighbor"; superstition, in the claims of the clairvoyants and soothsayers which fill the Sunday papers; sectional prejudices, in the rallying cry of the real-estate faker through the religious press of the South, "Get Some Yankee Money"; affection and loyalty, in the warning of the life insurance company, that you must provide for your loved ones while yet there is time; pruriency, in the leer of the "secret" or sexual book lure; and charity, in "Smiling Joe's" brave appeal for help to thousands more helpless than himself. These are the elements out of which greater men have made the world's tragedies and comedies, turned here to the needs of business.

A Masterpiece of Publicity. The picture that raised $250,000

Pleasant, indeed, would it be to conclude with the statement that, in advertising, honesty is the best policy. Unhappily it isn't true. But for the talent of the advertising man the two most profitable extant phases of swindling would quickly die out, and we should escape the deadly medical quackery and save our earnings from the wildcat stock schemer. True, there are advertising men, just as there are advertising mediums, who eschew this phase of the business; but there are more who make no distinctions. And, in itself, advertising takes no account of the article to be exploited, except as to its salability. Advertising has a thousand principles, one purpose, and no morals. That it should have morals is inhibited by its purpose, which is salesmanship. The ad that sells something is a good ad. The ad that does not sell is a bad ad. Advertising is art, it is literature, it is invention. But it is not humanitarianism nor altruism. Failure is its one cardinal sin, and success the all-sufficient justification of the means by the end.

"If we flee to the country for a day's communion with nature, we find sermons in stones and books in the running brooks"

Swimming

By ARTHUR H. GLEASON

THERE are swimmers that have swum in pools and rivers and the ocean in many portions of the globe. They are fortunate. For they have been able to add diversity to one of the supreme outdoor pleasures. But the Atlantic Coast alone, with the inland strip thrown in for good measure, gives opportunity enough for varied kinds of shocks and reactions.

The autobiography of one who swims with no expert strokes and no diving skill, but just straight on for a mile or so—a commonplace swimmer, such as any one may become—such a life-record of modest achievement ought to be of inspiration and service to a race of water-lovers, who live, every man of them, at the brink or entirely hemmed in by water.

The east end of Long Island was an excellent place to learn—in Peconic Bay, an arm of the Atlantic. If you once get a taste of the salt, fresh water is never the same thing. The only way then to make fresh water seem lively and worth while is to take it cold, where the shock makes up for the lessened buoyancy.

An admirable time and place for that sort of plunge is the early spring, on a week's walk up the left bank of the Hudson. The brooks that run wild down the hillsides a few miles west of the river dam up behind a boulder once in a while, and give a five-foot depth.

The ocean is attractive anywhere, and there is no choice between the New Jersey ocean-bathing and that at Coney Island and Rockaway. But you feel the change when you try the Maine coast in late September with the water at 54° to 57°. From Portsmouth, New Hampshire, through York Harbor up to Portland, at Old Orchard Beach and out at the Point, the bathing is keen and reviving after a long summer in the great city. Most of the bathers in those brisk fall days sit shivering on the shore. The water looks cold till you are once inside it, and there is no surer way of finding it too cold to go in than to sit on the beach looking at it.

Among personal adventures, the briskest swimming I ever had was in the Bay of Fundy. The water is gaspingly chilly and the salt infusion strong. There are few experiences more vivid than to walk all day down the west coast of Nova Scotia and then to leap into that green-tinted water just before the turn of the tide.

Before Martin Sheridan became the world's best discus-thrower and New York's favorite policeman, he ran Pelham Bay Park, which lies, fronting Long Island Sound, a few miles to the north of the Harlem River. He used to open up each winter morning by a swift run into the water from his room and then a couple of hundred yards of rapid-fire swimming in the water which wasn't quite frozen. He used to say that by March the water began to feel tepid, and before April was done he could get no proper reaction. But he was a colossal man, and the average citizen of the Eastern States will find June and July water none too enervating for an hour's pleasure.

And now they are spoiling Clason Point by making it easy to reach and attractive to lazy people when you get there. But in the good old days it was the resort of just a few water-worshipers, who came to swim and that only. Sunday was the great day, and you would see a succession of clean-cut plunges from the thirty-foot frame at the head of the pier, and long-distance endurance swims out into the middle of the current.

The man who is really a swimmer, and would rather do a thing than lament its absence, can get winter-swimming that will keep him sound and free from colds in almost any city of one hundred thousand inhabitants in almost any country of the world. The solution is the club pool, the Y. M. C. A. pool, or the Turkish bath. These resorts have been so largely used by men of rotund form and lazy habits, and by revelers recovering from Saturday night, that they convey the impression of a secret society of fat men. But their wise use is entirely possible to any person with a salary of ten dollars a week or over. The sixty-foot pool only needs to be traversed twenty times for the swimmer to score a quarter mile to his credit. It isn't the same joy as the ocean under a clear sky. The splashings of fat bunglers shut inside the same marble compartment are more objectionable than when you can beat out to open sea while they gulp in waves at the margin of the Atlantic Coast. But the exercise and the reaction are there in pleasant measure, accessible to all whose eye is fixed on the blue summer water of the open bay, but most of whose life is spent indoors in routine.

Doubtless there is swimming to be had up around the North Pole, and certainly there must be good floating, drowsing the long tides idle, where the supposititious equator belts our little world. Perhaps some day it will be granted us to try one or the other, and round out a life of swimming with some daring or luxurious extreme. Meantime let every one fall to on what is actually on hand, his little pond or brook or strip of the sea, and each year gain a wider area of time—no longer letting June and September go wasted. Then May and October will be taken over into the days that count—with always the bright goal of a Martin Sheridan in the mind's eye, when all seasons shall be alike to the hardy swimmer, master of every stroke.

A knot of undergraduates went by

His Second Senior Class Day

The Return of a Father to the House Outside the Campus

By GRACE ELLERY CHANNING

Illustrated by FRANK SNAPP

AS THE train drew near the city, Mr. Devine actually laid aside his paper unfinished, and from a casual observation of some passing landmark gave his whole attention to the moving scene outside the car window.

"There are the falls," he commented to himself. "H-m, that used to be the last station but one; and the old crossing—but they've filled up the pond. Must be getting pretty near."

He glanced at his watch and fell to thinking with characteristic energy what he should say to his son—which, equally characteristically, he had avoided doing until now. He never wasted more time upon any business transaction than was necessary for its successful handling, and Howard and Howard's affairs, including whatever foolishness he might now have got into his head, were merely his next most pressing piece of business—certainly the business nearest his heart, but which he could have done nothing to advance by fussing over all the way between Chicago and X——. He had, in fact, done no fussing at all since he had read his son's letter, but he had not been unaware of a slight, subconscious anxiety, like an undercurrent, through all his business hurry since. And he had had to hurry, beyond the usual quick despatch of business, to enable him to snatch this rare holiday for even such an important event as his son's senior class day and commencement.

It was a day they had looked forward to for years—ever since he had entered the boy (a little reluctant, for were not Harvard and Yale more sounding names?) at his own university, using—he never told Howard how much—of his gilded substance to secure the very same old dormitory which he had occupied in his student years. On that point of the university he had shown a singular obstinacy.

"Yale or Harvard after, for any special course you like," he had said, "and Europe after that; I don't propose to stint you in anything, but I've set my heart on my only son taking his degree where his father and his grandfather did before him. It's a good university—and our native town. The accident of your being born and brought up out West" (like all Middle Westerners he spoke of Chicago as "West") "alters nothing. A little pure New England won't hurt you, and you'll get it double distilled in X——. It hasn't changed any." Here the speaker had smiled a trifle grimly, for if he loved the place with an ancestral weakness, he also privately despised it as a "back number." His son—also privately—thought this might be other than a recommendation, but he yielded with a good grace. What are a few years to youth, with its certain hold upon immortality?

"It's a wonder to me you never go back for class reunions," he once remarked during a vacation as they sat talking college in the library over their cigars; and his father had answered with a shrug:

"Oh, either there's a flurry on the market, or a big case on hand, or your mother wanting to sail for Europe just then. We'll come to your class day," he had added, and they had both laughed.

He was keeping the promise now, though alone, and thought with a moment's grave regret of his wife—how much the day would have meant to her. He could not have failed to come if only on her account, and he would not willingly have done so on his own; but Howard had triple-clinched the certainty with that last letter of his—a very bombshell of a letter to wind up a four years' course in which the boy had run up no debts, got into no scrapes, and done, on the whole, very decently in his classes. The work had always been the very least consideration in Mr. Devine's eyes, New Englander though he was; he had seen too much of the world to think much of a college preparation for it; what he had valued for his son were the "associations."

And now he was suddenly and coolly informed that his son had enough of college—that he did not want to go to Europe, but was bent, instead, on going straight into one of the big paternal machine shops after a brief holiday (presumably to recruit from the exhaustions of scholarship), and he had presented at least six good reasons for taking this holiday, of all the places in the world, at Ogunquitt. Having sent his son back to a New England nurture, this should have been to Mr. Devine grateful evidence of his accurate intuitions; instead of which he had frowned heavily on reading the ingenuous presentation and boiled the six reasons briefly down into one, which he as briefly enunciated—"Girl!" as

He leaned over and gathered one—a little white blossom

he put the letter in his pocket and promptly dismissed the matter (save for the subconsciousness), to be dealt with on the ground when face to face with his son. That this meeting was now imminent, another glance out of the car window assured him. He had not yet decided what to say, but—well, he was not going to have the boy's future spoiled by one of the girls he remembered only too well, and who, doubtless, had continued her line of succession—the very kind of girl to play havoc with an inexperienced Western youth. A mass of white marble here hurled arrogantly by the window.

"Must be the new court-house—quite a structure—and just where we used to go chestnutting," muttered the traveler, then leaned eagerly forward. "By Jove!—there's the old hill!—and the old church-spire—!" A curious look came into the eyes trained to impassiveness. He stood up, like all the passengers, from sheer force of habit, and began to worry down the suit-case from the rack, after the manner of all uneasy Americans, never waiting to arrive before arriving. But that done, he continued, standing, to gaze with an eager intentness at the piled-up banks, crowned with trees and houses, through which the train hurled, under a street bridge, around a curve, and finally into a long and dim station, and it was not primarily the meeting with his son which caused his firm hand to tremble slightly as it grasped the boy's a moment later outside. Not lightly may a man step backward thirty years. The first glance he gave at his son assured him of one thing, however; it was "the boy" no longer; the second thrilled him with instinctive pride and pleasure in the tall, sturdy young fellow beside him.

"Not much wrong there," he thought, with anxious reassurance, precisely because the chap looked suspiciously, exuberantly well.

With an almost suspicious energy, too, Howard had seized upon his father and his father's belongings and was piloting both toward a cab when his father stopped him.

"If you don't mind, Howard, I'd like to walk—get unstiffened and my bearings at the same time."

His son looked astonished. In his acquaintance with him his father never had time to walk; an automobile run to the speed limit and, when discreetly practicable, over, was his pace.

Never waiting to arrive before arriving

"Why, of course," he said. "It's only ten minutes; you'll find it's the same old town still," he added patronizingly. Receiving no reply, he glanced at his companion, and it was vaguely brought home to him that he was on the eve of surprises; there was an expression on his father's face new to him as he glanced about the square with its impossible monument.

"Same old spot we used to hold our Memorial Day orations," he murmured. "And look here, Howard! I was in the mob of torchlighters when Blaine came out on that old City Hall pedestal and addressed us. By George! I can see it all now."

The young man watched with the indulgent amusement of youth the changes in his father's face, and it changed many times during the walk.

"The dear old boy must have cared a lot," he thought with sympathy; and was quite unaware that a year

ago he would not have been sympathetic at all. He supposed now that their mutual fondness came back to ancestral feelings; after all, this was what they had really come out of, and that always counted; he knew such a lot of people out West who had never come out of anything. Still, he was used to seeing his father—a contained, rather caustic, man, with a keen brain for business, which still had kept its intellectual edge—moved by quite other than ancestral matters, if at all. Moreover, he had his own reasons for watching the pater very closely just now.

Seen so, the two were curiously like, yet unlike enough to mark one of those American transitions due to geographical influences. At fifty the father was still young, a fact which his gray hairs only handsomely emphasized, and the New England lines were rather rounded out than obliterated by Western contacts. The son suggested a youth who had come to manhood under larger—it might be also easier—conditions; he was taller, ampler, and more richly colored, with a wider, less intense, gaze. One guessed that much had come to him as birthright which the elder had achieved.

All the way to the hotel the elder man continued quietly to note inconspicuous landmarks along the narrow streets, but they seemed to interest him abnormally.

"Actually got a trolley line up the hill," he frowned and smiled. "I remember how they talked about it ten years, while we were laying the whole West with lines; wonder if they've got a transfer service yet."

People sat on their doorstep

"Oh, yes," Howard replied, laughing; "but it's still esteemed a daring innovation; they are *talking* of letter-boxes on the cars."

"There's the old chop-house—I dare say you've sampled it?" He looked with twinkling eyes at his son and his son twinkled back.

"I dare say I have."

"And—upon my word!—there's old Ripton walking up the street exactly as he used to at this hour—fifty, a hundred years ago." He smiled delightedly. "Well, well! I've been told if I came back I'd find the same people doing the same thing at the same hour—but I didn't believe it. The West takes that out of me. Ah, there's the old library! In *my* day that was the haunt of all the pretty girls; immensely studious lot they were, but always on *this* side of the building—college side; we used to wonder what they kept on the shelves on the other side." The little chuckle with which he said this died suddenly as he glanced up at his son for an answering smile; the young man was looking distinctly embarrassed, and an awkward silence succeeded.

It was a relief to both that the hotel obligingly broke it, obtruding its brand-new bulk.

"You'd like me to wait for you, wouldn't you, father?" the young man asked courteously, yet he fidgeted visibly as he asked.

The elder man looked up; already his thoughts had wandered.

"No; if you don't mind, I'll come up

Yale or Harvard after

a little later; you must have plenty to attend to at your rooms, and the fact is, I've a little business of my own."

His son opened his eyes wide.

"Business!—in this town! You are not thinking of buying a cotton-mill, are you?"

The elder man laughed good-naturedly.

"Never mind what I'm going to buy; go and look after your spread. I'll turn up presently."

"All right"—there was a suspicious alacrity in the assent; "I'd like to make sure Prendergast doesn't forget the ice or something—but you won't be late?" He turned at the door to add mischievously: "Sure you know the way?"

"Considering I tramped hollows in it before you were born—yes," retorted his father. "Trot along, you only have *one* senior class day!"

Apparently the reminder had been heeded, if needed; the elder man, listening, heard him take the stairs in two plunges, and smiled with grim sympathy. No; one had only one senior class day! Left to himself, he made a very accurate toilet and descended the stairs with due dignity; nobody could have conceived how near his son's, for once, was the heart under the dignified exterior. One had but one senior class day!

Outside of the hotel he turned deliberately away from the college, and as deliberately chose a street that led away from the business districts; evidently his business was of a particular nature. It was June, growing into an early dusk, and the city of elms and lawns was busy concealing in that green cloak a multitude of sins. As he walked, the quaint beauty of the place struck him, although quaintness was the last virtue the ambitious manufacturing town pretended to or would have been grateful for. It saw itself as an important metropolis; it looked, to the outsider, a peaceful, innocent New England scholastic town; and it *was* a corrupt little plutocracy, with a social scale nicely adjusted to the number of spindles in its mills. Moreover, it was a bigoted and sectarian little city, and, by a natural compensation for its bigotry and slowness, its university was known for a very automobile among universities in the matter of pace; yet in it the man who knew both the golden West and Harvard had elected to immolate his only son.

And he knew no repentance even yet; rather the atmosphere of the place was working like yeast within him, and feelings, dormant for thirty years, were rising in the ferment of spirit. The farther he got away from the college, the nearer he felt to it, and he continued, without a mistake of a turning, straight toward the goal of a desire which had suddenly stirred into being with his thoughtless little jest about the library, and grown instantly to an overmastering impulse.

It was not far—nothing was far in this town; the man from Chicago had the sense of a toy village with toy streets of an almost impossible steepness, every one of them heavily roofed over with elms or maple. The queer old wooden houses sat primly in their detached gardens; many of them still had the old-time dignity of secluding fences—wood or iron; a few only of the more pretentious had cast this decency away, obeying the modern tendency to live on the sidewalk. And it was June—June with the apple trees still in late blossom, and the pregnant promise of the hot, thick New England summer close at hand, all unlike the keen torridity of the West.

"How long ago did I walk here?" the Western man asked himself with amusement. To play that it all amused him was a way of keeping the incident in its place, a measure of self-respect, and he played it diligently at intervals, for in his heart he was sharply aware of a growing sensation—something which gripped him like a physical pain—or was it a pleasure? He walked on up the street (for now he was on *the* street), going very slowly past remembered spots. Part of the way was parked and there were benches; how many summer evenings like this he had spent on one of them trying to solve the problem—to call or not to call? Some of his fellows had no such scruples; *they* called seven nights in succession; but he had had even in his youth a strain of that dignity or caution which had stood him in such good stead since; he had never liked to cheapen himself; three or four times a week, as he remembered it, had been about his limit. He smiled again—with amusement, of course. And now as he drew near a certain stretch of elm-shaded walk he walked slower yet. About here, he told himself with a smile now positively cynical, his heart had always begun to beat faster. Would she—it being June, and a night like this—be out on her doorstep or not? In those days people sat on their doorsteps. And would there be any one with her—or not? There was the house-garden—for a moment a positive clutch assailed him. He found himself deliberately thanking heaven there was no one on the steps; but he made *that* all right with himself by the increased cynicism of his laugh. Of course, no one would be there!—even thirty years ago—they would all be at the campus. In the shadow of the nearest tree he stopped and leaned deliberately on the top of the gate—it was the same old gate, he felt sure; he touched the latch with his fingers—it had the same old squeak. And then for a moment he stopped laughing and lost all regard for his own opinion.

Tempi passati! O tempi passati! Oh, days of youth! Oh, dream of youth! When in the thirty years of his life since had he felt what he used to feel in that little dooryard! There were roses growing against the fence; there had been roses then. Casting a

"We stood in this very window"

quick look about the deserted street, he leaned over and gathered one—a little white blossom—and, taking from his pocket a massive leather book, laid it away among his business papers. They dealt with big money affairs—those papers. At that moment, all put together, they were not worth to him what the little rose had stood for. *Tempi passati!* Oh, days of youth! "Youthful sentiment," he would have said yesterday—but that was before he had stood here, where all at once things which had been dreams, rarely recalled for years, became realities

again. Realities! Had there been any other realities in life half so real? He had lived a full man's life, full of stir and energy and enterprise, a self-respecting life, and been largely successful even by the American standard. There was nothing particularly to regret or be ashamed of; but how far, seen now, it had been from the life he dreamed of in those days, those good days of his youth! It had been a fast little college town even then; there had been plenty of things that had better not have happened even in a fast little college town; but somehow this house, the associations which surrounded it, the influences it shed, all that it stood for and that emanated from it, had sweetened and cleansed the whole for him. He had been a better man in that fast little college town than he had ever been since. Nobody else might know it—but he knew it himself. He had been capable of things then he had never been capable of again. And all because of what? He acknowledged to himself now that all his obstinate insistence in sending Howard here had been due to this one thing. He had seen, unconsciously, his whole college life in the light of that association. It was for this—for the sake of something missed out West—missed everywhere since; and he had never reflected that *this* might not come the boy's way. He had never even consciously desired it; he had other and definite plans for Howard; he had never even realized that the light which illuminated the college streamed directly from these doorsteps. And that light he might have kept always by him; he had never had any doubt about that—he had always *known*. If she had not been wholly in love with him, she had been, like other girls, in love with love; half the effort he had wasted since on worthless things would have *made* her in love with him. He knew the very moment when

The old campus

she had trembled on the verge—when they had both trembled on the verge; the very spot beneath the trees, on their walk home on his class-night, when in the softened tenderness of gathered memories, and touched with youth's first tragedy of parting, he should have spoken. For he was going to Europe and then to Harvard to please his father, exactly as he had planned that his son should go to Europe and then to Harvard to please him. They had corresponded; he had seen her, off and on, through the Harvard years, and always he meant to speak one day; then came his years on the plains and in Chicago. He was older, more cautious; it seemed better to establish himself first. The business instinct which had made him a success engrossed him; letters grew fewer, visits rarer—and then—he heard of her marriage. And he had not forgotten yet how he had felt when he heard. The daughter of a college professor, she had fulfilled her natural destiny and married the young professor of Greek and archeology—a man of his own class, a tall, slender boy, who even in those days had the scholar's lamp burning in his eyes, and had been conspicuously absent from all those walks and talks, those evenings and years. From time to time some chance word had drifted his way—of them in Greece on Sabbatical years—and then the man had written books—works on archeology. He had every reason to suppose it had been a happy, suitable marriage, like his own. He had always considered his own as happy. His wife had been a handsome, successful woman; they had been very comfortable together—and there had been the boy. Moreover, he had made her happy. He had nothing to reproach himself with on that score; but neither did he reproach himself with unfaithfulness to her memory as he stood there by the little gate. All his reproaches were for something utterly different. As he remembered the boy who sat there summer evenings—the boy who used to thrill at so many things—forgotten stirs of finer feeling, the meeting touch of finger-tips (never in the world had he touched her lips, nor even held her hand; it was part of the perfection of his dream that that would have been impossible), he wondered what that boy might have been if he had carried the dream through his life—a reality. Would it have been possible? Probably not, thought the man with a shrug.

A knot of undergraduates went by on the other side of the street, hurrying toward the campus, and as they went they sang from sheer exuberance of youth.

"Good night. Good night, beloved—!" their voices came floating back on the quiet air.

Good heavens! Did they sing that still? How many nights had they not sung that under the windows of how many girls! He had a voice in those days—Howard had it now. And on *that* night they had sung till after midnight on the campus and till after dawn through the streets; they had sung "Good night!" to everybody's beloved, and then he had stolen around and sung it all alone to her for the last time. The last time it had proved indeed.

He straightened himself up, for more students were approaching, this time on his side of the street. After they had passed he gave one more lingering look (a last look he knew it to be this time; thirty years hence he should not come back for his grandson's class-day), hummed very softly, "Good night, beloved!" and tried to smile at his own folly, but turned away rather abruptly instead.

On the way back to the college he thought with a whimsical tenderness of his son as a sort of extension of that early self of his. He resolved that he would deal gently with the boy's foolishness—it would be enough probably merely to get him away. Time and absence, he reflected with momentary bitterness, could efface most images. Probably three months of Europe would serve to obliterate four years of X——. He resolved also to keep an observant eye upon him that evening, but to do nothing to spoil it—one has but one senior class-day. Then, with only a little less than his usual definitiveness, he dismissed the past and gave himself up to an old student's enjoyment of the present; for the college campus rose at the end of the street before him.

The old campus! What old graduate looks on it unmoved! Its elms looked no larger than they had looked thirty years ago to the magnifying

(Continued on page 24)

A Vampire and Others

Including Eve and a Young Lady with a Promising Soprano Voice

By ARTHUR RUHL

Mr. Robert Hilliard in "A Fool There Was"

The music teacher, his pupil, and her two young admirers in "The Climax"

WHEN, as a lady is about to sail for Europe, a pale-faced young man shoots himself at her feet and she only says, "Ha! ha!" and a moment later, when the deck steward has rather ostentatiously mopped up the blood, asks him to set her steamer-chair over the still damp spot, it may safely be conjectured that she is no better than she ought to be. The Woman in Mr. Porter Emerson Browne's play, "A Fool There Was," was, in fact, very bad indeed. She was a vampire. She had driven a number of men to ruin and suicide before she met The Husband—we preserve the program's careful anonymity—and although she could scarcely have been in the first flush of her success, it can not be said that her unpleasant arts had yet begun to show any signs of decay.

She found The Husband, a handsome, healthy, altogether estimable citizen, saying good-by to The Wife and The Child as he was about to sail for Europe on an important secret mission for the President. And she left him, a year or so later, given up by family and friends, a drunken wreck, squeezed dry and dead. Then she pulled a rose from her corsage and scattered the red petals over him and went cackling away to find a new man. No doubt whatever is left in the spectator's mind about her wickedness. You can not blame the man over in the left-hand side of the orchestra who hisses as the curtain goes down.

And, of course, this is an act of consideration on Mr. Browne's and the actress's part for which all tender-minded people must be properly grateful. There are vampires, doubtless, who do not ring bells, as it were, when they come, who make virtue unattractive and vice heroic and desirable and insinuate themselves through one's better nature, so to speak. When they have completed their tragic work, the irony of it is that "it wasn't the least what the lady meant," as Mr. Kipling said.

These "inside," Ibsen-like vampires are horrid and uncomfortable. An outside, visual one like this, however, with a snaky gown, a lowering picture hat, languishing eyes, and vermilion lips—one who carries a sign, as it were, "This Way to the Vampire"—is a comfort and delight. She is like the buzz-saw which always is stopped before it decapitates the heroine, or the gunpowder keg which isn't really going to go off. Jones and Robinson can watch her and grind their teeth and say: "Gad! This is life!" and go out into Forty-second Street again as cheerful as larks, just as sophomores of a decade ago used to repeat "The Vampire" to a melancholy piano accompaniment and grow acutely and delightfully sorry for themselves for the crimes they had yet to commit.

In short, theatricalism and bathos are not necessarily at all tiresome. Anything done in earnest has a certain force, and Mr. Browne apparently is very much in earnest in his admiration of Kipling's poem and his endeavors to make a play of it. It is refreshing to see two such breezy and muscular men as Mr. Robert Hilliard and Mr. Courtenay shouting at each other as The Husband and The Friend and to hear the ladies admire his beauty when Mr. Hilliard turns his broad shoulders to the audience. Moreover, as Miss Nanette Comstock makes The Wife, after all her mental anguish, look exactly as round and plump and smiling and generally adorable in the last act as she was in the first, while The Friend stands stoutly by to offer her all the protection and consolation in a strong man's power, there are tangible reasons for optimism as one walks away. With every respect for Miss Katherine Kaelred's gifts, I was unable to imagine her with all her "Kee-ee-ees me, meh fools!" vampiring such a sensible-looking citizen as Mr. Hilliard away from—let us say—an evening paper or an oyster stew, infinitely less from the suburban rose-bower and lovely Miss Comstock. Let us, however, bear her no ill-will for that. One's feelings should not be put to too great a strain in this cheerful spring weather.

A Lady Loses Her Voice

OF QUITE a different sort is Mr. Edward Locke's engaging little play, "The Climax." It has only four characters, the action all takes place in the same simple New York flat, and the tragedy hangs on whether or not a young lady loses her singing voice.

Adelina had come from a little Ohio town to share the dingy flat with Uncle Luigi Golfanti and his son Pietro, so that the old music-teacher could give her lessons and watch over her voice. They were very ambitious. Adelina was going to be a great opera-singer some day, and lead Uncle Luigi out in answer to the applause and say: "I owe it all to him. He was my teacher." Pietro adored Adelina, and divided his time between pleading his hopeless case and dashing to the piano and pouring out his sorrows in music. This piano should be on the program with the rest of the cast.

The difficulty was John Raymond, the young doctor. He had lived next door to Adelina, and he loved her. He was opposed to the stage and to Adelina's career, and wanted her to give it up and marry him. A slight operation had to be performed on her throat. For a week after it Adelina was not permitted to speak above a whisper. There was a bare chance that the operation would destroy her singing voice, and the desperate young doctor succeeded in convincing her by mental suggestion that this had been done. He made her use an atomizer day after day to continue the suggestion until at last the career was given up and the wedding arranged.

In the excitement of the wedding day, Adelina suddenly finds that she can sing, and the remorseful young doctor confesses his selfish deception and goes away. As the curtain falls, Pietro is playing his great song, and Adelina, really in love with the doctor at last, is singing as she never sang before. Just what happens is a trifle vague, but one infers that she has her career, or at least a good try at it, and that sooner or later she comes back to her doctor and the anchor to windward.

The little play is written with a great deal of freshness and sincerity, and an unusual understanding of the musician's enthusiasm and point of view. Mr. Albert Bruning was characteristically good as the old music-master, and Miss Leona Watson pleasing in the by no means easy task of both acting like a singer and singing like one too. Mr. William Lewers was the doctor and Mr. Effingham Pinto the unhappy Pietro—with the aid of the piano. It is a play which will please those who like to see on the stage the same sort of problems and emotions which they know every day at home.

When Eve Came to New York

THE first appearance of Eve in Mrs. Tupper-Bellamy's drawing-room in Mr. Lee Wilson's fantasy, "The Return of Eve"—probably on the road ere this sees light—was of undoubted interest. The young lady had been brought up in a Virginia forest, completely isolated from the world. She and her brother had been taken from a foundling asylum when small children by Mrs. Tupper-Bellamy's rich uncle and immured in the Virginia Eden. When the uncle died he tactlessly left all his money to the young people, and at the opening of the play the righteously indignant niece had pulled Eve out of her Eden and brought her to New York. Here, she reasoned, her barbarous charms would assure instant social success, and Mrs. Tupper-Bellamy might, incidentally, get some of the money.

Eve had known no one but her brother, Adam, and old Winters, a philosophical gentleman with a coon-skin cap and a long white beard. She also knew all about deer, chipmunks, porcupine, and the Unseen Ones, of whom she was much afraid. She was shaped like a goddess, as strong as a colt, bubbling over with love of light and color, and when she saw Mrs. Conybear's pearl necklace, she immediately and joyfully grabbed for it. Old Winters had apparently not gone in heavily on property rights. And she quickly and quite without malice informed the straight-fronted and firmly-corseted lady that she was pulled in in the middle like an ant and looked like a toad.

And when the charming Mr. Seymour Perchwell was presented she was no less delighted with him than he with her and joyfully cried: "Oh, I love you, Seymour!" almost as soon as she set eyes on him. Of course Mrs. Tupper-Bellamy was shocked and told the young person to leave the room—Mr. Perchwell, it might be explained, was engaged to Miss Tupper-Bellamy—but it was almost impossible to make her go. She would get as far as the door and then describe a circle back to the young man—and Miss Bertha Galland's cozy beauty and pleasing simplicity makes this part very plausible and attractive—and, "But I'd rather talk to Seymour," she would say.

Later, when the two were left alone, this really gifted philanderer endeavored to kiss Eve's hand. She wondered why this interesting novelty vaguely frightened her—she never had been afraid of Adam. Mr. Seymour gave her his orchid and explained the resemblance between its exotic beauty and lack of fragrance and the brilliant, artificial world into which she was just entering. He taught her the indispensable phrase, "It is not done," and as the curtain falls he is adding to her vocabulary the word "fascinating," which describes, he says, the mysterious world which attracts her, yet fills her with vague suspicion and dismay.

It is an interesting and promising beginning with reality and the fantastic very plausibly combined. In the next act, a year later, we find Eve in her magnificent country place near Tarrytown. It is, perhaps, a not too encouraging fact that the scene is one of those brilliant evening parties with guests passing in and out and music and dancing off stage. Eve has spent oceans of money. She has bought villas abroad, taken yachting parties to the Mediterranean, and filled her house with opera singers as if they cost no more than canary birds. She is a long way from Eden now. In other words, the bloom is off Mr. Dodd's idea, and unless he is to make good on the basis of ordinary polite comedy, the fantastic note must be held with unusual deftness and originality.

It can scarcely be said that he accomplished either task. The act was more "dramatic" than the first and also more commonplace. The third and last was even weaker. Eve, disgusted with the hypocrisy of society, returned to Eden, but found mere trees and chipmunks no longer satisfying. The result was a rather labored struggle on the author's part to inject an element of surprise and suspense into what the audience already suspected was to happen. Of course the old gentleman in the coon-skin cap informs the young people that they are not brother and sister after all, and with Eve's decision to devote herself to the poor, the hitherto unconscious lovers are brought together at last.

Symbolism and fantasy are difficult things, as everybody knows. Mr. Barrie might have maintained the note of freshness and fantasy to the end, but, as somebody said the other day, the fairies help him. Mr. Dodd is not so very many years away from Yale, and possibly he may make the acquaintance of some fairies later on. There was freshness in his idea, wit in some of the talk, and in a number of Eve's lines a genuine feeling for nature. The first-nighters didn't care for Miss Galland. I think she must have improved later on. Mr. Lester Lonergan was a graceful Perchwell, and Mr. Dodson Mitchell, of course, more than able to take care of the small part of the family lawyer. The rest of the cast scarcely did the play justice.

Comment About Congress

By MARK SULLIVAN

UPWARD march the tariff rates. Washington is crowded with the powerful and those who have taken the shilling of the powerful. Senator Aldrich tells the naked truth when he says that nine y-nine of a hundred of those who appear before the Finance Committee ask for higher rates. (The consumer is at home busy with the plow.) Senators and Representatives are immersed in a high protection atmosphere. Every listening moment he is the center of a pressure that cries "Raise the rates." "You vote for high rates on my steel, and I'll vote for high rates on your lumber"—and so two rates are raised. Every day of delay means greater and greater heights. Every day of speech-making on the Senate floor is a day of buttonholing in the Capitol corridors. Senator Heyburn of Idaho said the other day that he does not consider the Republican Party pledged to revision downward, merely to readjustment—and "readjustment" is a euphemism for revision upward. That is the present spirit of the Republican Senate organization. The bill that comes to President Taft for signature will in all probability be higher than the Dingley bill. In the recollection of his campaign promises, the President will face the first real test of his moral courage.

Some Democratic Senators

THIS is the list of those Democratic Senators who, up to the present writing, have spoken in favor of retaining the present duty on lumber:

F. M. Simmons of North Carolina.
John Walter Smith of Maryland.

The National Democratic platform plank on lumber says: "We demand the immediate repeal of the tariff on . . . lumber, timber, and logs, and that these articles be placed upon the free list."

A Bully in Debate

SENATOR BAILEY of Texas was delivering his speech on the income tax. In the course of it he said:

"There was a time when he [Senator Aldrich of Rhode Island] denounced an income tax as a Populistic, Socialistic, Democratic plan of distributing fortunes. He will not repeat that during this debate because the Senator from Rhode Island, like all the rest of us, learns something as he grows older. [Laughter.]"

Immediately after the laughter subsided there was this spirited denial, which we set down verbatim from the Congressional Record:

"MR. ALDRICH: Mr. President, I have never at any time or anywhere expressed any such opinion as that which the Senator from Texas now attributes to me."

A Senator charged so directly as Mr. Bailey here is charged, with false statement, might very well be discomfited, lose the thread of his argument, and be discredited in the eyes of his fellow Senators and of all present, just as Senator Aldrich hoped Mr. Bailey would be. Mr. Aldrich has been long on the Senate floor and is adept in every trick of browbeating or cunning that helps to give him dominance.

But Senator Bailey was not discomfited. Within three minutes his secretary was at his desk with the bound volume of the Congressional Record for June, 1894, from which he read:

"MR. ALDRICH: Does he not understand that the income tax is supported by the Socialist Party, by the Populist Party, and by the Democratic Party, with a few honorable exceptions, simply as a means for the redistribution of wealth?"

Following the reading of this fifteen-year-old speech of Mr. Aldrich's, there ensued this exchange of remarks—we quote the Congressional Record verbatim:

"MR. ALDRICH: That is what I said.

"MR. BAILEY: But the Senator from Rhode Island said he did not say it.

"MR. ALDRICH: I think the statement made by me at that time was absolutely accurate as a historical statement, and I should make the same statement now as to conditions which then existed.

"MR. BAILEY: But the Senator said a moment ago that he had never, at any time or in any place, characterized an income tax as a Populistic, Socialistic, Democratic plan to redistribute fortunes. But I leave that aside to ask what the Senator thinks of the statement made by the present President of the United States, in his speech accepting the Republican nomination, in which he says he believes in an income tax? Is he a Socialist? Is he a Populist? Is he a Democrat? [Laughter.]

"MR. ALDRICH: I would be glad if the Senator would read that statement."

And so the episode ended with Senator Aldrich still questioning Senator Bailey's accuracy—but in somewhat more moderate language. Not many men, under the circumstances, would have practised Senator Bailey's forbearance to punch a bully when's he's down.

Brusk Reasoning

THROUGH the Hon. J. Thomas Heflin of Lafayette, Alabama, this item, printed in the Concordia, Kansas, "Weekly Empire" last fall, has found its way into the Congressional Record:

"CAMPAIGN CONTRIBUTIONS

"We have been invited to send a dollar contribution to the Republican campaign fund that is being raised by popular subscription and to which President Roosevelt recently subscribed. We would like to have our dollar in such select company all right, but we have done all the contributing we intend to do this year.

"We recently have completed building a house, at a cost of something over four thousand dollars, and for every foot of lumber, every pane of glass, every sack of cement, every pound of nails, and, in fact, for nearly every bit of material that went into it, we made a good liberal contribution through the trusts that control them, and we guess we have done our share.

"It may be treason for a Republican newspaper to talk this way, but facts are facts, and it sort of relieves our conscience to tell the truth about the trusts once in a while. We will just let the several trusts to which we have had to pay unwilling tribute in the past year pay our dollar for us. We need it and they do not."

Senator Lodge says the consumer is a myth.

The Promised Land

SENATOR ALDRICH, leading the Southern Democrats up on the mountain:

"I said that I wanted to commend the spirit of the Senator from Mississippi. I believe the Southern States have already entered upon an era of development and prosperity which will surprise the world; and, as far as I am concerned, in every vote I give upon this bill I intend to do everything I can as a legislator to encourage and increase that degree of prosperity and development to which I have alluded.

"I am glad to see that Senators upon the other side recognize this fact and are willing to *cooperate with us in giving such protection*—I care not what you call it—such encouragement, if you please, to this development *as will make your country what it ought to be, a country which will blossom as the rose compared with the wilderness which existed there twenty-five years ago.*"

Print the Statement—in Quotation Marks

KANSAS has eight Congressmen. All of them are Republicans. Two of these are among the Republican "insurgents" who voted successfully against the adoption of the old rules. These two are Victor Murdock of Wichita and E. H. Madison of Dodge City. The others stood by Cannon.

The day after that memorable fight on the rules a telegram addressed to the Kansas insurgents, Murdock and Madison jointly, was received in Washington. That telegram read:

"Kansas congratulates you both on your magnificent fight for the recovery of the constitutional rights of the members of the national House of Representatives."

This telegram was signed by three men jointly. They were W. R. Stubbs, Governor; J. N. Dolley, Chairman Republican State Central Committee, and Del Valentine, Clerk of the Supreme Court.

These three names signed to such a telegram—and especially the first two names in their official capacity—would seem to indicate the sentiment of Kansas and the Republican party in Kansas as to Cannon.

Some weeks later, Governor Stubbs and Chairman Dolley paid a visit to Washington on a matter of business of the State of Kansas. In the course of that business they called on President Taft. As to some things that happened in the course of the call on President Taft, and during the visit to Washington, we now print this version from the Leavenworth (Kansas) "Times":

"There was, however, one very satisfactory outcome of the visit. . . . President Taft has to others expressed himself in words which could not be misunderstood, that he desired it to be made clear that the position taken by the two Kansas Congressmen, Murdock and Madison, in bolting the Republican organization of the House of Representatives, and voting with the Democrats, was not endorsed by him, and that Congressmen Scott, Campbell, Miller, Anthony, Calderhead, and Reeder had voted strictly in accordance with his ideas and his recommendations of what was best for the Republican Party and for the country, in consideration of the issues presented in the organization of the House. It is generally understood that *this information was conveyed to Stubbs and Dolley and Jackson.*

"And this is not all. When the Kansas statesmen visited Postmaster-General Hitchcock, former chairman of the Republican National Committee, and who is generally recognized as the political adviser and manager of the Taft Administration, they were also plainly informed by Mr. Hitchcock that the course of certain Republican bolters and traitors in the organization of the House of Representatives was not endorsed by him. . . . Of course this information was vouchsafed to Governor Stubbs and Chairman Dolley because of the telegram which they had sent to Washington endorsing the course of certain bolters on the Kansas Congressional delegation.

"And now for the development which capped the climax. As the result of *the statements made to the Kansas visitors by President Taft and Postmaster-General Hitchcock*," etc.

This raises a serious and important question. We dispute the allegation of the Leavenworth "Times," and challenge it to print in quotation marks exactly what it alleges President Taft said and exactly what it alleges Postmaster-General Hitchcock said—what it describes as "the statements made to the Kansas visitors by President Taft and Postmaster-General Hitchcock." Until that is done, nobody can get much farther into the situation. Just as soon as the Leavenworth "Times" prints—in quotation marks—the exact language used by these two gentlemen, or admits that it was misinformed, we should like to take up the whole question as to whether Kansas generally, and the Republican party in Kansas, is with Cannon or against Cannon—whether it approves or disapproves of the action of Messrs. Murdock and Madison as "insurgents."

What the World Is Doing

A Record of Current Events

The Piping Times of Peace

AHEAD of items on slaughter in Asia Minor, and the sudden boom in English, German, and Austrian *Dreadnoughts*, and the crack of the gun of the lion-killer, we open this week's department with the National Peace Congress at Chicago. From May 3 on, for three days, men expressed their moral yearnings, and the hope that lies hidden under the bickerings of trade and the jealousies of race and faith.

Peace congresses are as naive, amusing, and ineffectual as the other efforts of faulty human nature to "be good." An attempt in this realm represents as much vital effort as large success in practical politics or the conduct of a business. It requires many foot-pounds of energy to communicate a moral impulse. So a resolution here is as good as a performance at the every-day level. The resolution of this Congress was to the effect that war is "a relic of barbarism unworthy of our time, and that the nations of the world, by joint agreement, by a league of peace among themselves, ought to make its recurrence hereafter impossible."

So troubled is the international situation this year that more than one peace orator had to apologize for his nation's militant activity.

Count Johann Heinrich von Bernstorff, German Ambassador to the United States, stated:

"We will, in 1912, have ten *Dreadnoughts* and three *Invincibles*, and not seventeen or twenty-five *Dreadnoughts* as was wrongly stated."

Wu Ting-Fang, representing the Chinese Empire, stated that "her traditional policy of settling disputes by discussion and amicable means will not be departed from. . . . The reorganization of our army need not create the least alarm, nor is it in conflict with the objects of this society. The Chinese Government has been actuated by one aim, and that is to place the troops in a state of efficiency for police and defensive purposes only."

Seattle, the Hostess

SEATTLE, in the State of Washington, entertains the world at large from June 1 to October 16. With the Alaska-Yukon-Pacific Exposition she reveals what the Northwest is and is doing. It is a section with riches and energy beyond the reach of most lands. The Exposition is a frank, legitimate, and most salutary advertisement that immense natural resources are waiting exploitation. Eastern farmers on rocky hillside farms, disconsolate Easterners on salary, desirous of a new home and a fresh working field, are aimed at by this colossal shop-window display, whose every shining exhibit is to be manifolded and surpassed in the unplumbed territory.

Our double-page of photographs shows the preparedness with which Seattle met the situation ten weeks ahead of the opening. We shall have to wait a year to show how permanently the city planned and built. For this is no ephemeral world's fair, whose pasteboard will be ripped down. Its structures will be taken over into permanent uses.

The site chosen was a portion of the campus of the State University of Washington—350 acres of it, lying between Lake Union and Lake Washington, and looking out upon the Olympics and the Cascade Mountains. A fund of $1,000,000 was provided by the Legislature, $600,000 at the disposal of the University Regents and $400,000 for the State Commission of the Fair. Many of the buildings were so constructed as to lend themselves to the permanent requirements of a university and a State.

News from Overhead

HERE for a thousand years or so, men have been doing their best to get up into the air. But May, 1909, is ushered in by a Mexican in Puebla who got up all right but couldn't come down. He had built his air-boat with every sort of device but that for descent. He made a blithe start on the morning of May 2, climbed the blue for fifty feet, and at that vantage height began to maneuver dexterously. Tiring of his performance, he decided to come down and go home, but found he had omitted the gear for dropping. So there he stuck, while his friends ran about on the earth and wondered how they could get at him. Finally a boy, remembering Rahab's rescue, floated a toy balloon up to him, with a guy-rope attached to the scarlet thread. The floater pulled in the rope, and his friends, with a long, strong pull all together, hauled him and his airboat back to the ground. Their sensation was not unlike that of "playing" a large coy fish at the end of a hand-line. Felix Gallo, the too buoyant aeronaut, is the first man in history to get stuck in the sky.

Wilbur Wright, arriving in London on May 2, says: "In the past year I must have flown between 2,500 and 3,000 miles."

That is a steady rain-or-shine average, Sundays included, of seven miles a day. He might consider it in the light of a constitutional, as another less aerial person looks upon the morning shower bath or the noon

The Petersburg Battle Monument to the Blue and the Gray. Presented by the Commonwealth of Pennsylvania, it was dedicated at Petersburg, Virginia, on May 19 by Grand Army men, composing a division of the Army of the Potomac, to the memory of those who fell in the Civil War in and around Petersburg. Veterans of both armies were in attendance

COPYRIGHT 1909 BY H. C. MANN

walk. Seven miles in the air before turning in for the night.

We can predict his hitting up his average this coming year to, say, twelve miles a day. And before this man and his brother, who between them are bringing in an epoch, have finished their lofty pilgrimage, we shall doubtless be watching them clicking off long reaches of space on their taximeter planes. Perhaps they will yet triple the yearly distance of the commercial traveler who crawls along on his 100,000 miles a year in laggard Empire State Expresses and Cannonball Specials.

The Militant "P. T. T."

FRANCE, and particularly Paris, is shaking with one more periodic semi-revolutionary crisis. Shall Government employees be permitted to unionize?—that is the disturbing question. On May 6 the "P. T. T."—the Posts, Telegraph, and Telephone Employees' Association—transformed itself into a syndicate or union. It thus claims the right to "strike" against the state employer with the same freedom with which union workmen may "strike" against private employers. This action has been led up to by considerable tumultuous history.

By the law of March 21, 1884, teachers, telegraphers, bureau clerks, postal employees, Government architects, engineers, and mechanics organized mutual benefit associations.

In March, 1909, a widespread "strike" of civil service Government employees was called because of the attempt to substitute a test of merit for that of seniority for promotion in the postal service. On Sunday, March 13, the general association of Government telegraph employees declared a strike. By Tuesday, Paris and many other cities were without means of communication with the outside world. The strike spread to railway mail clerks, telephone and postal employees, letter carriers, firemen and linemen. The Government compromised with the strikers, one of the concessions being that hereafter grievances could be submitted directly to the Minister of Public Works—thus preparing the way for making the head of the Postal Department a Cabinet Minister. The strikers went back to work.

The fresh flurry of trouble was caused by the Government's failure to keep its promises, so the "P. T. T." men say.

Paris at such times lives in a whirl of upheaval talk and half believes that another Commune is at hand, or a world strike of workers, such as has been periodically threatened for the last forty years.

Graham Taylor, who is both well-informed and open-minded on the problems of labor, says:

"The affiliation of those employed to serve the whole people with the organization for the class interests of any part of the population, however large, may not only be seriously questioned but peremptorily challenged. No one will claim that the right thus to affiliate could be conceded to the army or to the police.

"While the right of any craftsman in government employ to affiliate himself with the union of his general craft may not be denied, yet that by no means involves the right of those in any department of the Government service to organize as Government employees and then affiliate with the organization of any distinct class of the people.

"Whatever theoretical or even practical reasons there may be to the contrary, does not the possibility of a sympathetic strike by unionized Government employees, such as menaced the peace and paralyzed the power of the entire French people, point an incontrovertible argument against the public recognition of the right of Government employees to unionize?"

Two Vacation Suggestions

QUITO is a rather difficult place to get to, but it is extremely well worth seeing. It lies about ten thousand feet above the Pacific, at the base of Pichincha volcano and within sight of some of the mightiest peaks of the Andes. Cotopaxi and Antisana, both over nineteen thousand feet, are near by, and Chimborazo, over twenty thousand feet high, is passed on the way up from Guayaquil. Guayaquil is the seaport for Quito, the capital of Ecuador, and comfortable steamers touch there frequently on the way down the coast from Panama. Probably no vast horde of North American tourists will find it convenient to visit Quito's exposition this summer, but those who do will enjoy the experience.

Another and more ambitious "world's fair" will be the Railway Exhibition at Buenos Ayres in 1910. This fair will open in May and close in November, and it is planned to exhibit all sorts of transportation methods and allied devices, including not only locomotives, automobiles, street-cars, airships, and beasts of burden, but telephones and telegraphs, military transports and sanitation, and the decorative fine arts applied to the transport industry. The exhibition will be held in grounds near Sarmiento and Alvear Avenues, where Buenos Ayres takes its drive each afternoon. Among the surprises likely to greet those North Americans who visit this huge and animated capital will be the news that over fifteen thousand miles of railway lines already gridiron the Argentine Republic. Indeed, a railroad map of this great wheat and cattle growing country resembles a leaf torn from one of our own railroad folders, and little suggests the country of guachos and the pampa pictured in the antique wood-cuts of our geographies. Last year Argentina's exports were worth $387,429,983, with a trade balance of over one hundred million dollars in favor of the Argentinians.

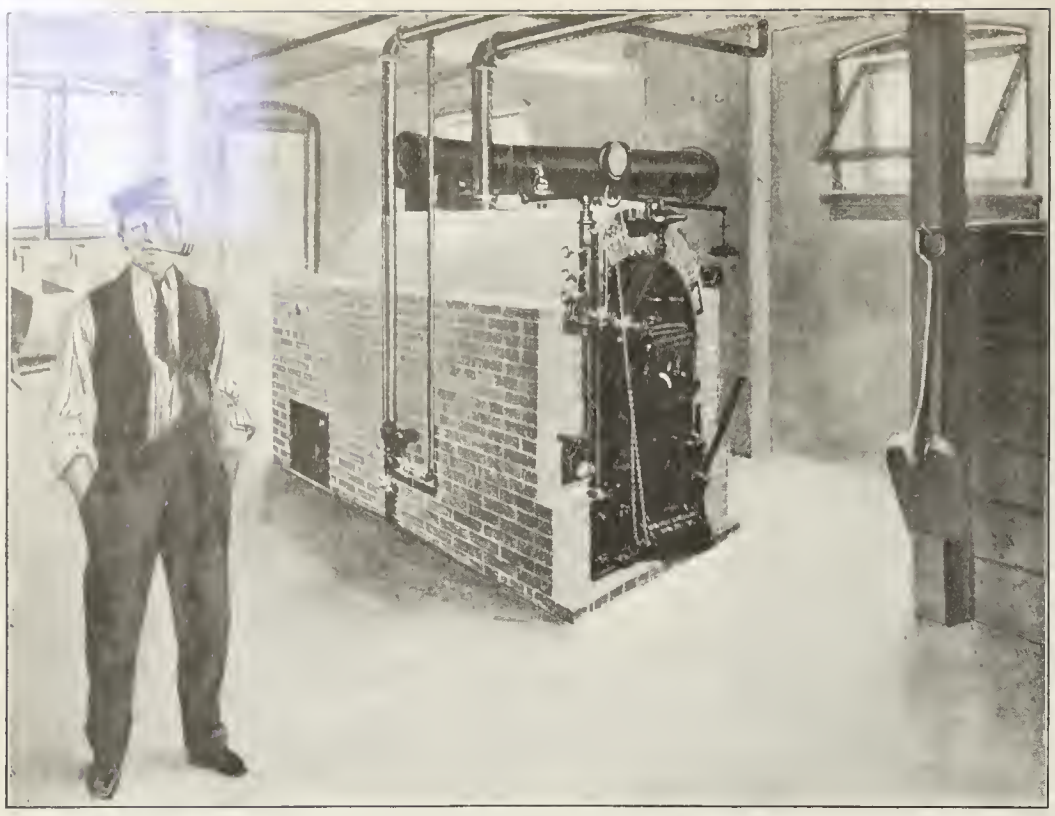
The absurd tradition that it is necessary to go to Europe in order to get to South America comfortably is rudely jolted again by the appearance of the new Lamport and Holt steamship *Vasari* of 12,000 tons to ply between New York and Brazil and the Argentine. The *Vasari* will carry 150 first-cabin passengers, all in outside staterooms. There are several suites with brass bedsteads and private baths for people who prefer to feel as if they were in a hotel when they are at sea. The *Verdi*, which was put in commission last year, is only slightly smaller than the new ship. The *Byron* and *Tennyson* also offer comfortable passage to Rio, and there are a number of freighters of the same line, slower and less comfortable, but with no less poetical names.

The Shot Heard Round the World

MR. ROOSEVELT and his son Kermit have enjoyed several weeks among the wildebeests. For purposes of self-defense and science they have killed a little big game. There really isn't much left to be told about that jungle country. We know the temperature of each of the twenty-four hours of the day and that the nights are chilly. Large and beautiful animals—gazels, hartebeests, antelopes, rhinoceroses—are plain to be seen, grazing, sleeping, and at the water-courses. Lions are disappointing, though still mildly dangerous. They are fast tumbling before the ex-President's advance.

The first killing was of a Thompson's gazel and two wildebeests on the Kapiti Plains on April 24. On May Day in the Mau Hills four lions fell to the Roosevelt family, and of the four Theodore slew three and Kermit one. On May 4 two more lions went down before Mr. Roosevelt and Kermit felled one lion and a cheetah. And six days later came the tidings of the bull rhinoceros who kept charging till the ex-Presidential bullet took effect at fourteen paces. Giraffes, hippopotami, and elephants are still roaming, immune and unbagged, up to the time we go to press.

Stirring incidents and unusual people continue to be drawn into the vortex of Mr. Roosevelt's life, just as much in Africa as in New York, Dakota, Cuba, and Washington. Frederick C. Selous, a world-famous big-game hunter, the original of the fiction character of Allan Quatermain, joined Mr. Roosevelt at Naples and tramped the East African country with him. They two rode on a seat attached to the cowcatcher of the locomotive that drew them out of Mombasa. With such men and such incidents Mr. Roosevelt's trip has been and will continue to be sprinkled. He has an affinity for adventure.



"Aunt Jane"—The City of Refuge

CALIFORNIA has recently shut down on horse-racing. The racing men were grieved by this, and realized that something must be done at once. So they crossed the border into Mexico in a straight line from San Diego, and are grading a new race-track in the little hot new town of Tia Juana.

Another set of orphans who are seeking sympathy in meek and sleepy Tia Juana are the "con" men. The very name, Tia Juana, is demure—"Aunt Jane" it means. "Aunt Jane" has become the City of Refuge for the "bloods," "sports," "touts," jockeys, bookmakers, and card-sharps of a too austere California. So stirring has been the effect of these alert immigrants on the placid village life that a saying has sprung up: "If the Prince of Monaco were to go to Tia Juana, they would take Monte Carlo away from him."

The Los Angeles "Times-Mirror" says:

"In a modest corner of Tia Juana [illegible]

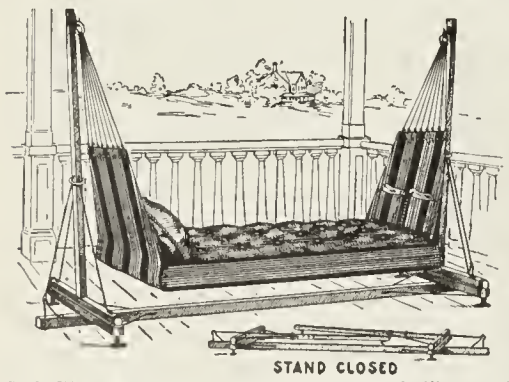
A KEWANEE Steel Boiler

Is a healthy heart for your new building

KEWANEE Steel Boilers are the best heating boilers in the world from every point of view. They will do—and are doing—**precisely what they are rated to do.** Thousands of owners of flat buildings, and other buildings, in the United States will cheerfully confirm this positive statement. KEWANEE Steel Boilers are far more durable than other boilers. They are substantially built of solid steel plate. They have no packed joints—no sections to give out. They are much cheaper than tubular boilers and more economical. On account of the long smoke travel, more heat is absorbed by the water, making a low temperature of the gases at their exit. **This unfailingly spells economy.**

KEWANEE Steel Boilers are much safer than the average boiler; they are cared for with ridiculous ease and require very little attention after being once filled. **These boilers have increased the renting value of flat buildings and apartment houses and have retained the renting prestige of old buildings.**

The illustration shows a KEWANEE heating plant—a brick-set boiler. It is the most perfect and the cleanest heating plant that is possible. It occupies little room in your basement. Over 65 miles of Chicago's fine flat buildings are heated by these boilers and they never give anything but the most satisfactory service. This is a sermon that is worth money to every man who puts up a flat building, an apartment house, a hotel, a hospital, a school house, a dormitory, a club, an auditorium or a church.



KEWANEE Steel Boilers are promptly insured at a working pressure of 65 pounds. Other boilers cannot be insured at more than 15 pounds. KEWANEE Steel Boilers will stand a test pressure of 125 pounds yet not over 5 to 15 pounds are used when the boiler is in operation.

Don't spend all your money on architecture and finish! Your heating plant is the most vital feature of your building. Give the matter the attention it deserves if you would save money and add value to your property.

Write for catalogs and full information. It will reach you by return mail

MATERNITY SKIRT
Registered in U.S. Pat. Office

of great interest to
Every Prospective Mother.

Something new — only scientific garment of the kind ever invented. Combines solid comfort and ease with "fine form" and elegant appearance in the home, on the street, and in society. — **Always drapes evenly in front and back** — no bulkiness — no draw-strings — no lacing — no ripping or basting. — **Can be worn the year round.**

Made in several styles, and at prices lower than you can buy the material and have them made at home.

FREE Send for our **Fine Illustrated Book — "Fine-Form Maternity Skirt"** — It's FREE to every woman writing for it. Tells all about these skirts, their advantages, styles, material, and cost. Gives opinions of physicians, dressmakers, and users. **10 Days Free Trial.** When you get our book, if your dealer has not yet been supplied with Fine-Form Maternity Skirts, make your selection of material and style, and we will make the garment to your order. When you get it, **wear it ten days,** and **if you don't find it exactly as represented,** send it back and we will cheerfully **refund every cent** paid. **Other Skirts** — If not in need of a maternity skirt, remember our famous B & W dress and walking skirts will positively please you — **same guarantee** — Illustrated book free. Which book shall we send? Write to-day to

Beyer & Williams Co., Dept. 51, Buffalo, N. Y.

WARNING

To protect you against disappointment we caution you that the **Fine-Form Maternity Skirt** is the only "Maternity Skirt" on the market, as it is the only skirt which can always be made to drape evenly, front and back—all substitutes offered will rise in front during development—a fault so repulsive to every woman of refined tastes. No pattern can be purchased anywhere for this garment. Its special features are protected by patents.

IN ANSWERING THESE ADVERTISEMENTS PLEASE MENTION COLLIER'S

where a sad-eyed, white-haired old man invites the public to toss rings for cigars. How pitiful that such an old man should have to eke out a living by such precarious means. The poor fellow is Poker Davis, and in the middle of his cigar game, it shifts into a well-known 'sucker' trap."

The track is on Mexican soil, but only a few hundred feet from the line. It is on the mesa on the "American side" of the river. A committee of horsemen was formed from the patrons of the Arcadia track, whose activities had been ended by the recent California law. This committee journeyed down to the City of Mexico to petition President Diaz for his blessing on the race-track and an official promise that the Government would not interfere.

Eight Problems for the Young Turks

THE future of the Ottoman Empire rests on the character of the new Sultan and on the capability of the Young Turks to maintain an unbroken unity both in the ranks of their soldiery and in their local and international policy.

The "Saturday Review" of England, whose ponderous prophecies of April 17 on the Turkish situation were reversed by inexorable fact, is up and at the Young Turks in the issue of April 24. It finds them victorious but unconstitutional. It sneers at them for their show of force, their "thirty batteries of machine guns."

"What Turkey wants is not a sham House of Commons, but a strong and righteous Sultan. . . . It is precisely the Young Turks, with their impossible twaddle and hypocrisy about the 'constitutional equality of all Ottomans,' who have let loose the fanaticism of Cilicia and Kurdistan."

It dubs them "those egregious parliamentarians of Young Turkey."

Then, a few sentences later, "we venture to warn the Young Turks and their Balkan Committee upon another matter also." That kind of offensive talk may be safely "ventured" on in London by the editorial writer who permits his personal bitterness and prejudices not so much to breathe as to hiss through his words. Scarcely would he "venture" on it if he were a few thousand miles nearer the Sweet Waters of Europe. And in the space of the two columns that thus belabored the victors, he taunts the United States, and takes a long-distance fling at Robespierre and Cromwell.

Futile as is such malice, the troubles of the Young Turks are real enough. An analysis of their situation would show at least eight problems to be dealt with: (1) A parliamentary body that may or may not be feeble, but that impresses the outside world as colorless. (2) A numerous clique, made up of the disgruntled retainers of the old régime, including palace favorites, back-stairs statesmen, and ex-office-holders. (3) Finances—the public treasury depleted, and the machinery of tax collection broken down. (4) Officials in the provinces—friendly to the old order of things, ready to plot against the new masters. (5) The fanaticism of Asia Minor—"the greatest force of all, the Faith of Islam." "All the tricolors of Liberty, Fraternity, and Equality will continue simply to vanish into nonentity when the green banner of the Prophet waves before the mosque of Justinian's Holy Wisdom, and the hoarse cheer of 'Din, Din, Din!'—the Faith, the Faith, the Faith!—thunders and roars above the masses of the true believers." (6) The Harem—the position of woman in the remodeled empire will require adjustment. (7) The Army—the great body of troops have had a free hand with unbelievers for several generations. Bulgaria used to suffer, and Macedonia still suffers from their lawlessness due to a combination of religions and racial scorn. It will be difficult to keep the soldiers within bounds. Also, it has been the history of armies in an absolute monarchy that a large element in them will remain permanently disaffected to any more liberal policy of government. (8) The new Sultan, who may prove reactionary and weak.

Dynamo Light for Commuters

RAILROADS in the Middle West are progressive. While a few long-distance trains have been lighted by electricity from storage batteries, yet the lighting of suburban trains by electricity generated by a dynamo is an innovation. The Chicago, Burlington & Quincy Railroad is successful in the experiment. On its trains from Chicago to Aurora, a distance of about forty miles, it has installed a steam turbine directly connected to a dynamo, and both mounted on the boiler of the locomotive. The turbine is supplied by steam from the boiler, and the dynamo has a sufficient capacity for lighting nine passenger coaches, each equipped with twenty-one 16-candle-power lamps, besides the locomotive headlight and cab lights. Of course with this system the locomotive must always be attached to the coaches, and it is not adaptable, except with storage batteries, for express service where the locomotives are frequently changed. For local service it has proved satisfactory, and fifteen installations have been ordered by the Chicago, Burlington & Quincy for their suburban trains.

Atheistical Gold-Filled Teeth

AS THE "Church of the Brethren" Conference at Rheems, Pennsylvania, drew to a close at the end of April, the Germantown church petitioned that delegates with gold-filled teeth should not be admitted to the conference. A former conference had decreed that gold-rimmed glasses were a vain show, and that delegates sporting such an eyesore should be barred out. So it was in painful consistency that Germantown asked for the new reform measure.

We can fancy delegates whose front teeth were intact, and only the hidden molars treated with precious filling, attending conferences for years—undiscovered and honored. And then a sudden smile or a burst of joviality reveals their bright secret, and they are suspended or in disgrace expelled. But that is only speculation, for the conference refused to discriminate against delegates with gold-filled teeth.

Such expressions of zeal are naive, and yet these "Brethren" make excellent citizens, industrious and honest. A sense of humor is desirable, but not essential, for life in Pennsylvania.

The Wireless Telephone

TELEPHONING without wires has already passed the experimental stage, and instruments are installed on a few of the battleships and on a number of smaller craft. The wireless telephone, as the wireless telegraph, depends on the production of waves that travel with the velocity of light—186,000 miles per second. The apparatus, as installed on board of a ship, consists of wires (technically called the "antennæ") strung between two masts, and of a transmitter and receiver, generally placed in the navigating cabin. By talking into the transmitter sound waves are transformed into electrical vibrations, which in turn set into oscillation ether waves. These waves are sent out through the atmosphere, and at the receiving station are transformed into sound waves similar to those taken by the transmitter.

✣ ✣ ✣

His Second Senior Class Day

(*Continued from page 19*)

eyes of youth; the same swaying festoons of Chinese lanterns illuminated the same happy crowd of youth beneath, the same half-bored elders—only the elders now had been the youth of his day.

There were the girls, too—millions of them; not so pretty, of course, as the girls he remembered, but too pretty to be safe. He frowned again as he made his way toward the old dormitory. No need to direct him; his feet could have gone by themselves to the old room. On its threshold he was seized at once by his son.

"Father! I believe you *did* lose your way after all! There are a lot of your old friends here, and I want to introduce you—" In a moment he was surrounded and submerged. It was a very pretty and gay scene, an enlarged and enriched copy of the old class-day spread; and under the windows, when he presently made his way to one, there flowed the same river of evening suits, dainty gowns, big hats, and fresh faces, all to the strains of the same familiar college airs. In his interest in the respectful attentions of Howard's young friends and the cordial reminiscences of old ones, he quite forgot to keep that observant eye on his son which he had planned to do. It was his son instead who presently hunted him up.

"Pater!—there are some old friends of yours," he said hurriedly, in his flushed duty of host—and bore him away to another recessed window where two or three young ladies and an elder one were looking out. It was to the elder one his son spoke.

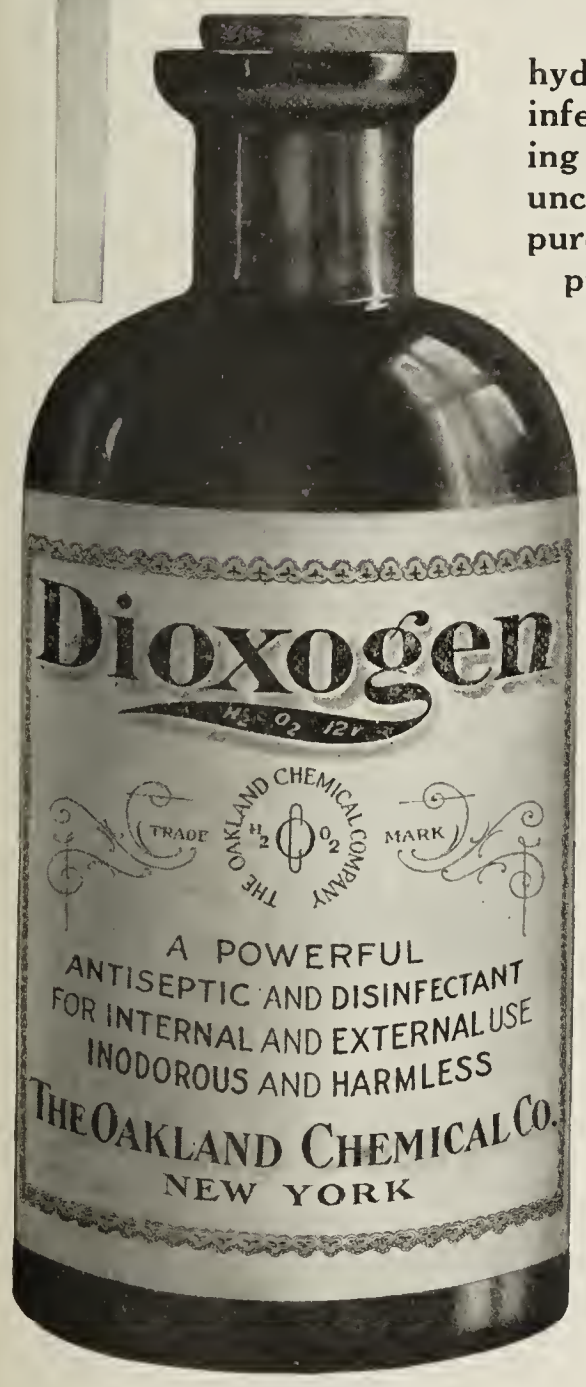
"Here he is, Mrs. Thacher; Pater—you remember Mrs. Thacher?"

She turned, and he found himself looking straight into the candid eyes of his youth.

Tempi passati! The slim girl had become, as slim girls will, a matronly woman; the pretty hair—still pretty—was

Dioxogen

THE PURE PEROXIDE OF HYDROGEN



The first law of health is personal hygienic cleanliness:

personal hygienic cleanliness wards off disease and maintains health because it creates conditions where disease producing causes cannot exist. Its application extends from the routine habits of every day life to sick room and hospital practice. Dioxogen produces this kind of cleanliness effectively, harmlessly and so simply that any one can use it.

Dioxogen foams and bubbles when it comes in contact with disease causing material, decaying infectious matter, disease germs, germ poisons and the materials in which they live and multiply, all of which it destroys and annihilates.

Dioxogen appeals to the understanding. It works openly; you can see and feel Dioxogen work.

Dioxogen uses extend from the toilet table of the home to the operating room of the hospital.

DIOXOGEN, the pure peroxide of hydrogen, is different from ordinary peroxide of hydrogen: it is free from the objections and objectionable ingredients found in the cheap inferior grades which are only fit for bleaching wool, cotton, hair and other manufacturing uses. DIOXOGEN does not contain acetanilid to make it turn rank and bitter; it is unchangeable and keeps equally well in open or tightly corked bottles. Dioxogen is purer, stronger and better than the official U. S. Pharmacopoeia standard. Dioxogen is the purest peroxide of hydrogen made by the largest manufacturers of this article in America. The name DIOXOGEN is a guarantee and protection against inferior peroxide of hydrogen of uncertain origin and quality. DIOXOGEN is never sold in bulk.

As a mouth wash Dioxogen bubbles and foams as it cleanses the mouth and teeth, destroying germs and germ products which lurk in all mouths; old food particles which collect in crevices about the teeth, and which cause tooth decay are, by the foaming and bubbling, detached and removed; offending odors are instantly killed, and the irritation and soreness caused by plates and bridge work relieved. Dioxogen does not injuriously affect fillings, though it frequently discovers loose fillings and cavities whose existence was unsuspected. Dioxogen never produces decay of the teeth, for in addition to its harmlessness, it does not stay in the mouth long enough to have prolonged action, and it so accelerates the flow of saliva as to leave the mouth in a normal, clean, healthy condition.

Dioxogen cleanses the throat of secretions and accumulations which are the breeding places of germs and the cause of many throat disorders. Used as a gargle or as a spray from a rubber-tubed atomizer, it dissolves and loosens irritating, germ-protecting substances, destroys germ life and germ poisons, and produces the hygienic cleanliness which is a most important safeguard against pulmonary disease. Professor Osler has said: "*Oral hygiene, the hygiene of the mouth and throat, there is not one single thing more important to the public in the whole range of hygiene.*"

After shaving: Dioxogen prevents infection from cuts and other causes; the irritation from too close shaving is relieved; in fact, Dioxogen is an ideal application to the skin both as a toilet and as a hygienic measure; it cleanses the pores from clogging, obstructing materials; it removes blackheads and other blemishes due to parasitic causes; it makes the skin soft and clear, and distinctly favors normal skin processes. As a deodorant for removing perspiration and other odors, Dioxogen instantly kills the odor. It does not disguise or substitute; it destroys.

Wounds, cuts, burns, old sores, skin affections, and injuries where the skin or tissues are affected, all present opportunities for Dioxogen cleanliness. The bubbling and foaming characteristic of Dioxogen working is nowhere more apparent and nowhere more valuable; simple injuries are prevented from becoming serious, infection is prevented or controlled, septic matter—the cause of inflammation and pain—is destroyed, or its formation prevented; the danger of blood poison is practically eliminated. Dioxogen treatment for simple or serious injuries is in accord with the most advanced antiseptic methods. Dioxogen contains no irritating residues. When it is through working, there is nothing left but plain water, hence it is safe for general public use. No accidental poisoning, no mistakes from careless handlings are possible with Dioxogen.

Dioxogen possesses the qualities which entitle it to public confidence.

Consult the circular accompanying each bottle for instructions.

Always send us your dealer's name when you have any difficulty in getting Dioxogen.

We want to make it easy and convenient for everybody to get Dioxogen. If your own druggist does not handle Dioxogen, write us, giving his name and address: we will send you a full 2 oz. bottle, free of all expense, with absolutely no obligation on your part, and we will direct you to stores within easy reach where real Dioxogen is sold.

The Top Notch in Pocket Photography

3A Folding Pocket Kodak

Every detail of design, material and workmanship has been worked out with the utmost care to produce a camera of the widest capabilities, yet it retains the Kodak simplicity—and "Kodak" you know, means photography with the bother left out.

A feature of the 1909 model is the Kodak Ball Bearing Shutter, in which we have embodied a new principle in shutter construction. The leaves are in five segments, mounted entirely on ball bearings and open in the form of a star, thus admitting a much greatet amount of light in a given time than any other between the lens type of shutter. Practically frictionless and with a precision and smoothness that are a mechanical delight.

No. 3A Folding Pocket Kodak, pictures 3¼ x 5½, $20.00.

gray; but there were not two pairs of eyes like that in the whole world. He stood a moment looking silently into them, and then she smiled—the old smile—and they shook hands, as sane and soeially educated people do in any extremity, and while he hunted in his unprepared mind (Howard should have prepared him!—but how should Howard know there was anything to prepare?) for the trivial phrase with which to renew speech, she spoke without either hunting or triviality.

"How wonderful to meet here—after thirty years." His ear jealously detected the tone of the girl's voice enriched into the woman's; it was a change for the better, but it was a change.

"It is more wonderful *not* to have met—in thirty years," he answered.

"Oh—Chicago is a long way off."

"It isn't Chicago that is a long way off," he answered quickly; "it's X——," and they both smiled.

"Yes," she admitted, "we are a little of a back number—but since we don't know it—? Nothing has really changed."

"No; not even the old gate—nor the latch; it has the same old squeak," he said lightly.

She looked at him astonished.

"How do you know that?"

And he answered with perfectly incredible simplicity and straightforwardness:

"Because I've just been there. You didn't think I would come to X—— and not go there? But there was nobody on the doorstep."

She looked at him with kind eyes.

"It was nice of you to go; no, they are all gone but ourselves. He saw her saddeu for a moment, in the touch of memory, then she put it by and smiled at him. "Still we *do* sit on doorsteps even now—but well-chaperoned. We are not *quite* a country village; we have changed a little after all."

"I don't think you have," he said suddenly.

She laughed outright.

"After thirty years!—and more than thirty pounds!—and six daughters! Did you know I had six daughters?" she spoke seriously with unmistakable pride.

"Six—" He was looking at her with faseination. Of course she would have had six daughters; it was written. "Are they all here?" he inquired vaguely.

"Dear me, no! Only one—the baby; the others are married."

Of course they would be married, he thought again; if she had had sixteen.

"And the baby?" he asked.

"Is over my head—I must introduce you—" she glaneed around. "She was here a moment ago—probably they've slipped over to Memorial to dance—well; her father is there, and Memorial is thick with patronesses," she smiled again. "I told you—we chaperone religiously nowadays."

"In our day—it didn't seem to be necessary," he remarked.

"No," she said thoughtfully, "it didn't." He saw her clear and innocent gaze go backward into that past, and across his own mind rushed the memory of that long, that exquisite intimacy, in which, in the flush of youth, he had never touched her lips, nor so much as held her hand. Then suddenly he remembered other things.

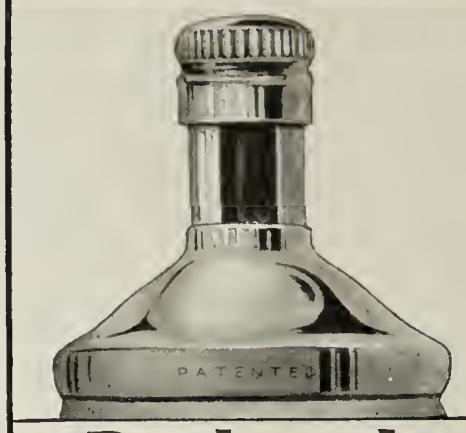
"There were some who would have borne a little chaperoning even then," he said bruskly, but he saw that the words did not reaeh her. For the first time it occurred to him why the tending of fires had always been entrusted to vestal virgins.

"Tell me something of your life all these years," he said quickly, and she came out of her musing to answer:

"There has not been much to tell; we have lived very quietly—with our ehildren. My husband"—she woke up suddenly—"you remember my husband?" and again, as when she had spoken of her six daughters, an army with banners looked out of her eyes; at least that was the impression they made upon him.

"Very well indeed," he added perfunctorily. "I hope to have the pleasure of renewing our acquaintance." Meanwhile he hardly heard what she went on to say, so busy was he with the inner vision of her life. Six girls—and a college professor's salary—it was easy enough to see the rest: yet she eould afford to flaunt banners in her eyes. This woman *had* then the capacity of living her dreams; she would have kept the dream alive if—

"Then you have lacked nothing," he said.



"Oh, yes," she answered quickly, with an entire change of manner; "I have no son."

He looked at her silently a moment.

"Thank you," he said.

"I don't need to ask you anything," her voiee was quick with feeling. "Howard has told me all; but—you have him!"

"Yes," he assented, "I have him. By

Auto Coats and Dusters

All Kenyon and Ken-reign Raincoats are good Auto Coats; but many styles have been specially designed for motoring.

Kenyon Gabardines

For Men and Women

are made of a light English material that is wind and rain-proof in texture, and is further rain-proofed by the most modern rain-proofing process, making the most watertight garments ever produced without rubber.

Kenyon Dusters

So many who have learned to prefer Kenyon Coats asked us for properly-made and practical Auto Dusters that we have produced a line of these necessary garments, in many styles, for both sexes, that will enhance our reputation for quality, workmanship, design, and extra value.

Every kind of protective clothing for the motorist in its most perfect form is provided. Look for the Kenyon Label.

For Sale at Good Stores

Ask your dealer or tell us what type of garment you prefer, whether men's or women's and about what you wish to pay. We will send style book, with samples, and will see that you are supplied.

---

the way," he spoke suddenly, turning toward her the face he had half averted, "you spend your summers at Ogunquitt, I believe?"

"Yes; we have a kind of modest bungalow there; we had to go somewhere for the children, and it has been a good place for my husband's work."

Her companion smiled and frowned together into the darkness outside, where the Glee Club was singing. The other occupants of the room had drifted out to the campus or to Memorial where the dancing was; for the moment they were quite alone, as they looked down upon the scene below. Her hand lay beside him on the window-sill; untouchable now as then, to him; he looked at it remembering, and an irrepressible desire came upon him to know if she remembered too. It forced itself from his lips.

"Do you remember?"

She answered instantly.

"I remember perfectly; we stood in this very window. How it must all come back to you to-night—in your son!"

How it must all come back to him! He longed to know how *much* she remembered, how *much* she knew; but the silence of the past was between them. One has but one class day! Yet he was conscious that he was happier, even as things were, here beside her than he had been since he stood there last. She had done for him again what she had done before—she had renewed his faith of youth; he knew now that some things were possible—even if not to him.

"Well, have you two reminisced up the whole past?" His son's gay, suspiciously gay, voice made them both turn with a start.

"Child, where have you been?" The laughing reproach from his companion fell on the elder man's ear vaguely as he gazed at the girl beside his son. She was taller than her mother, and far prettier than her mother had even been, though this he could not know; and she had been to college, which her mother had not; but she had been to college exactly as her mother would have gone, had carried the candid dream in her eyes all through it, and when she smiled now at him she smiled with her mother's very lips.

"*This* is my baby," said the mother, and as the daughter gave him her hand she looked at him fearlessly. Another keeper of fires!—he saw them veiled in her glance. And he had said to himself that there were not two such pairs of eyes in the world—as there were not two senior class-days.

"If you don't mind, Pater," meantime his son was saying with some becoming embarrassment, "I'm going to walk home with them (the professor is waiting downstairs, Mrs. Thacher). Will you wait here or shall I find you at the hotel?"

He saw the remonstrance shape itself upon the mother's lips, and checked it with a glance.

"I'll wait here," he replied promptly. "And don't hurry—I like to hear the singing. I suppose there are some cigars about?" he added lightly.

"Boxes!" His son rushed off in quest.

Both the mother and the daughter gave him their hands, but it was the girl's he held a moment, and under his keen scrutiny the color deepened in her frank cheeks.

"Here you are, Pater," said his son, heaping up cigars prodigally on the enshioned window-seat; "just make yourself comfy, and—I won't be long."

"Don't hurry," repeated his father. As the ladies passed out of the room he laid a detaining hand on his son's arm and looked into the young man's conscious eyes.

"While you are about it, Howard," he said dryly, "you might as well complete your arrangements for—Ogunquitt."

The glance his son flung back was charming in its triumph.

"Thanks," he said; "it's all arranged."

He wrung his father's hand in a hasty grip and rushed off after his guests. Mr. Devine, turning back to the window, quite ignoring the mountain of cigars, looked down upon the fast-thinning campus where the lanterns tossed fantastically. The Glee Club was in full swing now, and up from below came tenderly, exuberantly, triumphantly by turns, the shout of the young serenaders:

"Good night!—Good night, beloved!"

Smiling as he listened, he took from his pocket the leather case and dropped a little faded white rose down into the night.

There would be plenty of fresh ones for the boy. And why save the faded memorial of the first, when it appeared a man had after all two senior class nights in his life—his own and his son's?

REDUCE THE CARES

of housekeeping. One decidedly practical way is to use Borden's Peerless Brand Evaporated Milk in all cooking where milk or cream is required. Results will be more satisfactory than with most "fresh" milk. The convenience and economy will please you. Dilute Peerless Milk with water to any desired richness.—*Adv.*

The Architect
—whose "veto" power is wisely considered by discriminating owners, from his technical acquaintance with every form of roof construction for over 20 years, is professionally justified at all times in specifying The Carey Roof Standard.

The Contractor
—knows that his obligation to the Architect and Owner can be fulfilled without question where Carey Standardized Construction is specified. Also that the cost is uniform, delivery prompt, and that any workman can lay it.

The Dealer
—must stand high in his locality to be a distributor of Carey's. Our 45 Branch Stations in every section co-operate most cordially with our Dealers. Our Factory Guarantee stands back of every Carey Roof wherever laid.

The Owner
—when a Carey Roof is decided upon, is relieved of all question as to the responsibility of the Architect, Dealer, Contractor or Workman, because of the Manufacturer's Standardized Construction. He gets full value in return for what he pays.

Unanimously Endorse—

The Carey Roof Standard

INVESTIGATE all classes of roofing and you will find that The Carey Standardized Construction is most widely endorsed. It is most universally specified and used on all substantial buildings for service, durability and guaranteed satisfaction. The permanent economy and first cost of Carey's are the Standards of roofing values. For over a quarter of a century Carey's has been a uniform, standard, finished roofing always made the same in materials, quality, thickness and weight. Carey's is a combination of high-grade, wear-resisting materials formed by our special process into a compact, flexible, indivisible sheet that improves with age and gives the highest degree of protection and service in any climate. Its fire-retardent qualities also afford protection superior to any other class of roofing.

Guaranteed By The Manufacturers

We know The Carey Roof, therefore we do not hesitate to fully guarantee it in all respects. It is as nearly perfect finished roofing, ready to apply, as there is on the market today. Any workman can apply Carey's. No roof can be a *perfect* roof that must be manufactured on top of the building by the workmen who lay it. The reason that so many "Built up" roofs are failures is that the manufacturer of the materials cannot regulate or oversee their construction. With Carey's Flexible Cement Roofing there are no "specifications" to follow—No materials to "mix." The directions on every roll are simple and unmistakable. Our exclusive patent over-laps enable the workmen to make one smooth, even surface roof of any number of rolls required.

Write for Booklet and Free Sample

Satisfy yourself on the roofing subject by reading our booklet on Carey Roof Standard. Let us send you a sample of Carey's Flexible Cement Roofing so that you will appreciate its very high quality and the care with which it is made.

In the World's Workshop

Devoted to Facts, Observations, and Thoughts Concerning Common Industrial Methods, Products, and Influences

By WALDO P. WARREN

MAKING AUTOMOBILES

THOSE who are accustomed to think of automobile manufacturers as rolling in wealth, and that the great number of manufacturers indicate that the business is one in which money is made easily, will be interested in reversing that opinion by considering some statistics compiled by "Motor." In nine years 639 manufacturers have gone into the business of making automobiles, of which 270 are now in the business, 30 of which began shortly before the first of this year. The concerns which are now but one year old number 94, and those two years old are 98. The number that lived but one year was 94. Twenty-nine manufacturers turned their attention to some other line, and 273 retired from business. Only 187 out of the 639 continued in business for more than one year. Only 64 concerns were established in some other line before undertaking the manufacture of automobiles.

These figures, compiled with no small amount of labor and research, give what is perhaps the most succinct record possible of the fierce competitive struggles with which the automobile industry has come into being. If it were possible to obtain and tabulate the part played by manufacturing, selling, and advertising methods, in the success or failure of these concerns, it would afford an insight into most of the vital problems that confront many industries.

DECORATIVE LIGHTING

DOWN in Alabama there is on foot a clever scheme in which everybody wins—illuminating the Capitol dome. In open-and-above-board advertisements the electric light company, which is to install the lamps and sell the lighting service, proposed the scheme, stirred up public sentiment in favor of it, and keeps the public posted as to how much enthusiasm is being aroused. It was proposed that the citizens, not only of Montgomery, but elsewhere throughout the State, make a small subscription for this purpose, the Mayor of Montgomery acting as treasurer of the fund. The electric light company, rather than have it pointed out by others, claims that its object is to stimulate the use of electric signs and lighting by providing a notable example on the Capitol dome. As no one will be obliged to put up an electric sign unless he wants to and thinks it will pay him, the scheme is one in which everybody wins and nobody loses. Unlike many public-service corporations, the lighting company has attained much popularity by working with the people to procure a result that the people desire—or are willing to desire when they are convinced of its advantages. This is but one of the plans adopted by this company to increase the use of decorative lighting. After a three-year campaign in Montgomery the company now maintains about forty thousand lamps used in sign and decorative lighting features, with the installations rapidly increasing.

RESTRAINED COMMENT

THE common policy of some newspapers which causes them to make it a rule not to mention a business or a commodity in an agreeable way, even though it be the best of news, keeps the public from knowing some of the most recent improvements made in the world of invention. There is hardly a line of manufacturing, from musical instruments to railway appliances, that does not develop every year some new thing that represents the very highest achievement in the world in that line. It would be far more interesting as reading matter than half the non-commercial items treated of in the newspapers, but the public never hears of such things—except through the advertisements. Perhaps, after all, the policy is not to be deplored, as it gives a newsy element to advertising, and makes it a matter of necessity to read the advertisements to be up with the times. This in turn enables the manufacturer to tell the story straight, and avoid the woful misapprehensions which might arise from the

EDUCATOR SHOE

Needs No Painting

Amatite

ROOFING

THE fact that Amatite *needs no painting* makes it the most economical roofing on the market.

A roof which requires painting every couple of years to keep it tight is an expensive proposition. If you will stop and figure out the cost of the paint, you will find it is frequently more than the roofing itself.

Amatite is covered with a *real mineral surface*, which makes painting absolutely unnecessary.

Anyone can lay Amatite. It requires no skilled labor. Nails and liquid cement which requires no heating, supplied free with every roll.

Write to-day to nearest office for free sample and booklet.

Brighton Garters

A New Clasp that is 100% flatter, securer, stronger, smoother, lighter—and 100% more comfortable.

A New Grip that *draws in* the sock and tightens its hold at every movement—no slip or wear.

These Improvements

in Brighton Garters give a sense of security to the whole dress of the leg; a trim and sleek appearance to the ankles; a smooth and firm support to the socks; without rubbing, chafing or tiring the leg. *Pure silk*, wear-resisting webs in all colors; heavily nickeled brass, rustless metal parts with round edges to avoid wear or tear of socks. At your dealers—25c—or we mail them direct. Our guaranty card in every box.

PIONEER SUSPENDERS

give positive balance to the shoulders, direct and easy support to the trousers, freedom from all feeling of restraint, comfort in every motion. Exclusive artistic webs, firegilt mountings, elegant in finish. At your dealers—50c—or we mail them direct. Our guaranty band on every pair.

PIONEER SUSPENDER CO.
718 Market Street, PHILADELPHIA
MAKERS OF PIONEER BELTS

STERLING TIRES

WHEN one of our tire makers puts a layer of fabric or rubber on the core, he has to stop till it is inspected—then he puts on another, and that's inspected. In addition, each tire maker gets a weekly premium for a perfect score—meaning "no seconds."

Sterling tires are cured on air-bags, giving internal as well as external pressure, and thoroughly amalgamating the different fabric plies and layers of rubber. That's why Sterling treads and carcasses don't separate—they stay put.

Sterling Blue Tubes

Our tubes are blue and in making them blue we make them better than any other tube. There may be other tires nearly as good as ours, but the Blue Tube is absolutely unequalled. If you will tell us what tires and tubes you use and where you buy them we will tell you how you can get one Blue Tube without cost to you.

RUTHERFORD RUBBER CO.
RUTHERFORD, N. J.
New York Branch
1691 Broadway, corner 53d St.

STERLING BLUE TUBES

IN ANSWERING THESE ADVERTISEMENTS PLEASE MENTION COLLIER'S

superficial remarks of a half informed reporter.

When a newspaper is pinned down as to its policy of not mentioning a specific business or commodity in a complimentary way, the reason is usually found to be a fear of being classed as "countrified," because it has long been a custom of country newspapers to write "puffs" for advertisers. But there is a great difference between the puff and the frank recognition of the news element in a new invention or improvement.

No one can deny, however, the trouble that might arise if the news columns could be used to set afloat false ideas about various business interests, even as their silence is not infrequently bought when news facts are unfavorable to advertisers. It must be a problem, sometimes, for a newspaper to know what to do. One favorable mention might bring twenty requests for similar mention, backed up by insinuations of enforcing such requests by advertising patronage.

This fact, however, remains clear. No one can know all the world is really doing without reading advertisements.

A GOOD SPIRIT

IT IS always interesting to see an advertiser express due regard for other people in the same business. The advertisement that virtually says: "Everybody in this line of business is a fake but us," is the poorest kind of an advertisement. Something is usually wrong with the business that must boost itself by pulling others down.

A good spirit is shown in a circular letter sent out by a firm of tailors in Chicago. The letter reads:

"There are several hundred tailors in Chicago who would like to make your spring and summer clothes—but how many are really entitled to? Is the man who made your last suit or overcoat? Did he please you so completely that you want him to have your next order? If he did—stick to him. It doesn't pay to experiment. But if there is room for improvement, we believe you'll find it interesting to make an early inspection of our equipment and methods."

Such a letter naturally inspires confidence. It is a welcome relief from the class of advertisements which ruthlessly trample down the opportunities of others in order to get the lion's share.

And yet there are times when it may be the right thing to do to nail a competitor's lie, to keep your own business from being damaged by his insinuations about "all others."

WHERE TO FIND OUT

IF MANY of the learned men of the world should collaborate in making an encyclopedia containing most that the world really knows about itself, it is quite likely that there would be only one place to learn anything of consequence about the undertaking—and that would be from the advertising matter issued by the publishers who were to sell such a work.

If an instrument were invented to increase the rapidity of telegraphing one hundred times over, and thereby decrease the rate, the chief place to learn anything about the subject would be from the advertisements of the company which was to make money out of such a service.

If the world's most noted inventor should develop a new improvement on one of the world's most wonderful inventions—say, a phonograph—the only place to gain the knowledge that there had been any such improvement would be from the advertisements of the firm that had such improvements to sell.

Oh, well. Why expect it to be otherwise? Why not get your information at first hand, anyway?

TOUCH-BUTTONS

Work that develops from the inside out is the work that tells an individual growth.

The memory of an imparted secret remains long after the caution and promise are forgotten.

Mental growth is not always gradual—often the big development comes as a shell-breaking process.

When in doubt, quarrel with your conceits, and the doubt will disappear.

The joy of plowing new ground exceeds the belief of those who have never tried it.

Many who imagine themselves masters of society are really its slaves, and the scourge by which they are driven is their own desire to be considered great.

"THE GIBSON"
One of our 40 Spring and Summer Styles

Active Men,

men who participate in athletics and those who are interested in the world of sports, men of enthusiasm in ALL affairs of life, show their energetic dispositions in the clean-cut, snappy clothes they wear. Such men have their clothes made to order through

Strauss Brothers'

Buy a Diamond *NOW!*

There never has been a time when diamonds have been as superlatively safe and sound an investment as at the present time. Diamonds have long been recognized by shrewd business men as the best investment for any amount large or small. They are as safe as the best bank in the country, and they pay a good rate of interest. There is always a ready market for diamonds.

And in the last few months this market has been brisker than ever, and the prices are constantly increasing. The rapidly diminishing supply of diamonds in the African fields has done much to stiffen prices. Besides this the mines are being worked at greater depths than ever before, and the geologists' reports show that the supply is decreasing rapidly. The removal of the native African miners and the unionizing of white miners has also increased the cost of mining.

Right after the 1907 panic when prices even on the best bonds went down, the first investment that jumped back to higher prices was diamonds. Do you wonder that diamonds today are going up and bound to go up much more? Better buy a diamond now *before* it costs you *twice as much.* We are selling our stock not only at current prices which are subject to our special discounts (as shown on special discount sheet sent with catalog) but are also making some special offers based on prices paid before the recent advances. Besides we allow these trade discounts to those who buy on monthly terms. Thus we win the patronage of the most careful diamond purchasers. On this special offer you get the benefit of the money we saved on your advance purchase. Write for the Marshall Catalog.

ZODENTA

A PRESERVATIVE FOR THE TEETH

The condition of the teeth of the present generation is so bad as to be an indictment of our civilization. Regular use of Zodenta will change this condition, let me tell you why—

The soft cooked foods of civilization result in deficient mastication. Not enough mastication or grinding of the food between the teeth causes insufficient flow of the ptyaline laden saliva and gastric juices that are necessary to digest and liquefy the food. As a consequence, insoluble albuminous shreds lodge in the cavities and between the teeth, acid fermentation sets in and decays and discolors the teeth and taints the breath. Zodenta neutralizes these acids, arrests their destructive action and provides the detergent effect that is absent from soft foods, cooked foods and the resulting inefficient mastication.

In form Zodenta is not a powder to be wasted and spilt over everything—to be an annoyance to the clean housewife.

It is a paste or cream—economical and clean—without any defects.

For Zodenta is not dirty or dark in color, but is brilliantly white.

Zodenta does not petrify in its tube but remains moist and pliable.

Zodenta does not disintegrate into a number of separate ingredients, such as water, chalk, wintergreen, oil, etc., but always remains the same, an inseparable definite entity.

Zodenta does not scratch the teeth because of some cellulose or woody ingredient, for there are none such in Zodenta.

Zodenta is made as no other tooth cream or paste is made.

The ingredients of Zodenta are ground or milled until they can easily sift through silk.

I mix these ingredients together, then form the true inseparable combination in retorts under a temperature of from 350 to 400 degrees Fahrenheit.

Its texture is fairly like satin.

Whether under the burning sun of the Sahara or in the cold of Siberia—the soft, moist, pliable texture of Zodenta will remain always the same.

Let Me Prove My Statements

This is my fair and square offer—

If your druggist does not keep Zodenta send me 25 cents for large 2½ oz. tube, which I will mail you promptly, and also include FREE an aluminum Tooth Brush Holder.

Try Zodenta, if it does not bear out all my claims tell me so and I will return you your money. Write today.

FREDERICK F. INGRAM, 59 Tenth St., DETROIT, MICH.
President of the F. F. Ingram Co., Manufacturers of Milkweed Cream

NEW-SKIN

—Instead of Court-Plaster

New-Skin takes the place of ordinary court-plaster, being far more effective.

Court-plaster comes off, but *New-Skin* "stays put." *New-Skin* does not come off even when you put on a glove over it or when washed with soap and water.

Court-plaster collects dirt around the edges right next to the wound where perfect aseptic cleanliness is most essential, but *New-Skin*, painted softly over the wound, seals it securely under a clean air-tight, germ-proof film.

Court-plaster looks bad, is a blemish on face or hands, but *New-Skin* is transparent and practically invisible.

For everything that you use court-plaster for—cuts, abrasions, burns, scrapes where the skin needs protection, *New-Skin* is better than court-plaster; useful also in lots of cases where court-plaster is useless, such as chafed feet, callous spots, hang-nails, insect stings.

"Paint it with NEW-SKIN and forget it"

Always insist on getting "NEW-SKIN."
10c, 25c and 50c at the druggists or by mail.

"A Kalamazoo Direct to You"

Peter Fenelon Collier

Tributes to the Founder of This Paper by Some of Our Contemporaries

It has been a physical impossibility for me to answer personally the many kind messages of sympathy I have received from readers of Collier's. I hope to be able to do so in the course of the next few weeks, but in the meantime I ask each of them to accept my sincerest thanks. It is a source of real satisfaction to know how many friends my father had and how widely the significance of his life's work has been appreciated.—ROBERT J. COLLIER

"Under Peter Fenelon Collier's auspices, COLLIER'S WEEKLY has come to be both widely read and widely respected for the systematic campaign that it has carried on against corruption of all kinds."

—London *Times*.

✣

"A periodical of such fidelity to high ideals, of such sprightliness and originality and courage and force, as to perform a great service for the American public and to exert a very marked influence on the journalistic traditions of the country. That periodical, of course, is the nimble-witted COLLIER'S WEEKLY, accurately called a national organ of intelligence.

"As an illustrated journal of comment and news, COLLIER'S fulfils its mission in a time of greatly increased demands and higher artistic standards, as well as augmented facilities, with an adequacy never surpassed by any similar American journal in the past and with a success in appealing to the public interest not surpassed by the illustrated journals which have the facilities of foreign capitals at their disposal.

"The death of the man who hazarded capital in the gathering of a brilliant staff and the founding of a periodical of such radicalism, tempered with sanity, as to be almost a new and experimental type in its class of periodicals, can not be a matter of indifference to the public. He has left a memorial of his life work in a form exceeding that of the memorials of other men."—*Detroit Free Press.*

✣

"Peter Collier had to begin his business career at an early age, and he began it by selling books. He carried his wares from door to door, and prospered from the start. Before long he embarked in the business of publishing books. He made friends everywhere, and, when he turned to another form of publication, ultimately transforming 'Once a Week' into COLLIER'S WEEKLY, the success of the enterprise was largely assured. The energy and fearlessness of COLLIER'S WEEKLY, as shown both in its editorial and business departments, have given it a position of leadership. Mr. Collier took justifiable pride in all this success."—*The Outlook.*

✣

"COLLIER'S WEEKLY has for years been one of the nation's strongest forces for good government, for higher standards of thought and work and business. Such a paper is worth more to a growing nation than much fine gold, and such a paper the nation owes to Peter F. Collier."

—Denver *News.*

✣

"Without influential friends Peter Fenelon Collier rose to the front by dint of his own unaided exertions; and the example which this sturdy business man has left behind him is worth vastly more to his young countrymen than are all his golden accumulations."

—Atlanta (Ga.) *Georgian.*

✣

"The most imposing monument which can be erected to Peter Fenelon Collier's memory is the majestic publishing business, including COLLIER'S WEEKLY, erected on lines of sterling worth and character.

"His death will not interrupt the forward movement of his excellent work.

"He has sown the seed of clean methods, which will always bear fruit, in better lives and higher ideals."

—Chicago (Ill.) *Union.*

✣

"Peter F. Collier was a splendid and inspiring example of what hard work and perseverance may accomplish. He was born a poor boy, but he had ambitions, and they were the kind that are fruitful of good to society in general. He was once a book agent. Later he became a publisher, and in that capacity he used his opportunity and his splendid energy in the cause of cleaner and better things. The weekly which bears his name he made a power for better and cleaner politics and living. He fashioned it to be an independent agency of right, and it promises to remain an enduring monument to a man who knew how to play as well as work and use the fruits of his industry to fine public advantage."

—Saratoga Springs (N. Y.) *Saratogian.*

✣

"Mr. Collier was a wonderful man; almost as indefatigable in his activities as Mr. Roosevelt himself. He did an enormous amount of work, made a fortune by creditable means, and combined with his work more play than any successful business man we know of. His death at sixty indicates that he may have overtaxed his energies. But he got a great deal out of life that he liked—money, friendship, reputation, and sport—and he used handsomely what he got."

—*Life*, New York City.

✣

"He was a big-brained, warm-hearted son of the Emerald Isle, every inch a man and an Irishman of the noblest type; steady, straightforward, and clear-sighted. He made no mistakes. He grew rich off printer's ink, and he printed nothing unclean. He loved the animal as the human kingdom heartily; a blunt and breezy out-of-doors man, with a rare taste and sense for books. We tender to those that loved him the homage of our sincere and respectful sympathy."

—Louisville (Ky.) *Courier-Journal.*

✣

"Peter Fenelon Collier rendered a service to his country. He was a pioneer in the distribution among the people of cheap and admittedly good literature on the subscription plan."—St. Louis (Mo.) *Mirror.*

✣

"As publisher of COLLIER'S WEEKLY and a great many books, Mr. Collier ranks as one of the most prominent publishers in the world, and the organization which he leaves behind is one of the most striking evidences of personal success which this country affords.

"Mr. Collier's remarkable energy and faculty for organization is proved by the fact that in the past thirty years he has printed and sold 52,000,000 books.

"The passing of a man like Mr. Collier is a great loss to the publishing field, and serves to call attention to a remarkable life which uplifted an immense public with the best literature at smaller prices than such literature ever sold before, and established a weekly which has now become a foremost factor in national affairs."

—*Printers' Ink*, New York City.

✣

"Peter Fenelon Collier . . . was a fine example of foreign-born lads who found in America their opportunity and made the most of it. His capital consisted of keen intelligence, indefatigability, a good heart, kindly disposition, and a peculiarly buoyant temperament. He worked hard and he played hard, and to the credit of his memory be it said that whatever he did he did well. Of his making and selling of books there was no end; but the books he made and sold were good books. We have never heard of his yielding in a single instance to the obvious temptation to print flashy or even trashy material simply because it was easy to sell. And when he started his paper he made it a high-class paper, and appointed a high-minded editor whom he upheld in all good works. It seems a pity, and we are unfeignedly sorry, that he had to die at a time when life had become a joy not only to himself, but to all who knew and appreciated the graciousness of a cheering spirit which never flagged and never failed to lend encouragement to others."

—*Harper's Weekly.*

A study of a new period of decadence in the popular government of great cities

All Newsstands—15 Cents

The Goodyear Tire Making Machine

The quality of ordinary tires, no matter whether "moulded" or "wrapped tread," depends largely on human dexterity and strength. A tire casing is built up from alternate layers or sheets of rubber and fabric. The layers must be laid on with absolute evenness and uniformity or the tire falls down in mileage. It takes long training to learn the knack.

Each layer of fabric must be stretched and rubbed down into place at an absolutely *even tension*. If the first layers are pulled tighter than the finishing layers, that casing can never endure as it should. This is a matter of strength and "feel" which it takes years to develop. Yet no matter how highly skilled a man may be, *his muscles tire* as the day wanes. Tires made in the morning while the men are fresh are always infinitely better than those turned out in the afternoon.

This is true with regard to all Automobile Tires *save* one.

Goodyear Tires are made *on a machine* invented in the Goodyear factory and fully covered by patents, which perfectly does away with all muscular effort.

GOODYEAR AKRON. OHIO.

Every layer of fabric is stretched lengthwise and sideways as it is applied, at a *uniform pressure*, which can be regulated at will to make it *just right* for the particular size of tire which is being made. There's no longer any guesswork—no longer any possibility of tires made in the morning being better than those turned out just before quitting time.

Other Goodyear Points

—The breaker-strips of rivet-fabric (patented) which inseparably rubber-rivet the tread to the carcass. Mud-boils or sand blisters or stripping impossible.

—It alone combines the good points of both "moulded" and "wrapped tread" tires with disadvantages of neither. 10,000 to 15,000 miles from a single Goodyear Tire is not unusual.

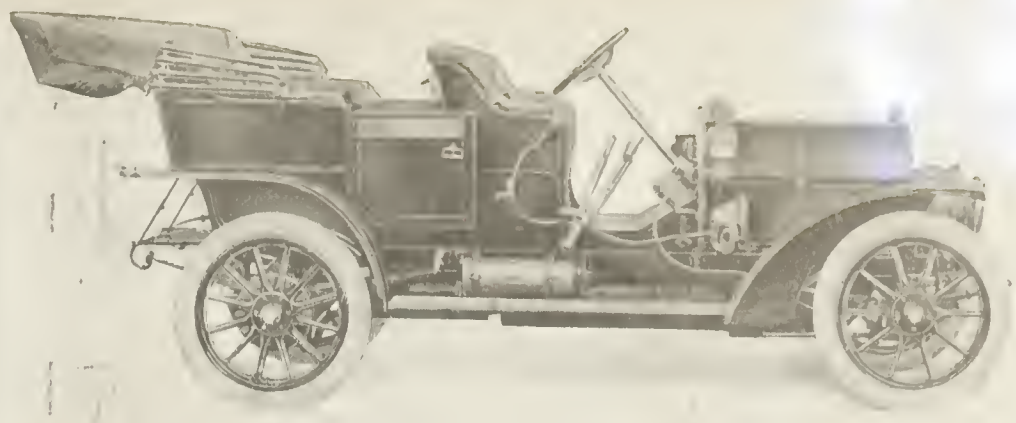
—The base or "feet" of the tire contains a tape of piano wire which contracts—makes the tire base smaller—with inflation. The harder you pump a tire the tighter it grips the rim.

—They are made from two "compounds" of rubber—soft, tender, resilient Para for the walls, and tough leathery, wear resisting compounded rubber for the tread or wearing surface, both inseparably vulcanized together. This means maximum of easy riding quality at a minimum of wear.

—The tough, rawhide-like tread or wearing surface, in combination with the rivet-fabric breaker-strips, is so difficult to puncture that the Goodyear is actually 90 per cent puncture proof.

—After the most gruelling practical tests, 800 out of the 1,000 Taxicabs in New York, operated by several competing companies, have contracted for Goodyear Tires to be used exclusively.

Because of this wonderful machine we can KNOW, positively and beyond dispute, that each tire made is *perfect* in all its parts, and that each tire produced is *just like every other tire* of the same size and kind.



We alone in producing Goodyear Tires have entirely eliminated the *human element*, which because of tired muscles, wearied eyes and strained nerves, has resulted in untold thousands of *imperfect tires* which have given unsatisfactory mileage from no other cause than *human frailty*—which no manufacturer has heretofore been able to overcome.

This is simply to explain why *we know* we are not exaggerating, and how *you* can know we are not guessing when we refer to Goodyear Tires as being PERFECT in construction with all the life, endurance, and supreme wearing quality which is to be expected in a perfect product.

Chalmers-Detroit "Forty"—$2,750

Made as Touring Car, Toy Tonneau and Roadster

Here's Just the "Forty" Car You Want

Here is a car at $2,750 which offers all that any price can buy.

Its possible speed is sixty miles per hour. You have no wish to go faster.

No hill is too steep for it, no road is too bad.

It has been pitted, again and again, against some of the costliest cars on the market.

Over and over, it has won against all in speed, endurance and hill climbing.

Last season alone it won first place or perfect score in twenty-five important events.

Lately it won, in one day, three separate hill-climbing contests at Memphis. On April 26th it won in its class easily at the Fort George, N. Y., hill climb.

Why Pay More?

What more does one get when he pays $4,000 or $5,000?

Perhaps a little more power, but he has no way to employ it.

The Chalmers-Detroit "Forty" will travel any road he can go.

And that higher price will always buy a multiplied cost of upkeep.

The heavy car will treble his tire cost, and use twice the gasoline. It will multiply his cost for repairs.

Yet that extra expense buys not a single advantage.

The Chalmers-Detroit "Forty" is one of the rare cars which never developed a weakness. No important alteration has ever been made in it. It has simply been refined in minor details.

It is the standardized car—the car that doesn't change. And that is the dream of all motorists.

The car today is about the same as every owner owns. So owners can tell you what sort of a car you'll get.

Ask them. You'll find them everywhere. Ask them which car to buy.

Hungry for the Road

We have just asked one owner for the best thing to say about the Chalmers-Detroit "Forty."

He replied: "I always say that it's hungry for the road. Nothing can faze it. No hill can disturb it. Its power is so over-sufficient that it seems always to be calling for something harder to do.

"The faster I go the faster it wants to go. The farther I go the better it seems to run."

We put the same question to another owner, and his reply was this:

"The best thing to me is the lack of trouble. My car runs for months without even lifting the hood."

Its Vast Economy

We asked another owner for the best thing he could say.

"Why," he replied, "the best thing to me is its wonderful economy. I have owned six other cars, and the cost of upkeep always spoiled my fun. I run my 'Forty' at one-third the expense of my last car."

He has given, perhaps, the best reason of all. The Chalmers-Detroit "Forty" is simply pure enjoyment. It does all that any car can do, and does it at minimum cost.

The Satisfying Car

The Chalmers-Detroit "Forty," for nearly four years, has been the most satisfactory car on the market.

Every owner knows the satisfaction which a perfect car can give.

The car is always ready, and it goes till he wants to stop. His fun isn't spoiled by the bills.

Please learn the facts. Send now for our catalog. Let us name the engineers of national fame who have selected this car.

Then get from our local agents the names of local users. Learn their experience. Ask them which car to buy.

COLGATE'S TALC POWDER WITH SIX HOLE SIFTER

(Another Improvement)

CONCENTRATES ON THE SPOT

ECONOMY:—No scattering, no waste, no sprinkling dress or coat. The position and number of the holes put the distribution of powder always under your control.

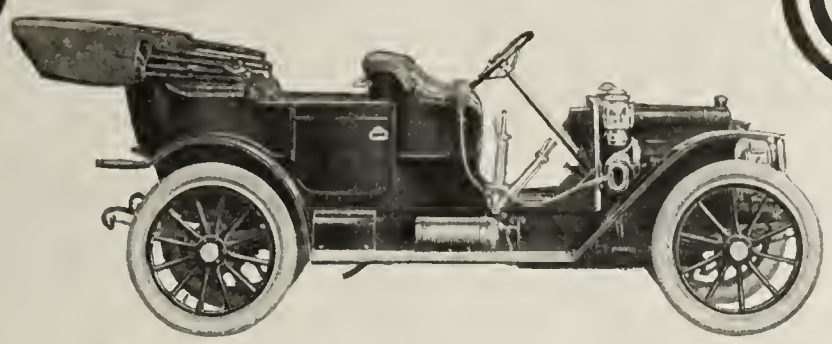
You can both concentrate on a cut or the tiny fold of baby's skin, and just as easily spread it over a large surface by merely moving the hand.

REGULATES THE FLOW

DOUBLE ECONOMY:—By turning the sifter top the six holes are made smaller or larger. This permits the most careful economy, and is possible only with **this non-leaking screw** top.

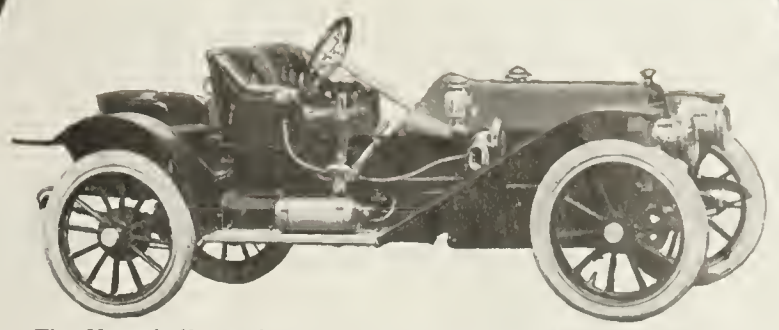
THE SAFETY POWDER IN THE SAVING BOX

The antiseptic and soothing ingredients of our Talc Powders, Violet, Cashmere Bouquet and Dactylis are prepared from formula of an eminent physician. Their exquisite perfumes also are **antiseptic.**



COLGATE ECONOMY is shown not only in this new Talc Box, but also in our **Ribbon Dental Cream**; which in our now famous tube "Comes out a ribbon, lies flat on the brush," with only half as much flow of cream as from the old round-mouth tube.

For trial size of either Talc or Cream, send 4 cents in stamps



WE COULDN'T IMPROVE THE POWDER, SO WE HAVE AGAIN IMPROVED THE BOX

HERRESHOFF

A New Standard In Motor Car Construction

THE Herreshoff Car is an expression of an entirely new idea in motor car manufacture. It is not a car built to sell for $1500, but is a smaller edition of the highest priced cars with all their excellence and elegance, which happily can be sold at that figure. Our endeavor has been to produce a car of light weight of as excellent design and careful workmanship as the big expensive cars and built of the same materials. We have approached its production in a wholly different spirit from that which has previously actuated the small car manufacturer.

The name Herreshoff has never been associated with anything but the highest type of production. Charles F. Herreshoff has maintained this standard in the Herreshoff Car. He is responsible for the entire design of the car, which follows the best and proven mechanical principles. In the production of the car he has employed the best materials and every detail is as carefully thought out as in the cars of highest price.

Harry S. Houpt has had as wide experience in the sale of motor cars as any one identified with the industry. For five years he has conducted investigations, taking down in the repair shop in connection with his garage nearly all types of American and foreign cars. He has expended in racing for experimental purposes possibly more money than any other motor car manufacturer. We believe, therefore, he is qualified to judge motor car values. It is on this account that he is willing to put his guarantee behind Herreshoff's and behind the guarantees of the makers of such parts as are best made by specialists who have been called upon in the production of the car.

The car speaks for itself. No car at any price is better finished, has more grace of line, or better workmanship or material. Its power is ample to drive it at a speed of 45 to 50 miles an hour or to climb any hill anywhere. Its riding qualities and easy handling cannot be adequately described but must be demonstrated. We are demonstrating them daily.

The Herreshoff Car

THE especial merit of the Herreshoff Car is its extreme simplicity and efficiency. Every principle employed in it is proven good practice. In the ingenious application of these principles the car is unique. Use of the best materials permits the reduction of weight without sacrifice of stability. Light weight means economy and easy handling. The owner of a high powered car pays an inordinately high price for the usual service to which he puts his car when he could use a light car more satisfactorily as well as more economically.

The peculiar efficiency of the Herreshoff Car is derived from the correct inter-relation of its parts. Each individual part is designed to harmonize with every other part. By designing both the intake manifolds and the valves to suit the cylinders, by designing the exhaust manifold and valve to relieve the cylinders quickly, by designing the carbureter to feed gas into the cylinders at the proper velocity at all speeds of the motor, the maximum efficiency of the engine is secured.

The unit power plant and simple shaft and rear axle construction, with an absolutely horizontal straight line drive, conserve the power developed so that more power is delivered to the rear wheels in proportion to the cylinder size than in any other car in the market. It has greater horse-power per pound of weight—and larger tires and larger brakes in proportion—than any other car. These are factors of the greatest moment to the car owner. Its economy of running expense and upkeep will commend it.

As wholesale dealers, we have disposed of our entire product for the year, and we could dispose of double the number without difficulty. At our various agencies there are a limited number of these cars for retail sale which can be delivered promptly. We invite inspection of them and the opportunity to demonstrate them. Inquiries addressed to us will be forwarded to the nearest dealer.

Manufactured by The Herreshoff Motor Co. at Detroit exclusively for

WE ARE NOW PREPARED TO ASSIGN TERRITORY FOR 1910 AGENCIES

Harry S. Houpt Co.

WE ARE NOW PREPARED TO ASSIGN TERRITORY FOR 1910 AGENCIES

Broadway and Sixty-Eighth Street, New York City

The Herreshoff Car does not take the place of the big car but supplements it. The place it fills among light cars the Houpt will fill among high-powered cars. Each in its class establishes a new standard.

The Houpt will represent to the big car user the best thought in automobile design,—the final word in motor car construction. The car is now being manufactured at our factory in Bristol, Conn., in two types:

A 60 horse power 4 cylinder car with 127 inch wheel base, weighing 3100 pounds.
A 90 horse power 6 cylinder car with 140 inch wheel base, weighing 3900 pounds.

Each will be made in touring car, tourabout, runabout, limousine, landaulet, and brougham bodies. They will be ready for delivery in midsummer.

ADDRESS AGENCY DEPARTMENT C FOR CATALOGUE OR FURTHER INFORMATION

An Armful of Burning Newspapers

We have perfected a heating system so sensitive that the flames from an armful of newspapers will send a glow of warmth over every radiator in the house.

A system which insures plenty of heat *everywhere*—on the coldest day of January; and perfect comfort without overheating, on cool evenings in June.

A system so flexible, and so economical of fuel that it pays its own cost and saves its own maintenance.

And its *first* cost is no more than that of common heating systems.

"RICHMOND"

Boilers — Radiators

The Richmond System of heating represents the climax of inventive ingenuity.

Compare the Richmond boiler, for instance, with any other boiler for producing steam or hot water.

You will find that the same fire which in common boilers heats 90 square feet of water surface, heats in the Richmond, 128 square feet, or over 40 per cent more. Think of it!

You will find that instead of the cumbersome, heavy iron castings enclosing the water circulation of common boilers, there is no waste metal in the Richmond to absorb costly heat.

Strong, Even Castings

The castings commonly used in boilers are too thick in some places—too thin in others. The castings used in Richmond boilers are uniform. They are stronger than common castings, but because of their evenness, waste no heat.

The flues used in common heaters deliver the burned gases and smoke to the chimney before it is half used.

While our *diving flue* forces the fire to travel over the heating surfaces until its heat-giving power is exhausted.

You will find that common heaters are perched on separate bases and that the cold water enters them at the fire level.

The result is that the fire is chilled and that for two inches around the edge of the fire box, where fire is most needed, there is nothing but dead ashes.

Adds Strength—Lessens Cost

The water line of the Richmond extends to the bottom of the ash pit. This water base level adds strength and lessens cost.

But more, it absorbs the heat of the ashes and warms the water before it reaches the fire. The result is that the Richmond boilers have no dead line of ashes or clinkers adjoining the water surfaces—but instead a hot burning line of flame.

There are countless other points of economy and of efficiency which are to be found only in Richmond systems. Points of superiority to be found in the ash pit, in the fire box, in the water circulation, in the regulation devices and in the radiators and their control.

Find Out For Yourself

The selection of heating system, whether it be for a home, a public building, a factory or a business block, is too important to leave to the judgment of others.

By inefficiency it may render comfort impossible; by improper design it may run the coal bill into an endless extravagance.

Write Us

If you contemplate building, please write us for full details of the new Richmond system of heating, which saves itself on costs and pays for itself on maintenance.

New Address after June 15th, Park Avenue and 41st Street

COLLIER'S NATIONAL HOTEL DIRECTORY

FOR the benefit of our readers we have classified the various hotels in the United States and Canada according to tariff in their respective cities. One asterisk (*) will be placed opposite the advertisement of the hotel which appeals to an exclusive patronage demanding the best of everything. Two asterisks (**) indicates the hotel which appeals to those who desire high-class accommodations at moderate prices; and three asterisks (***) indicates the hotel which appeals to commercial travelers and those requiring good service at economical rates.

COLLIER'S Travel Department, 426 West Thirteenth Street, New York City, will furnish, free by mail, information and if possible booklets and time table of any Hotel, Resort, Tour, Railroad or Steamship Line in the United States or Canada.

Special Information about Summer Resorts

Write us where you want to go and we will advise you the best route and where to stop.

BOSTON, MASS.

For the Reader of Books 30

Volume XLIII Number 10

P. F. Collier & Son, Publishers, New York, 416-430 West Thirteenth St.; London, 10 Norfolk Street, Strand, W. C. For sale also by Daw's, 17 Green Street, Leicester Square, W. C.; Toronto, Ont., The Colonial Building, 47-51 King Street West. Copyright 1909 by P. F. Collier & Son. Entered as second-class matter February 16, 1905, at the Post-Office at New York, New York, under the Act of Congress of March 3, 1879. Price: United States and Mexico, 10 cents a copy, $5.20 a year. Canada, 12 cents a copy, $6.00 a year. Foreign, 15 cents a copy, $7.80 a year.

NOTICE TO SUBSCRIBERS.—Change of Address—Subscribers when ordering a change of address should give the old as well as the new address, and the ledger number on their wrapper. From two to three weeks must necessarily elapse before the change can be made, and before the first copy of Collier's will reach any new subscriber.

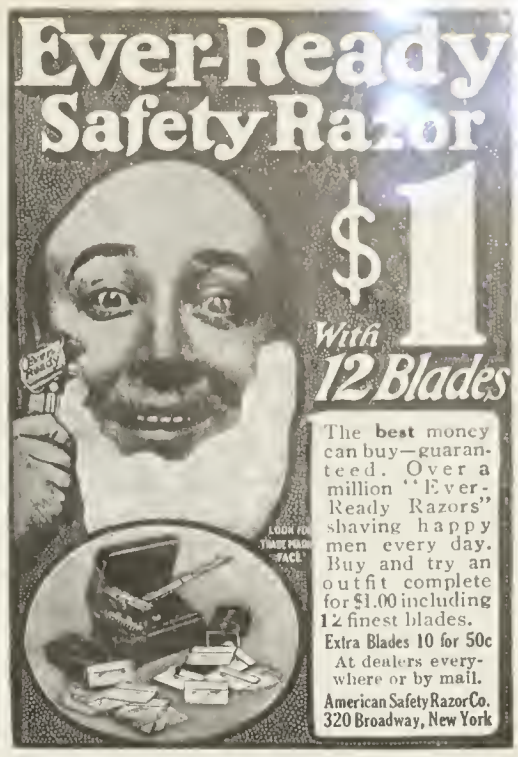
ADVERTISING BULLETIN

NO. 5

ADVERTISER AND PUBLISHER

AS you go over Collier's week after week, just remember the important part that advertisers play in connection with the paper, and this is true of all the best periodicals. Without the thousands of dollars the advertisers pay for space, it would be necessary for publishers to raise their subscription prices to a prohibitive figure. In fact without advertisers the high-class weeklies and monthlies would have to suspend. This seems like paying a big tribute to advertisers. Well, they are entitled to it.

Collier's works on the theory that a conscientious publisher should consider the revenue, resulting from increasing circulation and increased advertising, as a reinvestment fund for the benefit of his readers, by using it to improve the quality of the periodical and the quantity of interesting matter without increasing the cost of the publication to its readers.



The 10 cents that you pay for Collier's is not enough to pay for the art and editorial matter it contains and for the cost of printing and mailing it. The deficit is paid out of the advertising revenue. It is easily understood, then, what part advertisers play, and, as we admit none but responsible ones, it is to our interest to tell you these things so that you may place the same confidence in them that we do.

Think of this when you go over the business section of the paper!

E. C. PATTERSON

Manager Advertising Department

IN NEXT WEEK'S BULLETIN—"Standardized Merchandise"

THE TRAVELER'S FRIEND

If you travel, wear **LITHOLIN Waterproofed Linen Collars and Cuffs.** They save "carrying space" in the grip, "stop-overs" for delayed laundry, and make you comfortable. You *know* your collar is in shape always, and clean- or that you can make it white as new in a minute with a damp cloth. Never wilt, or fray. The same collar you have always worn, only waterproofed. All styles and sizes. If you don't travel, wear LITHOLIN just the same, and save expense.

Collars 25c. Cuffs 50c.

Always sold from a RED box. Avoid substitution.

If not at your dealer's, send, giving styles, size, how many, with remittance, and we will mail, postpaid. Styles booklet on request.

SOLAR
LAMPS
"SHOW THE WAY"

MAXIMUM
LIGHTING EFFICIENCY
Is absolutely necessary when touring after dark. Your *very* safety and certainly your comfort depends on **Proper Illumination of the Road.**

Solar Lamps
Are the **Best** motor lamps money can buy. That is an acknowledged fact—for 12 long years they have sustained that reputation—against all comers, all imitators, all competitors. Ask your dealer, the builder of your car, or any motorist "Who Knows!" Remember the only way to get Maximum Lighting Efficiency is to equip *your* car with **Solars.** They "Show the Way."

HEALTH MERRY GO ROUND

Makes Happy, Healthy Children

who prefer to stay at home and enjoy themselves rather than play on the streets. Operated by children themselves; the movement not unlike that of rowing, brings every muscle into play. Most healthful form of outdoor exercise; keeps lungs inflated, develops sturdy bodies, strong arms, straight backs, broad shoulders. Makes children studious. You owe the children this delightful pleasure—you'll save it in doctor bills. Inexpensive, simple, absolutely safe; no cogs or complicated gears to catch and tear clothing. Not a toy, but a real Merry-Go-Round. Will last for years. Full particulars and handsomely illustrated booklet free.
Health Merry-Go-Round Co., Dept. E, Quincy, Ill.

No Dandelions,
plantain or other weeds if you use my Lightning Dandelion Exterminator. Removes the growing weed and **Kills the root** at one operation. The polished brass tube holds gasoline or kerosene. As the knife cuts the weed a few drops of the liquid kills it without injuring the grass. Works rapidly and can't get out of order. Charges paid east of Rocky Mts. only $2.50. Money back if you're not satisfied. Order today. I take all the risk.
E. F. Cameron, Dept. 11, 78 LaSalle St., Chicago, Ill.

SHAKE INTO YOUR SHOES
Allen's Foot-Ease, a powder. It relieves painful, smarting, nervous feet, and instantly takes the sting out of corns and bunions. Allen's Foot-Ease makes tight or new shoes feel easy. It is a certain relief for sweating, callous, swollen, tired, aching feet. Try it *to-day.* Sold by all Druggists and Shoe Stores. By mail for 25c. in stamps. *Don't accept any substitute.* For FREE trial package also Free Sample of the FOOT-EASE Sanitary CORN-PAD, a new invention, address

$50,000,000 in Library Gifts

¶ *There is only one man in the world who can tell from actual experience how it feels to give away fifty million dollars, and he has never told it before. In next week's issue of Collier's, Mr. Andrew Carnegie writes of his library gifts, and for the first time makes public the number of buildings he has given, the amount they cost, and some of his feelings and opinions in regard to this unique work.*

As widely known as has been Mr. Carnegie's plan of giving library buildings to any English-speaking community in the world, the public as yet little realizes the actual magnitude of the work accomplished through his world-wide benefactions. The people in each locality know chiefly of their own library buildings, and, except for occasional press comment, have had no way of knowing how many buildings were being given in other parts of the world. Even Mr. Carnegie's closest friends may be surprised with the announcement that eighteen hundred library buildings are the result of his gifts.

Where they are, and how much they cost, together with Mr. Carnegie's personal views on the subject, will make a feature that will be awaited with more than usual interest.

The Art of Pitching

¶ *The third article on Baseball, by Will Irwin, appears in Collier's next week. It tells all about pitching, from the early days up to the present time, and describes every kink anybody ever got into the throwing of a baseball. "Who pitched the first curve?" is a matter of controversy, but Mr. Irwin tells the story which has been generally accepted by the historians of the profession. When the curve was first introduced it was greeted with so much skepticism that it had to be demonstrated by throwing it between fixed poles. But after that the problem became that of inventing all the new varieties, including the "jump" ball, the "spitball," and a lot of mysterious kinks that never had a name.*

The pitcher (and latterly the catcher who directs his play) knows as by a note-book the peculiarities of every batter in his league—who can not hit a high or low ball, who will flinch and lose pose at the first direct approach of a fast outshoot, who will reach out foolishly for a slow ball. When a new player enters the league, pitchers and catchers experiment with him until they find out his weakness, and pass the information along to their fellows. That explains why certain players, lost afterward to fame, bat with the leaders during their first month in the league.

Year by year the strain on the pitcher has grown greater. Every pitch takes all the force there is in a man. The strongest pitcher leaves his game with a sore and battered arm. Two games a week about comprises the possibilities in any pitcher. If he does much more he shortens his life in the game.

¶ *The Art features for next week include a cover design, "The Black Fan," by Howard G. Cushing, and a double-page drawing, "Saturday Afternoon," by Charles Dana Gibson.*

SCHOOL

ELECTRICITY
Practically Taught
through the medium of tools and machinery.
Our students learn by doing the work themselves, under the guidance of skilled instructors, in the largest and best equipped Electrical School in the U. S.
We prove our claims by showing all applicants through the school. Write or call for Prospectus "C."
NEW YORK ELECTRICAL SCHOOL
39 W. 17th Street, New York City

Summer School in Mechanic Arts
MECHANICAL / ELECTRICAL } ENGINEERING
STATE UNIVERSITY OF KENTUCKY
F. Paul Anderson, Director
This Summer School lasts for eight weeks, from Monday, June 14th, to Saturday, August 8th. It is for teachers who wish to study manual training; for mechanics and others who have not time for a regular college course, yet who wish to get some laboratory experience in certain phases of engineering; for college students behind in their work; and for young men who may wish to shorten the time spent in college by doing the shopwork during the summer. There are no requirements for entrance. For further details, address
A. M. WILSON, M. E., Lexington, Kentucky

I TEACH Penmanship BY MAIL

I won the World's First Prize in Penmanship. By my new system I can make an expert penman of you by mail. I also teach Book-keeping and Shorthand. Am placing many of my students as instructors in commercial colleges. If you wish to become a better penman, write me. I will send you FREE one of my Favorite Pens and a copy of the Ransomerian Journal.
C. W. RANSOM
289 Reliance Bldg., Kansas City, Missouri

ELECTRICITY
The Bliss Electrical School is the oldest and best school in the world teaching ELECTRICITY exclusively. Theoretical and practical course complete
IN ONE YEAR
Students actually construct Dynamos, Motors, etc. Graduates hold good positions in electrical industries. Seventeenth year opens September 22. Apply for free Catalog to **Bliss Electrical School,** 70 Takoma Avenue, Washington, D. C.

PERNIN SHORTHAND
MAKES EXPERT STENOGRAPHERS
It is the simplest, most legible and rapid shorthand in existence. It employs no shading, no positions, no hundreds of brain racking rules and exceptions, no thousands of word signs to be memorized.
STUDY BY MAIL
from the headquarters of Pernin Shorthand—one of the highest grade stenographic training schools in the United States. No failures. Textbook on approval. Write for free booklet No. I.
THE PERNIN SHORTHAND INSTITUTE, DETROIT

LEARN TO WRITE ADVERTISEMENTS
Taught by Mail Thoroughly
Taught by the founder of the original school. Taught in an expert manner, enabling you to earn expert salary. Twelve years' success and hundreds of successful graduates. Large prospectus free on request.
Page-Davis School Address either office { Dept. 19, Page Bldg., Chicago / Dept. 19, 150 Nassau St., N.Y.

Readjusting Conditions in Turkey

The upper photograph pictures summary justice as meted out by the courts-martial of the Young Turks to those of Abdul Hamid's partizans who incited mutiny and were treacherous to the Constitutionalist cause. As an example to the whole people, many of those condemned were hanged in the streets, from the bridges and in the public squares of Constantinople.—The central figure of the three officers on horseback is Chevket Pasha, the general in command of the Young Turks army, riding into Stamboul after the taking of Yildiz Kiosk.—The other photographs show soldiers of the Constitutionalist army searching a priest for seditious pamphlets, and the band of one of the Salonica regiments of the Young Turks army swinging through a street of Constantinople on the day of the city's capture

Action

MR. ROOSEVELT'S THOUGHTS ON TOLSTOY have naturally aroused attention, since their publication in the "Outlook." "I doubt if his influence has really been very extensive among men of action." Just who is this Man of Action? Mr. ROOSEVELT and others have been busily and reverently creating credit for him, but what Man is he? The Man of Action has a slight smack of the Man of Destiny. He is of faint kin to the Man in the Iron Mask. Mr. ROOSEVELT makes him the final test for literature as well as for other values. Imagine some such fragile growth as "The Eve of St. Agnes" brought to the Man of Action. "This will never do," says he. "I rather like it," he declares of some bouquet of TENNYSON. A few years ago the Man of Action was the great financier, running insurance or railroads. An obscuration took place, and several heroes resigned, died, or became insane. About every other century the worship of "action" returns to trouble this world with the notion that there is some virtue in action for itself. With it enters the companion idea that "action" consists in keeping busy in the external world. It means detonation, running about, jostling, talking, redistributing atoms. A man of our acquaintance is a physician who is forever working at experiments in an unfrequented office. He would blink among a Tennis Cabinet or at a gathering of politicians. He is unhappy in "rough-house" gayety. Discoveries and certain adaptations which he has made have lessened the death-rate among babies. The Man of Action, with bristling voice and busy ways, would deem the little doctor a feeble soul. He is not masterful. He clatters not about his victories. Mr. ROOSEVELT sheds no light when he condemns the world-figure and world-influence of TOLSTOY. He is right, we believe, in putting high value on his fiction; wrong in failing to appreciate the inspiration which the great Russian has been to a world which so easily tires of difficult, spiritual, patient, and long-continued work.

Chairs

CARLYLE WINS GLORY still with his reflections about clothes. Why has the chair never tempted essayists to rival "Sartor Resartus"? It, too, may reflect authority. It, too, changes with salary and station. The swivel gives orders to the high-desk stool. The straight-back chair of the stenographer differs much in meaning from the ampler piece of furniture which stands before the roll-top desk. In a wheel chair the child may see the world, and, after his pilgrimage, now an aged man, he may collect a little air. There are the chair of state and the electric chair of execution. The empty chair is a metaphor for all that is most tragic in our lives. What are the dreams of the artist's stool, and what of the milkmaid's, and which signify the more? How the rocking chair has been written about and despised by the haughty traveler from abroad, and how firm it stands—a great American conquest in domestic comfort. Around the chair also, and the attitude in which we sit, lie associations of our mental state:

> "The editor sat in his sanctum, his countenance furrowed with care.
> His mind at the bottom of business, his feet at the top of a chair."

When does thought come best from seat of ease and when from the severer bench, on which the schoolboy of old was wont to sit? You get the idea,—now go ahead with the immortal essay. All you need is concentrated thought and literary genius.

Cash Girls

HERE IS AN ADVERTISEMENT which seems to have about it a suggestion of movement and of changing times:

> "Enrich Brothers require cash girls. Promotion guaranteed to good girls; those who prove satisfactory have the advantage of evening instruction, library, and club membership free of charge."

Not elaborate these privileges, perhaps, but indicating that in the struggle, now waging, for happier human life, steady pressure, evenly applied and laid on with patience and good cheer, has not yet had the measure of its possibilities fully taken. Enrich Brothers presumably offer only what they must to obtain and keep cash girls. How long since would such an advertisement have seemed the proper method of securing help? Until in the progress of events some one invents a dustless battle, fighting in the thick of events must be done with little opportunity to see vantage-grounds most newly gained. Sometimes there is a sudden clearing and a revelation of new-won territory that surprises and gives hope.

Representation

WHAT A COMEDY is this tariff business at Washington, what a spectacle! A collection of adults, pretending to represent the people of the United States, when each in reality is fighting blindly for one locality or one group. How many men, in the Senate or the House of Representatives, in any sufficient way consider the welfare of the eighty million? Are there six? Limitations are to be expected in human beings. He who chaffs at shortcomings has but little understanding. It would seem, however, as if this degree of narrowness were extreme. It is our guess at present that the time will sometime come when a neighborhood can send to Congress any man from any State, instead of being forced to an absurdly local choice. If Illinois has no man whom it desires for the Senate, why should it not look to California or Massachusetts? Men elected under a broader system would probably study questions more on their merits than does the average gentleman now engaged in pulling for some petty industry of his own environment or some petty interest which helped elect him.

Indians

BUILDING A STATUE, heroic in size and conspicuous in location, to the vanishing Indian has at least an imaginative value. Whether the red men had all the virtues seen by COOPER, or all the vices seen by PARKMAN, they still stand pathetically as victims, exterminated by the white man's progress. He lied, no doubt, he changed his mind, he used the deadly rifle and the deadly whisky, but back of all incidents lay a more terrible fact, in which all these are swallowed up—the white man's need. We talk of right and wrong, and occasionally the distinction is clear; but who shall say it was wrong that the Indian should be exterminated? Had there been no trickery, no whisky, no needless cruelty, he would still have had to die. It is becoming, nevertheless, for the vanquisher to raise a memorial to the conquered. It is fitting to mark in this way a repentance over some unnecessary sins, and a deeper sorrow at the tragedy that was beyond avoidance.

American Germans

THE CLOSING of two American theaters in which German plays were produced has called out various explanations, one of which at least is true. Germans become nationalized easily wherever they go. Those who emigrate to the United States usually arrive equipped with some knowledge of our tongue and life, quickly extend their study of both, before long speak English with fluency and adopt our customs. You will often meet Germans here who decline to answer you in German. If you address them in that language they reply in English. Many children born here of people who came from the Fatherland can neither read nor talk the language of their parents. The closing of the German theaters, therefore, grows from the same causes which make of German immigrants such excellent American citizens.

Crusades

CRUSADING EASILY PASSES out of focus and out of perspective. It tends to a fury of praise or attack. The desire to score points, to heap up climaxes, grows on the practitioner. Take an article on "The Indecent Stage," published in an excellent periodical. The author, who has shown unusual ability both in investigation and in style, has here set out to prove something and to prove it hard. Some recent dramas have had salacious elements. The magazine writer decides to touch up this situation. If interpreted, rendered exactly as it is, it would make good reading now and a useful record in times to come. But this does not suffice. The author makes of the dozen unwholesome dramas a Saturnalia. He summons an atmosphere of decaying Rome—favorite device of those who specialize on evil. KIPLING'S schoolboy used to yell: "Watch me gloat." Even so our excellent friend and valued writer gloats on the festering trail. By isolating smutty blocks of dialogue, by writing in a heated way, he creates an effect that is momentarily gripping, but is no more of a contribution than an "Evening Journal" headline. After such a bout it is a relief to glide into the cool, easy prose of THACKERAY, because it is beyond all temporary cleverness. It sheds a steady light. It does not crack off into sparks. The historian of the future must discount much popular writing. Overemphasis is too characteristic of the general style. When men write with artificial emphasis the result may be high-colored, [illegible] doomed to perish early.

Real Dramas

LISTS OF GOOD PLAYS always have an interest, which naturally is greater if these dramas actually have been produced. A year ago we spoke with approval of the repertory of the Donald Robertson company of players, which finds increasing favor with the residents of Chicago. During the season just past the following were among the plays which they produced:

MILTON'S "Comus."
THOMAS WOOD STEVENS and WALLACE RICE'S "Chaplet of Pan."
RICHARD BURTON'S "Rahab."
IBSEN'S "John Gabriel Borkman."
GOETHE'S "Torquato Tasso."
LEWIS WORTHINGTON SMITH'S "The Art of Life."
VOLTAIRE'S "The Prodigal."
GOLDONI'S "The Curious Mishap."
BROWNING'S "A Blot in the 'Scutcheon."

For next season the plan is:

ALFIERI'S "Saul."
CALDERON'S "Mayor of Zalamaya."
ECHEGARAY'S "The Stigma."
MOLIÈRE'S "Tartuffe."
MARIVAUX'S "The Game of Love and Chance."
SHAKESPEARE'S "Timon of Athens."
SHERIDAN'S "The Critic."
SHELLEY'S "The Cenci."
BROWNING'S "The Return of the Druses."
SUDERMANN'S "Happiness in a Corner."
HEIJERMAN'S "Links."
VAN EIJDEN'S "The Ice Brand."
IBSEN'S "The Vikings at Helgeland."
BJÖRNSON'S "Marriage."

The list looks good, does it not? Mr. ROBERTSON is steadily increasing his audience, and is willing to wait for a building until a sufficient public demand has been created.

The Other Side

POINTERS TO THE PUBLIC are being put out by a certain street-railway company in a manner that shows intelligence, and in a spirit of friendliness and reason. This road admits its duty of introducing all possible safety devices, but it adds some clear opinions about the part of American impatience and carelessness in causing accidents. Men stand on the steps and jump on or off cars in motion. Women step off backward. Vehicles tear madly down the cross streets. Children steal rides and make the streets their home. Companies can do something to reduce accidents, but the public must do the rest.

Machine Guns and Worship

THE BRITISH EMPIRE is called to repentance. Troubled Englishmen ask for a period of religious fervor that shall rival the intensity of the Savonarola days. This brooding sense of divine immanence is to carry with it a régime of rifle practise and a preparedness for the battle-field. The "Spectator" acutely says: "'Peace in itself is no more virtuous than sleep.'" Most encouraging of all the tidings from the danger-girt isle is the report made by the school of gunnery to the army council, that the horse and field batteries of the Royal Artillery, armed with the modern quick-firing guns, are growing in efficiency. The "Evening Standard" puts it thus: "It is reported that the arming of the batteries with modern guns has raised a new spirit, which one general aptly calls 'the quick-firing spirit.' Such good guns as those now in use have raised an enthusiasm, the value of which can not be overestimated." Alas, these things do not stir the hearts of the youth in the land as once they did. There are times when an unbidden depression steals over us, suggesting that perhaps a something fierce and powerful has passed out of life forever. If that lust of carnage once goes, no faculty for prayer, no quality of mercy, no grasp of science, no wisdom in council, no tenderness in the home, can ever bring the ancient glory to the nation that has lost that battle fervor. But let us not be too ironical. It is easy for enlightened Americans to feel the anachronism of war. An Englishman is in a different plight. It is no small thing to him that his country in all seriousness is threatened. This danger may be the cause of hysteria, but danger nevertheless there is.

An Upright Judge

WHEN WE SPOKE last week of the case of Judge MACK, it was not because he is the only judge who is seeking reelection against unfair opposition in Chicago. His associates, Judges BRENTANO and CARPENTER, also amply deserve reelection. We selected the case of MACK, because the opposition seemed most intense, and because his standing was so striking. Outside of his admirable record on the bench, the measure of his general activity as a citizen is indicated by these positions:

Professor at the University of Chicago Law School, formerly Professor at the Northwestern University Law School; President of Friends of Russian Freedom, of Milk Commission of Chicago, of League for Protection of Immigrants, of National Conference of Jewish Charities, of Harvard Club of Chicago; Vice-President of Children's Hospital Society of Chicago, of Society for Social Hygiene of Chicago, of National Conference on Dependent Children, of Associated Jewish Charities of Chicago, of American Jewish Committee; Member of the Executive Committee (and formerly Vice-President) of the National Conference of Jewish Charities, of National Conference of Charities and Corrections, of Chicago Tuberculosis Institute, of Civil Service Reform Association, of Chicago School of Philanthropy and Civics; Director and formerly Vice-President of City Club of Chicago; Member of Publication Committee of the Survey; Member of Board of Directors of the Playground Association of Chicago.

Rather obviously, a man whose life takes this direction is not opposed to the welfare of the poor, however firmly he may refuse to be dictated to about the nature of his decisions as a judge.

Opium

OWING TO THE COSMOPOLITAN CHARACTER of its population, San Francisco has had a harder fight against opium than most cities. The Chinese are, of course, more addicted to the drug than any other people. The Eastern States suffer more from the traffic in cocaine than from either opium or morphine. A systematic warfare has been waged by the California State Board of Pharmacy against all drug stores selling opium. To the surprise of the Board, the Chinese Six-Companies have cooperated in the campaign. Even among the Chinese the men who sell opium, those who use it, and those who conduct opium joints are the outcasts of society. It is the wash-house Chinaman, the fruit-picking Chinaman, and those who are forced to hard labor, that are most addicted to the drug. It has not touched the Japanese, who lives altogether apart from the Chinaman. The Board has prosecuted one hundred and fifty-two cases and secured convictions in every case. The third offense is punishable by a jail sentence only; the first two by fine or imprisonment. The Treasury Department at Washington not long since issued an order that no more smoking opium should be imported into the United States. At the time there was about eighty-five thousand pounds of smoking opium in the San Francisco bonded warehouses, the duty on which was $6 a pound. In forty-eight hours the opium was all gone. The Chinamen wanted it where they could be sure of it. Later, the Government extended the time for importation to April 1, 1909. Announcement was then made in the San Francisco press that some two hundred thousand pounds of the drug was on its way in a Chinese steamer that would arrive before April 1. The effect of the campaign in California has been to drive a great many of the lower order of "fiends" out of the State and to lessen considerably the sale of the drug. Men have been caught in the "Barbary Coast" district of San Francisco with the drug, prepared for sale and done up in small packages concealed in their pockets, their hats, and even their shoes. As a result of the Opium Congress which met in Shanghai in January last, the various countries are limiting the supply by curtailing the growth of the plant—a remedy still untested. The Chinese have six or seven alleged remedies for the cure of the habit. Every one of them contains morphine. The Six-Companies have earnestly sought a remedy. They manufacture and distribute free certain herb teas, but nothing, so far, has been found that will permanently cure.

Life, Etc.

A YOUNG WRITER the other day proposed to do an article for us on a "new" subject which he had just "discovered" in Ohio. It was one of those topics which are suggested at least once in every season, but such a proposal not infrequently reminds an editor that he must keep on guard. No matter how young he feels he must not forget that he does grow older, while his readers have everlasting youth. Life, the producer, and death, the destroyer, are the equalizing agents, and the average age of the readers of COLLIER'S actually remains approximately the same. An editor is wise who keeps the young about him. He must have them in his office; he must have them among his writers, and he must cultivate their interests. If he neglects to do so he will find that his periodical has passed beyond the crowd and is standing in curious isolation. In the same manner the individual reader must remember his own relation to the great body of readers. He also grows ever so little older year by year. That which interests him now may not have interested him in the past, may not interest him in the future, and does not necessarily interest every one else. In youth we enter eagerly into the life about us, pass through all the great centers of interest, and, at the end, emerge from the crowd. But the crowd remains—to be taught, to be entertained, and to experience for the first time the thrills and aspirations that make up life. The editor of COLLIER'S ought in spirit to remain forever, like the average of his readers, at about the age of thirty-five.

Truth

IT IS THE KEYSTONE in the arch of home, the mistress of its other virtues. It is the shield of innocence, the avenger of guilt. It is the highest strain in the music of patriotism. Prospering commerce will not survive its betrayal, nor will ambitious statesman, ignoring it, write his name upon the world's larger page. It is the final standard by which we judge men and nations. It is the coin and courage of the world's highest thought, the seed of the world's best literature. It is the dawn that has dispersed the night of error, oppression, cruelty. It takes its own time to command the attention of men, but it is the courser that, sooner or later, wins every race. It retreats not. It is the light that guides the heart of childhood and rules the spirit in its supreme hour. It is the balm of wounded souls. It is the rainbow of promise. It is the strength, kingdom, power, and majesty of the ages.

Mohamed V, the New Sultan of Turkey, Assumes the Throne

In one of the upper pictures the Padishah is shown on his way to the Mosque of Ayoub to take part in the ceremony of the sword on May 10 (see page 22). The lower photograph is probably the first one ever made of the Lower House of the Turkish Parliament in session. The other pictures show the troops of the Constitutionalist army occupying Constantinople after the overthrow of Abdul Hamid

Following the evergreen hedge around a final corner, she emerged stealthily

"Where Thieves Break In"

The Story That Lay Behind the College Pin

By JOSEPHINE DASKAM BACON

Illustrated by ALICE BARBER STEPHENS

"The Pretenders," the first of the adventures of Caroline, appeared in the issue of January 30

ONE glance at Caroline's shoulders, hunched with caution; the merest profile, indeed, of her tense and noiseless advance up the narrow gravel path, would have convinced the most casual observer that she was bent upon arson, at the least. At the occasional crunch of the gravel she scowled; the well-meant effort of a speckled gray hen, escaped from some distant part of the grounds, to bear her company, produced a succession of pantomimic dismissals that alarmed the hen to the point of frenzy, so that her clacks and cackles resounded far beyond the trim hedge that separated the drying-ground from the little kitchen garden.

Caroline scowled, turned to shake her fist at the hen, now lumbering awkwardly through the hedge, and sat down heavily on a little bed of parsley.

"Nasty old thing!" she gulped; "*any*body could've heard me! And I was creeping up so still . . ."

She peered out from behind a dwarf evergreen and made a careful survey of the situation. The big square house stood placid and empty in the afternoon sun; not a cat on the kitchen porch, not a curtain fluttering from an open window. All was neat, quiet, and deserted. Caroline set her lips with decision.

"We'll pretend there wasn't any hen," she said in a low voice, "and go on from here, just the same."

Rising with great caution, she picked her way, crouching and dodging, from bush to bush; occasionally she took a lightning peep at the silent house, then dipped again and continued her stalking. Following the evergreen hedge around a final corner, she emerged stealthily in the lee of the latticed kitchen porch and drew a breath of relief.

"All right so far," she muttered; "I wondered if that old gray cat with the new kittens is fussing around here?"

But no breath of life stirred under the porch as she stooped to peer through a break in the lattice, and with a final survey of the premises inserted her plump person into the gap and wriggled, panting, into the darkness below.

It was stuffy and dusty there; the light filtered dimly through the diamond spaces, and the adventurer, crawling on hands and knees, cannoned into a shadowy pile of flower-pots, sneezed violently and groveled wrathfully among the ruins for at least five minutes, helplessly confused. Quite by accident she knocked her cobwebbed head against a narrow, outward-swinging window, seized it thankfully, and plunged through it. Hanging a moment by her grimy hands, she swayed a little fearfully, then dropped with a quick breath to the concrete floor beneath, and smiled with relief as the comparative brightness of a well-kept cellar revealed her safety. Vegetable bins, a neat pile of kindling-wood, a large portable closet of wire netting, with occasional plates and covered dishes suggestively laid away in it, met her eye: on the floor in front of this last rested a little heap of something wet and glistening. Untidy as it looked, it had an eatable appearance to Caroline, whose instinct in these matters was unimpeachable, and, bending over it, she inserted one finger.

"Currant jelly!" she whispered, thoughtfully licking the inquiring member. "The idea!"

She approached the wire closet and peered along the shelves; there was no jelly there.

"Dropped it getting it out," she pursued. "I wonder why Selma didn't wipe it up?"

Suddenly her face brightened.

"We'll keep right on and pretend '*twas* burglars," she announced to the quiet cellar, "and they stole the jelly in a hurry and dropped this and never noticed, and went upstairs to eat it and get the silver! And so I found 'em after all!"

Still on tiptoe she left the cellar, stole through the laundry, and crept mysteriously up the back stairs. So absorbed she was that a creaking board stopped her heart for a breath, and a slip on the landing sent her to her knees in terror. The empty quiet seemed to hum around her: strange snappings of the old woodwork dried her throat. With her hand on the swing-door that led into the dining-room, she paused in a delicious ecstasy of terror, as the imagined clink of glass and silver, the normal clatter of a cheerful meal, seemed to echo in the air.

It was always difficult for Caroline in such moments of excitement to distinguish between what she saw and heard and what she wished to see and hear, and at this ghost of table music she smiled with pleasure.

"The house is empty," said her common sense, but she pursed her lips and whispered: "They're up here eating—they've come for the silver!"

By fractions of inches she pushed the door on its well-oiled hinge and slipped noiselessly into the dining-room.

A broad beam of light fell across the dark, wainscoted room, and in the track of it sat a handsome, well-dressed man busily eating. In front of him was a roast chicken, a cut-glass dish of celery, and a ruby mound of jelly; a crusty loaf of new bread lay broken at his right; at his left, winking in the sunbeam, stood a decanter half-filled with a topaz liquor. He was daintily poising a bit of jelly on some bread, the mouthful was in the air, when his eyes fell on Caroline, an amazed and cobwebbed statue in front of him.

The hand that held the bread grew rigid. As spilled milk spreads over a table, the man's face was flooded with sudden grayish-white; against it his thin lips were marked in lavender. While the grandfather clock ticked ten times they stared at each other, and then a wave of deep red poured over his face and his mouth twitched.

"What are you doing here, little girl?" he demanded sternly, pointedly regarding her dusty, rumpled figure.

Caroline gulped and dropped her eyes.

"I—I—nothing particular," she murmured guiltily.

The man laid the piece of bread down carefully and wiped his fingers on the napkin spread across his knees.

"Some time," he said in a leisurely drawl, "you'll burst into a room like that, where a person with a weak heart may be sitting, and that'll be the last of 'em."

"The last of 'em?" Caroline repeated vaguely.

"Just so. They'll die on you," he explained briefly.

Caroline stepped nearer.

"Is—is your heart weak?" she inquired fearfully. "I'm so sorry. So is my Uncle Lindsay's."

"What were you sneaking about so soft for?" he demanded.

She flushed.

"I—I was playing burglars," she confessed, "and I got to where they were in here with the silver, and—and I was coming in to—to get them, and I didn't expect anybody would be here, really, you know, and I was surprised when I saw you. I didn't know about your heart."

"Burglars?" said the man, laughing loudly. "Well, that's one on me! I must say you're a nervy young party. So you thought I was a burglar, did you?"

"Oh, no!" Caroline cried. "Of course not—I meant I was playing it was burglars; I didn't mean you. I—I didn't know anybody was here."

"Humph!" said he. "What made you play burglars? Anything in that line yourself, ever?"

Caroline stared uncomprehendingly.

"My mother doesn't think it's right for Aunt Edith to go off and leave the house all alone the way she does," she explained. "She's always telling her some one will break in if she doesn't leave Selma or a dog. And she never locks a thing, you know—she says if they intend to get in they will, and that's all there is about it. So this time she went for three days, and Miss Honey and the General and Delia; and Selma and Anna went to a wedding, and Ed went somewhere about a lawn-mower, and little Ed was going to get the pony shod. I told Aunt Edith I'd—" she coughed importantly—"keep an eye on the house."

"I see," said the man.

He poured himself two inches of the topaz liquor; it rocked in the glass.

Caroline sniffed inquiringly.

"That's the Scotch," she said; "I know by the smell, partly like cologne and partly smoky. Do you like it?"

The man raised the glass to the level of his eyes and watched the light play through it, then made a slight movement of his arm and the whisky disappeared smoothly.

"Your Aunt Edith's taste is as good as her voice," he said, eying Caroline carefully.

"Oh, that's not Aunt Edith's—that's Uncle Joe's," she explained. Then, as it flashed across her suddenly: "Did you want to see him? He's in New York, too. They're going to have pictures taken of Miss Honey and General. But after that Uncle Joe's going to Chicago. Did you want him?"

"N-no, not exactly," said the man, studying his well-kept finger-nails. "I can't say I do. No, my business is with—is more—"

He stopped suddenly and followed the direction of Caroline's eyes.

There on the sideboard behind him stood a leather suit-case, long and solid-looking. It was open, and tight rows of forks and spoons filled it.

The room was quite still for a moment. Caroline wanted to show by some intelligent remark that she understood the situation and could easily imagine what the man was doing with the silver, but she found this difficult.

Strange people came to Aunt Edith's house. Dark, foreign-looking men ate meals there at unusual hours; once Caroline had seen with her own eyes a plump, yellow German fall suddenly on his knees at Aunt Edith's feet, as a hand-organ struck up its brassy music under the window, and burst into passionate singing, waving a whiskbroom in the air and offering it to Aunt Edith with the most extraordinary force of manner. And her aunt, who wore at the time a raincoat and tam-o'-shanter cap, had leaned forward graciously, gurgled out a most delicious little tune, accepted the whiskbroom, affected to inhale its fragrance rapturously, and whirled into a big and beautiful song in which the plump, yellow gentleman joined, and, rising, seized her in his arms, at which point they drowned the hand-organ completely, and the hand-organ man and Uncle Joe applauded loudly and they gave the hand-organ man all he could eat and a dollar.

You may see from this that one did not look for the commonplace in Aunt Edith's house. Moreover, the stranger was not unlike some of her aunt's friends; though he was handsome and assured and noticeably at his ease, Caroline felt that his manner was subtly different from that of the friends of her own family. But even the most unconventional guest had never collected the sideboard silver, and a little feeling was growing in the air . . . doubt and a bit of what might have begun to be fear . . . when suddenly the man began to laugh. It was abrupt, and it rang harshly at first, but grew with every moment warmer and more infectious, so that Caroline, though she felt that she was in some way the cause of it, joined in it finally, in spite of herself.

"If you knew what a sight you were!" he exclaimed, wiping his eyes with the napkin, "with your hair all cobwebs and all that dirt on your knees and those finger-marks on your apron, and being so small and all—" he began to chuckle again.

"Small?" she repeated portentously.

"Oh, I didn't mean small compared with—with anybody else the same size," he assured her quickly.

Catching her mollified glance, he went on more soberly:

"And how did you get in, now? No doors, I'll bet."

"Under the kitchen porch, through the little cellar window and up the back stairs," she explained.

"You mean to say you were out in that little back hall and I never heard you?"

She nodded. "I took pains to be still," she added, "so as to surprise the—so if there had been—"

"I understand," he said gravely—"so as to get them if they had been there. Well, you'd have done it. You're all right. Now, I suppose you're wondering what all this means, aren't you? You haven't got any idea who

I am, have you? You don't know one single thing about me, and you may be thinking—"

"I know one thing about you," she interrupted: "I know you went to Yale."

The man's jaw dropped, his hands gripped the arm of the chair.

"And how in—how did you know that?" he cried roughly, with blazing eyes.

Caroline shrank a little, but faced him.

"Your pin," she said, pointing to his vest. "I saw it when you held your arm up."

The man sank back in his chair and fingered the little jeweled badge unconsciously.

"Well, of all the cute ones . . . so you've seen this before?" he suggested.

"Of course I have—my brother has one and my Uncle Joe and Uncle Lindsay and Cousin Lindsay and Cousin Joe."

"All went to Yale?" he inquired.

"Lindsay and Joe are there now—they're seniors," she informed him. "The General's going when he grows up. All the Holts go there. Grandfather Holt went."

"You don't say," said the man, bending forward in genuine interest. "I guess it's a pretty good college, eh?"

"The best of them all," she assured him. "I'll tell you an awful funny thing," she went on abruptly. "You know all the Holts look alike. Well, when Uncle Lindsay first went to Yale he was walking along the campus and right by Old South Middle he met the president. And the president stopped and said: 'Well, well, I see the race of Holts is not yet extinct. Good afternoon, sir!' The president. And he never saw him before!"

"You don't say," he repeated. "Old South Middle—that's it. That's the one."

Suddenly he shrugged his shoulders and took out his watch. "This'll never pay the rent!" he said briskly. "Now let's get to business. I suppose you were surprised to see all that stuff in the suit-case?"

Caroline nodded and grinned back at him, his own quick smile was so friendly and compelling.

"Well," he continued, rising and bunching the napkin beside his plate, "I don't blame you. Not a bit. I'd have been the same myself. And you'll be even more surprised when you find out what I'm doing—that is" —he stopped abruptly—"unless your Uncle Joe has told you already and sent you over to help?"

She shook her head.

"Didn't, eh?" He stepped over to the sideboard, wiping off the knife and fork he had been using, and packed them with the others. Caroline, watching his hands, noticed in the corner of the case a familiar chamois-skin bag; she had often seen it on Aunt Edith's bureau.

"Well, now," he continued, "if I had a niece as sharp and smart and quiet as you are, Missy, I'd tell her my plans, I would, and get her to help me. I wonder your uncle didn't. Sure he didn't mention me—Mr. Barker?"

Again she shook her head, her eyes fastened to the bag.

"Well," said the man, shutting down the cover of the suit-case and strapping it tightly, "it's this way. You may have heard your uncle say something about it being kind o' careless, leaving the house so much alone? Anyhow, whether he's talked to you or not about it, he has to me often enough."

"Oh, yes!" Caroline was conscious of a distinct sense of relief. "I've often heard him. Then you *do* know Uncle Joe?"

The man faced her, starting in violent surprise.

"Do I know Uncle Joe?" he repeated. "Do I *know* him?" He shook his head feebly and gazed about the room. "She says do I know Joe Holt! And what should I be doing eating my lunch here if I didn't?" he demanded. "What should he tell me about his troubles for and ask me to help him, if I didn't know him? Is it likely I'd be packing his silver in my suit-case if I didn't know him?"

Caroline stood abashed.

"I should think you might guess by this time what the joke is," he went on forgivingly, seeing that she was quite overcome with her own stupidity; "but as I have to get away pretty quick now, I'll tell you. You see, Joe isn't coming right back with your aunt; he's going on to Chicago, and that may keep him some time away—"

"I know," Caroline interpolated.

"And he wanted your aunt to have somebody stay in the house to look after it—he felt worried. But no, she wouldn't. Wouldn't even get a dog—that is," eying Caroline steadily, "unless she's got one lately, but when I last heard—"

"No," she assured him, "she wouldn't. Aunt Edith hates dogs."

"So Joe told me. 'Now what would you do, Henry,' says Joe to me—that's my name, Henry Barker—'what would you do with a woman like that?'

"'Do, Joe?' says I. 'Why, I'll tell you what I'd do. I'd teach her a lesson—that's what. I'd give her one good scare, and then you'd find she'd take your advice after that.'"

At that point the man reached for his overcoat and began to struggle into it.

"'But I don't know how to, Henry,' says he. 'You don't,' says I. 'Nothing easier. Just tip somebody off when the house is empty and they'll run up and slip in, take what silver and jewelry they can find in a hurry, pack it up careful and hide it away wherever you say. Then when your wife gets back and finds 'em gone there'll be the d—— there'll be a row, and when she says it's her fault for not leaving the servants in the house, and she'll never do it again, then you say: "All right, my dear, I'm glad you've learned your lesson," and step out and get the bag! How's that?' I said."

He put his hat on, drew a pair of gloves from his pocket, and looked hard at Caroline; her answering glance was troubled and non-committal. He scowled slightly and rested one hand on the bag.

"'All very well, Henry,' says Joe to me; 'but who's to do all this? I don't know any one that would dare to, let alone be willing,' he went on, glancing hurriedly around the room. 'You know as well as I do that if they should get caught doing it, anybody would swear 'twas burglary, plain and simple, and run 'em right in. They'd call the police. It would look bad for whoever did it, you know,' he said."

"He might have asked me. I'd love to do it," Caroline muttered resentfully.

As a matter of fact, the scheme was sufficiently like many a practical joke of her irrepressible uncle. Better than any one, Caroline, his conspirator-elect, knew the lengths he was capable of going to confound or scandalize his adjacent relatives.

"Of course," said the man, with relief in his voice, "that's why I asked you if he hadn't. I guess he was afraid you wouldn't dare. I'd have trusted you, though, myself."

She looked gratefully at him.

"Then I said: 'Why, Joe, if that's the way you feel about it, I'll do it myself,'" he concluded, lifting the suit-case from the sideboard and grimacing at its weight.

"'What's the good,' says I, 'of calling yourself a friend if you can't run a little risk? Just tell me the day to come and where you want 'em put—where you pick a good safe place—and I'll 'tend to it that hour,' I said, 'and you'll do as much for me some day when I'm in a tight place.'"

He settled his hat firmly and moved to the long window.

"I'll have to hurry if I don't want to lose my train," he explained.

"But where's the place?" Caroline cried excitedly. "What place did Uncle Joe pick out? Won't you tell me? I won't tell—truly I won't!"

The man paused with one hand on the window button and looked thoughtfully at her.

"By George," he announced, "I've a good mind to tell you! I'm not supposed to tell a soul, you know, but you've been such a brick, and being his own niece and all, I think you've got a *right* to know: I really do."

Caroline nodded breathlessly.

"Look here!" he cried. "I'll trust you if your uncle won't. I don't like the place he told me, much—it isn't safe enough. There's two thousand dollars' worth of stuff here, counting the—counting everything, and an old barn's no place for it. See here. You promise me to stay here for an hour—one hour exactly, by the clock—and I'll leave this bag at your house for you. Then you can hide it under your bed, or anywhere you want, till to-morrow, and then you can manage the rest to suit yourself. How's that?"

"Oh, that will be grand!" she gasped.

"You can just tell your uncle that I saw you were game and I trusted you, if he wouldn't," he concluded, opening the window, "and I'll take this to your house in half an hour. Will you promise not to leave for an hour? We mustn't be seen together, you know, or people might suspect, and then the game'd be up. And will you look this window after me and go out the same way you came?"

"Yes, yes! I promise, I promise solemnly," she assured him, flushed with importance; "and tell 'em not to open it, will you? They might. Say it's private for me, will you?"

"All right," he said soberly. "I'm kind o' sorry they went to Yale," he added abruptly. "I'd rather—s-sh! What's that?"

He stood rigidly listening; his eyes rolled back, his hand raised in warning.

"I don't hear—" she began, but his angry gesture and the furious whisper that went with it cowed her into a silence as strained as his own.

For a moment it seemed to Caroline that she heard a faint snap as of a board released from pressure, but dead quiet followed; she held her breath with excitement as the man lifted the suit-case over the ledge and, peering over the balcony, stepped out. Suddenly he paused, one leg over the sill; his eyes rolled back toward the room, his lips tightened. So terrible and so despairing his face had turned that Caroline rushed to the window. Even as she started she heard quick, soft steps in the hall, and pointed to the freedom outside.

"Jump! Oh, jump, Mr. Barker!" she whispered in a glow of terror. "Hurry! It *is* somebody!"

He pointed silently to the ground below, and with her heart pounding heavily she peered over the sill. Directly below them crouched a Great Dane, brindled, enormous, one eye fixed sternly on the window.

The soft steps paused: perhaps she had imagined them! Perhaps, if they kept quite still, that quaking pair, perhaps . . . the man breathed like a drowning swimmer; it seemed to Caroline she must scream.

While the grandfather clock ticked ten times they stared at each other, and then a wave of deep red poured over his face and his mouth twitched

A door flew open.

"Look out there—it's loaded!" the voice came sharp as a cracked whip.

Caroline gave a shriek of joy.

"Why, it's Lindsay!" she cried. "It's just Cousin Lindsay!"

A tall, powerful young man came in behind a leveled revolver.

"Car—what—be still, there!" he gasped, steadying the weapon. The man stood motionless, his eyes on the ground.

"It's all right—I never carried a gun in my life," he said quietly.

"Oh, Lindsay, it's only a joke!"

Caroline ran toward him, stopping in horror at the ugly winking eyes of the revolver.

"Mr. Barker only meant—tell Lin about it!" she entreated, sick with foreboding at the dogged man before her, the scornful, flushed boy at her side.

"I guess you better tell him, Missy," said the man in a low, empty voice.

"Go home, Caroline; go straight home this moment."

Caroline had never heard her cousin speak in that tone, and it was partly in tears, partly in wrath, that she answered:

"I will *not* go straight home, Lindsay Holt, and you needn't talk to me that way, either! Uncle Joe himself asked Mr. Barker—"

She began glibly enough, but even to her simple consciousness the story wavered and rang false, with this stricken, passive man before her. Her voice faltered, she choked . . . had Uncle Joe really asked this man to get the emeralds? Was it possible that—Lindsay laughed disagreeably.

"If you've quite finished, Caroline, will you go home?" he demanded, his eyes still on the revolver.

She gulped painfully; her faith tottered on the last brink.

"Oh, let it go at that; can't you?" the man broke in roughly. "What difference does it make to you, eh, how this part of the job gets done? Have I made any trouble yet? My goose is cooked, all right, and we'll—we'll talk that over, later, when Missy goes, but—but couldn't you"—he looked almost appealingly at the young fellow—"couldn't we—it's all there in the suit-case—"

"It was going under my bed, Lin—I'd have been careful." Caroline was hoping against hope, now.

"You see, Missy," said the man quickly, in almost his old manner—"you see how it turns out. It was a bad plan, I guess—you can see how your cousin takes it. You'll have to—to tell your uncle how it worked; it's one on me, all right."

"Suppose we put it all back and—oh, Lord, what's the use?" he ended suddenly. "Cut it short—what the hell do I care?"

He dropped suddenly into the chair behind him; his head fell over on his arms, and the stiff hat rolled along the floor.

The young man stared curiously at him, but the weakness was genuine; every muscle was relaxed.

Lindsay's face softened a little. "As far as that goes, you're right," he said curtly, "though it's a little late in the day. Look here, Caroline. Mr.—Mr. Barker and I don't agree very well on the best way to teach people to lock their houses. I—it seems to me a pretty poor joke. Uncle Joe never meant it to go quite so far, I'm quite sure," he concluded jerkily. "I—I want to do the best thing all around, but," looking anxiously toward her for a second, "this is a little too—a little too—"

Her face cleared at his change of tone. "I know," she returned eagerly—"I know just what you mean, Lindsay; I think so, too. Anybody would think—"

"That's it," he said briefly.

"You say you thought so yourself at first," she added, looking uncomfortably at the bent figure in the chair, "and that made him feel—"

"Well, well, I understand now," Lindsay interrupted irritably; "it's all right now, Caroline. Hadn't you better go? Mr.—Mr. Barker and I will come along later."

"Oh, I'll wait and go with you, Lin," she returned, almost assured, now. "Why do I have to go first?"

The man lifted his head; at sight of the young fellow's nervous perplexity he smiled faintly.

"Suppose you run along, Missy," he suggested; "your cousin and I want to talk business—and then I must be hurrying on—hurrying on," he repeated vaguely, with dazed eyes. He raised his hand to his head; Lindsay started forward, the revolver loose in his hand.

"Where did you get that pin?" he cried sharply. "Give that to me."

The man fingered the pin thoughtfully. "You're 'way off there," he said. "That's not—that's not—"

"Not one of your 'jokes'?" Lindsay's voice rang disagreeably. "I happen to know the contrary. I'll trouble you to hand it over. I'll soon know to whom it belongs."

Caroline, hanging over the sill, lost in talkative admiration of the Great Dane, was oblivious for the moment of the room behind her.

"It belongs to my son," said the man. There was a moment of silence. Outside the great hound whined softly.

"His name Barker, too?" Lindsay asked coldly, half-rising.

"No, sir. His name is James Wardwell," said the man defiantly.

Lindsay sprang to his feet.

"That's a dirty lie!" he shouted. He stood over the man, careless of the revolver. "And you'll pay for it, too!"

Caroline stared aghast at them.

"Look out for the gun," the man warned him, and, as with a flush of mortification Lindsay mastered his weapon, he added quietly: "You can't be too careful with firearms."

Lindsay gritted his teeth.

"You—you—" he began furiously. The man met his eyes for a second, then with a dark, slow blush dropped his arm.

The boy drew back uncertainly.

"What's the good of lying like that?" he said. "How's it going to help you?"

The man looked at the floor.

"Don't be a fool—how's it going to?" Lindsay repeated irritably.

The other did not move.

"Is that the truth?" Lindsay's voice was strained and worried.

The man drew a long, uneven breath. "Yes," he answered.

Lindsay glanced at the suit-case, at the man in the chair, at the revolver.

"Jimmy!" he muttered. "Jimmy B.!" For the first time since he had last addressed her, he noticed Caroline. He frowned, then suddenly his face cleared.

The man half rose, but fell back with a grunt of pain

"Look here," he said, his eye again on the man, "do you know where all that silver belongs?"

She nodded.

"I help Selma sometimes."

"Could you put it back so nobody would know?"

"Oh, yes," she answered him; "and the—the things from the bureau, too?"

His lips curled scornfully and his hold on the revolver tightened.

"A thorough job, wasn't it?" he muttered; then controlling himself, he answered evenly: "Oh, yes, might as well get 'em all back. We'll just step into the library a minute."

The man got up and went before him into the library, stumbling as he walked.

Lindsay watched him drop into a seat and stood in front of him.

"What proof have you got that what you said in there is true?" he asked abruptly. "Before we leave the house I must know."

"Proof?" the man repeated. "Proof?" He stared almost vacantly at Lindsay.

"Why, yes," the boy answered impatiently. "You say you're the father of one of the most brilliant men in my class; you wear the pin of his society—a pin I happen to know he lost recently—and I find you stealing my aunt's spoons! For God's sake, what's the meaning of it?"

The man twisted his fingers together and moistened his lips.

"It kind of settled on me all at once," he said in a hollow voice. "I felt it since morning. She scared me so to begin with—she came like a ghost—and then the dog finished me. I had one o' them once and he nearly did me up—turned on me. Jim pulled him off," he added; "but they give me a turn whenever I see 'em."

Lindsay stamped angrily.

"Will you prove what you say? Or shall we discuss it at the station-house?"

The man raised his hand deprecatingly. "No, no," he said hastily. "No—that's what I don't want. That's why I—that's the reason I don't—good Lord, don't you know you've given me a half a dozen chances, if I'd had the nerve for the risk? Why, I c'd've butted that gun out of your hand twice in the last ten minutes, you young fool! How long d'ye suppose it would take a husky man to back you into one closet and Missy into another and walk off with the stuff? Hey?"

His eyes flashed, he threw back his head and breathed hard, a cornered animal. Lindsay felt a tingle of excitement run down his spine: for a moment there was danger in the air.

"I—I notice you didn't see your way to all this," he said scornfully. But he blushed as he spoke, the man saw it, and Lindsay knew he saw it; he winced and drew himself up in a boyish attempt to save the situation.

"It's quite true—I'm not in the habit of catching house thieves," he said, drawling a little, "and I doubt if many of them are quite such accomplished liars as you appear to be; but my stroke will improve, I've no doubt, as we go on. Would you mind getting up and 'coming along with me,' as they call it, I believe?"

The man made no answer, but raised his hands high above his head.

"If you'll look in that left vest pocket, there's a little leather case there," he said; "and—and you'd better take the pin, too, I guess. I'd be obliged if you'd say you found it somewhere. I never should've put it on."

Somewhat clumsily Lindsay extricated the leather case, cursing his awkwardness and the patience of the man.

A worn little photograph of a boy of eight or nine was in his hand; across the bottom was scrawled in a childish hand: "Daddy, from your son James."

He drew a long breath.

"That's Jimmy, all right," he said, dully.

"If you'll just tear it up," said the man. "It's all I've got, and nobody'd know but some friend that—that would be lookin' for the likeness."

Lindsay threw the picture on the floor. "I won't believe it—it's too sickening!" he cried. "Jim Wardwell's a gentleman! I—I—why, I admired him more than—good God, he's a *friend* of mine!"

The man smiled faintly.

"Oh, Jimmy has fine friends," he said, almost complacently. "He's always gone with the best. He's very particular."

Lindsay's forehead was a network of pain and doubt.

"But Jimmy has plenty of money," he insisted. "He always had the—his things—oh, it's idiotic! You're crazy, that's all."

"Oh, yes, he always had plenty," the man said simply.

In the pause that followed they heard the soft chink of silver through the wall; Caroline was evidently busy.

Lindsay twisted his face into an ugly smile.

"And I thought he was the squarest of the lot," he said, slowly. "I've said so often. We all did. Pretty easy, weren't we?"

"He is!" The man half rose, but fell back with a grunt of pain.

"Oh, *damn* this heart!" he complained fretfully. "I don't know what's the matter with me. That fortune woman, she knew. Last week it was I went. 'You're making a plan to end up your business,' she says to me; 'and so you will, Mister, but not the way you think. There's some trouble coming to you, and a child's mixed up in it. Look out for strange dogs,' she says—they all tell me that—'and run no risks this month. I don't just like the looks of your hand,' she says. And when I saw that child, it was all up with me, I thought. I didn't think the machine would ever get started again. And then that infernal dog . . ."

"We were speaking of—of— Did you say that Jim—?" Lindsay's voice sounded strange even to himself.

The man blinked a moment.

"What—" he said vaguely—"what about Jim? Oh—he don't know anything about it, of course. I sh'd think you'd know enough for that. That's what I'm telling you, if you'd keep still a minute."

He stared thoughtfully at the floor, and Lindsay waited. Caroline ran up the front stairs, and he had counted each step before the man went on.

"So I sent the money regular every quarter," he muttered, as if continuing some tale, "and I'd go to see him

(*Continued on page 26*)

DECORATION DAY

by Bliss Carman

[The Capitol, West Front]

STAND *here in the shadow of the Capitol*
And let your eyes range down across the city,
Where marble buildings rise out of a sea
Of tree-tops, and the Monument floats up
All rose and lilac in the morning light,
A thing of magic by the Potomac shore.

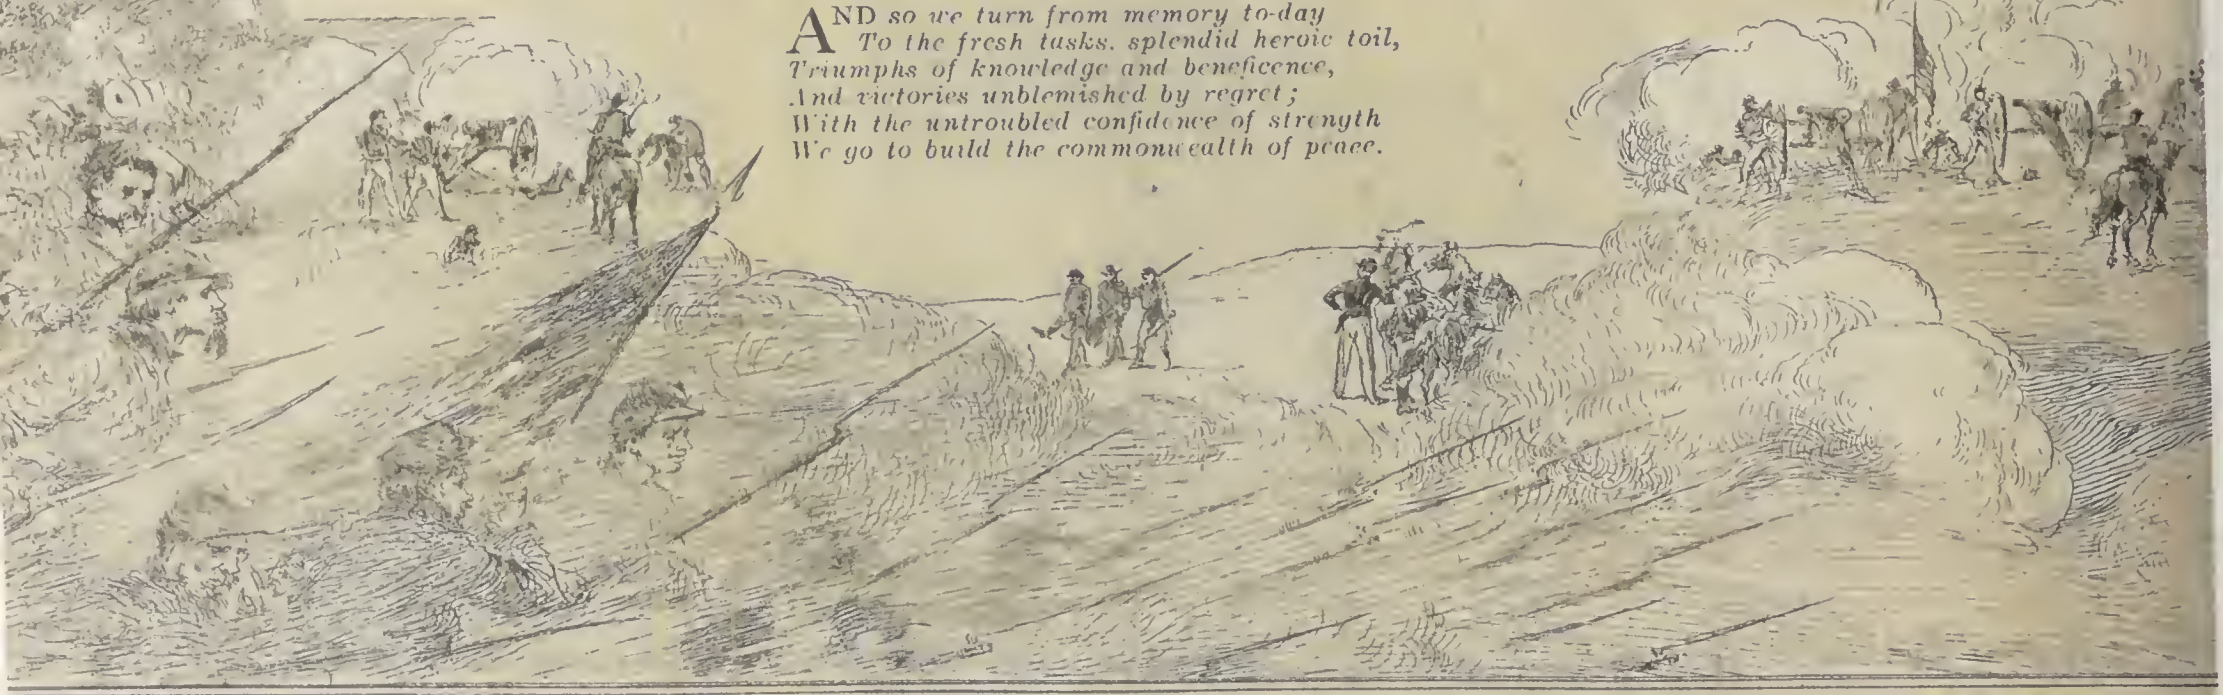
ACROSS *the river on the wooded bank*
Where that colonial portico gleams white,
Is the nation's hallowed ground,—their resting-place
Who gave their lives up gladly for the truth,
Each, as he deemed, a soldier of the right
Impassioned by the justice of his cause.

AND *hark, above the car-bells and the cries,*
A band is playing! Troops are on the move.
Far down the Avenue a column wheels
To pass the pillared Treasury, on the way
To honor its dead heroes sleeping there
On the heights of Arlington ten thousand strong.

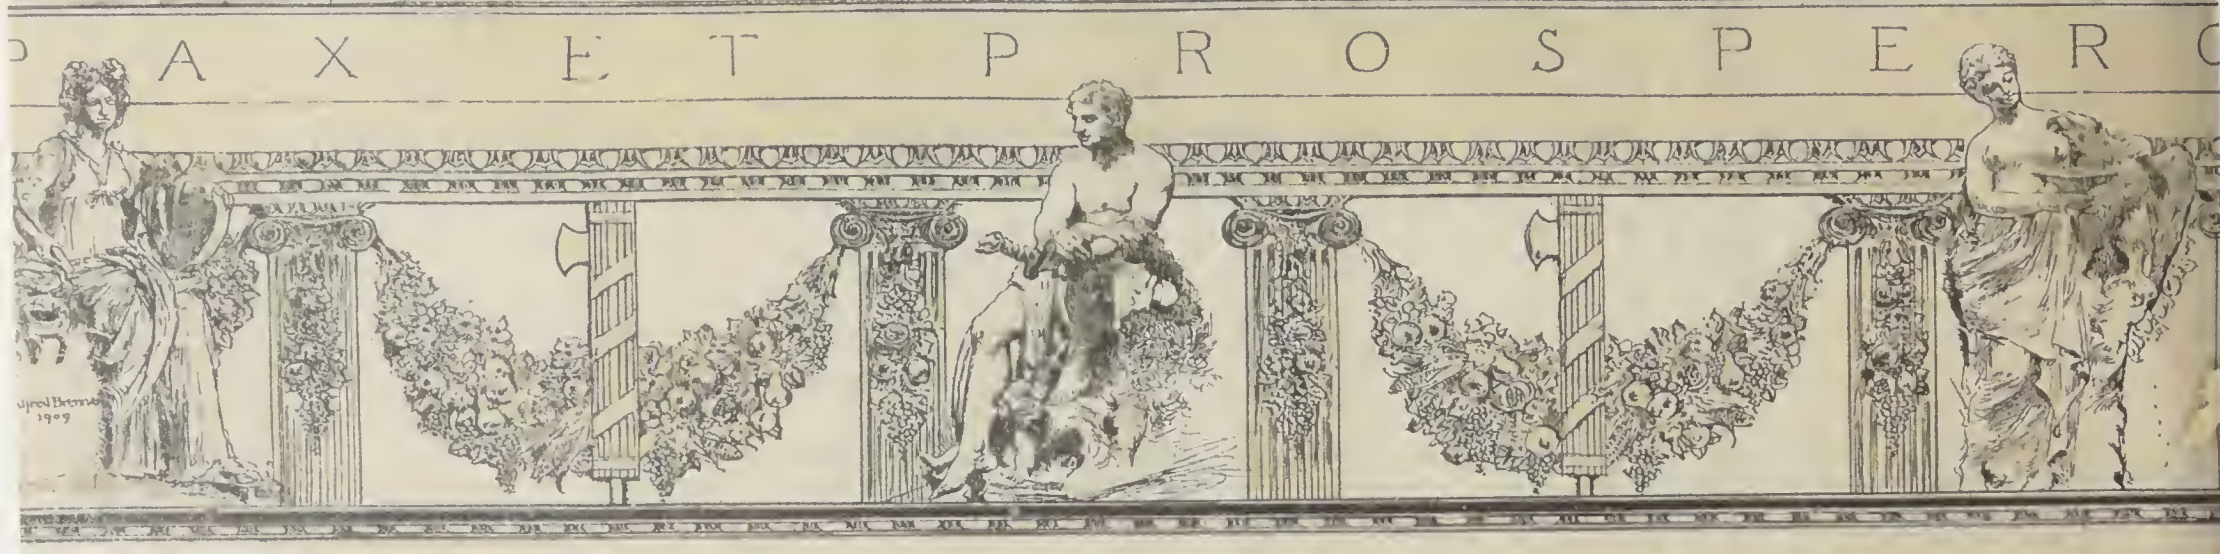
THERE *rests my old friend in his soldier's grave,—*
Old grim idealist with the tender heart,
The grizzled head, gray eye, and scanty speech,
And hand that never faltered in the fight
Through all the rough work of a long campaign.
God keep you, General, with the heroes gone!

IN MANY *a place through all the land to-day,*
Mourners will come, and with hands full of flowers
Pay loving honor to the valiant dead
Who gave their last breath for the cause they loved,
For liberty and justice, and flinched not
To pay the utmost for their noble dream.

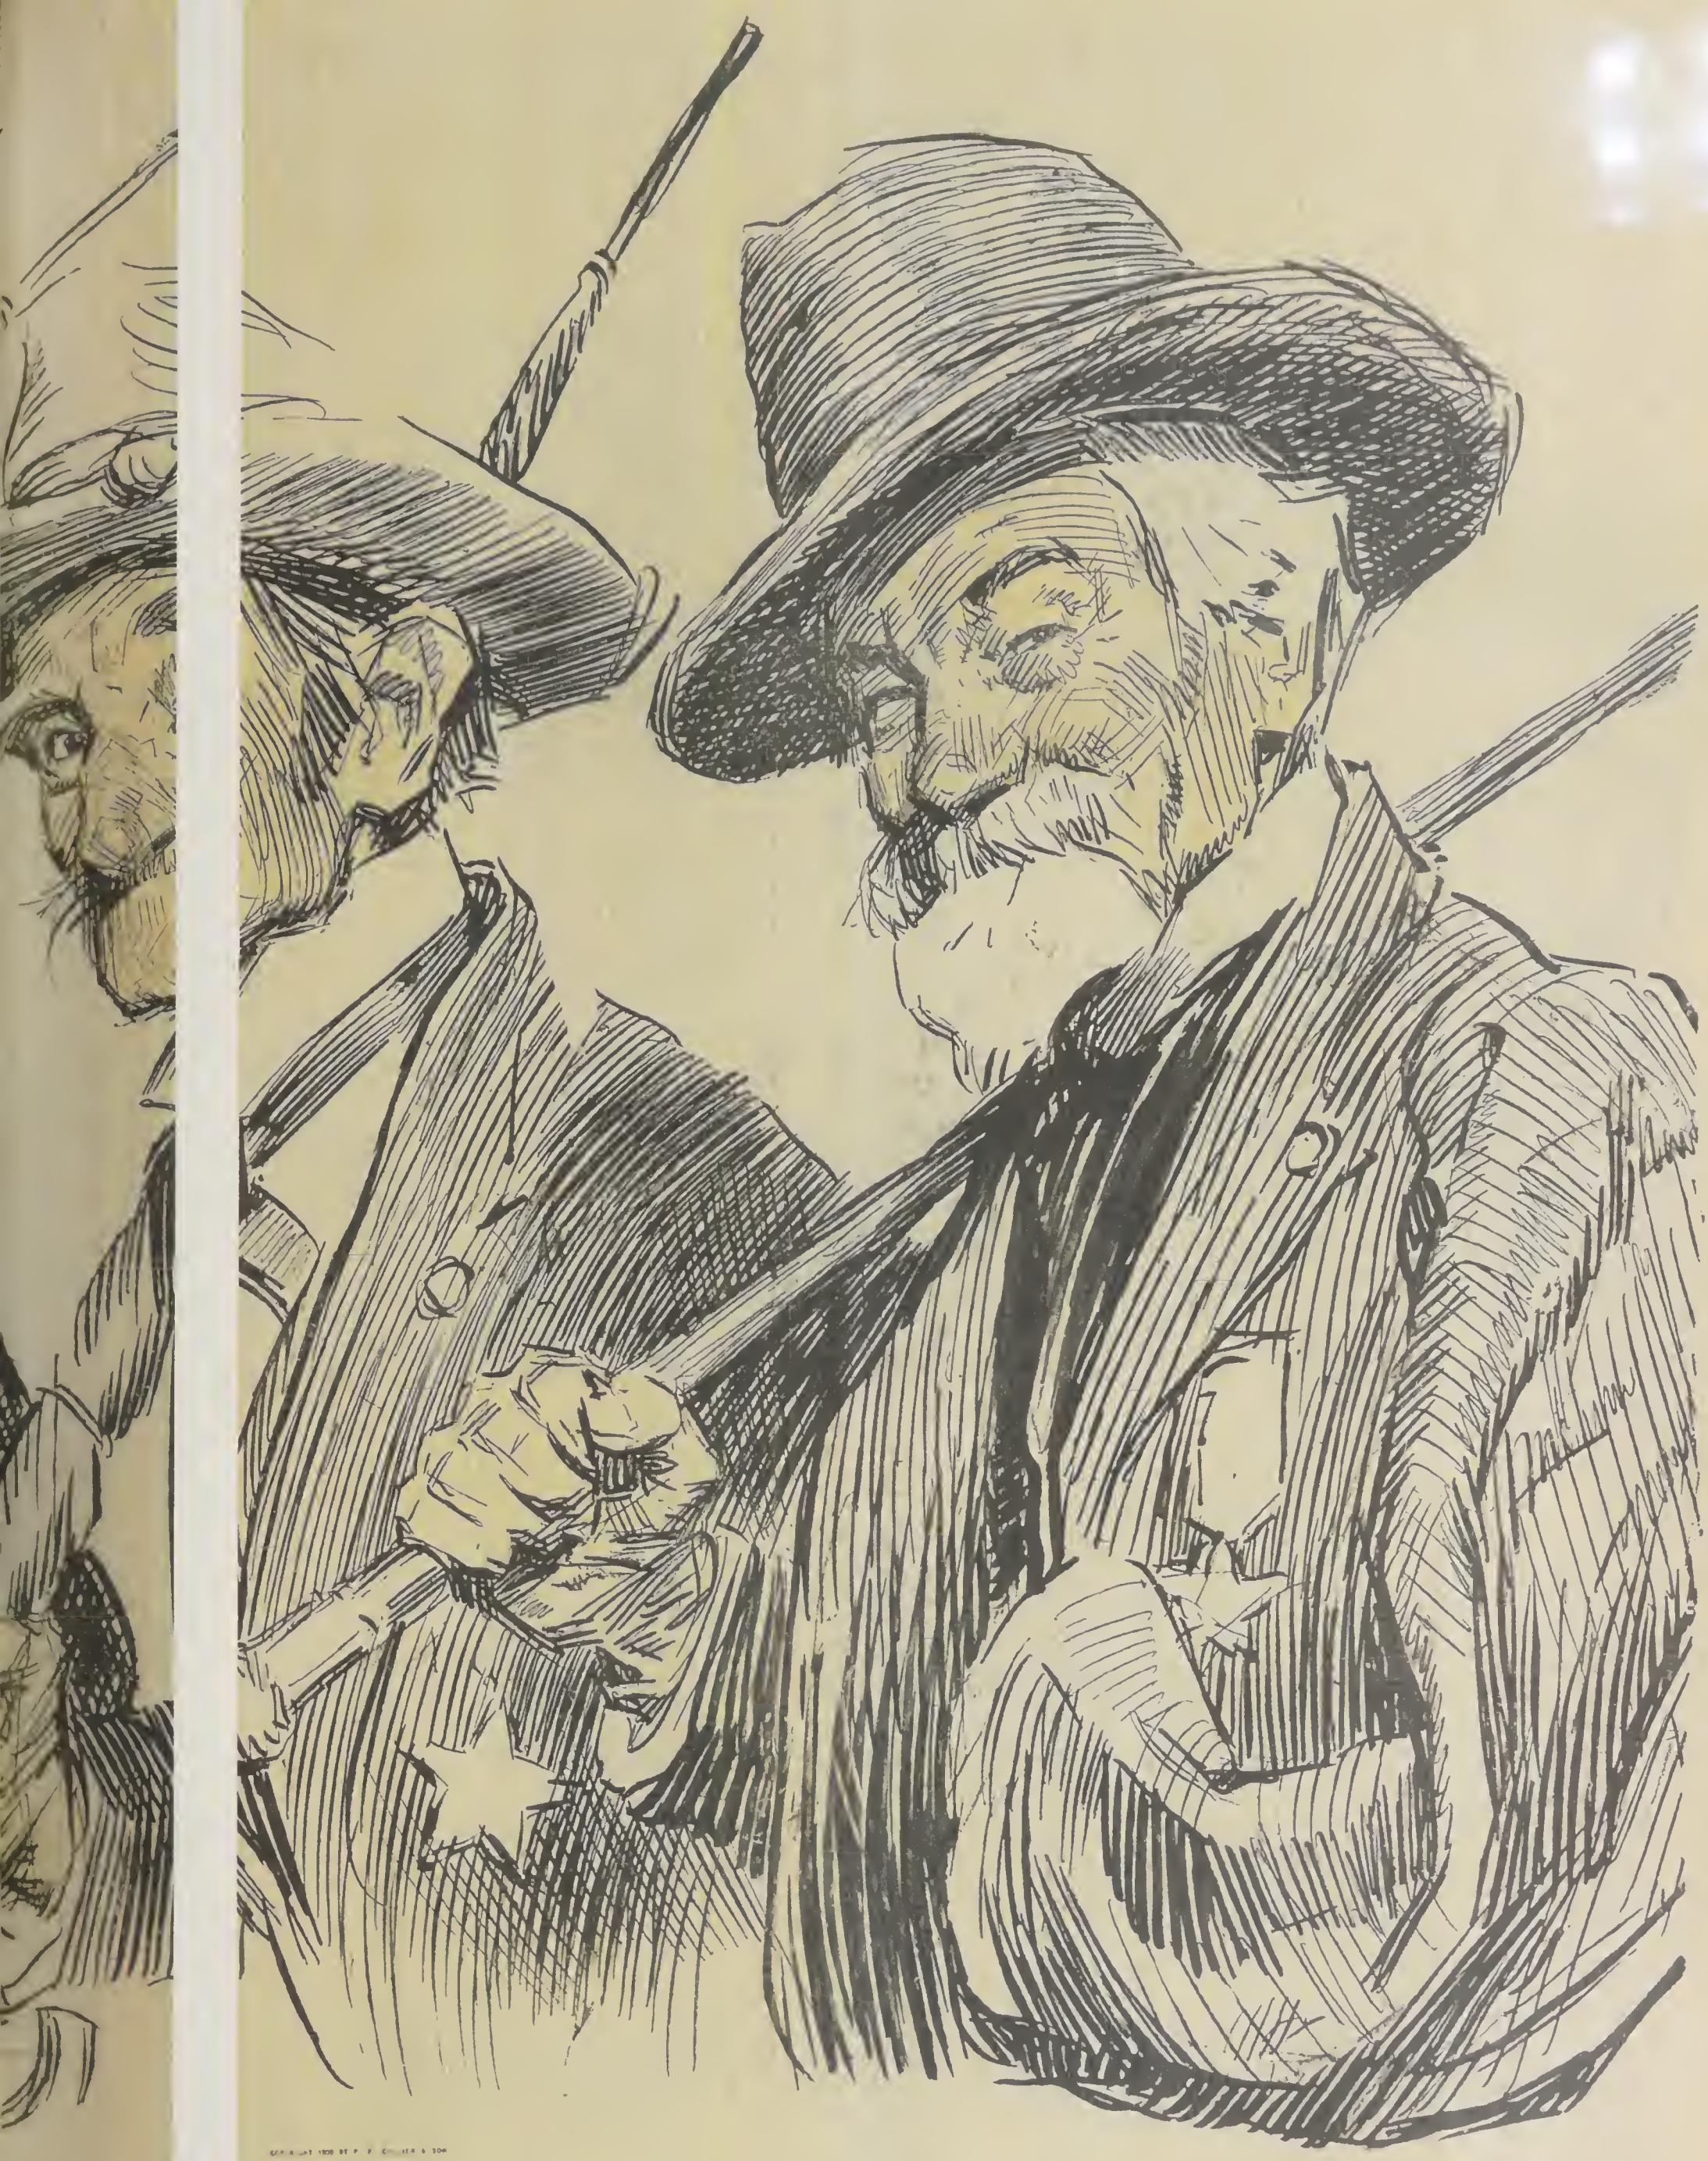
AND *you, O fond and unforgetful ones*
Who have no graves to tend for all your loss,
No sacred spot whereat your love may kneel,
But must in silence let the proud tears spring,
Keeping the lonely vigil of the heart,
While the flags flutter and the dead-march plays;



BEHOLD *for you the consoling rain shall fall*
In odorous assuaging woodland showers,
And wild wood flowers spring up to deck the ground
Wherever early summer passes now;
And in far valleys where no bugles peal
Shy birds will sing their requiems for your dead.



THEREFORE, *take courage, seeing all natural things*
Are not left desolate, but lovely earth
Transmutes each scar and sorrow to her gain,
And from the flux of time and growth renews
Her seasons of indomitable joy,
And breeds new beauty each reviving year.



LET *us too live with gladness, and become*
A part of that which never can be lost,
But must be merged forever with new power,
The urge, the aspiration, and the gleam,—
All that is infinite and divine in man,
The eternal rescued from mortality.

LET *us not doubt, but with an unvexed mind*
Bring truth to pass with beauty and with good,
One and sufficient in the last event,
The work made perfect by the loving hand,
The fair ideal translated into fact;
And heaven can not be far from this our world.

AND *so we turn from memory to-day*
To the fresh tasks, splendid heroic toil,
Triumphs of knowledge and beneficence,
And victories unblemished by regret;
With the untroubled confidence of strength
We go to build the commonwealth of peace.

ıth, an Vest

A GIBSON

North, East

The bookseller rose spryly, animated, diminutively urbane.

"Anything in particular?" he twittered.

The boy, thus accosted flatly, gazed at him with startled eyes, blushed, turned as far from me as possible, and, finally, blurted out something in a low tone.

"Sappho?" repeated the old man, blankly, fumbling at his chin. Disappointment clouded his face. He sighed: "I never heard of it."

With a gulp the boy was gone.

Smiling, I said:

"Now, if he had only asked for—" (I picked up a book at random) "the 'Scottish Pulpit,' say—"

A yellow photograph slid from between the leaves. I handed it to the bookseller. He stared at it dumfounded. His fingers trembled.

"You found it there? Well, well! So it was right there, all the time!" Holding it on his knees, he fell into a reverie.

It was the portrait of a woman, her hair arranged under an elaborate chignon, her graceful figure all but concealed by a voluminous ball gown of half a century ago—a shimmering costume decked with trailing fringes and thickly sewn with wax pearls. She was depicted leaning over a low chair in one of those attitudes of exaggerated grace which ladies once assumed before the camera; and her whole beauty had been so remarkable, so full of smothered fire and piercing secrets, that, contemplating this faded memorial of it, the mind was filled with an indefinite regret.

"What a wonderful face!"

"Ah, yes, indeed. It's Adelaide Neilson, the great actress."

"You remember her?"

"Not personally. I just kept this picture, long ago, because it was the perfect image of some one else." And while we sat silent, there entered the doorway a soft breeze, a breeze filtered through the spring rain and exquisitely perfumed thereby, a breeze redolent of sweet, fresh things, revivifying the air, purging the corners of their mustiness, making a different place of the old bookshop.

"A face to make one sad," I said at last.

He raised his eyes to mine wonderingly. Clearing his throat, he uttered, in a sharp, thin tone:

"Why should you think so, if I may ask?"

"Doesn't one often get a curious sadness from looking at such faces in old pictures? They are souvenirs of something vanished, the vivid, personal charm of which we deem ourselves supremely unfortunate never to have known. There, we say, was a beautiful being whose beauty was all for our predecessors, who thrilled the hearts of others, but never our hearts, who was everything to some one, but, alas! never could be anything to us."

"Ah!" exclaimed the old man, staring at me intently.

I said:

"I don't think that an extraordinary emotion: isn't it merely a variation, a reaching into the past, of a feeling one may experience any day? In a street which you have frequented unthinkingly for years, have you never seen, amid the passers-by who mean nothing to you, one face suddenly stand out—the face of a stranger, and yet surely not of a stranger, since it seems for the moment to contain something you have always dreamed of, something mysterious, impossible to name, but more valuable to you than anything else in the world? Then, when that face has vanished in the crowd, you say, with a feeling of profound melancholy: 'Why just that one priceless glance, and nothing more forever!'"

"Ah!" he exclaimed again. His eyes seemed larger and more watery. He made a tremulous grimace.

"I ought to know what you mean!" He looked down at the photograph. "Something of that sort once happened to me. I—I was standing at that very door, taking the air, one spring evening nearly forty years ago, when she"—he raised the photograph—"came by, out there."

Involuntarily we both looked through the doorway. The rain was still falling heavily in the empty street.

"Yes, sir, I can remember it as if it was yesterday, though I was a young man then."

He was a young man then; and as he told me of that day, with my mind's eye I could see him rejuvenated—a delicate, pale, gentle boy, a boy of dreams and timid impulses, a stay-at-home without ears for the echoes of the great world, a soul brought up between close walls and always content with restriction and monotony. Such a young man he was, leaning against the lintel of the bookshop in his quaint garments of another generation, gazing out idly at the little street washed in the spring sunset, when she came by.

At his first glance he must have recognized some indescribable, poignant charm in her, or rather, perhaps, about her like an aura—for thus, an old philosopher has said, do lovable attributes envelop, rather than pervade, a loved one, so that one loves not the material self so much as the unique atmosphere surrounding it. At any rate, it was in that first instant of perception that everything was done. Such a slight incident! She approached; she passed, probably unconscious of him; she was gone. But from that moment the whole world was changed for him.

The next day he waited in his doorway for her; and, at the same hour, she passed by again.

"And every day for five years," he said, "I saw her go by."

"For five years! And never in that time became acquainted with her?"

He stared at me with his large, timid eyes.

"How would I?"

"Ah, that's right," I agreed, looking at his face, his figure, his gnarled hands lying half-open and limp on his knees. "How would you?"

"That's just it, you see!" he chirruped quickly, cocking his head seriously on one side. "But"—after a moment's thought—"it was something, wasn't it, to see her every day?"

She was still a young girl, on that first evening; so, through those five years, he watched her blossom, though so subtly—since he saw her every day—that he himself would have been at a loss to tell wherein she grew more charming month by month, and how it happened, as her emotions and her mind unfolded, that her first virginal attractiveness was intricately enriched. In his eyes, every day she was more beautiful than the day before: and it never failed that her appearance gave him the same thrill, a thrill unweakened by many repetitions, that intense, indefatigable thrill—in most lives accompanying but one romance and in some lives never felt at all—with which the whole nature rouses at the approach of a personality loved absolutely.

For he poured into his mute adoration of her all the inchoate emotions of his youth. She embodied for him all the vague, glittering visions, the tender and extravagant fancies, the wild flights of imagination toward the stars, with which sensitive young hearts are stirred. For him she was Beauty and Love unattainable, and for that reason to be dreamed of in a sweet melancholy. For him she became like an apparition from some superior world, an apparition ineffably lovely, passing every day along the horizon of his humdrum life.

"And so it went." Five years of peering from the doorway, watching and waiting, seeing her go by!

In all that time he learned nothing of her—save, through conjecture, that she must have a superior sort of employment somewhere, since her passing was so invariable and so regular. Where she went, whither she returned, he never knew. Out of the maze of the great city she emerged, crossed that placid district, and vanished into the maze again.

"It didn't occur to you to follow her?"

He seemed astonished, perhaps a little frightened.

"Oh, never! Suppose she had seen me doing it! Besides, what would have been the use? And then"—gazing round vacantly at the cubby-hole wherein we sat—"who would have looked after the store?"

"Yes, of course, the store. . . . Well, after she had been passing for five years, what then?"

"Ah!" His face darkened. "That's what I'm coming to."

One day, when she passed, she was not alone—a man accompanied her. "He was a tall fellow with black, curly whiskers—a big, red-faced brute," said the little, pale bookseller, with an accent of bitterness—intense bitterness, cherished after all those years. "He was one of those fellows with trousers skin-tight, so that he could show his legs, and yellow gloves, and a rattan cane. He was puffing on a cigar! Quite a swell, some might say; but I can judge them—I seem to have a knack that way—and I set him down, right off, as nothing but a vulgar cad. And to be walking with her, blowing smoke in her face!"

His old, mild eyes suddenly struck fire. He exclaimed, in a flat, metallic voice:

"Do you know, I was frightened at myself afterward, for I wanted to rush out and—well, I don't know what I wanted to do!"

In short, the silent watcher in the doorway, always hitherto, in his sequestered life, a stranger to violent emotions, was stabbed to the heart with a terrible jealousy. Not so remote, for all his hermitage from the hurly-burly of passions that love could not exist to fire, he had also to experience its torments—as to the measure how well he had immured himself, Fate, with intense experiences to distribute, had inexorably dug him out.

For there began for him, that day, a period of agony in which he had to see the divinity he worshiped—if he was to see her at all—pass every evening with a man who was all that he was not. His keen eyes perceived in those two strolling figures innumerable minute signs eloquent of developing courtship, until he could not bear to go to the door when it was time for her to pass. In the back of his shop, surrounded, in the dusk, by his musty wares, he sat gnawing out his heart while listening for their footfalls, unfortified by any philosophy, feeling always at his heart the same dumb despair, because he was losing something that he had never tried to gain.

Then, one day, she disappeared.

"They had got married, I suppose, and she had gone away with him."

So he was left with dreams for company, dreams of experiences inexpressibly tenuous—adventures only of stolen looks and solitary raptures—yet surely, for all their slightness, precious dreams, since the mind does not find anywhere in life an allure so delicate, so touching, so exquisitely haunting, as from the thought of unrequited love. . . .

"I beg your pardon, gentlemen!"

An old man was in the doorway leaning on his cane: a lean, solemn old man wearing a threadbare frock coat and a rusty top-hat. He bowed to us.

"May I ask if you happen to have a copy of an old book by Holland, called 'Bitter-sweet'?"

The bookseller rose with an eager smile.

"Oh, that I have!" And he took from the shelf a slim, faded volume, beat the dust from it, and handed it, with a little flourish, to the customer.

The old stranger, tucking his cane—which lacked a ferrule—under his arm, turned the pages slowly, with a lingering touch, his face wearing an expression of solemnity. Now and then, when he read a passage, his chin moved up and down upon his frayed cravat, and he remained for a moment motionless, gazing before him, rapt in thought. For a long time he pored over the pages. The shower was over, and in the street a hazy yellow radiance, the glow of the sunset, was prevailing. The little shop was filled with a mellow light. The bookseller turned off the gas.

At last the stranger looked at us with a sweet smile.

"This is a very beautiful work, gentlemen," he assured us. Then, with a sigh, putting the volume down reluctantly, for the first time losing a little of his composure: "I—I didn't want to buy it. I—merely wanted to look at it again. I thank you."

He bowed and went out, clearing his throat repeatedly from embarrassment.

The bookseller, all the animation banished from his face, mechanically picked up the faded photograph and contemplated, absent-mindedly, the beautiful face that reminded him of his lost goddess.

"So that," I asked, at length, "was the end, then, of your romance?"

"No," he replied, glancing at the clock. "Though for thirty-odd years I thought it was. Through all that time I used to wonder: was she still with him? Was she fortunate? Was she happy? Had she children? Or was she dead? Every day I thought of her. Sometimes, about this hour, I'd go to the door and say: 'Nearly time for her!' And, one day, a few months ago, when I was standing there, pretending, I saw her coming! She had come back!"

"She had come back!"

"Yes." His pallid face was transfigured; his eyes seemed about to overflow. Then, as if this were the greatest boon that life could have granted him: "Imagine, after all these years, she came back to me! Every evening, now, I see her pass!"

He looked again at the clock, went to the doorway, and peered out. The clouds had broken in the west; the street was flooded with a golden light.

Suddenly he whispered:

"Quick!"

And, standing there in the shelter of the lintel, so close to him that I could feel him trembling, I saw a little old woman, poorly clothed, with the disfigurements of toil and suffering on her wrinkled face, pass by at a tired sort of trot, without a sidelong glance.

Medals for the Men of the Hour

THE WRIGHT BROTHERS *have at last come into their own. The rewards and applause which a fickle public are so ready to bestow after the worry and struggle are over and the battle won are now theirs. By the end of the summer the two modest young men of Dayton, Ohio, ought to have enough medals to cover their coats. The one represented here is to be presented to the Wrights by President Taft in the White House on June 10. It is given by the Aero Club of America. On June 17 and 18 the city of Dayton is going to turn itself loose for the Wright Brothers Home Celebration, during which National, State, and city medals will be presented to the brothers. There will be parades and general jubilation, and the enthusiastic Daytonians expect from 150,000 to 200,000 strangers to attend*

¶ *"The Trouble Hunter," the first adventure of Bill Simms and his Circus, appeared in the issue of April 24*

The King of Cocoanut Island

"John L.," the Yankee Elephant, Puts his Trunk into International Complications

By

FREDERICK UPHAM ADAMS

Illustrated by DAN SAYRE GROESBECK

WHEN Willie Simms reached the mature age of seventeen he decided on a life of danger and adventure. He therefore ran away from his Salem home and joined a circus. At twenty he was an animal trainer, and at forty he was sole proprietor of the Simms International Circus and Menagerie. For nearly a quarter of a century he conducted the affairs of this enterprise, amassed a modest fortune, but constantly bewailed the enervating placidity of his career.

In all these years nothing really thrilling had happened to this daring but shrewd Yankee. He went to the extreme of making a trip along the dangerous coasts of South Ameriea. This added to his bank account, but he did not lose a man or an animal, neither did he have a single experienee worth relating. In sheer disgust he headed his circus and menagerie for the tropical islands of the south seas.

"Perhaps somethin' may happen," old Bill Simms argued, "if I go battin' intew places whar thar's likely tew be earthquakes, volcano eruptions, cannibals, etcetera."

Mr. Simms had an inspiration while in Suva, metropolis of the Fijian Islands. He chartered the little trading schooner, *Daisy D.*, owned and commanded by Captain Jed Blout, and set forth for Sydney, Australia.

"I reckon nobody ever pulled off a stunt like this," he said. "If I can tote this bunch of animals on this sailin' tub through all them islands on the map without nothin' happenin', why, I might as well give up huntin' fer trouble."

Five days out of Suva the *Daisy D.* ran into a typhoon, was blown like a chip against the coast of a small island on which was a large volcano in violent eruption: Mr. Simms and most of his menagerie were washed from the deck into a sea bombarded by white-hot rocks, but were carried ashore on the back of "John L.," the massive and intelligent elephant who gave a tone of real distinction to the Simms aggregation. By a miraculous chance the schooner was driven into an inlet and was safely anchored in a secluded eove.

MR. SIMMS was bruised but delighted when he stood on the deck of the schooner the following evening.

"That sure was worth while, eap'an!" he declared to the owner of the *Daisy D.* "I reckon that breaks my spell of tough luek. This is the only exeitin' thing that's happened tew me like what I've read in books. It kinder gives me faith, cap'an, an' perks me up a lot. How long dew ye ealculate tew stay here?"

"No longer than I can help," gruffly responded Captain Blout. "I'd head her out now if I had a little more wind. Don't like the way that volcano's acting," and he glanced to the east and shook his fist at a huge column of smoke and fire.

There were constant rumblings, frequent heavy detonations, and other manifestations that the initial upheaval had not restored an equilibrium of what Bill Simms termed its "infernal forces."

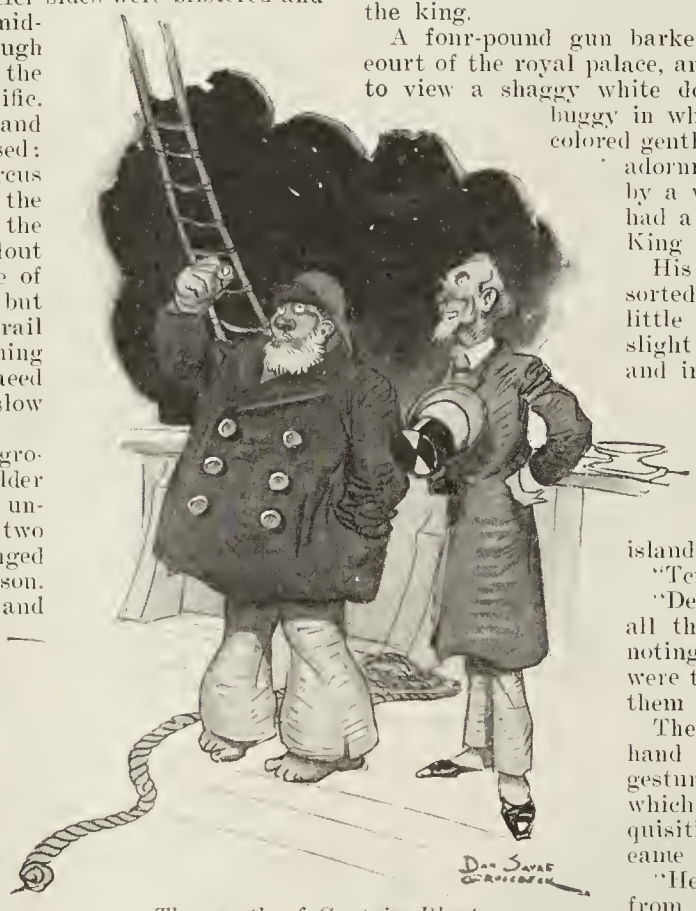
"That old mud-drum sure has got indigestion," he said, reflectively. "The next time the old belcher turns loose I speaks fer a bomb-proof reserved seat erbout a hundred miles ter win'ard. Look at that, will ye!" he exclaimed. "Somethin's startin' over thar right now!"

It had been pitch dark save for the intermittent flare from the tortured mountain, but Bill Simms pointed to a strange light whieh suddenly erawled along the edge of a cliff that reared a thousand dizzy feet above the waters of the cove. A broad river of lava poised an instant on the brink of this preeipiee, then fell the drop of six Niagaras into the deep water at its base.

"Let's pull our freight, cap'an; an' pull it darned quick," exclaimed old Bill Simms, shading his eyes from the heat. "I've read erbout aetive volcanoes ever since I'se a kid, but this busy old hummock's too active fer any use. Let's beat it."

The retreat of the ambitious tyrant

The captain of the *Daisy D.* needed no urging. There was barely enough wind to stir the sails, and its slant required a taek which brought the schooner still nearer the cataract of white-hot lava. When Captain Blout put her about the breeze failed entirely and the ship drifted still nearer the eolumn of plunging fire. The heat was intense. A stay-sail burst into flame.



"Guess we're goners, cap'an," stolidly muttered old Bill Simms, "but I'm gettin' a run fer my money. Driftin' with a menagerie intew a waterfall of lava sure is a thrillin' finish fer an old fool who went browsin' 'round the tropics huntin' fer trouble. Thar blazes 'nuther sail, eap'an!"

In the nick of time a puff of wind filled the unburned sails of the *Daisy D.*, and ten minutes later she was out of the immediate danger zone. Her sides were blistered and smoking, but shortly after midnight the schooner crawled through the inlet and was again on the broad expanse of the South Pacific.

The moaning of the scared and half-suffocated animals ceased: the wearied sailors and circus men threw themselves on the deeks and drank deep of the glorious air; Captain Blout turned the wheel over to one of his men and staggered below, but old Bill Simms leaned on the rail and gazed long at the flaming torch of the volcano and traeed its angry reflection on the slow heave of the sea.

A waning moon lifted a grotesque horn above the shoulder of the mountain and east an uneanny shimmer on the deep; two sea monsters fought and tinged the water with their crimson. "John L." lifted his trunk and sounded a sympathetie blast, and then silence fell, save for the ereaking of the rigging under the strain of a freshening wind.

"That's a fine summer resort,", mused old Bill Simms. "Just the plaee fer an old ladies' home or a san'tarium fer nervous folks seekin' absolute quiet. Guess I'll rub somethin' on my blisters an' turn in. Things sure are happenin'."

The wrath of Captain Blout

Mr. Simms learned in the morning that they were headed for Cocoanut Island, an elongated atoll about one hundred miles away. Its single village was oeasionally visited by trading vessels, and boasted a lumber yard and appliances for ship repairs—hence this ehange of course by Captain Blout.

"Be the inhabitants of this here Cocoanut Island cannibals?" asked the circus man.

"They uster be," admitted the captain, "but they don't cannibal much these days—only when they have wars."

"Progress has ruined purty everythin' worth while—'eept voleanoes," sadly asserted Mr. Simms. "Now I don't suppose these reformed heathen have even got a king?"

"They had the last time I was there. Big fat fellow with eleven wives. Calls himself Jingo—King Jingo."

"'Leven wives," repeated old Bill Simms, thoughtfully poising a ehunk of meat on a fork. "This here King Jingo's a brave old sinner; eh, eap'an? 'Leven wives almost under the equator. Beats thunder what folks will do."

The wind held true, and early that afternoon the *Daisy D.* droped anchor a quarter of a mile outside the tumbling surf. Canoes put out from shore and some favored savages were admitted on board, among them a half-naked pilot who skilfully worked the battered and scorched craft in past saw-edged reefs and warped her to a wharf which projected well out into the lagoon. Mr. Simms studied the straggling village and its assembled inhabitants with keen interest.

The bamboo "palaces" of King Jingo fronted the wharf, and five or six hundred huts lined the beach on both sides of it. There were smelly piles of eopra, crates of cacao beans, nodding palms, picturesque groups of natives, swarms of nude children, a dapper little missionary and two white traders. The latter annoyed Mr. Simms, who wished this scene set with no reminder of civilization, but he forgot these intruders when he saw the king.

A four-pound gun barked a salute from the sandy eourt of the royal palace, and when it ceased there eame to view a shaggy white donkey hitehed to a side-bar buggy in which reclined a stout, copper-colored gentleman scantily arrayed in hip adornments, his head surmounted by a white plug hat. The vehiele had a generous width of seat, but King Jingo completely filled it.

His Majesty was unloaded, essorted aboard the schooner by the little missionary, greeted with slight humility by Captain Blout, and introdueed to Mr. Simms.

"Mighty glad tew meet yer R'ile Highness," heartily exclaimed the eireus man. "Climate seems to agree with you, king. How long have you ruled this here island?"

"Ten year," replied the monarch.

"Dew yer men tote spears 'round all the time?" asked Mr. Simms, noting that most of the savages were thus armed, and that some of them carried rusty rifles.

The king frowned, waved a fat hand to the south in an eloquent gesture, and muttered something which was unintelligible to the inquisitive visitor. The missionary eame to the rescue.

"He says he fears an attack from the natives of an island thirty miles to the south of here," he translated. "The two tribes have been at war for years, and I have been unable to put an end to it."

"They come—I lick um—I do um!" cried King Jingo. "Damn! Caramba!" he added.

"Surest thing you know, king," declared the delighted Bill Simms. "I only hope they'll come while I'm here. Put her thar," he said, offering his hand. "Put her thar, king; bully fer you, an' I'll be mighty glad tew help ye."

At that inspiring moment one of the Bengal tigers emitted a blood-eurdling yell, and it was with diffieulty that His Majesty was restrained from jumping into the lagoon.

"Shoo! yer R'ile Highness," soothingly said old Bill Simms, "that's nothin' but one of the animals in my menagerie. I don't reckon ye ever saw a menagerie, eh, king? Come below an' look 'em over."

The purport of the Simms International Circus and

Menagerie was finally made partially clear to the ruler of Cocoanut Island, and after much urging he went down the companionway, and cautiously approached beasts never imagined even in his dreams. His island domain boasted no fauna larger than a rat, and the sight of "John L." dazed and entranced him, but he had an instinctive fear of the big cats, and frankly indicated the same.

"No like! Bad! Malo! Damn! Caramba!" he fluently said, pointing to the tigers' cage.

"Yer R'ile Highness makes me tired," scornfully asserted old Bill Simms. "Let me show ye somethin'."

To the horror alike of the king and the Reverend Reginald Jones he threw open the door of the cage, grabbed the larger tiger by the scuff of the neck, yanked him to the floor, kicked his striped sides and cuffed his ears. King Jingo crowded against the uprights which confined "John L.," and that playful pachyderm deftly removed the royal head-gear and waved it triumphantly abroad. An employee rescued the white plug hat and returned it to the frightened monarch.

"This is Prince," explained Mr. Simms. "I'll take him out tew the beach an' put him through some of his stunts. Come on!"

He dragged the tiger up the companionway and sprang with him to the wharf. The clustered subjects of the monarch were precipitate in their eagerness to yield a right of way. King Jingo hesitated, but pride gave him courage and he followed at a conservative distance. Simms piloted the beast to a clump of tall palms which fringed the edge of the lagoon, and here was joined by the king and a few of his more intrepid officers and soldiers, all of whom watched with delight the exhibition which followed.

The daring trainer made Prince jump through his hands, turn handsprings, stand on his head and perform other acts, the great cat growling, spitting, and glaring at his master with flaming eyes. The king's fear vanished, and he finally stood so near that he could almost touch the flanks of the leaping animal.

Bill Simms paused. It was hot work. The tiger turned, took one ugly look at the tyrant of Cocoanut Island, gave vent to a prodigious roar and sprang over the head of that exalted personage and stuck his claws in the pulpy bark of the tallest pine. He went up it like a kitten chased by a dog, then snarled down from a nest of drooping fronds, full seventy feet above his angry owner and the startled king.

"How much you take for he?"

Persuasion and commands were wasted by Mr. Simms in attempts to lure the tiger from his lofty retreat, and the old man was in a quandary. He could not climb the palm, and to cut it down would likely maim or kill the beast, and Prince was a valuable member of his animal family. He walked around and around the palm, and perspired and swore profusely. King Jingo shook his fat sides in unrestrained royal delight, Simms glowering alternately at him and the tiger. Then he had an inspiration.

"Wade out into that water, Jack," he said to one of his men, pointing to the lagoon, the waters of which lapped the roots of the palm. "See how deep it is twenty or thirty feet out."

The test indicated four or five feet of water.

"That's all right. Now bring "John L." an' erbout three hundred feet of rope," he ordered, mopping his brow and turning to the king. "Keep yer eyes on yer Uncle Dudley," he said. "I'll show yer R'ile Highness a Yankee trick worth knowin'. An' as fer you," he yelled, shaking a bony fist at the elevated tiger, "as fer you, consarn yer barber-pole hide—I'll see whether yc'll come down outer thar."

A few minutes later an elephant set foot for the first time on the hot sands of Cocoanut Island, and the total population followed at a safe distance.

"Shin up that tree with the rope an' hitch it purty well up the trunk Jack," was Bill Simms' next order.

The acrobat climbed the palm with the dexterity of a monkey, nor did he stop until he was almost within reach of the lunging strokes of the tiger's claws. Then he made fast and slid down. Simms dragged the rope directly away from the lagoon, then handed the end to "John L."

"Pull, darn ye; pull!" he commanded.

The huge elephant coiled the rope around his trunk and moved away from the shore. As the line tightened the top of the palm began to bend. Lower and lower it sagged as "John L." applied his enormous weight and strength. Simms backed with him, knife in hand, until the fronds were at a sharp angle from the base of the palm, the taut rope quivering like the string of a bow—then he slashed it.

As the palm shot back there was catapulted from its apex a tawny, furry, yowling streak which spread out four helpless claws in vain imitation of a flying-squirrel. Prince struck the water of the lagoon fully fifty feet from the beach, and when Bill Simms lassoed and dragged him ashore the beast was so cowed that the old man had not the heart to whip him. Jack led the coughing and dripping tiger back to the schooner.

"I did that ter show yer R'ile Highness that a man has tew know a heap before he can run a menagerie," modestly asserted old Bill Simms.

"Fine! Gran'! Bully!" exclaimed King Jingo. "How much you take for he?" pointing to the elephant. "Me do dat to Laopepo. Fine! Gran'! Damn! Give t'ree esposas for he."

"What's that?"

"Laopepo is the king of the tribe he is at war with," sadly explained the little missionary. "King Jingo wishes to buy the elephant so that he can throw Laopepo out of a palm. He offers three of his wives for him."

"Not enough," grinned the circus man, "but tell his R'ile Highness that I'll jolt that Laopepo guy outer a tree for nothin' if he'll catch him."

Bill Simms was the guest of the king at dinner that evening, and was in high spirits when he returned to the schooner.

"I'm tew give a circus performance by R'ile Appointment," he announced to Captain Blout. "We're goin' tew set the tents up in the R'ile front yard to-morrer, an' give the first show in the evenin'. These savages have no real money, so I've agreed tew take pearls, an' the king an' his bunch will be the only dead-heads, 'ceptin' the missionary an' you, cap'an."

Fully fifteen hundred copper-colored natives exchanged pearls for pasteboard tickets and crowded into the main tent. About half of them were armed with spears and guns. An attack by King Laopepo's tribe had been anticipated for months, and the ruler of Cocoanut Island was taking no chance of a surprise.

King Jingo, his eleven wives, his cabinet and war chiefs, Captain Blout, and the missionary occupied a box brave in tropical decorations. The delight of the assembled Cocoans was unbounded as the tawdry splendor of the circus was displayed before them. The antics of the clowns, the skill of the bare-backed riders, the daring feats of the gymnasts, the intelligence of the performing dogs, and other acts aroused these simple savages to frenzied yells of applause and the clashing of spears.

Then came the climax, the entrance of that most gigantic and wonderful of elephants, the peerless "John L." assisted by Mr. William Simms, gorgeous in a flaming suit of red velveteen. The elephant walked over him, the natives holding their breaths as each massive foot barely missed crushing him. "John L." waltzed to the cracked strains of an orchestrion, raised his master high in the air with his trunk, and did other wonders never before equally appreciated.

Attendants then covered the ample bulk of "John L." with a huge and tinseled blanket, and to this was added a clanking and glittering war harness, after which eight men with much difficulty hoisted and adjusted the most ornate howdah ever conceived outside the brain of a romantic novelist.

"Ladies an' gentlemen," shouted old Bill Simms, ignoring the fact that not five in the audience could understand a word of English, "ladies an' gentlemen, the performance will now conclude with a triumphant march round the ring, in which his R'ile Highness, yer gracious sov'reign, together with two or three of his favorite wives; yer affable missionary, the Reverend Reginald Jones, formerly of Ter'Hut, Injiana; also the commander-in-chief of yer army an' navy, will all ride in that howdah, an' totin' 'em is as easy fer 'John L.' as pullin' a baby carriage. Step right this way, yer R'ile Highness, an' don't lose yer nerve!"

This addition to the regular performance had been planned in advance, and those selected left the royal box and were assisted up a ladder into the howdah. Highly burnished native spears were handed to each of the passengers, thus vastly enhancing the warlike effect. The missionary hesitated to lend himself to a duty so unpacific.

"Don't crab the act," pleaded Bill Simms. "Take a spear an' be a good feller," and the Reverend Jones reluctantly yielded to this appeal.

"John L." lifted his master to his place as mahout, astride the leathery neck with his legs covered by the folds of the great ears. Mr. Simms carried a spear in one hand and a goad in the other. The orchestrion sounded the strains of "Hail to the Chief." "John L." started his lumbering stride around the ring, the howdah swaying with his uneven gait, the spears gleaming, the tinsel glittering, and the crowd so awed at the splendor of the spectacle that they forgot to cheer.

They had made half the circuit of the ring and were opposite the main exit when a distant shot was heard, followed instantly by a number of reports and an uncanny yell, then a savage dashed into the ring and shouted words which had a magical effect. King Laopepo and his warriors had attacked the village.

The armed portion of the audience slashed through the canvas walls in their eagerness to reach the open air and meet the invaders. The women set up wild cries and ran madly to and fro. The king was shouting at the top of his voice and vainly trying to find some way to reach the ground, but dared not jump.

"The king wants to get out and so do I," yelled the missionary, leaning over the front of the howdah.

"Tell the king that this is the best darned place in the world tew fight, an' that 'John L.' an' I are goin' intew action right now," old Bill Simms shouted back. "Stick tew yer perch, parson, an' I'll promise ye the time of yer life. Haw, 'John L.'; haw, darn ye, an' get a move on!"

Bill Simms swore profusely

The lumbering brute moved rapidly through the exit, which now was clear. The warriors were hurriedly being drawn up in front of the palace, and Simms steered the elephant that way.

"I sure am gettin' a run fer my money on this island," he soliloquized, as he peered out into the gloom. "It took a long time fer things tew begin happenin', but I've got no kick comin' lately."

From a distant grove of palms there came a fusillade of shots which did no damage, and then a fiendish chorus of yells as the naked warriors of King Laopepo charged across the broad court fronting the palace.

It must be explained that the interruption to "the triumphant parade" had robbed the spectators of a sight which had long been a special feature of Simms' International Circus and Menagerie, and of which Mr. Simms, its originator, was justly proud. Within the howdah was a powerful electrical battery, and on its framework and the connecting harness were hundreds of tiny incandescent globes, all of which glowed with light on the turning of a lever. With the regular circus lights suddenly turned low, and the mammoth form of "John L." thus concealed, the effect was one which never failed to appeal even to the most blasé of audiences.

The front rank of the oncoming savages was visible when Bill Simms turned the switch and spoke words to "John L."

The advancing hosts of King Laopepo saw a flaming monster dash toward them. His eyes were two blazing red balls; his snake of a trunk writhed high in air, and from his throat came a trumpet blast which rocked the night air and which would have appalled King Richard of the Lion Heart. On his brow was an armed red devil with a white beard, and on his back was a burning castle filled with shrieking warriors, their naked skins bathed with an unearthly light.

It is no more than just that Mr. William Simms should be permitted to give his version of what followed.

"I reckon it was the funniest battle ever fought"

"The slickest head-first dive I ever seen"

"One minute 'John L.' an' I was engaged in a peaceful pursuit of entertainin' them Cocoanut Islanders, an' the next we was plunged inter the horrors of war. I plumb forgot that them favorite wives of King Laopepo was on board, but it all happened so blame quick that I didn't have time to pay notice tew sich details. The big guy, who was a sort of generalissimo tew King Jingo, piled off when we got outdoors and jined his brave troops, but the king hisself an' his wives and the missionary stuck. They couldn't dew anythin' else.

"Back of us was erbout eight hundred of King Jingo's savages howlin' defiance tew the invaders, an' ahead of us was the oncomin' an' relentless foe. It was an awful racket, and the king an' them two wives of his'n helped a lot, an' when I turned on them lights—well, it sure was interestin'.

"The eight hundred brave warriers belongin' tew King Jingo was gettin' ready tew charge when old 'John L.' blazed up like a torch in the bottom of a well, an' they just naturally turned an' beat it one way, an' the savage fiends ruled by King Laopepo paused in their mad career an' just naturally beat it tother way.

"I suppose you know that an elephant can run like the devil, an' 'John L.' holds all records fer everythin'. He was in their midst in the jerk of a lamb's tail. I don't suppose 'John L.' ever enjoyed a happier ten minutes in his life, an' that animal has had lots of fun since I've owned him. He entered right intew the spirit of the thing. He made noises with that horn of his'n that I never heard him let loose before nor since. Perhaps 'twas the tropical environment—as my daughter Sally would say—then 'agin, mebbe he liked or disliked the smell of them savages, but anyhow, the way he rampaged erbout an' bellowed was worth livin' sixty-five years tew see an' hear.

"Did he kill any of 'em? Of course not. That ain't 'John L.'s' disposition. He was just playful, and he seemed tew know just what had happened an' what was expected of him. He'd pick up a slippery savage an' toss him heels over appetite intew a herd that was yellin' an' tryin' tew get away, an' then he'd up with his trunk and let out one of 'em cheerful blasts ye could er heard five miles away in the cellar of a rollin' mill.

"There was mor'n a thousand of them invadin' warriors, as we later larned, an' they had sneaked up the lagoon in a big fleet of war canoes. The main body whooped it back tew the beach an' piled intew them canoes, but 'John L.' cut off one division of the army an' chased it through a jungle, an' every minute I thought that howdah would be raked off his back. Them wives never let up their squawkin' fer a second, but King Jingo gradually got back his nerve, an' I afraid he jabbed some of them fleein' warriors with his spear, but the parson says he did his best to restrain him an' avoid the sheddin' of blood.

"All at onct his R'ile Highness leaned over the front of the howdah an' yelled in my ear.

"'Laopepo! Laopepo!' he hollered, pointin' with his spear tew a tall an' long-legged savage that 'John L.' seemed tew be headed right fer. 'Laopepo! Laopepo! Get he! Kill he! Damn! Caramba!' an' some more gentle exclamations in his own lingo.

"I spoke tew 'John L.' an' pointed tew that defeated an' hurryin' monarch with my spear, an' you can bet that the old bundle of leather understood just what I said to him. He let out his stride a few feet more an' overtook that ambitious tyrant like an express train does a lame tramp. Out went that long trunk. It gathered in that squeelin' savage an' histed him up an' back fer my inspection. King Jingo made a jab at him with his spear, but fell short, an' I pushed him back in his cage an' told the missionary tew take his spear away, which he did.

"'John L.' rested that Laopepo person on his tusks an' we withdrew from the field of battle because thar was no one left tew chase, an' went back tew the palace with two kings on board, King Laopepo restin' firmly out ahead, an' King Jingo yippin' joyously on top. The last war canoe was pushed out from shore just erbout the time them batteries give out. The war was over, an' when 'John L.' reached the palace I fell off his neck an' most died laughin'.

"First thing I did was tew have my men stand guard over the captured King Laopepo. What tew do with him, darned if I knew. If I turned him over tew King Jingo it was a sure thing he would adorn the dinner table as soon as we left the island. Then I had another inspiration.

"'See here, yer R'ile Highness!' I said tew that cruel monarch, who was prancin' erbout an' dyin' tew stick a spear intew his captured foe. 'Yesterday I promised you I'd jolt this Laopepo person off a tree, if we caught him. I'm a man of my word! Jack, go get that rope!'

"King Jingo was delighted, naturally, but suggested that it would be best tew jolt him off ontew the ground, but I wouldn't stand fer that. I wanted tew give Laopepo a swim fer his money.

"Laopepo was a slim-Jim of a king, an' when we boosted him part way up that palm an' said a few kind words an' pointed sky'ard he went up like that slippery bark was an elevator. Jack followed him with the rope, hitched it good an' strong, an' then 'John L.' an' I did the rest.

"In the mean time them intelligent savages had built a big bonfire, an' when I cut the rope and let that palm whip back, why, that King Laopepo shot intew the lagoon through a cloud of smoke an' sparks, an' it was one of the most effective acts I ever pulled off. He must er traveled seventy feet before he struck the water, an' blame' if he didn't right hisself in mid-air and strike the lagoon head-first an' make the slickest dive I ever seen.

"My men lined the beach an' kept them eager an' still hostile heathen from handicappin' Laopepo by stickin' his skin full er spears. He swum full two hundred feet under water, an' I watched him 'till he faded in the gloom. Did he get away? Sure he did! Rejoined his navy an' paddled with it to his own island, an' Cap'an Blout tells me he's never come back, an' I reckon he won't.

"That's erbout all thar is worth tellin' erbout the Cocoanut Island end of my hunt fer excitin' troubles, but plenty of things worth while happened later on. We left five days after the battle. King Jingo was so stuck on 'John L.' that he offered all 'leven of his wives in trade, but I'm not a marryin' man, besides I've got a little black-eyed wife back in Salem who can lick that whole Cocoanut Island harem as easy as 'John L.' an' I did that army of King Laopepo's."

What the World Is Doing

A Record of Current Events

In Toto

THE acute excitement in European Turkey and in England has a little subsided. The French strike of Government employees, after flaring up with threats of an unlighted Paris excommunicated from the rest of civilization, is again flattening off, apparently, into peaceable settlement.

As the mind runs all round the world and back again, it is good to see a lull in the rather savage activities of the weeks preceding. For the moment, the world is weary of its own unruly temper and passions, and rests from violence. By the time this is in the hands of our longest-distance subscriber, it may well be that we shall be back at our slaughterings again. But meanwhile we celebrate, however brief, the reign of peace.

Throughout our own borders we turn from tariff turmoil, and sugar and cheese pilferings and wheat crimes, to the gentle days of grammar school, high school, and college graduation. Soon the boy will take his stand on the flag-wreathed platform, and with occasional prompting speak brave words for God, for country, and for home. The white-gowned girl graduates will file by, carrying a shy promise of the wonderful years to be.

And then, a little later, the land will be filled with the kindly drone of conventions—educational, religious, economic—by lake and sea, where they take tired people to the islands of the blest.

The Newly Cast Shadow of God

WITH the Ceremony of the Sword, the Turks have brought a new Sultan into being; the uproar in Asia Minor is dying down; the golden nest-egg of Abdul, the dethroned, has been uncovered—these are the episodes of a week in the Ottoman Empire.

Mohamed V was girt with the sword of Osman on May 10 in the Mosque Ayoub. Standing in front of the buildings that compose the Sublime Porte, this new calif of the califs drew from its sheath the simitar and raised it on high. It is the ancient sword worn by thirty-four of his ancestors, and by twenty-eight of them since Constantinople was conquered. The sword was girded on the new monarch by the "Holy One of Konia," Chelibi, grand master of Dancing Dervishes; and the rite signifies that the spiritual power passes with the temporal to the new ruler.

A monarch he is, blue-eyed and fair of hair, with a pointed mustache, a kindly expression of face, and a rather diffident manner. The New York "Sun" is authority for the statement that he is a book-lover.

"A Paris Orientalist has in his possession an extremely rare volume of Persian poems translated into Turkish by Rechad Effendi, now Mohamed V. The book was intended for private circulation only, and very few copies were printed. The translation, it is said, shows a rare knowledge of Persian and a profound understanding of its poetic genius."

He is starred with as many titles as a "social worker." He is the Shadow of God upon Earth. He is Sultan of Sultans, King of Kings, Bestower of Crowns upon the Princes of the World, Emperor and Sovereign Lord of the White Sea and the Black Sea, of Rumelia and Anatolia, of Carmania, Roum, Kurdistan, Azerbaijan, Cham, Aleppo, Egypt, Mecca, Medina, Jerusalem the Holy, of all the countries of Arabia and the Yemen, and, moreover, of an Infinity of Provinces Gloriously Acquired.

He is protector of the Mussulman religion, sovereign and padishah of all the Ottomans. His majesty is irresponsible, his person sacred. He invests governors, names ministers, coins money, declares war, makes peace, and commands the armies by sea and land.

Clad in olive-green khaki, and, later, inhaling a cigarette, the shy, kindly, weak-faced Rechad stepped in under this downpour of glory.

The anachronistic Sick Man on a Tottering Throne has been replaced by the modern problems of social reform, constitutional government, warring tribes, and tangled finance. And still to the faith of the Turk, high over all this quivering, intricate network of human affairs, sits Mahmud on his golden throne.

David Lloyd-George

Chancellor of the Exchequer, author of the tax on the rich called "the red flag budget"

Vivacious Paris

NEXT to a clever play or a daring novel, Paris enjoys a revolution. It makes for good talk and it keeps the world's most beautiful city fertilized with ideas. Paris is still tumultuous over the question of the right of Government employees to form unions, to affiliate with workmen in private employ, and to strike.

A brisk debate in the Chamber of Deputies on May 14 preceded a vote of confidence in Premier Clemenceau and his Cabinet, the vote standing 365 to 159. The Government's policy of opposing the employees in their efforts to unionize was indorsed by 454 to 59. The five hundred Deputies made a day of it before proceeding to the vote. They shouted, hooted, exchanged insults, and shook fists. The Socialist members sang the "Internationale," the Radicals replied with the "Marseillaise," and a Royalist statesman chanted "Monsieur de Charette."

The striking Government postmen of Paris have called on the General Federation of Labor for aid. No one knows how many men are on strike. M. Barthou, the Minister of Public Works, Posts, and Telegraphs, states that only 2,367 out of 24,205 postal employees in Paris and the Department of the Seine are out. The strike leaders allege that there are 8,538 strikers in Paris and that twenty-five provincial cities are without postal service.

The days and nights are made picturesque by knots of men singing snatches from the "Internationale," whose first lines run:

"Arise, accursed of the world,
Arise, slaves of hunger!"

Government employees are so snugly knit into the structure of the Republic that their united action is not of merely academic or class interest. The state is paramount and must remain sovereign over any body of citizens.

But the grievances of the men are real. They are fivefold: (1) There is too much Executive interference with the liberty of employees. (2) The friends and relations of Government supporters receive the preference in appointment. (3) The *viva voce* examination and the personality of the examiners lend themselves to favoritism. (4) The Government has been known to maintain a widespread intelligence department to spy on employees, with resultant favoritism in promotions. (5) Punishment has been dealt out with injustice.

Some such system as a new bureau, with a Cabinet member at the head, will be created, by which grievances may be registered and then redressed.

It is the task of Clemenceau to define the legal status of Government employees, and at the same time to conserve their well-being. This means neither repression nor demagoguery, but plain statesmanship.

"The Red Flag Budget"

FOR several generations England's Chancellors of the Exchequer have made the presentation of the Budget an annual event. It has been the occasion of brilliant oratory and renowned feats of memory. Goschen, Michael Hicks-Beach, Harcourt, Gladstone, Disraeli, and Peel were of those who gave a luster to columns of figures. But as a thought-producer, David Lloyd-George has outpaced his mighty predecessors. His Budget has distanced the *Dreadnoughts* for inducing panic and clamor.

The reverberations grow louder each week. On May 14 several well-known bankers and merchants protested by letter to Mr. Asquith, the Prime Minister, stating that: "We feel that the prosperity of all classes has been greatly due to the fact that this country has afforded indisputable safety for invested capital, and we should deeply regret it if this conviction were in any way weakened."

Among the signers are Rothschild & Sons, Baring Bros., Brown, Shipley & Co., J. S. Morgan & Co.

Those who dislike the death duties, income tax, and the other proposals to tax the rich call the document "Lloyd-George's Red Flag budget."

The Home-Coming of the Wrights

Wilbur and Orville Wright and their sister were welcomed on May 11 by New York City on their return from a triumphal European tour. Two days later their city of Dayton, Ohio, conducted them home in a carriage at the head of a procession to the tooting of horns and the booming of cannon. They will soon "demonstrate" at Fort Myer

The "Saturday Review" is displeased with his "preoccupation with the sick and old," which, it says, is "becoming morbid." It rebukes his "puling philanthropy." "We doubt whether he will be able to carry his Budget."

The "Spectator" disapproves of the whole affair, but says: "Those who are now howling should either not have approved or been so feeble in their opposition to old-age pensions, which are the cause of the whole trouble."

Lord Hugh Cecil calls the Budget "a rehearsal of the Day of Judgment."

After the various items—levying on income-tax payers, brewers, ground landlords, and motorists—have been studied, the dust and clamor raised by the Budget will be understood only by realizing that, wise or unwise, the Budget is a program of social reform. It is an attempt to lessen the almost unbearable burdens of those living in misery.

The Return of the Sky Pilots

TO A LAND that gave them scant honor and no contracts, the Wright Brothers return laden with trophy. As inventors of the first successful heavier-than-air machine, Wilbur and Orville Wright have had a triumphal tour on the Continent. More like royalty than anything else it was. In money they have made a fortune that would go far in Dayton, Ohio. As celebrities the crowd will gather and surge about them inside of ten minutes in any civilized country. They have won medals of honor and prizes for competitive success. And there are persistent rumors of contracts with the Governments of France, Italy, Germany, England, and Russia. Sixty aeroplanes of their design are now building.

The Wrights arrived at the port of New York on May 11. The dinner in their honor of the Aero Club on May 12 was notable in the absence of the men who should have been there. The brothers Wright made their customary two-minute speeches, tactful, modest, and non-informing. On the following day they went to their home in Dayton. President Taft presents to them gold medals, awarded by the Aero Club, on June 10 at the White House. At that time they will fly on the Fort Myer grounds. In the early fall they return to the hospitalities of Europe.

In answering a reporter's question about the future of the aeroplane, Orville Wright said: "I do not believe that the aeroplane will ever be a regular passenger carrier. Neither will it carry freight. Its province will be more in the nature of a special conveyance for quick transit, more like an automobile, only its operator will not have to confine himself to defined routes of travel."

The time is coming when the new product will be standardized. The Wrights have been quoted as establishing a minimum price for an aeroplane at $7,500; and a price of $25,000 for a high-speed and commodious cloud-skirter.

These men in their genius and modesty have "done us proud." It approaches the time when we should be willing to commit ourselves to official recognition. Even now we shall be almost the last of the nations.

Tuberculosis and the Employer

MANUFACTURERS in Worcester, Massachusetts, are open-minded men. In Worcester, city and county, enough of them have placed their names to a contract to affect the welfare of 20,000 employees. It was the result of a recent talk given at the factory of the Royal Worcester Corset Company by Dr. M. G. Overlock, State Inspector of Health. David Fanning, president of the company, announced that if any of his 1,200 employees fell ill of consumption he would receive thirteen weeks' treatment at the Rutland Sanatorium free of charge, at the expense of the corporation. This is the probationary period in the treatment of the disease. Mr. Fanning agreed in writing to pay the four dollars a week charged by the sanatorium. Other manufacturers followed him in signing the contract. The noonday talk by the health inspector is being continued through the sixteen health districts of the State, containing 22,000 manufacturing establishments. If the idea spread from district to district, from State to State, and from nation to nation, it would help to turn the fight against tuberculosis. The employer guaranteeing expert care of the employee means two things: the removal of the sufferer from proximity to a multitude of fellow workers and proper care for the patient.

The Disappearing Horse

WE SOMETIMES speak of the disappearing horse as if he were a white rhinoceros or a purple cow, or even a dodo—a memory of the Never-Never Land. "Nothing but motor-cars now," you can hear the people say. And yet it would puzzle a statistician to tell how many vehicles are horse-drawn and how many motor-propelled on the average public road.

A paper in the "Engineering News" gives the count.

Seven typical highways in Rhode Island are chosen. On all but two of the seven roads there is a large excess of motor vehicles over horse-drawn vehicles. Over the seven roads, in eight hours, 1,262 motor vehicles and 695 horse-drawn vehicles passed. The touring cars of four to seven seats each were 848 in number. "Nearly all the horse-drawn vehicles were of light weight, and most of them had rubber tires."

The paper concludes by pointing out "the improbability of being able to effectually control the speed of motor-cars, especially in isolated districts, except by an extensive organization of State police."

Melodious Atlanta

FORTUNATE among cities is Atlanta, Georgia, to open her Auditorium-Armory with such golden voices as sang together in the Music Festival week of May 4. Geraldine Farrar, Olive Fremstad, Antonio Scotti, Riccardo Martin, and Zenatello were of those who aided in the formal dedication of a noble public building. The Auditorium seats 7,500 persons. On the opening night every seat was taken, and such an audience assembled as only a few cities of the world could have accommodated in a single public building. In addition to the world-famous "evening stars," the Auditorium chorus of five hundred voices sang "Tannhäuser" music, and the Dresden Philharmonic Orchestra of seventy-two musicians accompanied the various "numbers."

Atlanta is justifiably proud of her new building. No conference, convention, or musical assemblage that could crowd into London or Paris would overwhelm her. She is ready to play hostess to the world's best. The Atlanta "Constitution" says: "Perhaps it is not too ambitious even to look forward to the coming in the not very distant future of a great national political convention."

Holding Up a Nation's Mail

An episode in the May Paris strike of postal employees, some thousands of whom are claiming the right to unionize and affiliate with labor unions in private industry

Raisin Day

SOME of the California newspapers are lamenting that California's Raisin Day has not made much of a sensation in Eastern circles. A sovereign commonwealth devised a playful dodge for advertising a home-grown product, and too much silence followed the effort. Here, then, is at least a slight attempt at amends.

Raisin Day was instituted and fittingly celebrated in several parts of California on April 30. Its purpose was to aid the raisin-producing counties, such as Yolo, San Diego, Tulare, Sutter, Fresno, and Kings, to market their crops and to advertise to the great world that in raisins California has a toothsome product.

In San Francisco the celebration was enthusiastic. All public eating-places sprinkled the menu with raisins. Raisin sherbets and raisin cocktails cheered the sojourners in the palaces of drink. There were raisin luncheons and raisin dinners in clubs, hotels, and homes. One newspaper gave away to needy and greedy patrons 14,000 raisin sandwiches.

Fresno declared a half-holiday and enjoyed a night parade of illuminated automobiles—all for the cause.

George Meredith

IN THE death of George Meredith, on May 18, English letters have had one more grievous loss in a year of losses. Although recognition was tardy, in his closing years he was ranked as one of the great line of English novelists, continuing the tradition that opened with Richardson and Fielding, passed on with Smollett, and came to a full bloom with Trollope, Thackeray, Dickens, and George Eliot. At no long distance, he was one of that procession.

George Meredith was born on February 12, 1828, in Hampshire, England. He received a portion of his education—a portion that was shaping in its effects on his intellect—in Germany. He began his active life with the study of law, but soon turned to journalism, and thence swung into literature, where he continued steady production in poetry, narration, and essays till the closing years of his life.

He opened his strictly literary career with a volume of poems published in the year 1851. In 1855 appeared his Oriental prose phantasy, "The Shaving of Shagpat"; in 1857 a medieval Germanic tale, "Farina."

It was just fifty years ago, in 1859, that Meredith published perhaps the supreme book of his career. He called it "The Ordeal of Richard Feverel." It is doubtful if he ever touched the high places again with so sure and light a tread. The book proceeds at a rush, as if it were written in a single burst of the creative effort.

Its theme is the tragic outworking of a father's attempt to rear a boy on a theory. Some of the love passages descriptive of Richard and Luey are among the most perfect bits of prose writing in the language. They have the rare merit of being lyrical without falling into the prose meters that deface some of the best work in Dickens, for instance.

And this novel was free from the crackling epigram and staccato style that are an annoyance to the fastidious reader and that limit popular appreciation.

In "Evan Harrington" he elaborated a satire on social discriminations, the chief character in which was the son of a tailor.

His "Modern Love and Poems of the English Roadside," appearing in 1862, showed that he had authentic though limited inspiration as a lyric poet. Throughout his poetry, as well as in almost all his prose, the intellectual quality is dominant—a talent for analysis, a desire to reveal the motives in human action, to probe conduct, rather than the rendering of the "soft play of life itself."

In "The Adventures of Harry Richmond," Meredith wrote a romantic adventurous novel, with dashes of "high life" at court interspersed with gipsy wanderings. It is the predecessor and model of "The Prisoner of Zenda," and the multitude of high-colored, swift-moving novels of adventure.

"The Egoist" has made the strongest appeal of any of Meredith's novels to the Brahmanic few who enjoy the spectacle of ruthless character analysis. The book is a piece of spiritual surgery performed upon the hero, Sir Willoughby Patterne, who believes that the world, and particularly the world of women, exists for the purpose of perpetual adoration of his excellencies.

The opening chapter is akin to Meredith's famous 1897 essay on "Comedy, and the Uses of the Comic Spirit" in its "appreciation" of the "comic spirit" in life.

"Diana of the Crossways" was the searching study of a witty and beautiful woman who revealed a Government secret to a newspaper.

This list, with "The Tragic Comedians," probably covers Meredith's most competent and lasting work. His study of Ferdinand Lassalle in "The Tragic Comedians" has been accepted by critics and social democrats alike as just and fair to the "tribune of the people."

Other of his novels are "Sandra Belloni," "Rhoda Fleming," "Vittoria," "Beauchamp's Career," "Lord Ormond and His Aminta." He also published later volumes of verse.

The closing years of his life Meredith lived at Flint Cottage, Boxhill, Surrey.

Comment on Congress

By MARK SULLIVAN

THE SENATE had its first line-up on an important matter when the vote was taken on free iron ore. And *that vote demonstrated that the Democratic Party in the Senate is even more demoralized than in the House—has bolted even farther and more riotously away from the ancient position of the Democracy as a party in opposition to the protective-tariff idea.* Among the traditions and principles of the Democratic Party free iron ore is one of the oldest and most conspicuous. When the Democrats last controlled the Lower House of Congress they passed a tariff, and in that tariff iron ore was free. When the bill went to the Senate free iron ore was changed to a duty of forty cents per ton; and that was one of the two changes which caused Grover Cleveland to cry "perfidy and dishonor."

The Reasons for Free Iron Ore

WHATEVER the reasons for free iron ore sixteen years ago, they are more than doubled now when by far the greater bulk of the available iron ore in the United States has passed within the monopoly of a single corporation. It was in recognition of this condition that Mr. Payne and his committee, in framing the present bill, put iron ore on the free list. With that status the bill passed the Lower House. In the Senate Mr. Aldrich's Finance Committee made the change to twenty-five cents a ton. In the debate on adopting or rejecting this change to twenty-five cents a ton, a Republican Senator from Michigan, Mr. Smith, argued for the duty as a protection to his local industry; a Republican from a State in exactly the same situation, Nelson of Minnesota, said his people did not need this duty, and argued that "if we want to build up independent competitors of the steel trust, we ought to give them this advantage" of free iron ore. Dolliver of Iowa made the same argument, saying:

"There is one thing which, in my judgment, will gradually shoot through and through the steel monopoly, if one exists in the United States, and that is to give American capital easy access to the materials out of which iron and steel are made."

The two promises of the Democratic Party, to fight monopoly and reduce tariff burdens, would be fulfilled by free iron ore.

Senators Who Voted for Free Iron Ore

FINALLY came the vote. That ballot found twenty-four Senators out of the ninety-one in all voting for free iron ore. These are their names:

Beveridge, R.	Culberson, D.	La Follette, R.
Borah, R.	Cummins, R.	Nelson, R.
Bristow, R.	Curtis, R.	Newlands, D.
Brown, R.	Dolliver, R.	Overman, D.
Burkett, R.	du Pont, R.	Rayner, D.
Clapp, R.	Gamble, R.	Shively, D.
Clarke, D.	Gore, D.	Smith (Md.), D.
Crawford, R.	Hughes, D.	Smith (S. C.), D.

Now mark this fact: out of those twenty-four who voted for free iron ore, *fourteen are Republicans—more Republicans than Democrats are found fighting against protection on an important raw material.* The ten Democrats on that list are the only ones among the entire party representation in the Senate who voted for free iron ore—ten Democrats out of thirty-two.

Are These Men Democrats?

THESE are the Democrats in the Senate who voted against free iron ore and in favor of a duty of twenty-five cents a ton. They compose nearly two-thirds of all the Democrats in the Senate:

Bacon of Georgia	Fletcher of Florida	Paynter of Kentucky
Bailey of Texas	Foster of Louisiana	Simmons of North Carolina
Bankhead of Alabama	Frazier of Tennessee	Stone of Missouri
Chamberlain of Oregon	Johnston of Alabama	Taliaferro of Florida
Clay of Georgia	McEnery of Louisiana	Taylor of Tennessee
Daniel of Virginia	Martin of Virginia	Tillman of South Carolina

A Matter of Fact

THIS paragraph deals with a question of fact. Whether or not there ought to be a tariff on crude oil is one question; whether the men who are in Washington advocating that tariff are Standard Oil agents, or are independent producers, is another question. That there should be much confusion on the latter question is not surprising, since it has long been the custom of the Standard Oil Company to do business under many aliases, and to cloak itself in inscrutability. The matter is settled by the following paragraph from a letter written by Miss Ida M. Tarbell:

"There is no question in my mind of the entire independence of the oil producers and oil refiners who are now in Washington petitioning Congress for a duty on crude oil. I have known many of them all my life, and am more or less familiar with their business careers. As to their contention that free crude oil would be a serious handicap to them in their competition with the Standard Oil Company, and an advantage to the Standard, they are undoubtedly right, *if* Mexico turns out the tremendous oil producer that oil men are predicting. If the field does not develop as they seem to think it will, there is nothing in the world for them to fear from free crude. As you know, I am myself a thorough believer in free raw materials, *including oil*, and I wish that the independent oil men felt that they were in a strong enough position to risk free crude oil. Their courage would be a great help in tariff reform, for undoubtedly, as things look now, there will be much more reason for a duty on crude oil than there is for one on wool, hides, coal, or iron ore."

If Congress puts the tariff on crude oil, the consumer in the immediate future will pay more for his petroleum, just as he will pay more for his steel and his clothes and his shoes if Congress puts a tariff on iron ore and wool and hides. So much is undeniable. Oil is in that respect on the same footing as other raw materials. A wonderful pool of oil, of unexampled richness, is discovered within a few hundred miles of the boundary of the United States. To make the path between this store of natural wealth and the citizen who uses kerosene just as broad and smooth as possible ought, it would seem, to be the most obvious function of Government. If it is true that doing this would play into the hands of a great monopoly, then there should be some more direct means of dealing with monopoly than through a high tariff. This is free-trade doctrine, and perhaps it is the counsel of perfection. On the other hand, for the independents who, during the past ten years, under favorable State and national legislation, have fought a slowly winning fight against a great monopoly, sympathy is human. And two matters of fact are clear: it is the independents—not the Standard Oil Company—who are asking for the tariff on oil; and a Congressman who votes for this tariff is in exactly the same position as one who votes for a tariff on lumber, or ore, or coal, or hides, and is entitled to credit for the same degree of good faith.

Senators Whose Terms Expire with the Present Congress

Aldrich, Nelson W.	R., Rhode Island
Beveridge, Albert J.	R., Indiana
Bulkeley, Morgan G.	R., Connecticut
Burkett, Elmer J.	R., Nebraska
Burrows, Julius C.	R., Michigan
Carter, Thomas H.	R., Montana
Clapp, Moses E.	R., Minnesota
Clark, Clarence D.	R., Wyoming
Culberson, Charles A.	D., Texas
Daniel, John W.	D., Virginia
Depew, Chauncey M.	R., New York
Dick, Charles	R., Ohio
du Pont, Henry A.	R., Delaware
Flint, Frank P.	R., California
Frazier, James B.	D., Tennessee
Hale, Eugene	R., Maine
Kean, John	R., New Jersey
La Follette, Robert M.	R., Wisconsin
Lodge, Henry Cabot	R., Massachusetts
McCumber, Porter J.	R., North Dakota
Money, Hernando D.	D., Mississippi
Nixon, George S.	R., Nevada
Oliver, George T.	R., Pennsylvania
Page, Carroll S.	R., Vermont
Piles, Samuel H.	R., Washington
Rayner, Isidor	D., Maryland
Scott, Nathan B.	R., West Virginia
Sutherland, George	R., Utah
Taliaferro, James P.	D., Florida
Warner, William	R., Missouri

The terms of the thirty Senators on this list expire March 3, 1911. That official date seems a long time away; actually the reelection of these men, or the choosing of their successors, is a matter of the immediate present. In practically every case the choice will be made by a State Legislature which meets either next winter or the winter following. The men who will compose these Legislatures, in whole or in part, are now being nominated at party caucuses. *In Wisconsin, for example, the holdover half of the State Senate, which will help determine the succession to Senator La Follette at the session beginning in January, 1911, is already elected. For those who approve, as well as those who disapprove, the course of any of these Senators, the time for action is the quiet* now, *not the noisy time a year or two years hence, when the Legislature is actually in session.*

The Voiceless Consumer

SENATOR SIMMONS of North Carolina, defending his position in favor of the present tariff on lumber:

"I have had letters and telegrams by the hundred from the people of my State protesting against putting lumber upon the free list. I have had no letter to the contrary. It is said that the farmers are demanding cheaper lumber and expecting to get it. I have not had a single letter from a farmer of my State asking me to vote to have this duty removed or reduced."

There are more people who want cheap lumber to build homes than are engaged in selling lumber. But business is organized, vigilant, and working all the time. Not only do they flood Congressmen and Senators with letters and telegrams, inspired by painstaking committees; they fill the Washington hotels and crowd the corridors of the Capitol. Senator Aldrich was right when he said that ninety-nine out of every hundred people who appear before the Finance Committee ask to have the tariff raised. The rich, and those who work for the rich, are making themselves heard. The forlorn ineffectiveness of those who bear the burden of the tariff is a pathetic spectacle.

The Democratic Question

SENATOR ISIDOR RAYNER of Maryland, speaking:

"Where am I and what am I? These are the momentous problems that are surging in upon me. . . . Where do I stand? . . . Am I a Democrat, for instance, on free hides, and a Republican on peanuts? Am I a protectionist on zinc ore and pig-iron and a revenue reformer on pineapples?"

Senator Rayner is a Cleveland Democrat who believes in a tariff for revenue. There are few such Democratic Senators left.

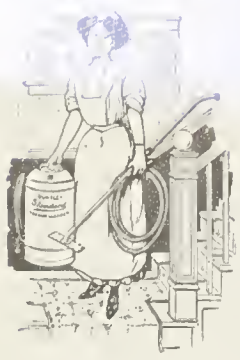
Shall Your Foods be Drugged or Not?

Much has been said about Benzoate of Soda in foods. It is not a matter, however, of mere press or political discussion —it is a vital health question that concerns you and your family.

Experts here and abroad, including Dr. Wiley, who has stood for the health of the American people for 25 years, have said that Benzoate of Soda in foods has an injurious effect upon the digestive organs. Benzoate of Soda is not a food. It is a tasteless, odorless drug made from coal tar.

Although used in many well-known brands of foods, the greatest danger in this drug is that it permits the use of inferior raw materials, as well as slipshod, unsanitary methods. In short, it is safe to assume that its use indicates uncleanliness or bad materials. It is never used to improve good materials. Does it mean anything to you that no manufacturer who uses Benzoate of Soda defends its use in his advertising?

Products of the best manufacturers (of whom there are many) do not contain or need Benzoate of Soda, because they are made of approved materials in clean surroundings.



Heinz "57 Varieties"—Ketchup, Sweet Pickles, Preserves, etc., etc., are prepared without Benzoate of Soda or any other drug—yet they may be purchased any time, anywhere, with absolute confidence in their keeping quality. Money returned if you are not pleased.

No person need accept a food containing Benzoate of Soda, for the law protects you by requiring its presence to be stated on the label. This statement is generally hidden in obscure type, an acknowledgment in itself of the maker's desire to conceal it. Read all type on labels; it is for you to choose whether food brought to your own table, or served to you on a public table, shall be drugged or not.

H. J. HEINZ COMPANY.

Members of American Association for the Promotion of Purity In Food Products.

Will you accept $5 a day for your services?

You can earn more than $5.00 a day at the start, and as much more as you care to make. You can establish yourself in a pleasant, profitable and permanent business that makes you independent.

You Take No Risk

You do not invest one cent in this business until you prove you make the money at it. You risk nothing, and are paid well for what you do.

You know the principle of the vacuum cleaner business, and how it has made housecleaning the work of hours instead of days.

What I want to prove to you is that you can make a fine income with the most perfect and convenient vacuum cleaner. The

Duntley Standard Vacuum Cleaner

embodies every principle and improvement known to the big wagon cleaners, and costly installed plants, yet it weighs only about 50 lbs.

You can take one of these machines into a house and remove every particle of dust and dirt from every room without taking up the carpets and without moving furniture, and do it ten times as thoroughly and in one-tenth the time.

The Duntley Portable Cleaner sucks the dirt out of the house. It does all and more than the big wagon cleaners can possibly do, and costs only a fraction as much originally and less to operate. This means bigger profits to you.

How The Business Increases

Every housewife who has a rug or room cleaned by the Duntley Cleaner, is so thoroughly satisfied that she wants a Duntley Cleaner for her own use—which you sell to her at a handsome profit. She tells her friends about you. You get their orders. Their friends give you more orders, both for cleaning and for machines. The more customers you get, the more customers they will get you.

My "Pay From Profit" Plan

I want one good, honest, active man or woman in every city or town—no matter how small, where houses are lighted by electricity, to write for my "Pay from Profit" plan.

I establish you in business, show you how it is done, and assure you an income of at least $5.00 a day while learning.

Make me prove what I say. Don't spend one cent until you prove the truth of everything I say. Whether you want to go into the business for yourself, or whether you want to prove the economy and satisfaction of the Duntley Portable Cleaner in your own home, take advantage of my offer.

Write Me for the Plan Today

The offer is made to you—now—today. It is your great opportunity to start in a new business—in a coming business—in a profitable business—in a business of your own that will grow bigger each year. You simply write me and ask for my "Pay from Profit Plan." Do it now—at once

"Where Thieves Break In"

(Continued from page 14)

sometimes all dressed up, and I tried to talk like he did. He thought I was traveling and didn't want to be bothered. But I couldn't see him mueh—was I going to drag him down, just as I'd got him started right? Not mueh. 'Go and visit your friends, o' course,' I used to tell him, 'and you can write to me.' The best schools I picked out, the very best. And they came high. But I was good for it."

He shifted and rubbed his eyes.

"I had a huneh when I bought the ticket," he muttered. "It just come over me: 'You ought not to go to a place you got the idea of from Jim.' And everything so still, and the stuff so easy. And the last time, too—the last time."

"But Jim—he thought—" Lindsay prompted. A dreadful curiosity held him.

"So then he wrote. 'Of course it's Yale, dad,' he wrote; 'we're all going up together. You don't mind if it costs a little to get settled, do you?' And was I going to go to him—he was head of his class, mind you—and say: 'The Trust has treated me the way I wouldn't treat a dog—it's all up with me and you? I can go baek and be foreman again at the works—we're bought up, ehewed up, and spit out like a wad o' paper'? Not much, I guess. No. Here's where I quit the honesty game, I said, for it don't pay. You stole my patent, and I shut up because I couldn't afford to fight you. Now, I says, since my boy's edueation has been stole from me, I'll steal it back, and only from them that can afford it, too! And I'll use no lawyer to do it, either, and no triek-work with papers. I'll get it straight from the big thieves that pass the plate on Sundays."

Lindsay listened to Caroline moving over their heads; her steps seemed the only reality in this horrid dream.

"It will just about kill Jim," he said.

"It would have killed him not to go to college," the man returned sharply, "and he had a right to go."

"But, good heavens, there are ways—he could have earned money—he's clever enough to work his way through a dozen eolleges!" Lindsay cried despairingly.

"There wasn't any working his way through for *my* boy," said the man with a eunning grin. "I've done enough o' that for the family, thank you. So did his mother—she died of it. No, there's money enough for all, and it only needs a little planning. Take from the kind that takes from *your* kind—they'll never miss it. I've just done for myself, and only wanted to get my twenty-five hundred a year for Jim—and enough to dress as I may need to."

Lindsay cleared his throat.

"Do you mean to say that Jim never asked you what your business was?"

"He didn't know I ever changed till last month. He thought I traveled for the comp'ny. Of course, he didn't like that any too well—brought up as he's been—and I guess he thought 'twould be kinder to me not to mention it much. He thought I didn't know, but I did. Last month—last month—" The man paused and bit his lips.

"Well, last month?" Lindsay repeated.

"I got my huneh to quit. That fortune woman and—and other things. The doetor told me to keep quiet. And I sort of fixed it up with Jim in a letter. I told him I was going to send him one more thousand for graduatin' with and I was going to let him try for himself after that. I knew that was all right, beeause he's told me of plenty of rich young swells who had to. Fathers believed in it."

"He was going with Buek Williamson on the ranch," said Lindsay slowly.

"That's it! Buck Williamson. He asked me wouldn't I look 'em up after they got settled and try it out there. It was an awful niee letter," said the man softly. "He's a real gentleman."

Lindsay looked toward the dining-room.

"Was this the 'thousand'?" he asked.

The man nodded.

"I've never been with him more than a day or two, and I thought I'd go up to Yale this spring—when he graduated—and see him. And then—I was planning to drop out. Of course I never meant to see him mueh. I was always deadly afraid something'd happen. But I've been careful."

"But your friends—" Lindsay was wrung with an angry pity.

"I don't care for mueh of anybody but Jim," said the man.

Caroline was moving about in the dining-room again. Lindsay shook himself.

"Of eourse this is very awkward for me," he began. "I mean—I—oh, the devil! You know what I've got to do, of course?"

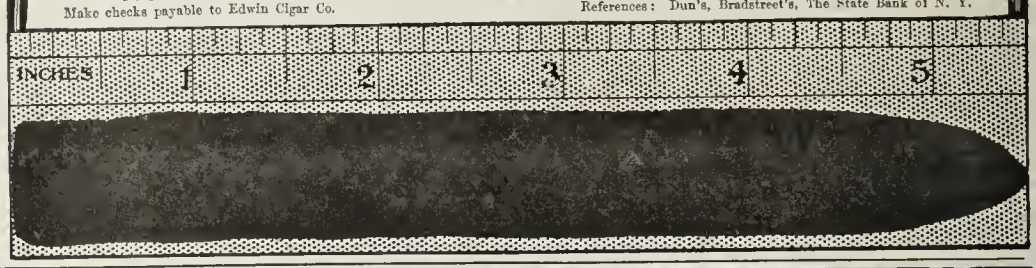
The man looked appealingly at him. "You've got it all back," he said quickly, "and you know Jim—"

"Yes, plague take it!—I know Jim," the boy muttered. "We all know Jim."

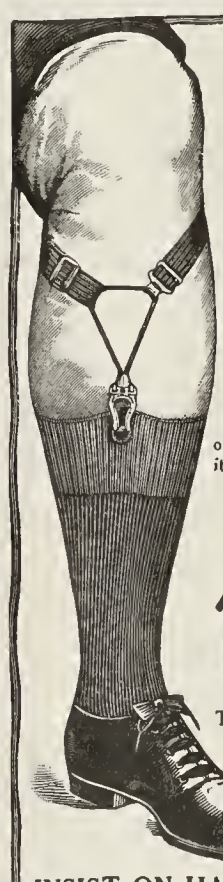
"Known well, isn't he?" the man inquired

100 SEGARMAKER FAVORITES $2.90 FROM FACTORY DIRECT TO YOU.

I call them "Segarmaker's Favorites" because they are the kind my cigarmakers smoke. Clear, clean, LONG LEAF HAVANA FILLER—nothing but Havana. They are not handsome looking cigars—they are roughly made, no bands, no pretty pictures on the boxes. You get them fresh off the bench. This is one of my greatest values. It's a cigar you can't duplicate at retail for less than 15c. *I buy and sell for cash.* I go to Cuba regularly, buy my tobacco direct from the grower, and pay him long before the tobacco reaches the U. S. Custom House, and that's the reason I undersell everybody. *The man who buys and sells on credit cannot compete with me.*



THIS PRICE APPLIES ONLY TO YOUR FIRST ORDER FOR NOT MORE THAN 100



None sold at this "get acquainted" price after June 30th

Orders from old customers will only be filled at regular prices—(1909 price list.)
You need not order a hundred to start—order 50 for $1.45, or even 25 for 73c. It's all the same to me.
PUT ME TO A TEST—smoke as many as you like—smoke them all, for that matter, and if you then tell me that you didn't get all you expected, I'll return your money and ask no question. You can't go wrong.

From Now until JULY 1st—NOT LATER

THERE is no more useful garden material than what are known as Dutch Bulbs, Hyacinths, Tulips, Narcissi, Crocus, etc. They give for a small outlay of time and money an abundance of flowers in the house from December until April, and in the garden almost before the snow is off the ground in the spring until the middle of May. These Bulbs are grown almost exclusively in Holland, and in enormous quantities, where they are sold at very low prices. Usually they pass through the hands of two dealers, and more than double in price before reaching the retail buyer in America.

By ordering from us now instead of waiting until fall, you save from 20 to 40 per cent. in cost, get a superior quality of Bulbs not to be obtained at any price in this country, and have a much larger list of varieties to select from.

Our orders are selected and packed in Holland, and are delivered to our customers in the original packages immediately upon their arrival from Holland, perfectly fresh, and in the best possible condition.

If you wish to take advantage of our very low prices, we must have your order **not later than July 1st**, as we import Bulbs to order only. They need not be paid for until after delivery, nor taken if not of a satisfactory quality. (References required from new customers.) Our import price-list, the most comprehensive catalogue of Bulbs published, is now ready, and may be had for the asking.

CLUETT, PEABODY & COMPANY, MAKERS OF CLUETT SHIRTS, 455 RIVER STREET, TROY, N. Y. SEND FOR STYLE BOOK

Our Most Popular Bonds

We make a specialty of bonds secured by first liens on valuable farm lands. Some of them are tax liens—municipal obligations.

They pay 6 per cent—a higher rate than can now be obtained on any other large class equally well secured.

They are issued in denominations of $100, $500 and $1,000, so they appeal to both small and large investors.

Short time or long time, as you prefer.

We sell a general line of municipal, railroad and other public utility bonds, but we consider these particular bonds the most attractive in the market. They are preferred by a large majority of our customers—people who know about them.

We have written a book about these bonds—a book of unbiased facts and clear information. Every investor, small or large, owes to himself its perusal. The book is free. Simply write us a postal, or send us this coupon. Please do it now.

GERHARD MENNEN COMPANY, Newark, N.J.

eagerly. "There's no cleverer scholar there, much cleverer, I mean, is there?"

Lindsay shook his head. "Not that amounts to anything," he said shortly.

"I'll bet there's no better fellow there than Jim—none of the big bugs?"

"There is no better fellow anywhere," said Lindsay.

Caroline tapped fretfully on the door. "Aren't we ever going, Lin?" she begged; "it's all put back."

"Yes, yes, in a minute!" he answered, and turned to the man. "I'm mighty sorry to have to do it," he began; "it's a horrible thing to do, but I can't see that there are any two ways about it. I don't want to hear you say any more. If you'll come quietly, well and good. If it was anybody else—but in my uncle's house—and—well, will you come?"

The man sighed. He looked ten years older. "All right," he said, "I didn't know but—well, never mind. My nerve's gone. I never had a failure, you see. But it's hard. Jim was telling me last month about this singer that he'd heard was so careless, and I noted it down for use some day. He never said his friends lived here. I—it makes me feel dreadful when I think how he'd feel if he knew I'd been working his *friends*—he'd never stand for that, Jim wouldn't. It makes me feel—oh, well, what's the odds? But I wish you didn't belong to Yale College."

Lindsay scowled, motioning to the door. "Shut up and come on, will you?" he blurted. The man got up.

"I guess I won't see Jim again, then," he said. "There isn't one chance in a hundred he'll ever know, but I couldn't explain why I didn't go up to New Haven, nor send the thousand, and it'll be five years, anyhow—ten, maybe. And I shan't hold out that. The doctor only gave me two."

"Ten years? Oh, no," Lindsay cried.

"It's grand lareeny," said the man.

"Lin, Lin, come *on!*" called Caroline.

"You've got the pin, and I'll tear the picture up," said the man. "I've got it all planned, o' course—I give the name of Barker. And—and *if* Jim ever says anything to you or any of his friends about me being mean about the thousand, when I'd promised it, just kind of give a hint, will you, that things may have happened so's I couldn't? I hope he'll think I died. I wish he was through Yale, though. The thousand won't make any difference with graduatin', will it?"

Lindsay swallowed hard; his nerves were strained to snapping.

"Good God, no!" he shouted. He opened the window and threw the revolver away.

"Get out!" he said briefly, turning to the man. "Get out of my sight! If Jim ever receives another penny from you, I'll tell him all I know."

The man swayed toward the chair. "Do you mean it?" he gasped. "Honest?"

He began to sob and choke a little.

"Get out!" Lindsay repeated, looking persistently sidewise. The man leaned over and fumbled for the picture on the floor, found it, and straightened himself.

Suddenly he leaped back and fell into the chair again; a dreadful pallor reached the roots of his hair.

"All up, I guess—twice to-day— Jim, good-by," he said very quickly, and rolled against Lindsay, holding the picture tight.

"Lin! If you don't come pretty soon—" Caroline pushed open the door a little.

"Hush! Run and bring that whisky!" Lindsay whispered with a frightened face.

She waited outside while he labored mysteriously, breathing hard.

"Is Mr. Barker sick, Lin?" she whispered fearfully when he returned to the door.

"Y-yes. I guess he's pretty sick," he said slowly, stepping out and turning the knob carefully. The dining-room reeked with the whisky on his hands and coat.

"We'll go for the doctor," he went on, "both of us, because we'll have to fix—you needn't hurry so, Caroline. There's no—we don't have to hurry." He tried the outside door twice, to make sure it was latched, and glanced hastily at the windows.

"I'd better wire Uncle Joe," he said, half aloud; "he'll know what to do—oh, there's the dog. Come on, Hamlet—he's Buck Williamson's—gentle as a kitten."

"Yes, he'll know," she repeated contentedly, reaching for Hamlet's black muzzle.

"But I don't think that was right, do you, Lin, even for a joke?" she queried, following him down the side path.

"No," he agreed briefly.

"Wasn't it funny he had one of your pins?"

Lindsay stopped short and almost faced her. He looked very young and tired.

"I swear, Caroline, I believe worse men have worn it!" he said.

MOTHERS, BE CAUTIOUS

In selecting a food for the baby don't experiment. Baby can't stand much experimenting. Borden's Eagle Brand Condensed Milk is acted upon by the infant stomach substantially the same as mother's milk. For 50 years it has made glad mothers and started thousands of babies on life's journey with health and happiness.—*Adv.*

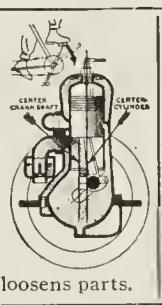
THE cylinder castings for many of America's best automobile engines are made in the Ferro Foundry. Ferro Marine Engine cylinders are made at the same time from the same fine gray air furnace iron.

The Ferro Machine Shops machine cylinders and engine parts for automobile manufacturers when the volume of work on Ferro Engines will permit of outside business. Ferro Marine Engines not only embody the successful mechanical features of the high grade automobile motor, but they are made of the same kind of materials and with equally as good workmanship. This is, in brief, the reason for the reliability and durability of Ferro engines. You will be enthusiastic if you run a Ferro.

FERRO Marine Engines

Made in 1, 2 and 3 cylinders from 3 to 25 H.P. Jump Spark Ignition



Two Cylinder Ferro Engine with Ferro Reverse Gear

1 and 2 cylinders, 4 to 15 H.P. Make and Break Ignition. Just the engine for any boat for work or pleasure.

Attractive Prices—Best Quality

Offset Cylinder—

An improvement found in the highest priced automobile motors and Ferro engines. Force of explosion exerts all turning effort on Crankshaft. Gives greater power efficiency, reduces and equalizes side thrusts of piston on cylinder walls. Eliminates "knock" which loosens parts.

Ferro Engine Embodies Most Advanced Improvements

Counter Balanced Crankshaft.
Successful Cooling System for any climate.
Positive Pressure Oiling System.
Efficient Ignition—Jump Spark & Make & Break.
Accessibility of Working Parts.
All Parts Interchangeable.
And others too lengthy to mention.

SPECIAL—5000 3 H.P. FERROS AT $60 EACH. Good as money can build. All improvements of standard Ferros, quantity brings down the price. Just the thing for launch, canoe, dingey or auxiliary yacht.

If You Visit the Alaska-Yukon-Pacific Exposition in Seattle this summer be sure to see the Ferro exhibit in Machinery Hall. Experts in attendance.

Leading Boat Builders use Ferro engines. They must be good. Ask any of the following: W. H. Mullins Co., Salem, O. Outing Boat Co., Ashland, Wis. Cleveland Auto Boat Co., Cleveland, O. Memphis Boat Co., Memphis, Tenn. Pope Boat Co., Fond du Lac, Wis. Rippley Hdw. Co., Grafton, Ill. Inland Lakes Boat Co., Lake Geneva, Wis. W. J. Hand, New Bedford, Mass. Niagara Motor Boat Co., N. Tonawanda, N. Y. Pioneer Boat & Pattern Co., Bay City, Mich. Packard Motor Yacht Co., Cincinnati, O.

A Practical Treatise covering design, construction, installation and operation of marine motors sold for half the cost—25 cents.

Free Catalogue describing all 1909 models upon request. Write for it.

THE LATE PETER F. COLLIER

Founder and head of Collier's Weekly and the great publishing house which bears his name was a firm believer in Life Insurance.

HIS CONFIDENCE IN

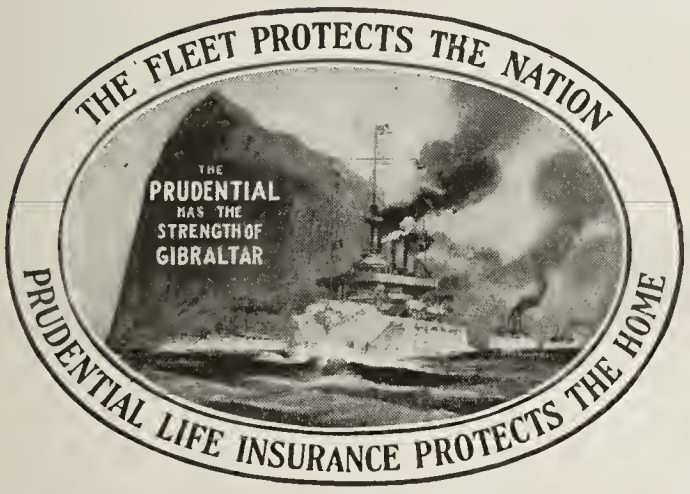
The Prudential

WAS SHOWN BY HIS VOLUNTARY AND UNSOLICITED SELECTION OF THIS COMPANY

The following letter from his son and executor, Mr. Robert J. Collier, shows the wisdom of his choice:

Office of Collier's Weekly,
New York, May 4, 1909.

Hon. John F. Dryden, President,
The Prudential Ins. Co. of America,
Newark, N. J.



My Dear Sir:

Permit me to thank you, and through you The Prudential Insurance Company of America, for the very prompt receipt of checks for $50,000 in full cash settlement of claim on the life of my father, Peter Fenelon Collier, who demonstrated his belief in Life Insurance in The Prudential by carrying policies in your Company for several years.

Proofs were completed and checks delivered the same day and your Company did everything possible to effect a quick payment of claim.

Assuring you of my appreciation,
I remain
Yours very truly,

Robert J. Collier

The Prudential pays claims small or large immediately upon the receipt of satisfactory proofs of death.

Total Payments to Policyholders Since Organization, Plus Amount Held at Interest to Their Credit, Over 313 Million Dollars!

The Prudential Insurance Company of America

Incorporated as a Stock Company by the State of New Jersey

SEA LION WATERPROOF BELTING

Why It Pays to Buy Sea Lion Leather Belting

First cost and maintenance cost of belts are two very different things. That's why you save money getting Sea Lion Belting. It costs you a trifle more to begin with, but it lasts eoough longer to more than make up for the initial cost.

If you require a belt that will etand live steam, water conditions euch as leaking roofs, bursting pipes or flooded wheel pits and the trying humidity of a warm climate—in fact any of the conditioos that eo quickly knock out an ordinary belt—

SEA LION
Guaranteed Waterproof
Leather Belting

Is the *only kind* you can afford to buy.

We cut it from the choicest oak tanned hides on the market—using only center etock. Every proceee in the making ie done with utmost thoroughneee and care. The laps are joined by our own proceee of cement under 3,000 lbs. hydraulic pressure to the equare inch, eo that you could tear the leather sooner than separate the joints by any tensile straio. We eell it under a guarantee equally as liberal to the user as we place on our **Oak Tanned Reliance Leather Belting** and that meane every foot is guaranteed and that we will repair or replace any belt defective in stock or workmanship; and in addition to the above we guarantee the lips against opening up on account of either water or steam.

We are also manufacturere of Reliance, Sterling, Imperial and Dynamo brande of belting—which are just as good value for different purposes. Write naabout your belt needs. We will advise you and eend you a book on belting.

THERMOS THE BOTTLE

A Freezing-Cold Drink On A Burning-Hot Day

In mid-summer, when the sun's rays beat down with tropical fierceness, and you lack ambition—lack inclination—lack the desire to do anything other than keep out of its range—then, and surely then, you'll thank yourself for having made the comfort-investment of a THERMOS BOTTLE.

The refreshing coldness of the liquid within—the ice-cold liquid that *stays* cold—cold for three days—that's always ready—will stimulate you and add immeasurably to your hot-day comfort. The same bottle in the winter keeps liquids piping hot for 24 hours.

It doesn't matter what you pour into the Thermos—ice-cold milk, lemonade, champagne, coffee, tea, water—*it will stay cold without ice for 72 hours—ready for instant use.*

In the New Model Thermos Bottle, the inner bottle can be easily and cheaply replaced in case of accidental breakage. The Thermos is the only bottle in which this separable-case feature has been patented.

Pints from $3.00 up. Quarts from $5.00 up.

If you don't already own a Thermos, get one today. It's guaranteed by 30,000 dealers. Be sure to look for the name "THERMOS" on the bottle. It's your guarantee that the bottle is genuine. The others are merely weak—worthless imitations.

AMERICAN THERMOS BOTTLE CO.

FOR THE READER OF BOOKS

Friends in the House

By MILDRED McNEAL-SWEENEY

THEY have never a word to say.
Each one turns a quiet back
And sits, a little monk in gray,
Or sober brown, or honest black.

BEHIND the guests of my desire
I make fast the outer door.
And lo! before the crumbling fire
These await one mute word more.

AND when at dawn, from out my ease
Up springs some half-forgotten care,
At my bed's head, thinking peace,
Two and three, the monks are there.

IN THE noon when traffic swims
Like a gulf about my brain,
One that has gone out with me
Divides with me the press and pain.

AND he comes in with me at night
And says no word and makes no sound:
But sits within the candle light
And calls the gentle brothers round.

AND from the cowls, fallen low with time,
I have all kind and human looks,
And life once more sings out in rime. . . .
The happy brothers are my books.

By Airship from London to Quebec

RUDYARD KIPLING'S power to dramatize machinery and the peculiar tang and sweep of what might be called his geographical poetry were perhaps never more vividly exhibited than his airship story of the year 2000 A. D., published in "McClure's Magazine" a few years ago. He not only constructed an airship, perfectly plausible for literary purposes, but his story was firmly set in a background of entirely new experience. His airship people had their own lingo, as well-worn apparently as the slang of sailors and railroad men to-day. The latter part of that stirring flight, with the "dawn-gust" tingling on the taut skin of the "Postal Packet 162," the dark being crammed back over her bow and the sun coming up the curve of the earth behind, was a work of real imagination, a *tour de force* which no one else could have done. By printing on one side of the paper, using wide margins, and adding fanciful advertisements "from the contemporary magazine in which it appeared," the story is now padded into a book and published by Doubleday, Page & Company. "With the Night Mail" is quite the best airship story yet written. A. R.

Good Temper in Controversy

IT IS as it should be when a clergyman has the boldness to lead thought. This Professor Walter Rauschenbusch has done in his book "Christianity and the Social Crisis." There is scarcely a book on a controversial matter since the "Apologia Pro Vita Sua" in such all-perfect tone. It is good to move about amid that serenity, that fairness and tender courtesy to opponents, that avoidance of dogmatism. Men begin to listen when we give our hopes and conclusions tentatively in a quiet voice. So Professor Rauschenbusch is winning many readers in this urgent but temperate appeal. He feels that the Christian Church fails to see and then to seize its opportunity in the present world-wide crusade against poverty. He believes that the common people are going to gain a more just distribution of opportunity, and he fears that the Church will continue to play a hesitant part in that ongoing.

It is a little more than a coincidence that the rejuvenating plans of the conservative Socialists, such as Thomas Kirkup, should precisely duplicate the social reforms of modern philanthropy. Kirkup and Rauschenbusch ask for no single item of change that is not called for by the charity organization societies. There is only one point at which they differ. Philanthropists believe that the present industrial structure will permit all their beneficent tinkerings without sagging at the center or breaking off at the rims. The other folks say with equal cheerfulness "go ahead. Abolish child labor, overwork, underpay. Fight congestion, tuberculosis, the saloon evil. When you've made your alterations, you will have broken down the competitive system."

One says you will have the same old fellow, only sounder. The other says you will have a new man and, particularly, a new woman when you have administered the drugs and used the knife. A. H. G.

More of Ferrero

TO A large part of the human race, history means dulness. To others it may be as interesting as anything outside of our immediate private concerns and the relative standing of the Chicago and Pittsburg Baseball Clubs. If you like history at all, you can hardly fail to be interested in Ferrero, and his fifth volume is better fitted for general popularity even than the preceding four. It has to do with the reign of Augustus, and treats largely of social questions not very different from those which we are all talking about to-day, such as luxury, divorce, war and peace, and the relations of various classes. Signor Ferrero is the same man in this volume that he was in the preceding four. It must be remembered that he is a very young man for a historian, and it may well be that his arrogance and love of sensational effect will vanish as he grows older. Time and again, in this volume, he takes a position with emphasis obviously because it is the opposite of the position which has been taken by all ancient and modern historians. He is, in short, in this regard, the George Bernard Shaw of history. Granted this weakness, his books are, nevertheless, very stimulating and decidedly worth while. This volume especially will give a great deal to think about to any one who is interested in public affairs, and, moreover, it accomplishes the difficult feat of treating history from the economic and political standpoint, rather than from the standpoint of battles and personalities, and at the same time making it readable. Signor Ferrero is extremely interested in Augustus, who had a type of mind which he is able to grasp much more adequately than he could grasp the mind of a genius like Julius Cæsar. This interest helps him to give a larger proportion of positive thought and interpretation and a smaller proportion of mere combativeness than he gave in most of the other volumes. N. H.

One Man's Reading

FROM one interesting letter relating to literature we clip the following:

"What I have in mind to read now is the Fiftieth Chapter of 'Decline and Fall' (spread of Mohammedanism), 'She Stoops to Conquer,' 'Merchant of Venice.' My character is slowly dissolving, I fancy. For instance, I'd just as soon read the Fiftieth Chapter of 'Decline and Fall'—but the whole thing straight off—no. I did the first two volumes, when I was younger, straight off. Doubt if I could now. Recently saw Sothern in 'Hamlet.' Think he makes him too robust, insufficiently neurotic, but a great performance. Bob Davis's play—'The Family'—is, I understand, a hit here. Haven't seen it. Liked your editorial about Mademoiselle Kellerman. She and her sisters ought to be cast for the Rhine Maidens—that's obvious.

"I'm going to patronize vaudeville instead of drama my Wednesdays in town. It is the expression of America, and drama is exotic here."

A Wells Novel

"TONO-BUNGAY" is good for the inquiring mind. It is by H. G. Wells, and is the latest and most human and interesting of his more recent stories.

With mature skill the philosophy of the intellectual Socialist is woven into the history of three people—Uncle Ponderevo, originator and promoter of the patent medicine "Tono-Bungay, the Secret of Vigor"; Aunt Susan, his optimistic wife; and the waif nephew, business manager for his imaginative uncle and even-tempered observer of the absurd life drama.

Wells is a lover of his trade. It is a delight to follow his sentences. He has created half a dozen characters that any reader with curiosity will be glad to meet. The whole group is real. Lovers, promoters, maiden ladies, servants, shopkeepers live through the pages. It is a novel with a purpose, but a novel which would be alive even without its purpose.

THE NATIONAL WEEKLY

The Black Fan

VOL XLIII NO 11

THIS may well be called the "Oldsmobile Limited" since it is limited in its appeal to those who desire the practical efficiency so long associated with the word Oldsmobile, together with almost daring originality of design. This originality, however, has for its basis the soundest of all mechanical principles;—and the six-cylinder cars with the forty-two-inch wheels are the "final word" in motor car manufacture, not solely on account of the merit of the large wheels, but because the car as a whole is the most satisfactory product for those who insist on the *maximum* of speed, comfort and reliability.

It is almost impossible to describe the "riding qualities" of this car, because no other car ever built compares with it in luxury. With wheels of this diameter it is as easy to turn out of a deep rut as out of a shallow car track; every small inequality of the road is levelled out for the passengers; large ones are fairly bridged over and hence hardly noticeable.

We have to buy our own billets, in order to be sure of second growth hickory for the wheels.

Special molds were made for tires of this size, which give the car the greatest road resistance of any car of its weight.

Tire replacements are only necessary after many thousand miles of travel—and then cost no more than for wheels of 36-inch diameter. Hence the greatest possible economy is added to its luxury and efficiency.

The 1909 production of these cars has been allotted and it is probable that no present order can be delivered;—but the 1910 production will be delivered comparatively early in the season, and orders will be filled strictly according to date of receipt. Only 50 of the roadster types will be manufactured. Our branch houses and agencies will inform you as to details and first dates of delivery. Six passenger cars and roadsters, $4500 and $4600.

You ought to see Yosemite

Santa Fe

In the Sierras of California, a mile above the sea, is **Yosemite,** rimmed by sheer cliffs, thousands of feet high.

Can you imagine a more delightful vacation than camping among its giant redwoods?

Yosemite is now reached by rail. Through Santa Fe Pullman from San Francisco.

En route visit the **Colorado Rockies** and stop a few days at **Grand Canyon of Arizona.** Also bathe in the Pacific at **Coronado Beach.**

Afterwards take in the **Alaska-Yukon-Pacific Exposition** at Seattle. A cool trip all the way.

Low excursion fares all summer.

Won't you let me assist in planning your tour by mailing these Santa Fe '09 Summer books?

"A Colorado Summer." "Titan of Chasms" "California Summer Outings" "Yosemite"

Also special convention folders for N. E. A. at Denver, G. A. R. at Salt Lake, Elks at Los Angeles, and the Seattle Exposition.

ACME QUALITY

PAINTS AND ENAMELS — THE ACME QUALITY KIND — STAINS VARNISHES

Paints and Finishes

For the Home

At this time of the year there are many little jobs of painting and finishing about the home that anyone can accomplish successfully by following the Acme Quality plan.

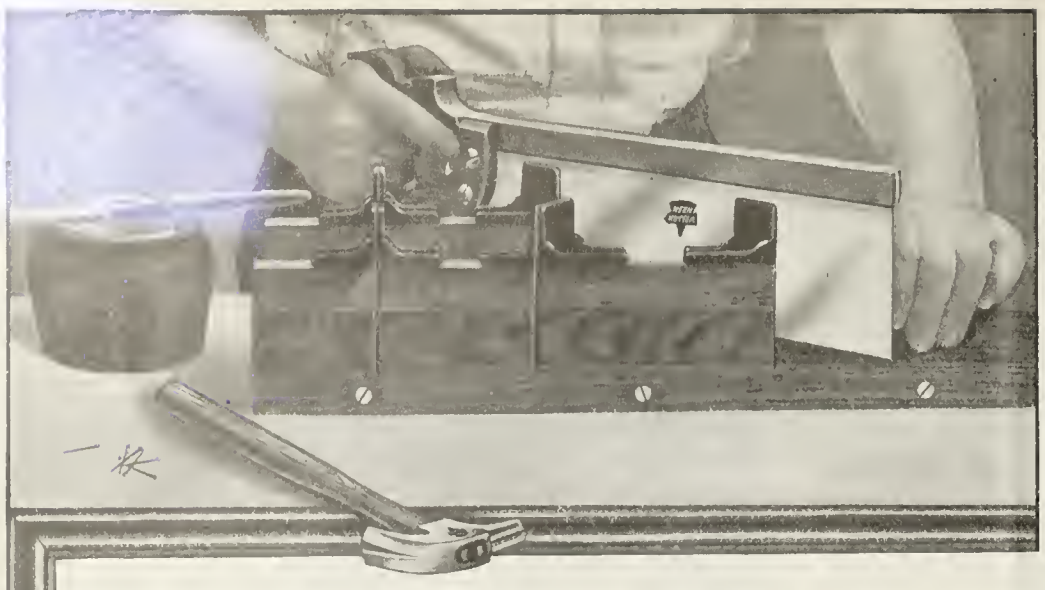
Now is a good time to repaint the floors, to refinish the woodwork, to brighten up the furniture, to redecorate the walls, or to enamel the bathroom.

Acme Quality Paints and Finishes are put up in convenient form for ready use and easy application—just tell your dealer what you want to do and insist on goods bearing the Acme Quality trade-marked label, for—if it's a surface to be painted, enameled, stained, varnished or finished in any way, there's an Acme Quality Kind to fit the purpose.

Acme Quality Enamel (Neal's)
Gives that smooth, beautiful, sanitary enamel surface so easy to keep bright and clean. In white or dainty tints.

Acme Quality Kalsomine
For walls and ceilings. Mixes with *either* hot or cold water. Flows freely, covers with one coat and does not show laps.

Acme Quality Porch Furniture Enamel
For finishing porch and lawn chairs, settees, swings, flower stands, railings, etc. Imparts a tough, durable finish and prevents rust and decay.



For example, a treasured old chair or other piece of furniture that is badly marred and scratched can be made as good as new. Simply refinish it with Acme Quality Varno-Lac—a stain and varnish combined that imparts the elegant effect and durable, lustrous surface of beautifully finished oak, mahogany or other expensive woods.

Acme Quality Text Book

The Acme Quality Text Book tells just how to get best results. It is an encyclopedia of paints and finishes, covering every phase of home painting. Tells what to use and how to use it. Free to any address on request.

ACME WHITE LEAD & COLOR WORKS
Dept. P, Detroit, Mich.

IN DETROIT—Life is Worth Living

For Home Work or Shop Work

If you have made a failure of home work, look at your tools. Are they the kind an experienced carpenter would use, or are they "any old kind"? The success of any work depends largely upon the tools.

How could you make a neat joint for a picture frame unless you had a fine true saw and mitre box to guide it? You couldn't use the same saw you would use to cut a two-inch plank.

KEEN KUTTER
Quality Tools

are for home work or shop work.

Every tool is the very best that can be made in quality, temper and adjustment. No others hold their edges so long nor are so accurately set, balanced and adjusted. With Keen Kutter tools, home work becomes a pleasure and many conveniences and improvements may be made.

Every Keen Kutter Tool is guaranteed.

Look for the name and trademark on each tool.

Keen Kutter Tools include Saws, Chisels, Bits, Drills, Gimlets, Awls, Planes, Hammers, Hatchets, Axes, Drawing-knives, Screw-drivers, Files, Pliers. Also a full line of Scissors and Shears, Pocket-knives, Razors and Table Cutlery.
Keen Kutter Tools have been sold for nearly 40 years under this motto:

"The Recollection of Quality Remains Long After the Price is Forgotten."—E. C. Simmons

"Elk"

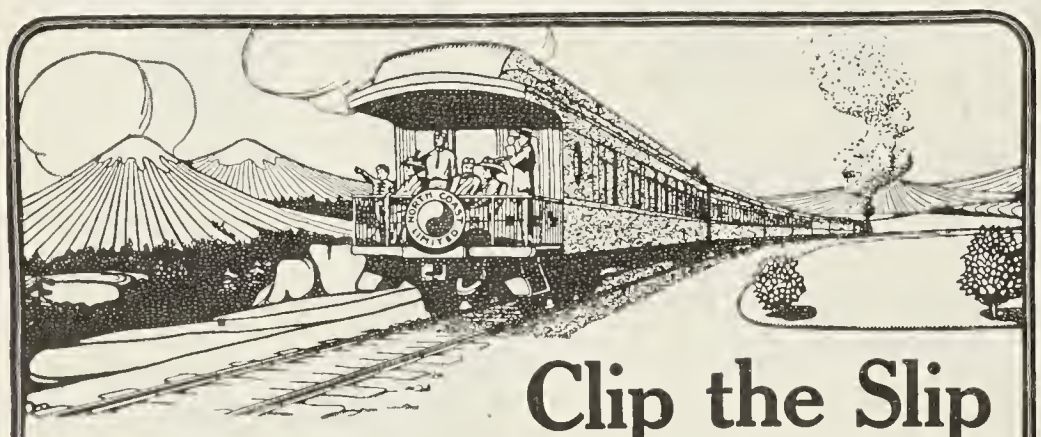
The Newest Summer Collar

A Corliss-Coon Hand Made Collar

2 for 25c.

In "Elk" we have succeeded in putting style and snap in a low, comfortable, warm weather collar.

"Outing," "Yachting" and "Varsity"—Standard Summer Styles—will also be worn this season. "Kaiser"—a revived style—is meeting with some favor.



Any styles you buy in Corliss-Coon Brand are hand-made, strong, long wearing collars of the "Better" sort.

Sold by Furnishers everywhere—especially by those who seek to give undoubted value.

If not readily obtainable, order from the factory, enclosing the regular price, $1.50 per dozen or 25c for two, and prompt, prepaid delivery will be made.

Send for our new Style Book, showing all the best shapes—it will help you in your collar selections.

Corliss, Coon & Co., Dept. T, Troy, N.Y.

GLIDDEN'S
GREEN LABEL VARNISHES

SUPERIOR WHITE ENAMEL

is the finest quality of white enamel that can be made. It dries quickly, with a beautiful glossy surface that retains its beauty through exposure and wear and does not turn yellow. Is easily kept clean and is not affected by repeated washing.

It is intended for use on the finest interior woodwork, and can be used over old varnished or painted surfaces with most excellent results after the surface is properly prepared by a competent painter. Can be rubbed to a dull finish, or will accept a most beautiful polish.

Price $5.00 per gallon. Quarts $1.35 each

VELVET WHITE ENAMEL.

Similar to the above (and at the same price) except that it dries with an egg shell gloss, producing a natural rubbed effect without the necessity of rubbing. Is waterproof and not affected by washing or changes in temperature. Can be successfully used on new or old woodwork as directed above.

For sale by paint dealers everywhere. If not at yours, we will send by express prepaid on receipt of price.

ADVERTISING BULLETIN

NO. 6

STANDARDIZED MERCHANDISE

IN 1908 advertisers spent upward of $100,000,000 to standardize their goods through the medium of national advertising. Did you ever stop to think what this means to you? Here it is in a nutshell. Whenever you go to buy a piece of silverware, what do you look for? The stamp "Sterling," and on solid gold in any form you look for the "14-k." If it is there, you are satisfied; you need no further assurance of the quality of the goods; they are standard.

On hundreds of articles that you buy from time to time you look for the same token of merit. For instance, on collars and shirts the names Cluett-Peabody, or Corliss-Coon, or E. & W. are enough to satisfy you of their merit. Go to a grocery and you ask for "Ivory," "Fairy," "Pears," or "Swift's" soap. In buying breakfast foods, you may ask for any one of a dozen well-known brands, all good and all standardized on account of merit and advertising.

Standardized goods sell better than unknown brands. I have in mind a sale that was carried on by a department store in Chicago. They had bought the complete stock of a house that had failed. Among the goods were shirts and collars, a quantity of which carried only the name of the retailer, who had failed, while the balance bore the name of a well-known manufacturer. They were marked to sell at the same price, but the well-known, trade-marked goods were sold out almost immediately. It proved that the purchaser knew that he was taking no chances with the goods with which he was familiar. The dealer who had gone out of business was no longer responsible, but by purchasing the standardized goods, a man could procure a style of shirts or collars which he had been wearing, or could continue to get the style of any new shirt or collars that he might purchase. With the unknown goods this would have been impossible.

The double guarantee—that of the manufacturer and also of the retailer—is what you, as a consumer, want.

E. C. PATTERSON
Manager Advertising Department

IN NEXT WEEK'S BULLETIN — "Outdoor America"

You Should Read This New Bond Book

"The World's Greatest Industry"

Every investor, small or large, should ask for our **New Bond Book.**

It tells some facts, now too little known, about the most attractive bonds that we know. The book is written after fifteen years of experience in selling these particular bonds.

They pay **6** per cent interest—a higher rate than can now be obtained on any large class of bonds equally secured.

They are secured by first liens on valuable farm land. Some are tax liens—Municipal obligations.

They are serial bonds, so afford opportunity for either long or short time investments.

They are issued in denominations of $100, $500 and $1,000, so they appeal to both small and large investors.

They are by far the most popular bonds that we sell. You will want some of them when you know all the facts.

Send us this coupon or write us a postal. Please do it now.

Eastwood Sandal

Children's
Sizes 4 to 8
$1.00

An Ideal "Play Shoe"

All the fun of **"going barefoot"** without the scratches and bruises

Eastwood Sandals allow the feet to expand naturally and are a grateful relief to children whose feet have been distorted by ill-fitting shoes. They relieve and prevent excessive perspiration.

The **Eastwood** Sandals are made by an entirely new method of shoe construction. Stitching is all outside, no wrinkled linings, waxed thread or tacks—just clean, smooth, oak-tanned leather next to the feet.

MADE OVER THE FAMOUS EASTWOOD LAST

OUTDOOR AMERICA

For June

Edited by

CASPAR WHITNEY

¶ Outdoor America *is striking its gait. This will become apparent after looking over the list of articles selected for the first summer month. The range is from rowing to baseball, from farming to ballooning. The articles are all important, and, what is more, they are entertaining and profusely illustrated.*

¶ *Some people think the man up in a balloon is at the merey of the whimsical wind—and so he has been, and is still to a considerable extent. Aeronauts, however, are pushing their researches farther and farther into the heavens, and learning a whole lot about air currents they never even dreamed of. David Torrey Wells has been interviewing the men "higher up," and has written a most interesting and informing paper under the title of* "Ballooning with a Scout."

¶ *Every season countless parties of nerve-racked city folk move countryward seeking abandoned farms. A certain percentage of them actually think there are lands to be had for the taking. There is a pathetic human doenment in the story of these abandoned farms, and Ralph D. Paine offers it, after journeying all over New England, in his article—*"Abandoning the Old Farm."

¶ *Since the manufacturers have been making small motor boats at a cost within the average man's income, the gasoline craft has become a fun-giving essential of the holiday equipment. No home near the water is complete without one—at least so Winfield Thompson decides in his* "Shipmates with Gasoline."

¶ *President Taft not long ago declared golf to be* "The Poor Man's Game," *but van Tassel Sutphen thinks the President didn't say half enough, and undertakes to show how, in its conquest of America, it has really become every man's game.*

¶ *Last year when Harvard raced the Yale crew off its slides, so to say, at the same time administering a decisive beating, the question of* "The Relation of Pace to Four-Mile Rowing" *became a burning one among oarsmen. Harvard's policy at New London last year spoke the lesson her crew had learned on the English Thames. What Cambridge did to Harvard, Harvard did to Yale—and in the same way. Roger A. Derby, an old Harvard oarsman, takes up the question in an entertaining and illuminating manner.*

¶ *If wishes were horses, polo would rival baseball in number of players. Unhappily, horses are not to be had so cheaply, and thus it comes about that a comparative few play this most spectacular, courage-testing game. America is making another attempt this month to get back that polo championship cup which the English took away from us over twenty years ago. You will find in the June number photographs of the American team, and the story of what we have done in the game and where we stand.*

¶ *The number will also contain Mr. Will Irwin's final article in his series on baseball—*"The Business Side of the Game."

The Royal Three-Barrel Gun

makes you ready all the time for any kind of game

THE Royal Three Barrel Gun adds unlimited possibilities to the sportsman's outings in a mixed-game country and extraordinary pleasure and satisfaction.

It is a carefully made standard two-barrel shot-gun of 12, 16 and 20 gauge, built on most advanced principles, of Krupp Fluid, Damascus, or Crescent Steel. Hammerless, matted rib full length of barrels, pistol grip, checkered grip and fore-end, finest imported walnut stock.

And a perfectly bored rifle properly sighted, giving extra flat trajectory, and adapted to the new high-power smokeless powder shells. Any caliber.

Five Royal Three-Barrel Guns were purchased for the Roosevelt African Expedition, evidence of superior construction and serviceability.

The Royal Three-Barrel Gun has an extreme delicacy of poise and balance not excelled in any other gun at *any* price. Weight only 6½ to 7¾ lbs.

Thousands of sportsmen say no other gun or guns can take the place of this American-made three-barrel gun.

Sold by leading dealers, or sent anywhere for inspection. Write today for our fully illustrated catalogue.

Reading for Americans

NEVER HAD THE CITY OF FLORENCE more than seventy thousand inhabitants, in the days when she was the mother of DANTE, PETRARCH, MICHELANGELO, BOCCACCIO, MACHIAVELLI, and GIOTTO. Discussing creative genius in the United States, the soundest of our critics, JAMES BRYCE, in a fascinating chapter, speaks with moderation and fine enthusiasm of the reading which gives keenness to the eye and strength to the wings of the mind; and this is the reading not of daily newspapers, or of national weeklies, but of BACON, MILTON, BURKE, or GIBBON. What time you spend in perusing scandal, meaningless politics, news of racing, gossip of society, would be more than enough to make you, in the amplest sense, an educated person. It is not the number of volumes, but how we read, and what.

CHARLES WILLIAM ELIOT, for forty years President of Harvard University, has undertaken to lend his experience and his intelligence to collecting in fifty volumes such of the world's literature as he deems most useful for Americans. That collection we are to have the satisfaction of presenting to the world. Amid the wheat and chaff of life, this particular bit of work seems to us occasion for rejoicing. Writing in this paper at the beginning of the year, the then junior partner told something about what his father's existence had meant to the reading public of America. Of the literature which he made accessible to those who are not rich, there have been 5,720,000 volumes of Dickens, 1,592,000 of Cooper, 992,500 of Scott, 732,000 of Shakespeare, 616,000 of Thackeray, 1,905,000 encyclopedias, and 9,174,000 histories, including such writers as GREEN, GIBBON, MOTLEY, PRESCOTT, GUIZOT—writers who, as Mr. BRYCE would say, give strength to the wings of the mind. The best literature creates those faculties which sensational papers and ephemeral novels destroy. It develops powers of enjoyment unknown to the hasty. It helps us to rise above poverty and above wealth. It is to the mind what air and exercise are to the physique. It is the recorded human best in thought and feeling—the company of the deepest and most gifted, expressing what in them was worthiest of expression. Lamps of the intelligence, good books burn brightest in adversity. CARLYLE exaggerated but slightly when he said no book that will not improve by repeated readings deserves to be read at all, and still less did he exaggerate when he found in a collection of books the truest university.

Dr. ELIOT in his selection will include mainly entire works. A collection of short extracts too easily produces the same effect as the passing novel and the daily paper, weakening the attention and destroying the power of larger thought. Reading only in that way, we can never make of great writers our lasting and close companions, increasing ever in value and affection, even as the best among our mortal friends. This familiarity with *the whole* of a number of great books is a necessary part of "well-reading," to use a quaint old phrase that ought still to be alive. It is by such knowledge that we lend to our lives something of the sweep of centuries—an ampler spirit, a something larger, crowded into our little moment of existence. Although skipping doubtless is a useful art in our less important reading, what needs careful tending is the fragile gift, so readily lost, of serene and deep attention. The man who spends the bulk of his reading time among those volumes which seem masterpieces to so fit a judge as Dr. ELIOT will spend the hasting hours to better purpose than he who reads by accident. Our civilization, rich in triumphs, nevertheless includes among its evils an encouragement to living scattered and in detail, without concentration, poise, and purpose. If the foundation is soundly laid, we read by some compass when we stray off into the natural relaxations of the newspaper, the periodical, and the passing novel. A man who constantly reads well can, without harm, indulge some curiosity also about the frivolous accidents of his day.

Another of Dr. ELIOT'S guiding principles is that we should read as sensible men and women, not as pedants who follow sheepishly ideas built upon Greek and Latin courses in British universities. Much academic deadwood will receive the ax from him. Books marrowless to-day will not be included because they have long been famous. Moreover, the collection is being made by an American for Americans, and Dr. ELIOT would never have gained so distinguished a leadership had he not been a man of his own era and his own country. An American must have read with small intelligence if he has never found in EMERSON, WEBSTER, LINCOLN, and FRANKLIN words that enlighten, lift, or stir. He who reads CICERO and CÆSAR in a never-faltering pitch of admiration, through inspired and shallow parts alike, has a nature somewhat lacking in freshness and reality. To admire the orations against CATILINE and not the speech at Gettysburg is to belong with the dust upon the shelves.

"We must educate our masters," the British statesman said. Our masters in America are eighty million people. Our masters are ourselves.

Reflective Lords

THE ENGLISH have a decorative and at times humorous institution, known as the House of Lords. Recently the members bent their minds on a detail of government in which they are recognized authorities. The subject, in short, was motoring. "I always give instructions to my driver," said the Earl of Dartmouth, "to go round a corner with the expectation of finding on the wrong side of the road an old lady in a governess cart." The Earl of Dartmouth is one of the most sensible men in the upper chamber, and this detail of his life is worthy of his general reputation. Another principle laid down is of more doubtful value. Lord WILLOUGHBY DE BROKE introduced a bill for less noise. He told of his past life, which had been rich in experiences with all sorts of vehicles, from hansom cabs to four-in-hands, and asked the honorable gentlemen to forbid "hooters, horns, or other loud instruments of warning." "At present," he observed, "motorists assume to themselves the privileges of the fire engine." Lord WILLOUGHBY DE BROKE has no invention to take the place of noise as a warning to pedestrians. He admits the need of noise, but desires a quieter one.

If

A CONTEMPORARY for whom our esteem is high has produced this wild surmise:

"ABE ERLANGER has been mentioned for Mayor of New York. If ABE should ever be elected to this job, we know a certain weekly in New York which would have to come out on asbestos."

The Richmond "Times-Despatch," which is a paper of principle and ability, thus shows itself gifted in horrible imaginings. Two theatrical writers, who belong to ABE, have mentioned him for Mayor. One of these it was who printed seriously the story that ERLANGER had outboxed Kid McCOY; the same, and another, who told about his scholarship and library. The "Times-Despatch," however, is the first to raise the nightmare of what in such an Alice-in-Wonderland occurrence we ourselves should be compelled to say. Asbestos is expensive. Perhaps we might hire a funny man and depart on a vacation.

Graduates

DON'T BE TOO SEVERE on him. The yearly jokes about the college graduate form one of the largest and most reliable of crops, but why forget that vanity seldom disappears with age? Those who have had the advantage of twenty or forty years of conflicts still admire themselves. Vanity is among the most difficult traits to understand. It might be supposed that even a limited intellect would appear to itself a pathetic atom in a mighty universe; yet self-admiration exists, and occasionally even in superior men. Go easy, therefore, on the graduate. Youth is often out of focus, but that lack of perspective is not peculiar to our early years. If one is ever conceited, is he not likely to remain conceited to the end?

Travel

WHERE BEST TO GO depends upon what the traveler is. The man who imagines nothing to exist beyond American boundaries would do well, if opportunity offers, to observe sympathetically other lands. He, however, is less frequent than he was. The opposite type invites more attention now. Knowing any part of the world may give refreshment and rejuvenation, and none offers more inspiration than portions of North America. The Alaska-Yukon-Pacific Exposition will have part of its usefulness in causing Easterners to see more of the continent on which they live. Many of them, even of the prosperous

traveling class, although they may go every season to England, Italy, or France, pass from the cradle to the grave with no knowledge of the Colorado mountains, the great desert, the Sierras, the colors of Arizona, the Canadian Rockies, the vigorous cities of the Pacific Coast, the picturesqueness of New Orleans, the beauties of Florida, the thousand aspects of their own country, which, if seen abroad, would fill them with curiosity and admiration.

The Soul of Meredith

SAYS JOHN KEATS: "I would sooner fail than not be among the greatest." But again he says: "There is not a fiercer hell than the failure in a great object." And he knew disease and poverty as elder brothers, nearer than hands and feet. To do your best, and then have it fall short of requirements; to aim your full strength and all your working hours at just the one point of sincere product, accurate, true, and free from bitterness and malice—and then to find it all inadequate to demands—is starvation necessarily a keener pang? No equalization of worldly goods, no dispensation of golden opportunities, will reach down to a bruised spirit. "There is a certain grief in things as they are, in man as he has come to be, over and above those griefs of circumstance which are in a measure removable." There is "a capacity for sorrow in his heart, which grows with all the growth, alike of the individual and of the race." So speaks PATER in the loveliest chapter of "Marius the Epicurean." But there is an overword back of all these elements of our distress—the failure that is the sure comrade of all brave attempts, the ingratitude that answers back our every true effort of unselfishness, the nobler ambitions that will always overleap accomplishment. The hope that we carry is a dark-veiled hope. The message of those that have gone ahead is stoical. KIPLING speaks the larger language when he says: "He who hath not endured to the death from his birth, hath never endured." We live in the Valley of the Shadow. And if there is radiance to light it—not of the starlight, not of the moonlight, is that light for young mariners. Hidden in the unconquerable soul—only there—is the flame that is steady to the end. Something like this is the valiant spirit that GEORGE MEREDITH has left with us, he who never knew success till the fulness of years made him indifferent and he could only coolly enjoy it, till he was solitary and could not personally impart it, till he was known to the wise and did not need it. He was renowned, but never popular. He lived many years after awakening from "that dream of hope" which makes youth glorious. To a friend he wrote: "As to us two, we will say that the gods may rob us of everything except the heart to endure." Perhaps he speaks a greater word than any swift ripening and resonant early triumph would have brought forth.

Extreme

IF JUDGE BEATTY of California is in sympathy with the reform of criminal procedure, it is difficult to understand the attitude of himself and his court at a banquet recently in Los Angeles, when COLLIER'S was denounced. At the close of the feast Judge BEATTY, in a loud tone of voice, pointing his finger at our representative, said he was a "damned scoundrel," and that he intended to wait a year and then answer him. This announcement makes it worth while to live a year if possible. During that period, also, it may be that the Supreme Court of California will pass upon the case of RUEF, and, if CALHOUN is convicted, even upon that still higher power. Truth is popular provided it does not strike near home. Mr. T. T. WILLIAMS, in disapproving of COLLIER'S, said there is "not a man on the Supreme bench of California against whom suspicion or distrust has ever been directed." The Oakland "Inquirer" recalls a former editorial in Mr. WILLIAMS'S paper in which, in speaking of HARRIMAN'S counsel, HERRIN, it said:

"It is the influence that protects criminals from justice. It is the influence that takes the kernel from the lives of ambitious men and throws the husks aside. It is the influence that drags the ermine of the bench in the filth of dishonesty. It is the influence that makes a mock of right living and right thinking in politics. . . . WILLIAM F. HERRIN is the hired bribe-giver of the Southern Pacific Railroad. Not a great lawyer, he is hired to bribe judges. It is said of him that 'no man can so easily slip an overcoat on a judge's back at Christmas time.' He has his own way of influencing courts. In one great case he was hired at a salary of $150,000, and the Supreme Court of California at once reversed itself, while honor held her breath and turned away her nose."

That is the Hearst-Williams style, not our own. What is the explanation of the mighty change? It is merely a detail in that far-reaching *entente* between Messrs. HARRIMAN and HEARST, by which the magnate accommodated the publisher and the publisher called off his papers from damaging criticism of HARRIMAN or any of his interests.

Trees and Money

PLANTING EUCALYPTUS TREES in California is undoubtedly a good thing for the State and the nation, and under favorable conditions should mean gain to the owner. Owing to their comparatively rapid growth and various excellent qualities the eucalypti give promise of unusually large returns on the money invested after comparatively short periods. The speedily diminishing hardwood supply of the East is an important factor in directing attention to the possibilities of eucalyptus culture. It is unfortunate that many of the one hundred or more eucalyptus companies which have recently sprung into existence show a tendency to exaggerate the possibilities. Their printed statements indicate that they are more concerned with selling stock and land than with insuring legitimate returns. Land, planted to eucalypt, costing certain promotion companies from $40 to $60 per acre, is being sold for $185 to $250 per acre. Agents of some of the companies are now conducting an aggressive campaign in Eastern cities searching for the man who is willing to make one hundred per cent or more on his money. The doings of the Mexican rubber companies are recent enough to supply material for comparison. The eucalypts are trees, after all, however fast and well they grow; and although the wood they produce means a fair rate of interest on the capital invested, it is nevertheless wood, not pockets of gold. A check will result to the legitimate growth of this most commendable industry if there is much cheating of that easy mark, the small investor.

An Authoress

TO WRITERS of the feminine gender frequently falls the journalistic task of enlightening everybody on the homely troubles of this world. For example, one of them brightens the columns of a certain magazine with pin-money papers. From month to month her "healthful hints" "lighten the burdens" of "everyday life," to use her own apt phrases. Seldom has she been more helpful than in her June answer to Gladys P. She writes:

"Before trying to break a cocoanut put it in the oven to warm. When heated a slight blow will crack it, and the shell will come off easily."

This accurate and pointed reply will, we are convinced, lighten the burden of life for many a struggling Gladys, who might, without such assistance, have spent years endeavoring to open a cocoanut, cold, with an ordinary monkey-wrench.

Patriotism and Taxation

IF ALL INTERNATIONAL scolding matches had resulted in shooting matches, the globe would have been completely depopulated long ago, with not even a newspaper writer left to prophesy what countries would next go to war. Even within twenty years there have been several political flurries which were going to bring on the worst war in history, but which did not. At one moment Germany and Russia were supposed to be on the verge of fighting, at another it was France and England. The United States and England had their turn, so had Austria and Italy. Still other conflicts were, no doubt, entertainingly imminent, but it is impossible to remember between whom or what about. Recently the patriots of Germany and England have been shouting at one another in vociferous terms. They cry that sacrifices must be made, etc., but since the English Chancellor of the Exchequer presented his budget some weeks ago, which of course included the price of warships, his scheme of taxation has met with almost unanimous censure. The proposed income tax, legacy duties, land tax, liquor licenses, stamps on stocks and bonds, excise duties on spirituous beverages, and import duty on tobacco were all attacked by the people whom these respective forms of taxation would have affected. Last year Germany's Minister of Finance had the same experience when he suggested the means of defraying the Empire's public expenses, which, of course, also included its naval amusements. Everybody who was to be taxed thought somebody else ought to be taxed instead. As in England, nobody thought he was the proper person to be taxed. In all countries of the world every one is willing to "make patriotic sacrifices" out of every one else's pocket.

Aim

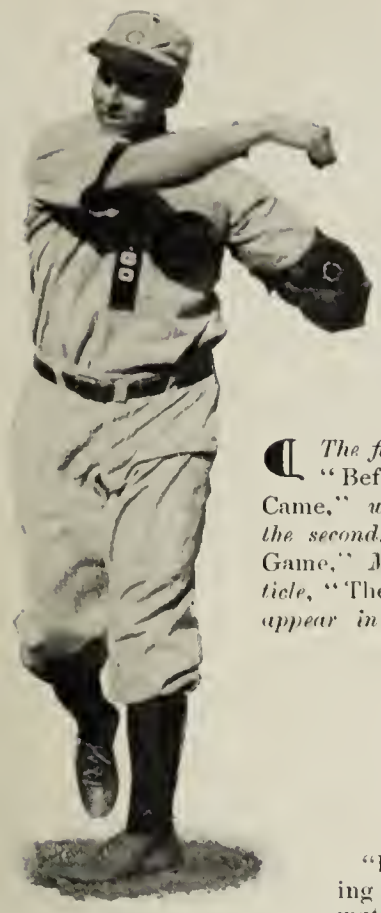
WHAT MAKES A PLAYER in the healthy and absorbing game of golf? One critic, MARSHALL WHITLATCH by name, observes:

"The difference between the good players and poor players is more in accuracy than in power. The vast majority of golfers expend more energy than they can control accurately. The increase in distance comes from increase in accuracy. No one will ever be bothered in not applying enough power."

Such doctrine is good also for citizens of every sort. All along the line it is controlled and directed energy that tells. It is never the volume of force, proceeding at a rush, shattering itself on the first chance obstruction. It is raw power leashed and governed. Power in itself lacks virtue, and splurges of undirected force fail of accomplishment.

The Brewers' Gospel

WHEN WEARINESS THREATENS we turn the pages of the "Brewers' Year-Book," vintage of 1909. There is surcease for wo. Here is optimism all hearty and simple faith. Here is one cure for all afflictions. There is but one simple, all-sufficing rule. Drink beer, and you empty your jails. Irrigate the dry soil of humanity with clear-flowing channels of Piel. When will the towns and counties learn that when you are harsh to cheery saloons, citizens reel, mothers sob, and crime walks at noon? The brewers are almost too good for human nature's daily food. They are lonesome in a heedless world. They believe in unspoiled nature. Trust it, nourish it, feed it on malt. Let melody and Würzburger flow, and we shall enter upon our heritage. Such is the gospel of the brewers, and if it leaves anything to be desired it at least does not lack enthusiasm.



Collier's

BASEBALL

The Art of Pitching

The Third of a Series of Four Articles on the National Game

By WILL IRWIN

Mordecai Brown, *of the Chicago Nationals*

¶ *The first paper of the series,* "Before the Professionals Came," *was published May 8; the second,* "Working Out the Game," *May 15. The last article,* "The Business Side," *will appear in the issue of June 12*

"Baseball? There's nothing to it but a guessing match between the pitcher and the batter."

—*Addie Joss.*

WHEN the first man-monkey discovered the low, elemental ruse of throwing a stone at his adversary, instead of smiting him with it at close quarters, he discovered also the principle of the first "curve ball." Men were "curving" hand-thrown projectiles during all the long centuries between the caveman and the baseball player. For nothing which comes away from the human throwing arm, except the spitball, travels without a "spin," and the spin, given that the projectile is sent with enough force, usually becomes a curve, however infinitesimal that curve may be. Americans were playing baseball for twenty years before they discovered this simple fact in physics; and they were pitching intentional curves for fifteen years more before the men of science explained to them why a spinning baseball behaves as it does.

In the early days when the Knickerbockers, the Eagles, and the Gothams used to play their matches on the Elysian Fields, it began to dawn on pitchers that they could reduce batting by fraud and device. Restricted to a wholly artificial delivery—a perpendicular underhand toss "without throw or jerk"—they found only two ways to accomplish their purpose. In the first place, they could deliver a succession of balls beyond the reach of the batter, at him, behind him, and so confuse and harry him that, when an unexpected good ball came over the plate, he would smite it without "getting set"—and so score only a one-base-hit, perhaps, instead of the home run which every good batter of the time hoped for when he stepped to the plate. In the second place, the pitcher could vary fast balls with slow ones, thus taking advantage of what physical-culture experts call "muscular memory." So "change of pace" was born. In the pleasant amateur days of the fifties Harry Wright, ex-cricketer, learned this trick. He learned also to deliver his fast and slow ball with the same motion and apparent force of the arm. This, therefore, is the oldest ruse in pitching.

"Phonnie" Martin's Zephyr-like Delivery

IT WAS in 1863, the year which saw the first "called ball" rule for the restriction of pitchers, that a new star blazed in the baseball firmament. Alphonse Martin, known as "Phonnie" or "Old Slow Ball," a boyish veteran just home from the war, opened on the teams about New York City a delivery which puzzled the best players. His ball came toward the batter like the lightest zephyr, so slow and weak was it. At the plate it died—dropped wearily away and burrowed in the earth. Furthermore, it seemed that batters never could meet it squarely for long hits. They popped it into the air or they sent it skimming along the ground. For years the why and wherefore of this ball was a puzzle even to Martin. Critics noticed only one difference between his method and the accepted one. Instead of keeping the ball above his hand at the moment of release, as a tenpin bowler does, he kept it *below* his hand. Moreover, he released it with a little dip of the wrist. Martin himself did not understand then why this method made the ball behave as it did. He knows now. That action of the wrist sent the ball spinning vertically *toward* him—the "reverse English" of billiards, the very spin which, given infinite speed to counteract the attraction of gravitation, produces the rare "rise" ball. In Martin's case the ball had but little speed, but the spin was just strong enough to make it "hesitate" when it came near to the plate; and then, because of the arrest of motion, it dropped. (Diagram B.)

"There is nothing new in baseball," say the critics of to-day; and, in fact, there is difference of opinion over the origin of every single improvement. So the question, "Who pitched the first curve?" is a matter of controversy. I but tell here the story which has been generally accepted by the historians of the profession.

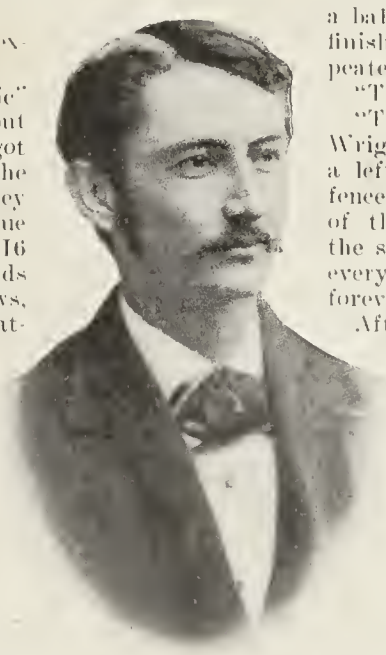
The Stars of Brooklyn were a famous war-time nine. Arthur Cummings, a tall, loose-jointed boy with a flexible arm, was their substitute pitcher. As a stripling he had exercised his throwing arm by spinning clamshells on the beach. He noticed how they curved, and he speculated idly on the possibilities of a curving baseball. When he became a real pitcher, Cummings plotted to beat the rule which provided that the ball must be sent in without "throw or jerk." Having a loose, strong wrist, he learned to give it a horizontal whip as it left his hand. That whip of his wrist, though he did not know it, imparted to the ball a fast horizontal spin from right to left—the spin of an outcurve to a right-handed batter. One day in practise he pitched against the wind. Every pitcher knows now that a head-wind produces wide curves, since the curve is only a matter of atmospheric friction. Both Cummings and his catcher noticed that the ball was behaving curiously; the catcher nearly wrecked his bare right hand in reaching for it. It seemed to curve away from him. Cummings announced his discovery to the older members of his nine, and invited them to watch him. That day the wind was at his back, and he produced no curve. His elders laughed at him, but Cummings persisted in his practise.

In 1867 the Stars of Brooklyn went to Boston to play the "Harvards of Cambridge," and Cummings went along as pitcher, the regular being sick. Here was his chance to try that ball in a game. That day the wind was in his face. The Harvard nine, a stronger team, went down before the Excelsiors because they could not hit Cummings. After the game a Harvard player bespoke him.

"What were you pitching to us?" he said. "It came at us and then it went away from us!" From that time the curve, a simple out, was Cummings's chief reliance.

The Discovery of the Outcurve

THE historians add that "Bobby" Matthews, the next great curve pitcher, watched Cummings until he learned the trick. Matthews was the sphinx of baseball. He never talked much anyway; and he only smiled when asked about his methods. He died without enlightening the world on the subject. Some believe that he had the "spitball" twenty-five years before Stricklett rediscovered it.



"Phonnie" Martin is now a hale and strong man of sixty-four, an employee of Harry Stevens, the caterer of Madison Square Garden in New York. He will maintain to his dying day that Bobby Matthews had the first curve. "Harry Wright was scouring New York in 1868 and 1869 to get a pitcher for the Red Stockings," he says. "Do you suppose if Cummings was there with the curve, Wright would have passed him up? I never saw him pitch a curve until the seventies." Martin has a vivid memory of the first curve he encountered. In 1869 his team, the Eckfords of Brooklyn, were national champions. He himself was the greatest pitcher in the country. The Eckfords went South to play the Marylands of Baltimore. This was an obscure, new team; but one Bobby Matthews, unknown to fame, was its pitcher. The Eckfords, through Maryland errors rather than their own merits, got a victory by one bare run. After the game the Eckfords put their heads together and inquired:

"What was he serving us? It was out in front when you looked at it and right beside you when you hit at it!"

The Marylands challenged for a return exhibition match.

"Don't you accept it, boys," said "Phonnie" Martin. "I'm supposed to be a pitcher, but I can't do what that fellow does. He's got something brand-new." But the rest of the Eckfords were foolishly confident; and they forced Martin to yield. The exhibition game was a pitchers' battle royal—score 21 to 16 in favor of the Marylands. The Eckfords went back to spread the fame of Matthews, who became a star at once. By 1871 Matthews had won the record "low-score" game of the time—Kikeongos of Fort Wayne 2, Forest Citys of Cleveland 0. The curve was then a simple "out."[1]

When the pitcher, released a little from the artificial limitation, could use a side-arm motion, some one discovered another spin which produced the "in." And before the middle seventies Bond discovered the "drop."

Arthur Cummings, *generally recognized as the first curve pitcher*

But it remained a "freak" delivery, a thing doubted and distrusted. Harry Chadwick admitted that it could be done, but what was the use? "It is uncertain," he argued; "neither catcher nor pitcher knows when it is coming; it delays the game."

In the spring of 1874 Princeton had a pitcher with an arm like a tree—"Mac" Mann, now James McElroy Mann of the Scribner publishing house. Mann had heard of the new delivery. In the final campus game of that season, he went into the box with a sore second finger. To "favor" it, he twirled the ball off his forefinger. Lo, the curve! All fall and winter he practised it in the gymnasium. He applied his physics to it, too; crudely studied out the reason. So he developed an out, an in, and a drop. Pitching curves became the rage at Princeton. Visitors saw ten or a dozen men, on any bright day, tossing balls against a wall with the "Mann snap" of the wrist. As for Mann, he became invincible with it. The Princeton students, in the summer vacation of 1875, carried the secret of curve pitching to every part of the country. By 1876 there was a rush for men who could command this new delivery. Old-timers had to learn it or get out of the game.

And still the public and even the savants doubted. When A. G. Spalding took to England the first American baseball invasion, the British sporting authorities told him that a curve was impossible.

"But your cricket bowlers do it!" said Spalding.

"Oh, yes, but their ball strikes the ground first," said the lordly British. "You can't do it in the air!"

Proving the Actual Possibility of the Curve

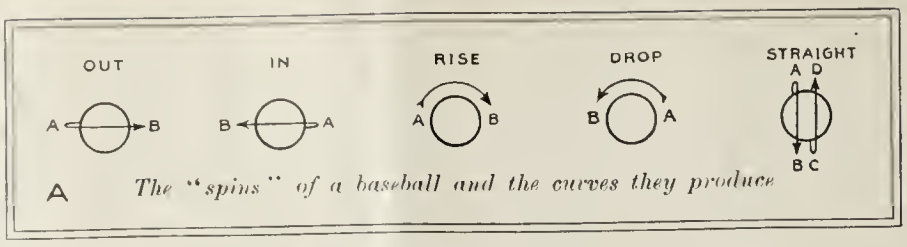
PART of the American public remained just as incredulous. It was not until 1878 that the question was settled once for all. George Wright's Boston nine was playing the final series of that year in Cincinnati. The curve-ball controversy raged in the city of the Red Stockings. Wright was asked to prove that a ball could be curved. He agreed to test the matter after the final game.

The Cincinnati team put up two ten-foot fences about twenty yards apart, with a post between them—all on a line. Tommy Bond, a right-handed pitcher, stood at the left of one fence. After two trials he threw a ball which went to the right of the post and finished to the left of the second fence. He repeated this six or seven times.

"The wind did it," said the doubters.

"Then we'll try it the other way round," said Wright. He stationed Mitchell of Cincinnati, a left-handed pitcher, to the *right* of the first fence. Mitchell threw a curve ball to the left of the post, which finished to the right of the second fence. News of this, telegraphed to every part of the country, settled the question forever.

Afterward slow-moving, skeptical science explained the phenomenon. It is all a matter of air friction. You could not pitch a curve in a vacuum. When a ball is sent forward spinning, one side is traveling toward the air, the other receding from it. The side which keeps striking the air gets, therefore, the greater friction. (Diagram D.) And since moving bodies take the line of least resistance, the ball, in its forward motion, edges away from that friction. In other words, the air is always pushing it aside in the direction of its spin. Any one, in throwing a ball, spins it. But he does not spin it rapidly enough, usually, to produce a perceptible curve.



That is not quite all. Roughly speaking, there are six possible spinning motions to a baseball, corresponding to the six faces of a cube. We have the horizontal spin from right to left which produces the "out," the horizontal spin from left to right which produces the "in," the vertical spin away from the thrower which produces the "drop," the vertical spin toward the thrower which produces the "rise." But what of the vertical spins toward the right and left of the thrower? If you are really [illegible], consult Diagram A. And you must find [illegible]

[1] Baseball terminology is a little confusing. When the pitcher throws, to a right-handed batter, a ball which curves to the left of the plate as the pitcher faces it—and therefore away from the batter—it is called an "out." But that same curve, when delivered to a left-handed batter, standing on the other side of the plate, is called an "in." In other words, they describe curves from the standpoint of the batter. For the sake of clearness, I assume in describing curves that all pitchers and batters are right-handed. Of course, the spin and motion which produce the "out" of a right-handed pitcher produce the "in" of a left-handed one.

Christy Mathewson, *of the New York Nationals*

¶ *The "fade-away" ball, that is Mathewson's chief reliance, is merely an indrop. He is the only first-class pitcher who can throw this ball with the same overhand motion as is used for other deliveries and control its direction. To get the curve, he sweeps his fingers across the ball horizontally at the moment of letting go. There is nothing in his whole act of delivery to betray to the batter whether the ball is to come over straight or drop suddenly as it approaches the plate*

A *The "spins" of a baseball and the curves they produce*

the air, and produce, therefore, these are precisely the spins effect is to steady the for- to increase velocity; that is displaced the smooth bore. And the two have their place in baseball; consciously or unconsciously, pitchers employ them in their straight, fast balls, to give speed and accuracy.

Curve-pitching got its greatest development after 1883, in which year the artificial restraints were removed, and the pitcher was allowed to deliver the ball as he pleased —which means overhand. At that period the "out," easiest of all curves to throw, was falling into disrepute among major leaguers. The incurve, by the limitations of the human arm a smaller but quicker deviation than the out, was temporarily much in vogue. The drop remained, as always, a favorite. Scientific change of pace, the standby of such great early-day pitchers as Harry Wright, Asa Brainard, and Al Spalding, was temporarily lost. Radbourne, a tremendously speedy overhand pitcher, came along with the first "rise" or "jump" ball. He had wonderful development of the wrist, the thumb, and the two first fingers. The limitation of the arm, as well as the hostile attraction of gravitation, make the rise difficult —many believe it to be impossible. This curve can be delivered only with a straight overhand throw; and the only way to give the ball a back spin is to jerk the fingers down its surface as the hand passes down to release it. But Radbourne had the speed, the flexibility, and the grip to do it. So has "Old Cy" Young of this day. When Young gets it to "working right," his team-mates recognize it by the number of men who go out on little pop flies and fouls. For it has only a slight jump, two or three inches.

There is a jump ball, however, which does not depend on spin, and which may be called the "false rise." A very tall, long-armed pitcher, like Addie Joss of the Cleveland Americans, gets it when he throws an over-arm ball toward the batter's knees. The ball, coming downward with great speed, *packs* the air below it. Just when the ball begins to lose speed, the elastic air-cushion, for a fraction of a second, has equal power with the attraction of gravitation. This air-cushion carries the ball horizontally for a few feet, until further loss of motion brings it to the ground. This parallels the old exemplar of the school-books—the windows broken by an exterior explosion fall *outward* because of pressure from the air-cushion within. (Diagram C.)

The Incurve Is Lost

WHEN batters began to study pitchers, pitchers found that, to be effective, they must deliver all balls with the same motion of the arm, the same grip of the fingers. Once they "fingered" the ball differently for different shoots. Now, the accepted hold became a tight grip of the thumb and the first two fingers. And the necessity for moving the arm always on the same line had one unexpected result. It banished the incurve —of a right-handed pitcher to a right-handed batter—from first-class league baseball. For to throw a good, controllable incurve, every pitcher, with certain golden exceptions, must throw round-arm, giving the ball its spin as it slips from the end of his fingers. Since the round-arm is no man's natural throw, the pitcher, by changing his style, "telegraphs" this curve to the batsman at the moment of delivery. The great exception is Christy Mathewson of the New York Giants. His famous "fade-away" is a slow indrop. He gets it by whipping his hand from right to left behind the baseball at the instant of release. When it is "going right" this ball, delivered with low speed, "breaks" about a foot. Other men can pitch this ball, but none other, with the possible exception of Sparks (Philadelphia Nationals), can control it or can make it take so wide a course as does Mathewson (Diagram F.)

However, this came not until after the rule-makers, in trying to delimit the pitcher and to increase batting, passed an amendment which had the final effect of putting the whole game into the pitcher's hands. The pitcher's position had been continuously receding from the plate. In the game which the Knickerbockers played on the Elysian Fields, the "line," nucleus of the "box," had been forty-five feet from the batter. In 1892, for the season of 1893, the league finally anchored the pitcher's hind foot on a mound exactly midway between first and third, or sixty-three feet from the plate. The longer throw, they reasoned, would reduce the effective speed of pitchers, would give the batter more time to [illegible] the ball

But the recession of the pitcher's position overturned all calculations. In the first place, it assisted his fielding, giving him more time on grounders and liners. His throw to all the bases became shorter and easier.

Getting the "Break" on the Ball

IT WORKED just as definitely to increase skill in delivery to the bat. Certain pitchers had been working to produce a sharp "break" on curves. At forty-five or fifty feet from the plate, that was hard. At sixty feet it was easier. The slow, wide curve became a "roundhouse," a "farmer slant," a thing less than contemptible.

The "break" or "shoot" is a curve which travels straight through most of its distance and then swerves suddenly. It is a matter of speed combined with quick jerk of the wrist. Its physical principle, a little mysterious, appears to be this: A ball thrown with sharp spin and great force travels at first with enough speed to overcome the air-pressure on the side which is taking the greater friction. It cuts through the air, spite of all resistance, just as a rifle-bullet has a "flat trajectory" against the attraction of gravitation for the first two hundred yards or so. The instant comes when it begins to lose its speed; and then the effect of pushing air comes upon it all at once. It "breaks," taking a fast shoot in the direction of its spin. Now at the old distance, a ball thrown full force hardly decreased in speed at all before it passed the plate. At the new distance the swiftest spun ball had begun to lose its velocity as it approached the batter. Only a few feet, but enough.

The "Cross-Fire" Tried and Abandoned

WHEN this change of position and condition was new to pitchers, they tried two innovations, one of which died a natural death, while the other survived. With his left foot on the mound, a flexible-armed pitcher would step far out to the right and deliver the ball round-arm. The "cross-fire" they called it; and it had virtue. But, like the round-armed inshoot, it "telegraphed" the delivery. Further, it was hard on the pitcher's shoulder. The cross-fire ran its course and practically died, although a few league pitchers still employ it occasionally.

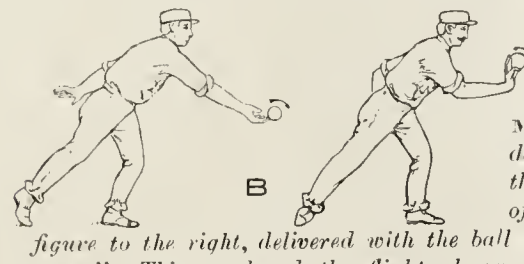
Scientific change of pace, however, came back —to stay. It is not enough that the pitcher shall vary fast balls with slow; he must deliver both speeds with the same effort, the same apparent sweep and motion, else the batter will know what to expect before the ball starts. E. C. Patterson, who made a season's strike-out record with the New York State League in the nineties, was perhaps the first to revive this old ruse of the ancient giants. The pitcher about to deliver a slow ball holds it absolutely loose in his fingers, whereas for a fast ball he grips it with all his strength. He lets go his sweep full force. The ball, by virtue of the loose hold, loses all effect of that snap from wrist to elbow which finishes off a fast throw. It has "nothing behind it"; yet it starts with speed, which it loses with each foot of advance. It has very little spin; this also makes it lose force. Not until it is half-way to the plate does the batter know whether it will be fast or slow.

At last, in the opening years of the twentieth century, Elmer Strieklett of the Brooklyn Nationals introduced the latest thing in fancy pitching — the "spitball." Probably it was not quite new. James H. Hart, Tim Murnane, and Will Rankin agree that Bobby Matthews "had it." They noticed that the silent Matthews always kept one side of the ball clean; also, he was observed holding it to his mouth behind his hands. And at the same time he got a sharper drop-ball than any other pitcher.

"It's a messy proceeding—that's the main objection to it," says Overall of the Chicago Nationals, regarding the spitball. For that reason as much as for any other, pitchers of nice instincts, in these days of the gentleman professional, do not like it; and the National League, which has few "spitball" pitchers, would abolish it if the American, which has many, would agree. The pitcher moistens one side of the ball with saliva, until it is as slippery as ice. Gripping with his fingers over the wet spot, he throws full force without trying for a "spin." As it nears the plate, the ball drops always, and with a break far sharper than that of any spun ball. But it may drop to the right, to the left, forward—in any direction below the horizontal. The pitcher himself never knows just what direction the ball will take at the plate. "It behaves as if haunted," says an eminent "spitball" artist. Because of this, it is destruction to the hands of catchers.

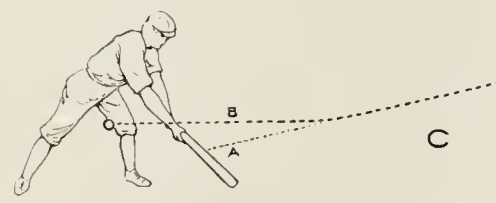
The Puzzling "Spitball"

A PROFESSIONAL pitcher who studied physics in college has given the only satisfactory explanation of this behavior. The "spitter" does not spin at all. It slips straight off the fingers—the batter can see the seams as it passes him. *It is the only thrown ball which has consistently no revolving motion whatever.* A spin of any kind tends, first, to add to the "endurance" of the motion, to help the projectile resist the attraction of gravitation, and second, to keep it in a regular course, straight or curved.



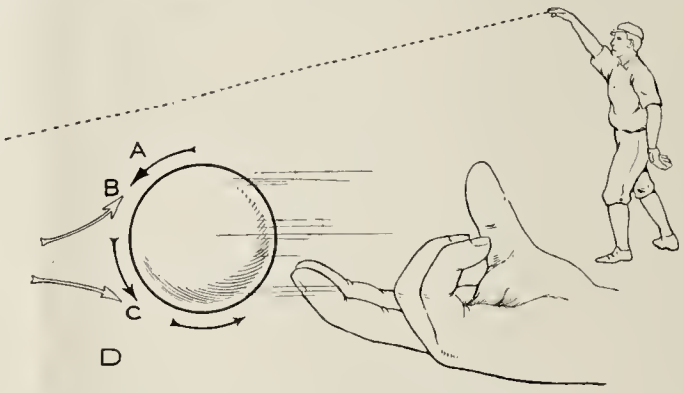
The air, as the Wright Brothers have discovered, is an unstable element, shot with invisible, intangible whirls and currents. The spitball travels through this maze with an initial velocity which cuts straight through everything, resists everything, just as the first course of a "shoot" resists the tendency of its own spin. But all the time the ball is practically in a kind of unstable equilibrium, "trying to find its own center of gravity," says the philosopher-pitcher. At the instant when it loses its momentum, it falls rapidly because it has no spin to resist the attraction of gravitation. At that instant, also, it encounters some air current which deflects its drop to right or left as though it were a feather.

It is hard on the arm; few pitchers can stand its consistent use. For, what with the slippery surface, one must "follow through" his throw; he can not snap off a wet ball midway of his arm-sweep as he can a dry one. That follow motion gives the shoulder and upper arm a sharp jerk.

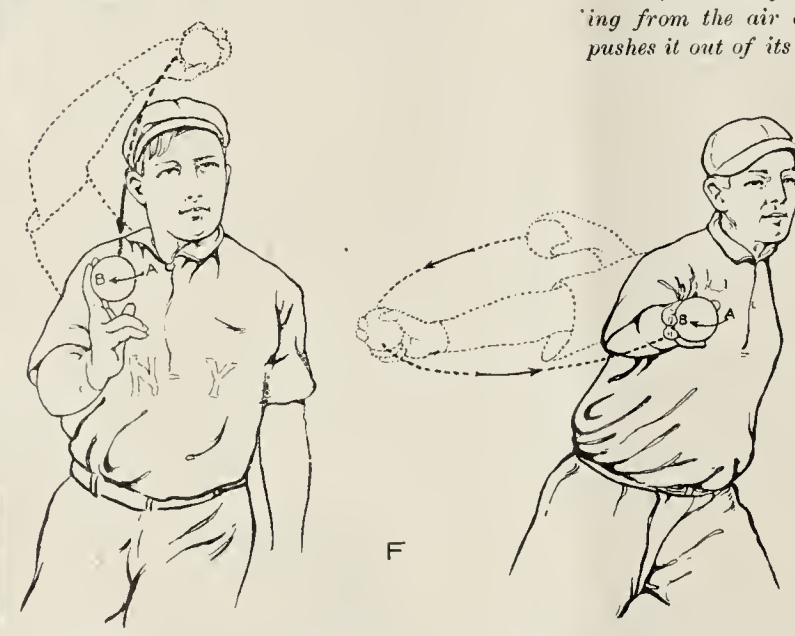


In the season of 1904 Jack Chesbro, learning the spitball from Strieklett, all but pitched the New York Americans to the pennant with it. His arm has never recovered from the strain. Walsh of the Chicago Americans, by contrast, although averaging for the past four years more pitched games than any other pitcher in his league, has used the spitball three-quarters of the time—and his arm remains as good as ever.

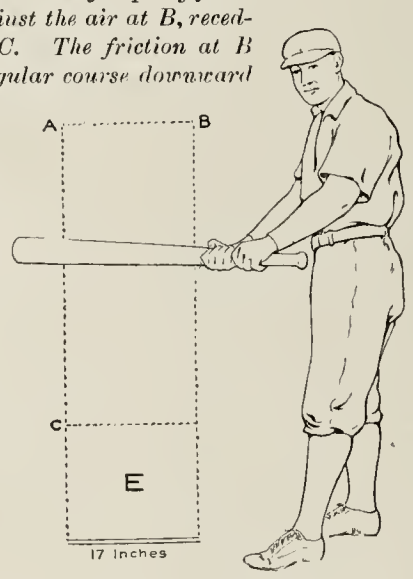
When all this tale of skill is told, the fact remains that first-class pitching, now as in 1860, is still a matter



(Continued on page 25)



Martin's Slow Ball.—*The figure on the left is delivering a baseball as most pitchers did in the underhand days—with the hold and motion of a tenpin bowler. Martin, as shown by the figure to the right, delivered with the ball under his hand and gave it a sharp back-spin as it "came away." This produced the flight shown by the dotted line—for reasons which the text explains*



The "False Rise."—*A tall pitcher, throwing a fast low ball overhand, produces this course of flight. Just before reaching the point B, the ball has begun slightly to lose velocity. The cushion of air packed under it has for an instant equal force with gravity. So for a few feet the ball takes a horizontal course*

The Principle of the Curve.—*Illustrated by a "drop." The ball, revolving rapidly from A to C, is rubbing against the air at B, receding from the air at C. The friction at B pushes it out of its regular course downward*

The Incurve.—*The right-hand figure is throwing an incurve in the old-fashioned way—round-arm, the ball getting rotation from the ends of the fingers. When pitchers were required to throw all balls with the same arm motion, that went out. Mathewson's "fade-away" is illustrated in the left-hand figure. That is the only genuine incurve used to-day in first-class baseball. Mathewson gets it by whipping his fingers across the back of the ball at the instant of release*

Why the Drop is More Effective Than the Out.—*With the drop the pitcher has the distance A C to fool the batter, with the out only the distance A B. The batter presents only the width of the bat to the drop, but the whole length to an out. "Cut that out and make it an outdrop," say the big league managers to the recruit who throws a pure out*

An old rhinoceros, disturbed at his feeding time, decides to charge upon the intruder

Mr. Dugmore in camp

He charges, gets his photograph taken at a distance of about twenty yards, and is shot

Another rhinoceros awakes from a nap in the grass to the scent of approaching humanity and subsequently assumes discretion to be the better part of valor

Photographing the Rhinoceros in Advance of the American Invasion

Collier's photographer, Mr. A. R. Dugmore, passed along the trail now being followed by Mr. Roosevelt's party several months ahead of the Smithsonian Institution's expedition, and photographed some of the specimens-in-waiting as they roamed their native pastures

Fifty Million Dollars

The First Accurate List of Mr. Carnegie's Gifts, and a Statement by Him of How it Feels to Give Away Half a Hundred Millions

COPYRIGHT 1909 BY G. GESSFORD

The Library Gift Business

By

Andrew Carnegie

MANY times have I been asked whether I am satisfied with the result of my gifts of library buildings to communities willing to maintain and keep them open free to all the people. I have always replied in the affirmative. Yes, in the fullest measure I am more than satisfied, and rejoice that it has been permitted me to stand ready to give to any English-speaking community in any part of the world a sum necessary to erect a library building on the conditions mentioned.

Perhaps I owe something to heredity in following this library development, but it was not until long after I had begun that I learned that my father, a weaver in Dunfermline, was one of five fellow weavers who agreed to combine their few books and give them out to applicants. A vacant space in my father's loom-shop was filled with the few books, and this was the beginning of the library movement in my native town. This was shortly after I was born. The records show that this collection was moved seven times, the first time in the aprons of the pioneers, each move increasing its sphere until it was merged in the Mechanics' Library. So that my father may be said to have assisted in giving the first public library to Dunfermline, and his son has been privileged to give the last. I have often said that I do not know a lineage which I prefer to that of a library-founding weaver.

My secretary tells me we have given 1,800 library buildings, all under the same conditions, scattered among the English-speaking peoples of the globe, including New Zealand, the West Indies, Australia, and all English-speaking countries. So far Canada has taken almost as many as our own land in proportion to population.

The letters received from parents thanking me for libraries established and telling of the change these have made upon their children are numerous. It is not only what a library does in a community; that is only one-half of its sphere. What it prevents is equally important. If young men do not spend their evenings in the library, where will they be spending them? If the young do not acquire a taste for reading, what will they otherwise acquire?

It is often charged against public libraries that they supply so much fiction. There is something to be said upon that side, but the impression received by the figures is greatly misleading. The novel is returned on an average in a few days, but the solid book, conveying instruction, is kept five times longer; so that when we read of fiction being one-half of the total books read, if the time consumed be compared with that spent upon instructive works, then the time spent upon fiction is ten per cent, one-fifth of that which the reader would suppose, after reading that fiction is fifty per cent of the whole. But even if fiction be read far more than any other one branch, provided the fiction be good, it is salutary.

It means much to young men and women that after their dreary, uneventful toil during the whole day they should be admitted to the world of good fiction. The masters of fiction are benefactors to the race, and the librarian is becoming fully alive to the fact that his mission is not only to hand out the book asked for, but to lead the applicant into green pastures—the best fiction.

I like library giving for one reason particularly. The library gives nothing for nothing. The youth who is improved by it must cooperate. If he does not read and study he finds no reward. Nothing for nothing is the law within the walls. Help yourself is the decree.

Another feature pleases me greatly. The library supported by taxation is owned by the community. It is no gift to the poorer classes. They also contribute their mite. It is the library of the people, and within its walls the poorest citizen has all the rights of the Mayor.

Free public libraries are the cradles of triumphant democracy. The working man showing his friends who have come to visit him the buildings of the town can stop as he comes in sight of the library, which I rejoice to say is almost without exception an ornament to the town, and say to his astonished guests: "Here is my property. I am an owner of this building. The Mayor has not any more rights within its walls than I have. I am part owner with him."

Another consideration most grateful to the giver: he has not pauperized the community in any degree; he has only given the building. The community gives the site and maintains the library.

When I gave Dr. Billings the note agreeing to furnish New York City with seventy-eight library buildings, which was the largest wholesale business I ever did at any one time in library giving, I was met by many who offered their hands and wished to congratulate me upon having given New York such a gift. My invariable reply was: "No, I can not receive your congratulations upon that account; but if you wish to congratulate me upon having induced New York City to agree to supply its inhabitants with free libraries everywhere, then shake." It is not what the individual gives, but what, by giving part, he thereby induces communities to give, that really counts. My part is small, but it stimulates cities to do great things, and I am grateful for being even so humble an agent in bringing within reach of the poorest—the "people's university"—a collection of books free to all.

Distant is the day when the free public library, maintained by taxation, will cease to be recognized as a fountain from which only healing waters flow.

Distribution of the Carnegie Libraries

ALABAMA
12 Libraries, $186,300
Avondale, Bessemer, Decatur, Eufaula, Ensley, Gadsden, Huntsville, Montgomery, Selma, Talladega, Tuskegee, Troy.

ARIZONA
3 Libraries, $54,000
Prescott, Phoenix, Tucson.

ARKANSAS
3 Libraries, $125,600
Eureka Springs, Fort Smith, Little Rock.

CALIFORNIA
69 Libraries, $1,752,787
Alameda, Alturas, Anaheim, Auburn, Azusa, Benecia, Berkeley, Biggs, Chico, Colusa, Corona, Covina, Colton, East San José, Escondido, Eureka, Fresno, Ferndale, Fullerton, Gilroy, Hanford, Hayward, Hollywood, Los Gatos, Long Beach, Lincoln, Lodi, Monrovia, Merced, Monterey, Nevada City, Oakland, Ontario, Orange, Oxnard, Pacific Grove, Palo Alto, Paso Robles, Petaluma, Pomona, Porterville, Redding, Redwood City, Riverside, Salinas, San Bernardino, San Diego, San Francisco, San José, San Leandro, San Luis Obispo, San Mateo, San Pedro, San Rafael, Santa Ana, Santa Cruz, Santa Maria, Santa Monica, Santa Rosa, Selma, South Pasadena, St. Helena, Tulare, Vacaville, Vallejo, Visalia, Watsonville, Whittier, Woodland.

COLORADO
20 Libraries, $522,943
Alamosa, Boulder, Canon City, Colorado City, Colorado Springs, Denver, Durango, Fort Collins, Grand Junction, Idaho Springs, Lamar, Leadville, Loveland, Longmont, Pueblo, Rocky Ford, Salida, Silverton, Steamboat Springs, Trinidad.

CONNECTICUT
7 Libraries, $85,100
Darien, Derby Neck, Norwalk, Orange, Saybrook, South Norwalk, Thomaston.

DELAWARE
1 Library, $6,000
Georgetown.

FLORIDA
4 Libraries, $95,000
Jacksonville, Ocala, Pensacola, Tampa.

GEORGIA
16 Libraries, $373,200
Albany, Americus, Atlanta, Atlanta (for negroes), Augusta, Columbus, Cordele, Dublin, Macon, Monlezuma, Moultrie, Newnan, Norcross, Pelham, Sparta, Waynesboro.

IDAHO
6 Libraries, $78,500
Boise, Lewiston, Moscow, Mountain Home, Nampa, Pocatello.

ILLINOIS
81 Libraries, $3,203,430
Arcola, Aurora, Beardstown, Blue Island, Bunker Hill, Carrollton, Centralia, Charleston, Chicago Heights, Danville, Danville (Soldiers' Home), Decatur, De Kalb, Des Plaines, Downer's Grove, Du Quoin, Edwardsville, El Paso, Evanston, Fairfort, Farmington, Flora, Freeport, Fulton, Galesburg, Galena, Galva, Gardner, Geneva, Greenville, Greenup, Harrishurg, Harvey, Havana, Highland Park, Hillsboro, Hoopeston, Jacksonville, Jerseyville, Kewanee, La Grange, La Harpe, La Salle, Lewistown, Lincoln, Litchfield, Macomb, Marseilles, Mattoon, Maywood, Mendora, Milford, Moline, Mount Carroll, Mount Vernon, Olney, Onarga, Oregon, Paris, Paxton, Pekin, Piano, Polo, Petersburg, Pittsfield, Robinson, Rockford, Rushville, Savanna, Shelbyville, Springfield, Sterling, St. Charles, Streator, Sycamore, Taylorsville, Tuscola, Urbana, Vienna, Wilmette, Winchester.

INDIANA
65 Libraries, $4,528,680
Alexandria, Anderson, Andrews, Attica, Batesville, Bedford, Bluffton, Bicknell, Bloomington, Brazil, Columbus, Clinton, Connersville, Crawfordsville, Crown Point, Danville, Decatur, Delphi, Des Plaines, East Chicago, Elkhart, Elwood, Fort Wayne, Fowler, Frankfort, Goshen, Greencastle, Greenfield, Greensburg, Hammond, Hartford City, Huntington, Jeffersonville, Kokomo, Lebanon, Ligonier, Linton, Logansport, Madison, Marion, Martinsville, Monticello, Montpelier, Mount Vernon, Muncie, New Albany, Noblesville, Peru, Portland, Poseyville, Princeton, Rensselaer, Rochester, Salem, Seymour, Shelbyville, Sullivan, Tipton, Union City, Valparaiso, Wabash, Washington, Waukegan, Whiting, Winchester.

IOWA
78 Libraries, $1,284,906
Albia, Algona, Ames, Atlantic, Bedford, Charlton, Carroll, Cedar Falls, Cedar Rapids, Charles City, Cherokee, Clarinda, Clinton, Colfax, Council Bluffs, Davenport, Denison, DeWitt, Dubuque, Eagle Grove, Eldora, Estherville, Fairfield, Fayette, Fort Dodge, Glenwood, Grinnell, Hampton, Hawarden, Humboldt, Guthrie Center, Indianola, Iowa City, Iowa Falls, Jefferson, Lake City, Laurens, Lemars, Leon, Manchester, Manson, Maquoketa, Marengo, Marion, Marshalltown, Mason City, Monticello, Mount Pleasant, Nashua, New Hampton, Newton, Odebolt, Oelwein, Onawa, Osage, Osceola, Oskaloosa, Ottumwa, Pella, Perry, Red Bluff, Red Oak, Rockwell City, Sheldon, Shenendoah, Spencer, Spirit Lake, Storm Lake, Stuart, Tama, Tipton, Villisca, Vinton, Waterloo, Waverly, West Liberty, Winterset.

KANSAS
31 Libraries, $495,340
Abilene, Arkansee City, Anthony, Blue Rapids, Chanute, Concordia, Council Grove, Dodge City, Downs, Emporie, Emporia College, Fort Scott, Frankfort, Girard, Goodland, Great Bend, Hiawatha, Hutchinson, Independence, Iola, Kansas City, Lawrence, Leevenworth, Manhattan, Newton, Ottawa, Parsons, Russell, Salina, Washington, Winfield.

KENTUCKY
15 Libraries, $775,500
Covington, Elizabethtown, Henderson, Hickman, Latonia, Lawrenceburg, Lexington, Louisville, Middlesborough, Newport, Owensboro, Paducah, Paris, Shelbyville, Somerset.

LOUISIANA
4 Libraries, $305,000
Alexandria, Jennings, Lake Charles, New Orleans.

MAINE
19 Libraries, $209,800
Auburn, Eastport, Freeport, Guilford, Harpswell, Houlton, Lewiston, Madison, Milo, Norway, Old Town, Pittsfield, Presque Isle, Rockland, Rumford, Vinal Haven, Waterville, West Gouldsboro, Wiscasset.

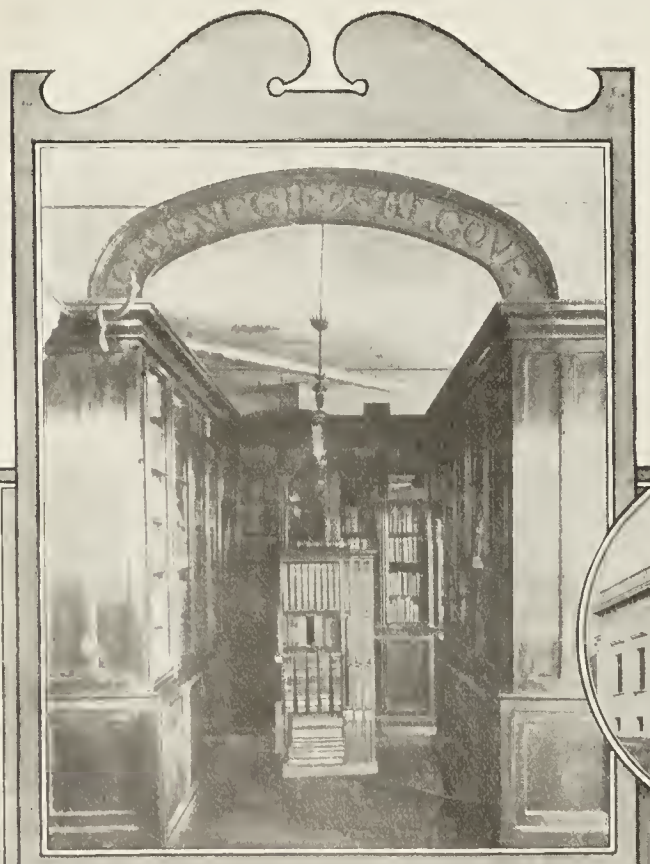
MARYLAND
4 Libraries, $555,000
Baltimore, Cumberland, Hagerstown, Laurel.

MASSACHUSETTS
29 Libraries, $740,000
Ashland, Athol, Chelsea, Chicopée, Clinton, Dighton, Edgartown, Holliston, Hudson, Lee, Leominster, Marlboro, Melrose, Needham, North Andover, Reading, Revere, Rockland, Rockport, Somerville, Southbridge South Hadley, Springfield, Stoneham, Teunton, Turner's Falls, Walpole, Williamstown, Winchendon.

MICHIGAN
40 Libraries, $1,471,700
Adrian, Albion, Ann Arbor, Belding, Benton Harbor, Birmingham, Cadillac, Charlevoix, Charlotte, Cheboygan, Detroit, Dowagiac, Eaton Rapids, Escanaba, Flint, Houghton, Howell, Hudson, Iron Mountain, Ironwood, Ishpeming, Jackson, La Grange Township (Cassopolis), Lansing, Ludington, Manistee, Mendon, Morenci, Mount Clemens, Niles, Petoskey (2), Port Huron, Portland, Saint Joseph, Sault Ste. Marie, South Haven, Sturgis, Tecumseh, Three Rivers, Traverse City

MINNESOTA
42 Libraries, $562,900
Aitkin, Albert Lea, Alexandria, Anoka, Austin, Bemidji, Brainerd, Coleraine and Bovey, Crookston, Duluth, Fairmount, Fergus Falls, Glenwood, Grand Rapids, Hibbing, Hutchinson, Litchfield, Little Falls, Luverne, Madison, Mankato, Mapleton, Marshall, Montevideo, Moorhead, Morris, Northfield, Park Rapids (2), Pipestone, Red Wing, Redwood Falls, St. Cloud, St. Peter, Sauk Center, Spring Valley, Stillwater, Two Harbors, Virginia, Willmar, Wortbington, Zumbrota.

MISSISSIPPI
2 Libraries, $21,000
Houston, Meridian.



MISSOURI
19 Libraries, $1,354,000
Albany, Bethany, Carthage, Carutbersville, Chillicothe (2), Eldorado Springs, Jefferson City, Joplin, Kirksville, Louisiana, Maryville, Moberly, Oregon, Richmond, Sedalia, Springfield, St. Joseph, St. Louis.

The Earliest and the Latest Carnegie Libraries

From the Little 1886 Alcove of Cases to the Fiji Island Structure

IN A BRICK school building of Knoxville, across the river from Pittsburg, is a library with a "Carnegie Alcove."

Thereby hangs a tale. Sixty years ago when the twelve-year-old boy, Andrew Carnegie, arrived in Pittsburg with his parents from Scotland, a project was on foot among Pittsburg leaders to incorporate the Mercantile Library and Mechanics' Institute, and the Legislature granted the request a few months later, namely, on February 12, 1849. The library grew and the boy likewise. In about a dozen years he was serving in the Civil War as Government superintendent of military railways and telegraph lines in the East. With the close of hostilities in 1865 this old Pittsburg library on Penn Street received young Carnegie as a life member. It was but three years after this date that Carnegie introduced into this country the Bessemer process

The first Carnegie library, Pittsburg

The libraries at Sault Ste. Marie, Michigan; Tuskegee, Alabama; Danville, Illinois, and Valley City, North Dakota

MONTANA
11 Libraries, $154,200
Bozeman, Dillon, Glasgow, Great Falls, Helena, Kalispell, Lewistown, Livingston, Miles City, Missoula, Newport.

NEBRASKA
21 Libraries, $318,000
Albion, Alma, Auburn, Beatrice, De Witt, Fairbury, Fremont, Grand Island, Hastings, Havelock, Holdredge, Kearney, Lincoln (2), McCook, Nellgh, Norfolk, Pawnee City, South Omaha, Superior, Tecumseh.

NEVADA
1 Library, $15,000
Reno.

NEW HAMPSHIRE
12 Libraries, $159,000
Berlin, Dover, Claremont, Franklin, Hampton, Lebanon, Littleton, Peterborough, Raymond, Rochester, Somersville, Whitefield

NEW JERSEY
20 Libraries, $626,385.50
Atlantic City, Bayonne, Belleville, Caldwell, Camden, Cape May, Cranford, East Orange, Freehold, Kearney, Montclair, New Brunswick, Pautsboro, Perth Amboy, Red Bank, Union, Vineland, Westfield, West Hoboken, West Orange.

NEW MEXICO
2 Libraries, $20,000
Las Vegas, Roswell.

NEW YORK
47 Libraries, $6,538,873
Albany, Amsterdam, Binghamton, Canandaigua, Canastota, Catskill, Chatham, Coboes, Dunkirk, Frankfort, Freeport, Fulton, Gloversville, Granville, Hornell, Johnston, Kingston, Medina, Mount Vernon, Niagara Falls, Nyack, New Rochelle, Naw York, North Tonawanda, Olean, Onaida, Oyster Bay, Patchogue, Penn Yan, Plattsburg, Port Jervis, Riverhead, Rockville Center, Sandy Hill, Saranac Lake, Saratoga, Saratoga Springs, Schenectady, Sea Cliff, Solvay, Syracuse, Ticonderoga, Warsaw, Watervliet, Wellsville, White Plains, Yonkers

NORTH CAROLINA
9 Libraries, $147,945.71
Charlotte, Ooldsboro, Greensboro (2), High Point, Rutherford College, Statesville, Wilmington, Winston-Salem.

NORTH DAKOTA
8 Libraries, $117,700
Dickinson Devil's Lake, Fargo, Grafton Grand Forks Mandan, Minot, Valley City.

OHIO
71 Libraries, $2,320,783.64
Akron, Alliance, Ashtabula, Athena, Bellefontaine, Bellevue, Bryan, Bucyrus, Cambridge, Canton, Carey, Celina, Chillicothe, Cincinnati, Cleveland, Cleveland Heights, Clyde, Columbus, Conbocton, Conneaut, Coltinwood, Delaware, Defiance, East Cleveland, East Liverpool, Eaton, Findlay, Fostoria, Germantown, Greenville, Galion, Gallipolis, Genava, Glenville, Jackson-Kent, Kenton, Lakewood, Lancaster, Lebanon, Lima, London, Lorain, Mansfield, Marion, Marysville, Mentor, Miamisburg, Middletown, Norwalk, Norwood, North Amberst, Portamouth, Ravenna, Rockport, Salem, Sandusky, South Brooklyn, Steubenville, Toledo, Urbana, Warren, Washington Court House, Wauseon, Wellston, Willoughby, Wilmington, Wooster, Xenia, Youngstown, Zanesville.

OKLAHOMA
9 Libraries, $143,000
Ardmore, Bartlesville, El Reno, Enid, Guthrie, Oklaboma City, Ponca City, Shawnee.

OREGON

Baker City, Eugene, Grant's Paaa, Portland, Salem, Tha Dalles.

PENNSYLVANIA
39 Libraries, $3,179,215.65
Allegheny City, Beaver, Beaver Falls, Bradford, Blairsville, Carbondale, Carnegia, Chartier's Township, Clarion, Clearfield, Connellsville, Dunmore, Easton, Erie, Oreeaaburg, Greenville, Hamburg, Huntingdon, Johnstown, Kennett Square, Knoxville, Lansdowne, McKeesport, Nawcaetle, Norristown, North Bessemer, North East, Oakmount, Oil City, Phoenixville, Philadelphia, Pittaburg, Royersford, Sheridanville, Slatington, Tyrone, Uniontown, Wilkinsburg, York

SOUTH CAROLINA
6 Libraries, $71,200
Anderson, Greenville, Honea Path, Marion, Spartanburg, Union.

SOUTH DAKOTA
15 Libraries, $171,000
Brookings, Canton, Deadwood, Dell Rapids, Huron, Hot Springs, Madison, Milbank, Mitchell, Pierre, Redfield, Sioux Falls, Varmilion, Watertown, Yankton.

TENNESSEE
8 Libraries, $245,000
Chattanooga (2), Cleveland, Columbia, Harrimaa, Jackson, Johnson City, Nashville.

TEXAS
27 Libraries, $574,200
Abilene, Ballinger, Beaumont, Belton, Brownwood, Bryan, Clarksville, Cleburne, Corsicana, Dallas, Denison, Denton, El Paso, Fort Worth, Greenville, Houston, Jefferson, Nacogdoches, Paris, Pitteburg, San Antonio, Stanford, Temple, Terrell, Tyler, Waco, Winnaboro.

UTAH
3 Libraries, $52,500
Eureka City, Provo, Ogden.

VERMONT
3 Libraries, $73,000
Burlington, Fair Haven, Rockingham.

VIRGINIA
3 Libraries, $201,000
Charlottesville, Manassas (books), Norfolk, Richmond.

WASHINGTON
16 Libraries, $686,500
Aberdeen, Anacortes, Ballard, Bellingham, Chehalis, Ellensburg, Everett, North Yakima, Olympia, Ritzville, Seattle, South Bend, Spokane, Tacoma, Vancouver, Walla Walla.

WEST VIRGINIA
4 Libraries, $91,500
Huntington, Hinton and Avis, Parkersburg, Williamson.

WISCONSIN
47 Libraries, $849,861
Antigo, Arcadia, Baraboo, Bayfield, Beloit, Berlin, Chippewa Falls, Columbus, Cumberland, Darlington, Durand, Eau Claire, Edgerton, Elroy, Fond du Lac, Green Bay, Hayward, Hudson, Janesville, Kakauna, Kewaunee, Ladyamith, Madison, Manitowoc, Merrill, Monroe, Neenah, New London, Plymouth, Portage, Racine, Rhinelander, Ripon, Rice Lake, Richland Center, Sheboygan, Sparta, Stevens Point, Stoughton, Viroqua, Wasbburn, Watertown, Waukesha, Waupun, Wausau, Wauwatosa, West Superior.

WYOMING
9 Libraries, $161,000
Casper, Cheyenna, Douglas, Evanston, Green River, Lander, Laramie, Rock Springs, Sheridan

DISTRICT OF COLUMBIA
2 Libraries, $725,000
Washington (2) (branchea).

INDIAN TERRITORY
3 Libraries, $30,000
Chickasha, South McAlester, Tahlequah.

PORTO RICO
1 Library, $100,000
San Juan.

* * *

Mr. Carnegie has also given 85 libraries in Canada, amounting to $2,069,915. They are distributed as follows: 2 in Alberta, $60,000; 1 in Saskatchewan, $10,000; 3 in Manitoba, $130,000; 65 in Ontario, $1,339,000; 3 in British Columbia, $121,915; 1 in Cape Breton, $15,000; 1 in Newfoundland, $50,000; 1 in New Brunswick, $50,000; 4 in Nova Scotia, $94,000; 3 in Quebec, $175,000; and 1 in Yukon Territory, $25,000. He has also given one library at Matanzas, Cuba, $1,000.

For Housing Books

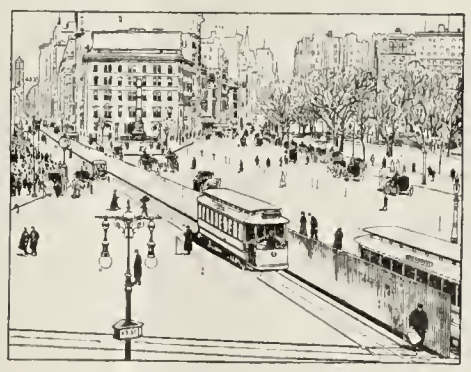
of making steel, and but fifteen years after when the firm of Carnegie Brothers & Company presented to each of their office employees an annual membership in the library. Excellent as the collection was for general purposes, the next half-dozen years of experience with it convinced Mr. Carnegie that it needed a scientific and technical department. This was the day of small things, and when the directors of the library received his offer to put in an alcove of cases, filled with volumes of that character, they expressed their appreciation in appropriate resolutions on April 3, 1886, and thereby enabled Mr. Carnegie to try an experiment in library founding. The authorities gave it the name "Carnegie Alcove," and placed an appropriate arch over its entrance.

Over a score of years have passed. The great Carnegie libraries of Pittsburg came into being. The old Mercantile Library belonged to the past. From one cause and another it began to decay. Claims against it were presented. It was offered at sheriff's sale. A suburban company bought up the claims against it and placed it in their school building. There in the midst of it, after all these vicissitudes, stands "Carnegie Alcove."

It is an easy leap from this ealm scene to the Fiji Islands, where the Governor, Sir Everard im Thurn, recently laid the foundation stone of a Carnegie library in Suva, Fiji. Fifteen months ago Mr. Andrew Carnegie was approached by a member of the Board of Fiji, who had an ambition to start the building of a literary home in Suva. Mr. Carnegie donated $7,500, providing that the sum of $750 yearly were forthcoming from the inhabitants of Fiji for the maintenance of the proposed building. And this is the library started on September 1 last at Suva.

The Magnitude of the Gift

BROOKLYN, which has seventeen Carnegie libraries, large and small, in districts varying enormously as to size and quality of population, has calculated that in 1909 about three and a half books will be circulated from these libraries for every dollar Mr. Carnegie has spent on the buildings. The figures are based on the actual circulation of previous years, and as some of these buildings are brand-new and others several years old, they may be taken as the basis for a rough estimate of the circulation this year from all Carnegie libraries. Multiplying the total amount of his gifts on December 31, 1908, $51,596,903, by three and a half gives us 180,589,160.5, roughly the circulation from all Carnegie libraries in 1909. Mr. Carnegie gives libraries only to English-speaking communities, but there are not 180,000,000 people in all the English-speaking countries of the world. So that figure, relating only to Carnegie libraries, must indicate a vast annual reading for this one race.



A vault that could hold $50,000,000

What Fifty Million Dollars Mean

IT IS hard for the every-day, garden variety of mortal to understand that, after all these years of library giving, the industry —for it has become such—should be increasing rather than diminishing its output. Yet such is the case. Mr. Carnegie is giving more libraries this year than for some time past. In the panic years of 1907 and 1908 library giving, like every other industry, suffered. Mr. Carnegie stood ready to do his share, but not so many towns and cities were prepared to pledge the money for maintenance. But in the first four months of 1909 just flown his secretary reports the receipt of more offers to maintain buildings than were made in the whole of either 1907 or 1908. That is the same as saying that more libraries are being given.

It is within the last six months that the library gifts have passed the fifty-million-dollar mark. In giving this vast sum, Mr. Carnegie has caused the towns and cities benefiting to pledge a sum, varying in specific cases, of course, but on the average ten per cent as large annually for the maintenance of the libraries. So every year it costs the nearly two thousand communities having Carnegie libraries $5,000,000 for the privilege. In other words, it is taking these many millions of taxpayers just a decade to contribute for their own welfare in this one respect an amount equal to that which one man has given them.

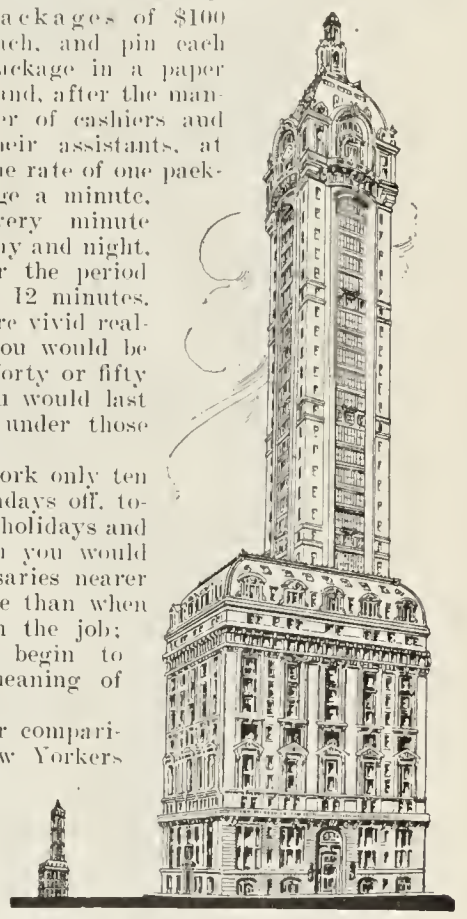
Over a mile of silver dollars

Could you see one thousand silver dollars piled in a single stack 8 feet 4 inches high, you would partly understand the meaning of a small fraction — one-fifty-thousandth—of $50,000,000.

Could another such pile be stacked beside the first, and then another and another, continuously, making a silver wall a mile long and 8 feet 4 inches high, and you were to walk its whole length, you would still have to walk over a fifth of another mile before you reached the end of the $51,596,000.

Could those stacks all be gathered into a single great steel vault, 32 feet by 25 feet, and 8 feet 4 inches high, there would still be a remnant of $396,000 left outside.

That, however, means only about half of the real value, for the intrinsic value of a silver dollar has been only about 50 cents (on the average) during the past fifteen years. Therefore the vault should be built 16 feet 8 inches high, or double the size shown in the cut, towering a long way above the 6-foot keeper's head. Were you to count out one-dollar bills into packages of $100 each, and pin each package in a paper band, after the manner of cashiers and their assistants, at the rate of one package a minute, every minute day and night, without food or sleep, for the period of 358 days, 7 hours, and 12 minutes, you would have a still more vivid realization; only, of course, you would be dead, as would also your forty or fifty successors, for none of you would last over one week, at most, under those conditions.



A New York Carnegie library

However, suppose you work only ten hours a day, and take Sundays off, together with the customary holidays and half-holidays, at the finish you would be three birthday anniversaries nearer the final finish of your life than when you started in on the job; and you would begin to discern the meaning of $51,596,000.

A single further comparison will help New Yorkers (and others familiar with the tall Singer Building) to "size up" the $51,596,000 of library gifts. To show that comparison graphically to the eye, one picture must be eighty-one times as large as the other. That means nine times as high and nine times as wide. Such a comparison is presented herewith.

Or, if the reader prefers, he can, in imagination, place eighty-one Singer Buildings in column, one above the other, reaching to a height of almost exactly ten and a half miles.

The Singer building and a similar structure made of all the Carnegie libraries

GIBSON

The team that carries the mail from Nome to Council City,—an entry in the sweepstakes

Last year's start in the All-Alaska Sweepstakes

The Derby of the North

The Sutor Trophy

THE great sporting event of the year in northern Alaska is the dog-sled race, conducted by the Nome Kennel Club, over the 412-mile course between Cripple Creek and Nome. The race this spring started on April 1, and resulted in knocking twenty-four hours off of the previous record. The winners, the Berger team, finished the run in 82 hours and 2 mimutes. They were awarded a purse of $11,000 and the Sutor Trophy for the All-Alaska Sweepstakes, to be held for one year. The second to cover the distance—another Berger team—drew in just seventeen minutes behind the first.

The start was made in a blizzard, and the temperature ranged from 15 to 20 degrees below zero. However, this did not chill enthusiasm, for the stores were closed in the settlements along the way and the people lined up to see the competing sleds go by.

Bets were made in mining-camp proportions, and aggregated a fortune. The favorites among the fourteen entries were Fink's Siberian dogs, and $100,000 had been wagered on them; but during the race they became afflicted with snow-blindness, and finished third.

What Are Women Anyway?

They Are as Intellectual as Aldermen, and Trained for the Primary by the Wash-tub and the Bargain Counter

By

CHARLOTTE PERKINS GILMAN

THE amount of discussion aroused by women throughout history is enough in itself to prove that they were not in their true place in life. A normally placed creature attends to its business without fuss, and gives rise to small comment, but if any living thing is put in an unnatural position, and kept there by force, it makes trouble.

Such a creature is uncomfortable; if it is able to protest or rebel it does so; and this protest and rebellion create a disturbance. Our ideas regarding woman's place, and our efforts to keep her in it, resemble the process described as "putting a quart measure into a pint cup."

Men have been talking about women since the world was, or since language was; they have been writing about women since literature was; and the burden of all their discourse is a threefold paradox. They express, first, a boundless admiration; second, an as boundless condemnation, and, third, a continuing bewilderment.

What women said about men was in private. However garrulous they may have been in the harem or at the well, there is no literary output of women's opinions as to men as a class until recently. It may be here noted that man, the critic of five thousand years, is extremely sensitive to being criticized for fifty.

Men Afraid to Write, Now Women Can Read

SINCE women have learned to read, the offensive opinions about them have been much modified, though still an occasional Weininger or Möbius arises to proclaim that the female of our species has neither mind nor soul, and that her body is but an instrument of evil.

In our immediate time the subject of this long-vexed dispute is coming forward with a rush. She has, during the last century, gained a share in education, some justice, and much liberty. She is now gaining economic independence at a rate which alarms those who disapprove of it, and she is fairly bursting into the field of political activity.

Against all this growing change rises the intensified protest of the reactionaries, the real base of whose opposition is a misapprehension of the nature of woman. They believe, sincerely and solemnly, that woman is "the female of *genus homo*"—and nothing more.

The rapidly increasing group of the progressives, on the other hand, hold that whereas women are unquestionably women—females like other females—they are also something more. They are people. They are human beings.

If this point could be cleared up; if it could be proved to the satisfaction of the general public that women are persons, citizens, just as much as men are, the major part of the long discussion would be settled. We should then be able to discriminate between the duties of women as citizens and the duties of women as females.

It is not easy to disabuse the popular mind of a belief which has been immovably embedded in its deepest part for the whole historic period. No one belief is so deep-rooted and universal as this misbelief about women; no prejudice so heavy, no group of associate emotions so morbidly sensitive.

Our theory is that the major purpose of woman's life is to be a mother, that the minor purpose is to be an agreeable and serviceable companion to man, and that she has no other.

Note in perfect expression of this view the delicately explicit statement of Mr. H. B. Marriott Watson in his article in the "Nineteenth Century and After" in June, 1905, on "The American Woman," of whom he says: "Her constitutional restlessness has caused her to abdicate those functions which alone excuse or explain her existence."

It is on this ground that there appear such widespread alarm and displeasure at our decreasing birth-rate; that woman's assumption of civic rights and duties is held preposterous; that her development of personal interests and activities is condemned as selfish and unnatural.

This is the position of the doctors who rise up against us with warnings and threatenings, dilating upon the fragility, the exceeding weakness of the mother of all industry; and this is the position so frankly taken by Mrs. Gilbert E. Jones, the anti-suffragist leader, in her recent statement of the objections to women's voting. "Sex is the first reason," says this lady. "Sex is the second reason." "Sex is the third reason"—and she gives no others.

How if the error in our treatment of women lies in precisely the above misconception—in having focused all our attention upon her sex and completely overlooked her humanity?

We broadly divide ourselves into two great classes, men and women. We divide our fields of action on these lines, and call them the Home and the World. We further divide our duties on the same basis, as those of "wife and mother" for the woman; for the man—everything else. We appear to suppose that being a plumber, or a legislator, or a policeman, is a duty peculiar to a "husband and father."

Here is our mistake, our double mistake. In the woman's case we try to confine a human creature to sex functions only; in the man's we cheerfully assume that all the activities of human life are sex functions—his.

The facts are these: Physically we differ, and each sex has its exclusive duties; but humanly we are of the same species, and share the same duties.

Cooking and Politics

FOR instance, here is a mother, female; a father, male; and a cook. Is a cook male or female? We are familiar with both. Is the cooking of either to be distinguished by those who eat? Is a woman any less a woman, a wife any less a wife, a mother any less a mother because she is a cook? Or is a man any less a man, a husband any less a husband, a father any less a father because he is a cook?

Obviously the general activity of cooking has no connection with the special activities of sex. Neither has politics. The femininity of woman has no more relation to politics than the masculinity of man, but it does have as much, and has the same right to expression.

As a human creature she is responsible with him for that orderly management of our common affairs called government. When this management is in the hands of kings and queens they show equal ability; in proportion to their number we have as many great queens as great kings.

Democracy is a form of government which demands the intelligent participation of all its citizens. The young princess and the young prince must be carefully trained for the duties of their coming reign; so should both our young citizens be trained for their coming service.

Cure for Man-Made Troubles

WHEN government consisted chiefly in making war and raising taxes, men might have had some excuse for objecting to being governed by women; now that government means service, why should men object to being served by women? They never have before.

Those who see nothing but sex in woman claim that her inherent qualities as such forbid her taking efficient part in public affairs, ignoring every instance of kingdom or republic which proves the contrary. Queen Victoria, affectionate wife, prolific and devoted mother, took large part in world politics—but what has that to do with the question?

What has any fact or any number of facts to do with a feeling—a feeling as old as Adam?

As to these medical opinions—they not only present women from the sex viewpoint, but from the pathological. Few are the doctors whose observations are drawn from the millions of healthy, hard-working mothers who do so much of the heavy labor of the world.

In bodily strength any active washerwoman is equal to the labor of casting a ballot, any theater-goer to attending a convention, any bargain-hunter to bearing the pressure of a primary.

In mental strength any competent housewife is equal to the average alderman, and our exceptionally intelligent women are numerous and able enough to equal the exceptional intelligence of our majestic legislators.

The time given to political duties by the average man could be given by the average woman without harm to her other work. Foolish girls or young matrons with abounding babies would not be elected to office—at least not by women voters.

As to that ancient bugaboo, "the filthy pool of politics," this is evident: Those things in the world which are unsuited to women are due to the absence of women, due to the presence of unmitigated men. Those things in the home which we love and revere are due to the presence of women—somewhat modified by men.

When women share the world's work they will bring to it precisely those elements of peace, order, comfort, and affectionate service which we so prize in the home—and so miss in the world.

Developing as human beings they will be far more agreeable wives, far more competent mothers. It will do the women good, do the world good, do the home good, do the children good. And what will be the effect on men and on our man-made troubles?

Shall we call it—mitigation?

As they went out and reached the street, he was aware that Harris was ahead fighting off the men from him

The Choice

Which Only Goes to Prove Again That It Is an Ill Wind That Blows Nobody Good

By EDWIN BALMER

Illustrated by LESTER RALPH

"THEN I must—I shall give, sir," the secretary shut his books slowly, "the warning to the men to-morrow morning!"

"I have still one other chance. I shall hear from it to-morrow noon," the president evaded, unlike his usual way. "Till I know finally that I can not find the money, be careful to keep this from the men."

He felt himself fingering guiltily, and still with some strange sense of an intolerable injury and injustice to himself, the long letter concealed in his pocket. It had come to him that morning, special delivery, and marked "personal." He knew that his secretary had not opened or even seen it; yet he seemed to feel, somehow, as Harris watched him doubtfully, that the secretary's keen eyes were boring through his pocket and into the envelope, and that the man was reading, even at that moment, the plain proposition which that letter put.

The president crushed the paper vengefully in his palm, therefore, as though to crumple the lines and prevent the other from reading.

"But we really know to-night, sir," Harris only continued respectfully the discussion between them, "that we can not get the money. So is it not better, if we must turn them off, to warn the men as soon as possible?"

"They can find no other work this winter anyway," the president returned sharply. "So see that you need not excite them before I have—it has been decided, Harris," he substituted quickly.

"Very well, sir," the secretary acquiesced. He went to the office closet where the coats and hats hung, and handed out the president's first and helped his employer on with them; then he buttoned his own coat close about him and put on his muffler slowly. The president, as he waited impatiently, had gone to the window and stood looking out.

It was after ten at night in December and already very cold. The lights of the cheap saloons and the nickel theaters, which dotted the black streets beyond the shops and toward the bordering tenements, glowed luridly in the chill, clear air. And though the regular patrons of both and of the lodging-houses beyond must have established themselves within long before, still the streets were dotted everywhere by restless single figures pacing up and down wearily in the cold; and larger groups moved together, as if in packs for warmth.

For a month and more they had been a familiar and common sight during the day—these scores and hundreds who kept applying daily, almost hourly, for work at the big, sounding shops and foundries whose loud clanging and humming had kept proclaiming proudly their continuing activity in the face of the panic. Mr. Ford had been able to employ a score or two of the first who came six weeks before when the last additions to his new plants were completed. And since then, though he had detailed a special clerk merely to turn off the applicants who persisted in spite of the dozen displayed signs, still scores of others pressed after him every noon when he went out to lunch. As he could not help these, and as it added only another and a useless distress to his own increasing trouble, recently he had taken to sending out a boy for his lunch and had eaten it in his office. But in the morning, before he could reach his refuge within, and in the evening he had had to encounter them.

Yet in the daytime they had seemed very different and less hopeless than to-night, pacing up and down in the cold—some, he knew, still waiting hopefully to importune him again, but the most watching for their more fortunate fellows to be settled for the night when they could steal some place to sleep upon a saloon floor, in an entry, or in some other spare, warm place. And it was perhaps most particularly different to Mr. Ford just at that moment when, at last, he must consider himself consciously before those men, no longer as the strong shelterer and employer of five hundred of their fellows, but as one who must now turn out his employed and pretended hundreds into the streets to join those before him. *Must?*

He started, wincing a little, again apprehensive that Harris, touching his side, might read his thoughts or the plain proposition of that letter still hidden under his hand in his pocket. He turned to his secretary impulsively, then, to give himself the crumb of comfort he might.

"Even if we shut down, Harris," he said kindly, "of course I will need you to keep on here. Your salary goes on."

"Yes, sir," the secretary nodded his acknowledgment. "But if we must shut down for this season, sir," he stated rather than asked, "it means, of course, that we can scarcely hope for a start again till this time next year?"

"No — scarcely till then, Harris," the president shrugged himself about cheerfully, as if resigned at last, "when my sons will be able to start with me, in their places in the new shops. So we shan't have to find temporary superintendents for them after all, Harris."

"They have been watching our light, of course," the secretary answered absently, "and are waiting. We may as well go down, sir."

He put on his hat and handed his employer his. "I beg your pardon, sir," he recollected himself then. "We will all be glad surely, sir, to have your sons starting in the places you intended for them when we start again next year. But just then, Mr. Ford, I was thinking of those men there in the street. I had to think, sir, of our men there—to-morrow night."

"Yes, Harris," the president acknowledged. He thumped heavily after the younger man down the echoing stairs; and as they went out and reached the street, he was aware that Harris was ahead fighting off the men from him somehow; so that when they came to the car-line the crowd had been discouraged and dropped away. Harris was holding out his hand to him tentatively as he saw their car, which would take them both home, slowing for them.

"You have kept them on, sir, longer than many have this year, anyway." He hesitated. "Here's to better times when we start again—with your sons!"

The president started suddenly back. He pushed the secretary quickly toward the car and himself stood back from the track. "I think, after all, I'll walk, Harris," he said. "But you get on. No; go home. I won't be bothered or followed now. The men I'll pass now," he forced a laugh, "won't mistake me for a man with jobs to give. Go on, Harris."

He waited till his subordinate obeyed him, protesting a little; and then he turned abruptly on his heel and started along the street with the winter wind sweeping it aslant.

He lived a little over two miles north of that portion of the city where, after crossing a park, the fashionable and comfortable homes suddenly began. At his vigorous fifty-third year he had made it more than ever his habit, for his health's sake, to walk those straight two miles either in the morning or the evening of every fair day. And it was known that, in trouble, he turned to that walk unfailingly in any season, any weather. And trouble truly held him now. For to-morrow he knew—one vanishing chance excepted—in default of the additional $75,000 which his banks had promised him and suddenly claimed inability to deliver, he must shut his shops—the new ones, just completed, the old ones and all—and he must turn his five hundred men out of employment for the year; or—as the letter in his pocket kept branding upon his brain—he might now turn himself out and sell out, at a panic price, all the achievement and the establishment of his life, and turn his plants over to others to keep them open and his men employed and make himself a mere menial manager of his own shops for those others.

His new improvements had heavily involved him. Everything was bonded or mortgaged somehow; but—he had gone over the figures carefully again that night—if he shut his shops at once, and dismissed all his men, he could carry them over till next year and better times, and then open them again safely—and still *his*. But if his shops were to run and his men have work in them that winter, it could be only for another and with another's ownership and control.

The hopeless injury and the unthinkable injustice to

him in such a situation stung and slashed him more sharply and bitterly than the knife of the winter wind which stabbed at him at the street corners. What did he owe these shivering, cringing men who met and stared at him, without recognition, as he hid from them behind his coat collar? What had they done or would they ever do for him or his which demanded from him such a sacrifice for them? For they were asking him—they or their fellows at any rate—that he must sacrifice for them now his whole hope and independence, his past and present achievement, the hard-won establishment of his life. No; as they scurried, scared and slinking past him, they demanded from him not only that, but also they cried and required from him that he must sacrifice his sons too, as well as himself—their promise and independence also and their sure future!

His sons! He caught himself up, incredulous that he could have entertained it a moment, had he remembered what it meant to them. It was not himself and his own merely; it was they and theirs which he was thinking of selling out!

For it was when Harold, the elder boy, was born twenty years before, he recalled to himself hotly, that he first had the thought and the courage to strike out for himself and start the establishment of the business which men called his, indeed, but which he had always felt he held as regent to pass on to his son. And when Robert, the second son, was born a year later, he had formed his hope and his resolve to have the business so that his boys could possess it, in time, as partners together. He recalled to himself how, during all the years since, he had planned, prepared, and provided in the business for their places there—their places for which he had just finally enlarged and extended the shops and plants so that, when they finished their engineering course together at the end of the year, they could start with him at once in the direction of the plants. And now he was being demanded, not only to sell out himself and make himself a menial, but to sell out his sons too, and make them mere mechanics in some one else's shops. To spare his workmen a little!

He felt himself drawing back, as if to strike at those now brushing past him. He turned angrily upon the figure which, he felt vaguely, had been following him from the block behind; and he faced the man challengingly. He recognized him suddenly, then, with a quick-shamed sense he could not entirely conceal, as Allen—one of his subforemen.

"Well, Allen, what is it?" he acknowledged his recognition gruffly.

"I saw you walking home past here, sir," the man apologized, confused, "and I thought I would watch after you a piece, sir. There's many a man about now to do things they wouldn't think of a few months ago, and—no, sir," the man substituted frankly. "The truth, sir, I heard a bad bit of news after quitting to-night; and then one of my boys brought me the word of your light up there late in the office window. So I waited to watch after you, Mr. Ford. For I thought perhaps you might tell me—"

"One of *your* boys, Allen?" the president muttered. "Well, to tell you what, Allen?" he demanded then quickly.

"If it is so, sir, that you have come to trouble too, and must turn us all off to-morrow!"

"So that was it!" The employer considered a moment. "Come along with me, Allen," he granted then suddenly and shrugged himself about again with a start, "if you want to talk to me."

"It is true then, sir?" the man caught step fearfully. "You mean, sir, you mean that you must—"

II

"FATHER has come in now, mother."

"Harold? Oh—where is he?"

"In the dining-room."

"What time is it, son?"

"Twelve—a little after."

"Where has he been all this time?"

"I met him on Oak Street, this side of the park, just ten minutes ago. He started to walk home, as Harris told us; but he met one of his men and has been walking with him, for some reason, ever since. They both were very cold, so father brought him in to be warmed before he would let him go back."

"Oh! Your father has eaten?"

"Nothing since noon anyway, if he had much then. He seemed to like it that I went to meet him; but he didn't want to talk to me for some reason or other."

"You told him that I was waiting here, Harold?"

"Yes; but he said if you were asleep, not to wake you. He told me to go to bed. And he said he would wake you himself in a moment, when he comes up. I got him into the dining-room to eat some fruit or crackers or something; and he sat down while I was watching him. But when he thought I had gone, he got up again and began tramping up and down. He hadn't even taken his coat off. Do you think, mother—do you think he has—he must fail now and lose the new shops—the new plant and all just when he has them and—and Robert and I are to go to him?"

"No, son, no!" the mother kissed her boy, defiantly. "No; he—"

"But he scarcely could speak with me, mother, when I—and he wouldn't tell me anything when I asked what the matter was, and—"

"Go on to bed now, son, as he said;" the mother caught and kissed him hurriedly again. She straightened her skirt and pressed back her hair carefully from her face. "And tell Robert—he was down here a moment ago—that father is in now; and everything is all right. And—don't worry yourself, Harold!"

"No. But you will go to him, mother?"

"Of course, son," she tried to let him go carelessly as he started to obey her. She turned quickly then and hurried into the hall.

Her husband, as was his habit when coming in late, had evidently extinguished the lights left for him in the front of the hall; but those which the boy had lit in the dining-room were burning; and in the shaft of yellow which they threw between the portières and into the darkened hall, the husband's shadow moved restlessly back and forth—back and forth twice while she came the length of the long rug. She pushed between the portières quickly then and came face to face with him. He still had his overcoat on, as the boy had left him, and his gloves crushed in his hand. His eyes lifted suddenly and met his wife's.

"Edward!" she moved to him in quick concern. "Why, my dear, how cold you are! What a night and a time to walk home! Why, my dear!" she exclaimed again.

"Allen—my foreman—he is gone, Edith?" the husband replied tensely. "He didn't want to come in—that was what kept us out. But I made him come in a moment anyhow to warm himself at the hall heater before going back. He is gone? I thought I heard the door shut a moment ago."

"He is gone, Edward. There is no one in the hall. So, my dear, why—why—"

"You telephoned Harris, Harold told me, Edith."

"Yes. You said at six, Edward, that you would not be in till ten and to have something. So at eleven, when you were not here, I telephoned the office, and then Harris at his house. He said you had started to walk some time before, so Harold went out to look for you. There are so many, many unemployed now, Edward, that you *must* be more careful, and—and—"

"I know, Edith," he cut her short, not unkindly. "But Allen, the man who just left, came with me. I had to walk because—"

He stopped. His wife knew, and he knew that she knew, the meaning of his walks at such times, and particularly of such a delay in reaching either his home or his office. It brought her at once to the heart of the matter, and she faced him fairly.

"Harris told me that you could not get the money to-day, Edward."

"No, Edith."

"And it is absolutely impossible for you to go on now without it?"

"Absolutely, Edith."

"But, Edward; Harris told me, too—I made him tell me, too"—she caught her husband and held him with the reckless, defiant cling of the woman whose husband not only, but whose children, too, are threatened—"that you need not lose the business! I made him tell me that if you only closed down now at once and [illegible] all your men for the year, you can keep the [illegible] business yours and start it again—yours, Edward!"

"Yes"—the husband put her from him gently—"if I only shut the shops now, Edith, and turn out all my men for the year I can keep the business mine and start the shops next year—still mine, Edith."

"Then what is it? What is the great matter, Edward?" She dropped back and regarded him, puzzled in her quick relief. "Then what has troubled you so terribly? Oh, my dear." She moved back to him quickly when he did not answer and she thought she understood. "Why, Edward, of course I know you must be sorry to have to close the shops now when you thought you were ready to start them better than ever and were getting things running and ready for the boys. I know you must be disappointed, for you wanted to give us—oh, so many things when the 'shops should be finished.' But you can give them to us next year as well—when your sons will be starting in your shops with you, Edward! So what is the great difference now?" she demanded inspiritingly.

"I have not told you the whole matter, Edith. It was true, as you knew yesterday, that either I must find fifty or seventy-five thousand dollars at once or I can't run a machine any longer or have material to keep a man at work, and so must shut down the shops. And it is true, too, as I just told you, that I can not find the money—for myself. But to-day one thing was offered me, which I must pass on at once—and which I may do. I can sell out now—to-morrow—to the Stokes-Campbell combined companies to have them take over, at once, but at a panic price, my plants and my business with a guarantee that they will run the shops full force, full time this winter—all this year."

"*What, Edward? What?*"

The husband repeated, automatically.

"But *you*, Edward, *you?*"

"The proposition provides to keep me, upon a fair salary, as inside manager of my—the shops, Edith."

"*What?*" the wife made him repeat, dazed again. "*What? You sell and take a salary to manage your shops for them?*"

"It is the one way, Edith, that those shops—my new shops which I have just built—can stay open this year; and it is the only way that my men—the five hundred men who work in those shops—can have work this winter—this year."

"But—but, Edward, the shops won't be yours! Why, Edward, of course the plants may keep running; but

(Continued on page 26)

"Held him with the reckless, defiant cling of a woman whose husband and children are threatened"

Comment on Congress

By MARK SULLIVAN

SIMPLICITY and directness are engaging qualities anywhere. If there is one section of this country beyond another where public opinion is more moved by human qualities, that section is the South. Little wonder then that the South has heard and read with greater hope and enthusiasm, than they have had reason to get from any other utterance of a President since 1860, that speech of President Taft at Charlotte, North Carolina, the other day, which concluded with these words:

"Let me again say to you how my heart has been aroused by the cordiality of your reception . . . and say to you that I haven't spoken here consciously a word to influence you in a partizan way, but it is impossible to discuss the conditions without mentioning the parties. I hope you will therefore forgive me for an apparent reference to political conditions when I am really only extending to you the right hand of fellowship as Americans, explaining possibly by inference some of the difficulties of conducting this Government as its Chief Executive. I thank you."

Here is the simplicity that goes with sympathy unaffected, and the candor that proves good faith. And the President *is* in good faith. His words are backed up with such deeds as appointing Democratic Federal judges on their merits, instead of Republicans on their party records. The South throbs with promise. Virginia, with its iron ore and coal and timber, has probably ten times the natural wealth of Indiana. So, also, have Georgia and Alabama. Within a decade or two that natural wealth will be transmuted into more than Indiana's personal prosperity, schools, and all that goes with material abundance. All the South needs is capital and efficient labor. The money that has been busy and profitable in the West for thirty years is beginning to look southward, and when capital arrives either the negro will become efficient or our immigrants will debark at Charleston instead of New York. Capital always finds labor. One can imagine a man like James J. Hill casting toward the Mississippi Delta that same far-seeing and practical eye which, twenty years ago, he bent upon the Far Northwest. The railroads that now conduct home-seekers' excursions to Saskatchewan and Assiniboia will carry the restless Iowa farmer south to land of half the price and twice the plenty, with three times the aggregate of sunshine, and under the American flag. Material prosperity, the freedom that every other section already has to solve its own problems in the way its own thinkers and leaders lay down, and a public opinion accepted in the same good faith in Washington, and carrying the same weight as New England—these will make a new South. The nation will be the gainer by the South's resumption of its old-time weight in Congress. Some Southern members may then vote for protection—but they will first have to be elected on that issue. It will not then be possible for protectionists to come into Congress from the South, by default, simply because they happen to be labeled Democrats. On the other hand, the South's well-known fidelity to conviction, when they know the issue before election, will contribute to Congress the backbone of that healthy opposition to the present dominant party which is the country's chief political need to-day. The South is full of promise, material and political.

Southern Newspaper Sentiment

This cartoon appeared in the exceptionally able "Times-Democrat" of New Orleans. It illustrates how far apart are Southern sentiment and the action of many Southern Democrats in Congress. From the same State, where the "Times-Star" is a leading exponent of public opinion, both Senators voted against free iron ore, and all of Louisiana's six Representatives in the Lower House voted against free lumber. The Richmond, Virginia, "Times-Despatch"; the Fredericksburg, Virginia, "Star"; the Raleigh, North Carolina, "News and Observer"; the Columbia, South Carolina, "State"; the Charleston, South Carolina, "News and Courier," and the Florida "Times-Union"—all have condemned these Southern Senators and Representatives who have voted for protection. The Norfolk, Virginia, "Pilot" says that the Southern "country press, with scarcely an exception, has treated this departure from Democratic policy as unwise and misrepresentative of the sentiments and interests of the constituencies directly concerned"

Where the Shoe Pinches

A SECOND LIEUTENANT in the army is a good type of the Ultimate Consumer. (Thank Congressman Henry S. Boutell of Illinois for that phrase.) He gets a fixed salary of $1,700 yearly, roughly the same income that is received by some millions of average Americans. This personal experience of one young lieutenant, who writes from the Philippine Islands, is therefore illuminating:

"When a cadet graduates from the Military Academy he will buy at least five hundred dollars' worth of equipment before entering the army as a second lieutenant. Four hundred dollars of this amount will be spent for clothing that he must have, and this clothing is made from the best English manufactured broadcloths and olive drab goods. I don't know exactly the duty on these goods, but I believe it is about forty or fifty per cent. [The writer of this letter understates the facts; the duty is roughly about ninety-six per cent.] Although protected by this tariff, no American manufacturer can produce goods of the quality suitable for officers' uniforms, and we poor devils are forced to pay almost double the price for our clothes. . . . A graduate of '07 class went to London and bought his first outfit of clothing in that city. He saved enough by buying his outfit in London to pay his way to Europe and back again. He got a complete outfit and a trip to Europe for less than I paid for the same goods in New York. He wrote our class, '08, advising us all to go to London to get our uniforms, assuring us we could save money and have the trip, too. The tariff hurt me for two hundred dollars this year, and will keep on hurting me for about the same amount each year until it is changed."

This young officer is taxed something over ten per cent on his income. Hundreds of thousands of salaried men, cashiers, expert mechanics, doctors, and small shopkeepers, who have about the same income, if they analyzed their expenditures, and compiled the tariff-tax in them, as this lieutenant has done, would find that they pay an income tax of something more than ten per cent. Is this more fair, or less, than to make men with an income of $10,000 a year or more pay a direct income tax of three per cent?

Soliciting Bids

SENATOR F. M. SIMMONS—he is a Democrat, always bear in mind—of North Carolina was arguing for the retention of the present tariff on lumber:

"I am ready, with him and with any other man on either side of this chamber, to extend the same treatment to every product embraced in this bill, I do not care in what section of the country it is located."

That's the way to get a high tariff through Congress—"you vote for my lumber, I'll vote for your steel."

Looking Forward to the Accounting

THIS sentence was uttered by Senator Borah of Idaho in the course of his speech on the income tax:

". . . No man is politically so short-sighted or politically so blind as the man who thinks that the steamer *Hamburg* carried away the policies and principles, the public interests, the aroused public conscience, and the searching inquisitive public concern which this remarkable man bequeathed to his countrymen."

The *Hamburg*, it may be said for the benefit of short memories, is the ship that carried Roosevelt away from New York.

The Moral Aspect of Protection

THE amount of revenue raised for the Government by the present tariff is about three hundred millions; the amount which that tariff makes the public pay for what they buy, more than they would pay under a tariff for revenue only, is about two billions. The difference is one of those forms of acquisition which can go by no other name than graft. It is money taken from the pockets of some and put in the pockets of others, without compensation. The tariff is a moral question. Some day we shall vote on it with public attention focused on this point of view.

Lost in Pittsburg

COMES now the Pittsburg "Post" to proclaim that it still stands guard on the ancient battlement. "For nearly sixty-seven years we have been conscientious and consistently loyal in our support of the Democratic party and policies." Such a history deserves a better fate. We wish either that the "Post" had had a more responsive habitation all these years, or that Pittsburg had had a more persuasive exponent of Democracy. We have never heard that the spirit of tariff reform had made much headway in Pittsburg. Can't the "Post" keep John Dalzell at home? For twenty-two consecutive years now he has been the plumed knight of high protection in Congress. In all Pennsylvania there are thirty-two members of the Lower House of Congress; five of them are Democrats—and no one of the five comes from Pittsburg. We wish, indeed, the "Post" were a more persuasive thing. By the way, which Democracy does the "Post" now profess—that of Governor Johnson and the national platform, or the more practical tenets of those eighteen Democratic Senators who voted against free iron ore and the thirty-eight Democrats in the Lower House who voted for a tariff on lumber?

What the World Is Doing

A Record of Current Events

The Georgia Race-Strike

THE firemen of the Georgia Railroad are on strike to enforce the supremacy of white men over negroes. From Atlanta to Augusta main line and branch lines are tied up. The mails are delayed, and some communities are lacking the "necessaries" of life. As we go to press the strike is in its tenth day, with arbitration probable and an end of the strike in sight.

Five hundred miles of road had been cleared of train service, and a territory, 170 miles long and from 25 to 100 miles wide, thrown back to old post-road days.

The town of Crawfordville wired to the State Railroad Commission: "For God's sake, do something, as we are threatened by famine." The same condition prevailed in Athens, Warrenton, Greensboro, Covington, Lithonia, Stone Mountain, and Decatur.

Three thousand pounds of mail heaped up in the Atlanta post-office.

Flour, fresh meat, ice, and other staples and "necessaries" ran out during the early days of the strike.

Relief was had by the ninth day by the use of automobiles for passenger, mail, express, newspaper, and pack service. Fifty towns installed motor-car communication, by which both food and passengers were exchanged. A few of the machines gave a seventy-mile route. Wild-cat prices prevailed, in some instances twenty-five cents a mile.

Charles P. Neill, United States Commissioner of Labor, is in Atlanta, interviewing all concerned, and it is expected that he will arrange arbitration and a settlement.

The immediate cause of the strike was the discharge of ten white firemen and the filling of their places with negroes. Another cause was the recent reduction in the wages of white firemen.

But the fundamental question at issue is: Shall negro firemen be allowed on passenger engines? On most of the Southern railroads negroes are not permitted to become engineers. But they have been permitted, when their work was competent, to rise through the various grades of "firing" to the highest position to which a fireman may reach (without becoming an engineer)—that of "firing" on first-class passenger trains.

The Augusta "Chronicle" says editorially:

"Inasmuch as the negro constitutes the bulk of the South's laboring population, to take away from him his right to labor—'side by side with white men,' when necessary—would place the heaviest possible handicap upon the South itself; for it would not only have a surplus of idle negroes to contend with, but a scarcity of labor in all industrial pursuits."

Thomas K. Scott, general manager of the Georgia Railroad, sent word, on May 23, to Hoke Smith, Governor of Georgia: "The whole responsibility for this condition rests upon you as Chief Magistrate of the State of Georgia for failing to exert your power to the fullest extent in maintaining order."

Mr. Roosevelt Riding on the Cowcatcher

Some members of the Smithsonian Institution's expedition on the locomotive that drew them out of Mombasa into the British East African hunting-grounds

The New York "Sun" says: "It was Smith who elected to play the part of an Altgeld when fate put him in a situation in which he had a choice to make."

Healing the Ancient Wounds

THE President paid equal and ringing tributes to the soldiers of the Blue and of the Gray on the Petersburg battlefields, once the "citadel of the Confederacy." Mrs. "Stonewall" Jackson greeted him at Charlotte with the words: "I am indeed delighted to know the harmonizer of all our hearts."

By those two incidents in Mr. Taft's Southern visit of May 19 and 20, it was made clear that a new era was well under way. Sectionalism was far off for those two days of grace.

The "Times-Dispatch" of Richmond, Virginia, said:

"The historic Cockade City will welcome to-day a President of the United States who has shown a juster and kindlier understanding of the South than any Republican President since the war." It speaks of his "genuine affection for the South."

Petersburg opened its gates to the largest invasion, in number of human beings, since the incoming of Grant's army in 1865. The occasion was the dedication of the sixty-foot shaft at Fort Mahone, erected by the State of Pennsylvania in memory of the Pennsylvania volunteers.

Next day, at Charlotte, North Carolina, the home of the Mecklenburg Declaration of Independence, which it is claimed antedated the 1776 Declaration, the President joined in the "Mecklenburg Celebration." In his address he pleaded for "a complete tolerance of opinion." He said he wished to wipe out the feeling that the central Government was a Government alien to the Southland.

"I am going to appoint Republicans and I am going to appoint Democrats, striving in each case to get a man who will commend himself to the community in which he lives."

"The Harmonizer of All Our Hearts"

On the Petersburg battlefield on May 19, the President helped to dedicate a monument, erected by the State of Pennsylvania, to the Pennsylvania Volunteers of the Civil War. The monument is a sixty-foot shaft. One day later, Mrs. "Stonewall" Jackson used the above phrase in meeting Mr. Taft

Henry H. Rogers

"THE master-brain of the greatest and most successful commercial enterprise in the world" ceased to exist on May 19 by the death of Henry H. Rogers. He was executive head of the Standard Oil Company, his official position being vice-president. He is reputed to have held over 16,000 shares in that corporation, and to have left a fortune of $50,000,000.

His career was as picturesque as any of the historic and literary Poor-Boys-Who-Have-Become-Famous. He was born sixty-eight years ago in the town of Fairhaven, Massachusetts, where he worked as a newsboy, clerk in a grocery store, and baggage-master. This town, which gave him his start, he made his summer home in later years, gave it a church, school, and library, macadamized its streets, and altogether enriched it by over three million dollars' worth of benefactions.

At the age of twenty-one he went to the Pennsylvania oil fields, where he became associated with John D. Archbold. Later he came to Brooklyn and joined Charles Pratt, of "Pratt's Astral Oil" fame, and for eight years he continued there, among other things developing the machinery by which naphtha is separated from crude oil. In 1874 the Rockefellers formed "Standard Oil," and Rogers and Pratt were brought over into the company in New York City. Mr. Rogers organized the pipe-line system for the transportation of oil.

His most recent exploit was the construction of the Virginia Railway—442 straightaway miles of track from Deepwater, West Virginia, to Norfolk, Virginia. This gives a tidewater outlet for the coal mountain regions.

As a witness in court, Mr. Rogers had made several silent or laconic appearances. He was quoted as saying that there is "but one lawyer in the United States whose cross-examination on the witness stand could afford him anything but amusement and recreation, and that is Samuel Untermyer."

His association with Thomas W. Lawson in the Amalgamated Copper Company transactions increased the public fame of Rogers. All through the rushing paragraphs of Mr. Lawson's book, "Frenzied Finance," the figure of Rogers moves jovially and mightily—like Long John Silver in "Treasure Island." He storms and rages, or bellows in mirth. He was never a national character—though for years a well-known name—till Lawson shot him up into the firmament, like a Pain portrait done in fireworks. Lawson's sketch may be too intense—but it is living. Some such man lived and moved in that vital way. (To say that is not to endorse or criticize Lawson's interpretation of certain transactions between the two men.)

Henry H. Rogers

Master mind of the Standard Oil, who died on May 19

Like so many little jets of flame, the paragraphs spurt up and reveal a lovable, strong figure. Lawson tells of Rogers at a directors' meeting surrounded by financiers.

"You will surely hear his sharp, incisive, steel-clicking, 'Gentlemen, are we ready for the vote. For I regret to say I have another important and unavoidable meeting at ——' (twelve or fifteen minutes away)."

Another time Lawson has Rogers say to "King Charley" Schwab, then head of the Steel Trust, who asked him to "wait": "All meetings where I sit as director vote first and talk after I am gone."

He then renders him as "terrible in anger":

"I have seen many forms of human wrath, many men transformed to terrible things by anger, but I have never seen any that were other than jumping-jack imitations of a jungle tiger compared with Henry H. when he 'lets 'er go'—when the instant comes that he realizes some one is balking the accomplishment of his will.

"He jumped backward. The next second I was in the storm-center. The room was small. Suddenly it became full of arms and legs and hands waving and gesticulating, and fists banging and brandished; gnashing teeth and a convulsed face, in which the eyes actually burned and rained fire. And the language—such a torrent of vilification and denunciation I had never heard."

Often there was "kindly good-will in the eyes when they are at rest."

"The moment Mr. Rogers saw the deal was a 'go,' all his hardness melted as the snow upon the mountain-sides under the April sun. Nothing could be softer, kinder, and fairer. The blood had disappeared; the tiger was a great, purring house-cat, intent only on catching naughty rats and mice for the good of the household."

"Mr. Rogers smiled one of his thin, easy smiles."

"The tiger was awake, his cage rattled: it was raw meat time."

"The keen, penetrating eyes of the great tra[illegible]

"Onyx" Hosiery

Extract from speech delivered in Congress, April 6, 1909, by

Hon. Sereno E. Payne

Chairman Ways and Means Committee

"LORD & TAYLOR are the largest Importers of Hosiery in this country. These people buy in the regular way and do not knowingly handle any merchandise made by the smaller manufacturers, preferring the merchandise made in the large establishments, where better regularity of manufacture is maintained, thus handling the somewhat expert grade of merchandise."

We believe that this authoritative and unbiased statement concerning the superiority of "Onyx" Hosiery will prompt all men to demand the "Onyx" brand and secure hosiery that has the *Real Stuff* dependable for all occasions.

From 25c to the highest grade made. May be had from most first-class shops in every part of the United States. Accept no substitute.

If your dealer cannot supply you, write to Dept. C and we will direct you where to procure "Onyx" Hosiery

Lord & Taylor Wholesale Distributors *New York*

Those Important 51st and 52d Weeks

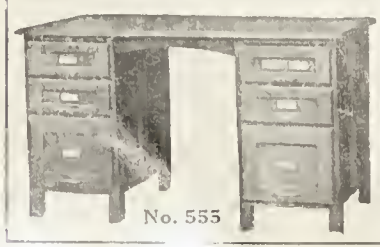
which you spend on your summer holiday mean the storing up of energy for another year.
Climate, surroundings and amusements should represent an entire change from your usual environment. The New York Central Lines traverse

"The Vacation Land of America"

which furnishes the change for every man and every place. This vacation land embraces Niagara Falls—the greatest scenic wonder of the world; the Thousand Islands—the great St. Lawrence River resorts; the Adirondack and White Mountains, the Berkshire Hills, Lake George, Lake Champlain and the New England Seashore.

Let Us Suggest a Vacation Trip

If you will tell us the number in your party, the length of time and amount of money you desire your holiday to embrace, whether you want continuous traveling or not, and give some idea of your taste regarding surroundings, amusements, etc., we will propose one or two trips for your consideration with complete information. Address



New York Central Lines Travel Bureau, Room 783 Grand Central Station, N. Y., or Room 447 La Salle Street Station, Chicago.

No. 421

The Weis Mfg. Co., 54 Union St., Monroe, Mich.

"Instantly came one of those flash decisions for which H. H. Rogers is noted among his business associates, the oft-proved correctness of which goes far toward making him the preeminent American financier of the day. Sunday is Mr. Rogers's pick of days for a lengthy hearing, and, returning from church, he came directly to the 'stowaway' rooms at the Murray Hill Hotel, where we frequently met while the Wall Street world was trying to trace and keep track of our movements."

It is plain that Lawson had the same literary experience with Rogers that Milton had with Satan. He started in to make him devilish and ended by painting him the dashing hero.

Peace by the Golden Horn

THE lull continues on the Continent. In Turkey events have ceased to move with that dizzy rapidity which made April and most of May seem like a set of rather tragic moving pictures exhibited at full speed. The Sultan or the strong men that direct him and speak through his lips is acting and talking with consistent firmness. Aware that the murder of 25,000 Armenians in the Alexandretta Bay region is so hateful to the nations as to make intervention a possiity, Mohamed V, in his speech from the throne on May 20, promises punishment to the guilty and relief to the suffering.

The situation in Asia Minor is largely in his hands. As head of the church, his word is law to the wildest tribes.

But in the Western Empire, the construction and administrative ability of the Young Turks will have full scope. The two irreconcilable elements inside the Western Empire are the soldiers and the priests—the one with the modern view of life, and the other with the traditional.

It was the German-trained military that rendered the new régime victorious.

In 1883 the Central Military School in Constantinople, using German methods with German instructors, had 450 pupils; in 1895, 1,700, with 14,000 pupils of all classes. The number of officers going from this military school system into the army was 456 in 1895; 700 in 1903; about 1,000 in 1909. These officers and these soldiers were the core of the Young Turk movement, which took its inspiration from Japan and its training from Germany.

The rising hope of the Young Turks is Mahmoud Chevket Pasha, Inspector-General of the Constitutional forces on land and sea. As Commander-in-Chief, he will have opportunity to show statesmanship of the highest order in handling factional fights, and the racial and religious differences of the conglomerate empire. Thus far his ability has been shown in terms of swift military action. He it was who invested and then entered Constantinople with the Third, and part of the Second, Army Corps.

One of the slight but illuminating incidents of the April 13 revolution in Constantinople is recorded by a writer in the "Contemporary Review":

"In one case, where a poor dressmaker was half-frightened out of her wits, she was gently led by a white-haired old Turkish officer through the crowd until she was able to be put into a tram which should take her home."

Presbyterians and Sunday

IN THE very week when Ray Stannard Baker's article on "The Godlessness of New York" was appearing in the June "American Magazine," the Presbyterian General Assembly was meeting at Denver, Colorado. Baker says:

"We find the united clergy of various cities, campaigning with enthusiasm against Sunday baseball, Sunday concerts, vaudeville, and moving picture performances—the amusements of the poor. I am merely illustrating this tendency to preach and organize *against* things instead of preaching and organizing *for* things. They (the churches) devote tremendous energy in attempting to suppress vaudeville shows while hundreds of thousands of women and children in New York are being degraded, body and soul, by senseless exploitation—too much work, too small wages, poor homes, no amusement. They have no vision of social justice; they have no message for the common people.

The Special Committee on Sabbath Observance recommended to the Presbyterian General Assembly on May 21 that resolutions be adopted "that the General Assembly reiterate its strong and emphatic disapproval of all secular uses of the day, all games and sports, in civic as also in army and navy; all unnecessary traveling and all excursions;" and "that the General Assembly hereby reiterates its emphatic condemnation of the Sunday newspapers," and "that the General Assembly respectfully requests the faculties of colleges and seminaries, if the way be clear, to omit recitations on Monday mornings, so as to have

YOU Can Make Big Money with Rapid Passenger Traffic Cars

These cars earn $100 to $500 per week for their owners and you can earn more money with a Rapid Pullman Sight Seeing Car every day in the year, than you can in any ordinary position, trade or small mercantile business, requiring an equal amount of capital. Some owners of Rapid cars have earned as high as $700 in one week. Look into this profitable business. Get our book "The Rapid Way of Making Money." It is free to those who are truly interested.

For Interurban Service. Rapid Passenger Traffic Cars are now filling a long felt want in the interurban passenger and freight business. Cars like the above carry nine passengers and about 1400 pounds of freight. This is a very profitable vocation. Requires no experience and is a clean cash-in-hand every-trip business. As feeders to steam and electric railways. Rapid Combination cars are coming into great prominence and favor as factors of no mean importance in solving vexatious traffic problems.

For Stage Line Service. The above car is one style of Rapid Passenger Traffic Car which has met with great success in transporting passengers between small towns, country clubs, hotels and depots. It is beautiful in design, handsome in appearance, and luxurious to a degree unknown to any but owners of Rapid Passenger Traffic Cars. Summer resort owners are respectfully asked to write us about this car.

For Hotel Service. Here is a Rapid Passenger Traffic Car that meets the most exacting and discriminating demands of the best class of hotel patrons. It is beautiful in design, comfortable and luxurious. No up-to-date hotel can afford to offer its patrons anything but the best, which is found in Rapid Passenger Traffic Cars of the above design. Can be used for transporting guests from depots or for opera use as well as other lines of service too numerous to mention here.

Attention Tourists

Rapid

When you travel this year look for this name plate on the front of the sight seeing car in which you ride. The name RAPID is an assurance that you will see the sights aright; that you will enjoy a comfortable, pleasant trip and that you will be charged only a reasonable fare for high class service. Look up the man with a Rapid Sight Seeing Car. "You don't miss the return train when you ride in a Rapid."

the Sabbath free from the felt necessity of some of the students to prepare their lessons on that day."

On the Trail of the Higher Education

THERE is simultaneous agitation in England and in the United States for reform in college administration. The feeling grows that higher education does not completely meet to-day the efficiency tests to which other activities are subjected.

Picturesquely radical words are those of R. T. Crane of Chicago to the members of the Illinois Legislature. He had been solicited for funds by President James of the University of Illinois, and he says:

"Instead of appropriating funds for such institutions, it would be a good deal better for the State to put a torch to them and burn them down; to go out of the 'higher education' business and permit the boys to go back to their homes and assist in supporting their families, instead of causing them a heavy expense."

In New York State on May 21 the Higher Education Association was incorporated with a capital of $300,000. Its purpose is to work improvements in American colleges. One of the incorporators, Clarence F. Birdseye, has for years made a study of colleges. He believes that they have overlooked the problem of training of the individual student. He would create an administrative department inside the college to study the local conditions and plan organization, in just the way that a business corporation studies and analyzes itself and eliminates waste motion.

✣ ✣ ✣

Baseball

(Continued from page 12)

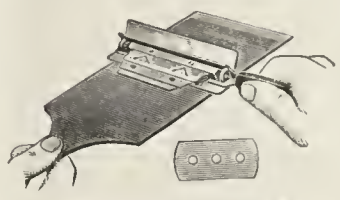
of brains, of "athletic sense." With the increase of strategy and "inside play" in every department of the game, pitching has more than kept pace. What made Clark Griffith an able pitcher; and why, to-day, a bench manager with gray in his hair, is he able to go into the box and pitch out victory in a pinch? He had no speed; his ball would scarcely have broken a window-pane at the plate. He had little curve; his best ball in that regard bore a mild resemblance to Mathewson's "fade-away." But he did have control—and brains. He knew where the batter could not hit; he took advantage of every change in his pose to land a ball out of effective reach; he cut the corners; he toyed with his opponent's psychology.

The pitcher (and latterly the catcher who directs his play) knows as by a notebook the peculiarities of every batter in his league—who can not hit a high or low ball, who will flinch and lose pose at the first direct approach of a fast outshoot, who will reach out foolishly for a slow ball. When a new player enters the league, pitchers and catchers experiment with him until they find his weakness, and pass the information along to their fellows. That explains why certain players, lost afterward to fame, bat with the leaders during their first month in the league.

Nailing the "Waste" Ball

THE player who is good at them all, like Lajoie or Wagner—he is the despair of pitchers. "I've tried to pass Wagner and Donlin to first again and again," complains a star of the National League, "and they've reached clear over the plate and gobbled 'em up!" The "waste" ball is a maneuver which has come with "inside" baseball. The catcher, believing from the coacher's signals that a runner is going to steal, will signal for a straight, fast ball far to the right, out of reach of the batter but convenient for a quick throw in case of a steal. Wagner, Donlin, Lajoie, and Cobb have a fashion of converting "waste" balls into hits!

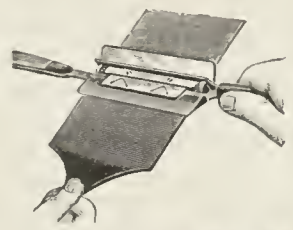
As a matter of fact, the repertoire of most really first-class pitchers is more limited than the public believes. The catcher of one pennant-winning team went through last season with just four signals to his pitchers besides his signals for height—"curve," which meant usually an outdrop; "straight ball," which meant one of those cannon-ball throws that sometimes shoot inward a shade; "slow ball," and "waste ball." With one of his pitchers, "curve" meant a drop. The plain horizontal outshoot, by the way, is no more in fashion—for reasons which Diagram E will explain better than words.



The selection given above is the effective repertoire of three pitchers in four. The "jump" of Old Cy Young, the "fade-away" of Mathewson, and the spitball of Walsh, Chesbro, and others are only fancy additions.

Control is the thing. To know where the batter can not hit is one matter, to

Don't Throw Dull Blades Away—Strop 'Em!



Not One Man in Fifty

Strops his Razor properly. Not one in a thousand knows how to Hone a Razor. The almost invariable result is a "rounded edge" instead of the keen, sharp edge so necessary to a clean and satisfactory shave.

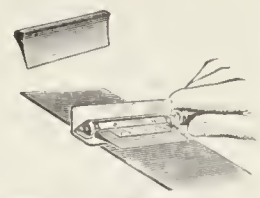
Stropping Wafer Blade with the FLEMING

Shaving troubles are not caused by a poor Razor, but by the poor condition of the Razor. A Razor will not shave well if not properly Stropped or Honed. A keen edge for a clean shave in a minute if you use the

Stropping old-style Razor with the FLEMING

Fleming Razor Stropper and Honer $2

Strops and Hones All Razors and Blades, Old-Style and Safety.



The Fleming Stropper and Honer firmly grips the blade of the Razor and lays it **flat** on the strop or hone. By an automatic reversing action, both sides of the edge are Stropped or Honed uniformly, without removing the Stropper from the strop or hone. You cannot press too hard, you cannot strop at the wrong angle, you cannot "round" the edge of your blade. The **Fleming** automatically Strops and Hones Razors and blades of any style, thickness or width, and does it in a minute, almost without effort. The most expert barber could not do it better. It is perfection itself! It requires no skill or experience!

Honing Safety Razor Blade with the FLEMING

Purchase a **Fleming Razor Stropper and Honer** and *stop the everlasting expense of new blades!* The **Fleming** will last forever, and it will make your present blades last almost as long, and give you a clean, easy, satisfactory shave every time.

Ask your dealer for the **Fleming.** If he cannot supply you, we will send it, prepaid, on receipt of **$2**—cash, money-order or bank draft.

Our Illustrated Booklet is FREE for the Asking.

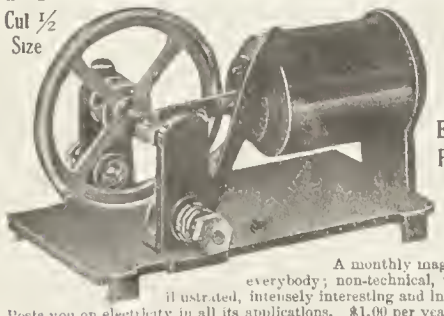
We Want Factories

Ft. Smith, Arkansas, offers to capital seeking investment in factories, to individuals or corporations having manufacturing plants and looking for new locations with greater opportunities, the best proposition possible to-day in the United States.

¶ *Ft. Smith is situated in the center of almost fabulously undeveloped wealth of semi-anthracite smokeless coal; the largest gas field in the United States; vast deposits of splendid building stone; in the close neighborhood of approximately twenty billion feet of commercial hard and soft wood timber.*

¶ *Ft. Smith has forty thousand population — nine railways — and is the natural and logical center for the manufacturing and wholesale market for the Southwest.*

¶ *Ft. Smith has no city debt, has splendid homes, fine schools and churches, beautiful parks and public buildings, and every street in the city is being paved. It presents magnificent opportunities for both labor and capital. Jobbing trade now $40,000,000 annually.*



¶ ***We want factories of every kind and character, especially in metal, wood and textiles, and will make every reasonable concession to parties desiring to locate here.***

¶ ***For further information, address the***

POPULAR ELECTRICITY IN PLAIN ENGLISH

Cut ½ Size

Send for Electrical Premium List

A monthly magazine for everybody; non-technical, profusely illustrated, intensely interesting and instructive. Posts you on electricity in all its applications. $1.00 per year, including an ELECTRIC ENGINE like above illustration; engine will run a long time on one wet or dry battery. 1,000 revolutions per minute. A marvel of skilled workmanship.

Popular Electricity Pub. Co., 1202 Monadnock Blk, Chicago, Ill.

put the ball there another. On his good days, the pitcher has that perfect coordination of hand and body and eye and brain which enables him to do this; and, if calculations go right, it is a shut-out game. On other days, when he goes into the box feeling just as strong and able, his control mysteriously fails. Courage and nerve enter mysteriously into this personal equation. A succession of hits deprives some pitchers of all control; they are good only until the hitting begins. The heart in him, his fellows say, is the open secret of Mordecai Brown. No accident, no miscalculation, no momentary loss of skill, can disturb his incomparable control of himself and the ball.

Year by year the strain on this position has grown greater. The old-timers probably talk foolishness when they say that the modern pitchers are mollycoddles; that Radbourne and John Clarkson, were they recreated as in their prime, could carry again the lone burden of a pennant-winning season. The "shoot" needs infinitely more power of the arm than the old wide curve, besides a livelier snap of the wrist. The slow ball, under modern conditions, is exactly as exhausting as the fast ball. And the necessity of delivering everything with the same motion puts the strain all on one set of muscles. Every pitch takes all the force there is in a man. The strongest pitcher leaves his game with a sore and battered arm. "I can hardly lift my fork at dinner on the days when I play the whole nine innings," says one of the most stalwart pitchers in the major leagues. Two games a week about comprise the possibilities in any pitcher. If he does much more, he shortens his life in the game.

The Choice

(Continued from page 21)

they won't be running for you! And your men may have work; but they won't be working for you!"

"Yes, Edith." The husband turned away. "That is it. You have put it precisely."

He moved away a little, to give her some time, at least; and as he waited for her to gather herself, he recollected himself also and laid off his coat. When he came back to her a moment later, he knew that she appreciated a little better; for she had been crying; but she controlled herself rebelliously before him.

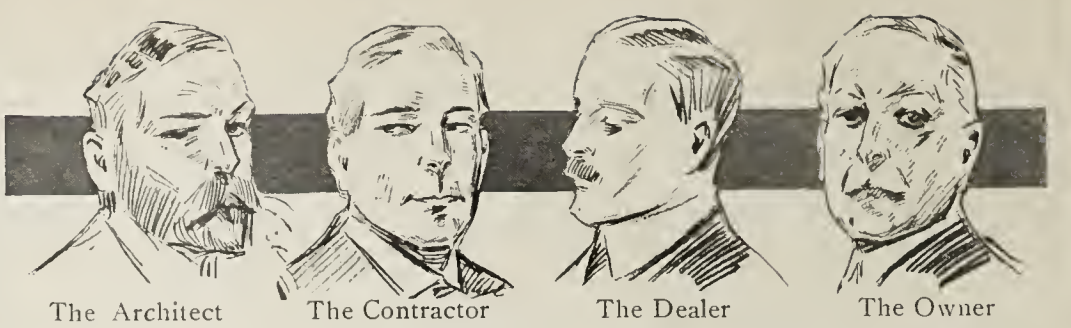
"But Mr. Stokes and Mr. Campbell both have sons, Edward! Mr. Campbell, I have heard, has five grown!" she met him then. "So—think, Edward!—you are not only selling out yourself to your sentiment, but Harold and Robert, too! Suppose you have the right to give up all your own past and present to spare your feelings; can you give up your sons' future, too?"

"For a sentiment? To spare my feelings?" the husband rebuked.

"Oh, I didn't mean that! But—"

"I have been thinking of my sons, too, Edith."

"I know! Of course I know you have." She touched him quickly in amends. "Harold told me you could scarcely speak with him on the way home."



"He was talking, to cheer me, I suppose, of how he and Robert wanted to be with me now—and how soon I would let them come to help me. No; I could scarcely speak with him. But before he met me, Edith, one of my men—the one I brought in here, who just went—one of my men was talking to me of—some other things." The husband turned away a little. "I was able to speak a little with Harold, my dear; but that man—that man, my dear, when I made him tell me—those things—I could not speak with him at all."

"He—knew, Edward?"

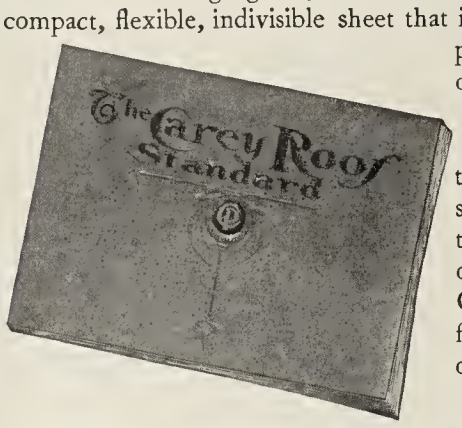
The man flushed scarlet. "That I could keep him and all his five hundred fellows in work if I wanted to? No! He thought only that I had held on for all as long as I could and now was being forced to turn my men out. So instead of striking me down, or letting me go on alone to be struck down at some street corner, as he ought if he knew, he told me some things about my men—to make it easier for me to turn them off, since he thought I had to.

"He felt badly for himself first, of course: but then he told me I need not worry much about my men, if I had to turn them off—that is, about most of them. For he himself, he told me, and a good many of the others have saved up and have a fair amount of money—many of them at least a thousand dollars, and some of them more. So, he said, they and their families can live safely on those savings for the year—quite safely.

"I knew, of course"—he raised his head—"that many—most of my men, perhaps, might not starve or freeze if I had to turn them out of work for a year. But, though they might not have to ask alms, it never

The Architect —*whose "veto" power is wisely considered by discriminating owners, from his technical acquaintance with every form of roof construction for over 20 years, is professionally justified at all times in specifying The Carey Roof Standard.*

The Contractor —*knows that his obligation to the Architect and Owner can be fulfilled without question where Carey Standardized Construction is specified. Also that the cost is uniform, delivery prompt, and that any workman can lay it.*



The Dealer —*must stand high in his locality to be a distributor of Carey's. Our 45 Branch Stations in every section co-operate most cordially with our Dealers. Our Factory Guarantee stands back of every Carey Roof wherever laid.*

The Owner —*when a Carey Roof is decided upon, is relieved of all question as to the responsibility of the Architect, Dealer, Contractor or Workman, because of the Manufacturer's Standardized Construction. He gets full value in return for what he pays.*

Unanimously Endorse—

The Carey Roof Standard

FOR over a quarter of a century Carey's has been a uniform, standard, finished roofing always made the same in materials, quality, thickness and weight. Carey's is a combination of high-grade, wear-resisting materials formed by our special process into a compact, flexible, indivisible sheet that improves with age and gives the highest degree of protection and service in any climate. It is the one perfect finished roofing ready to apply. Any workman can apply Carey's. No roof can be a *perfect* roof that must be manufactured on top of the building by the workmen who lay it. The reason that so many "Built up" roofs are failures is that the manufacturer of the materials cannot regulate or oversee their construction. With Carey's Flexible Cement Roofing there are no "specifications" to follow—No materials to "mix." The directions on every roll are simple and unmistakable.

came to me quite so close before—the rest."

"The rest?" the wife asked curiously.

"Yes; the rest which goes from them when their savings go—as we are thinking of letting them go this winter—though they may not become paupers. That man—Allen—has been with me almost fifteen years. I knew he had saved. I asked him why. He started his saving when I started my business for myself—when his first boy was born. He has four. He had hoped to send them at least through high school. I asked him of some of the other men. They—most of them—were the same way. . . .

"You and I, Edith," he went on after a minute. "I—we thought first, when this thing came to us, of my—giving up my place. Allen and my men must think first, too, of losing theirs—their places in my shops. But the hardest, the bitterest, thing which we face is not alone that I can no longer maintain what I have fought for and won; the far bitterer thing, when we think—is it not?—is that to-night, having gained it and held it for them, I can not give it on to my sons, and that they, who carry on my life, can not carry it on from where I leave it; but they must go back to the beginning, and after all my life struggle for them, I must see them begin again where I began.

"So to-night, Edith, we need not think of the many, many of my men whom I would put out to-morrow to beg or to starve—we need think only of the most fortunate, of those who may have saved and who—have sons, too. For to-morrow, if I turn them out of work for this year, the terrible, the bitter thing is not the loss to themselves alone; but it is that they must eat and burn, to keep bare life for their families, the savings they have struggled and scrimped and spared to give their children a better chance than they had—to send them, perhaps, through the high schools or the technical training shops. For not I, the master, alone, but the man—even the mechanic—must live in hope that his son may start at least as high as he leaves off. But if those men must go without work this year, their children can not! They must go back to the very beginning, and, after all their fathers' struggles for them, start again at the bottom where their fathers had to start and—mostly—have remained.

"You have asked me, have I thought of my sons, Edith? Yes; but now I have had to think of theirs, too! One way to-night may mean a sure future for ours and a safe start for them where I stop; but the other—it means the slow, slipping start at the black bottom from which their fathers have fought to raise them, for the scores of sons instead—the hundreds—I don't know how many."

The woman lifted her eyes at last. "You are thinking of their sons, Edward," she said slowly. "But would they—would they ever think of yours? You will sell out and sacrifice yours for the sons of your mechanics! But who of them—even the man who told you all this to-night—would risk a thing of his for yours?"

"Hush!" The husband started quickly. "What is that?"

"It is Harold, your son," the woman said as she listened. And:

"Father," the boy said, as he came quickly between the portières to the two standing before each other beside the table in the center of the room, "there is trouble, I know. So why can I not come with you this year instead of next—why can not Robert and I come to you now, father?"

"My boy!" The father held him before him. "My boy!" he faltered. But the mother moved quickly.

"Because your father has to close his shops this year, Harold," she answered. "Father can't take you now, for the shops must close. But next year he holds your places for you both."

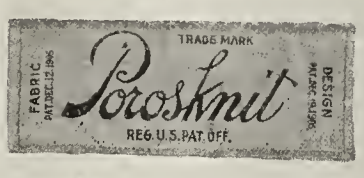
"Father?" the boy turned to him in appeal.

But the father had turned away. "Go and fasten the outside door, Harold," he put the son off. "I must have forgotten to close it. It is shutting in the wind."

III

"HARRIS!" the president demanded.

He had told himself, the night before, that he had not to decide till he could have the answers from his last appeals to the banks that morning. But even before he left his home he had realized that no hope could meet him at his office. The morning papers could chronicle only the further spread of the panic. Those who crowded about him in the car seemed to wear only a more hopeless look than the day before. The streets seemed more filled than before with the shuffling groups of the idle; and the lines before the offices of the trust companies and banks were clearly longer and more weary and anxious than before.



As he had left the car and passed

Not at Your Expense but Mine—a Fox Typewriter in Your Office

The reason is—I want you to know how good and how **different** the Fox Typewriter is.

That's why I'll send a Fox Typewriter to your office, absolutely at my expense, prepaying all charges.

Give it every hard test you can think of—compare it with **any** and **every** other machine.

Maybe you've had typewriter troubles.

I spent years perfecting my Fox invention so as to avoid every flaw and weak point in other typewriters. And I **did** avoid them all.

That's why the Fox, with the hardest Trust competition, is making good everywhere with keen-thinking business men—and selling all over the civilized world.

It is one typewriter that's absolutely right in those vital parts—the **type bar** and **hanger.**

On the Fox, the cone bearing is wide and the bar heavy. It is adjustable to take up all wear. That means no wearing down—perfect alignment for years and years.

You can buy two carriages—different lengths—and change them at will. You write with two colors on the Fox, and you do not have to touch the ribbon from the time it goes on until it is worn out.

W. R. Fox, President
Fox Typewriter Company

Use the Fox for any purpose; letter writing, invoicing, billing, tabulating, stencil cutting and heavy manifolding. One Fox machine does all of these things perfectly.

I can't make a claim so strong that the proof won't back it up. That's why I say to you as a fair-play loving business man—just try the Fox Typewriter, all at my expense.

You have no risk, assume no obligation, and I thank you beforehand for the privilege. Just write me, personally, sending the attached coupon. Address—

W. R. Fox, President
Fox Typewriter Company

The Roofing That Needs No Painting

Amatite

AMATITE Roofing has a *real mineral surface* and it needs no painting. The ordinary ready roofing requires a heavy coat of paint every year or two or it will quickly deteriorate.

Painted roofs are as out of date today as old style farm machinery.

Why should you buy a material which is only the *base* for painting? Buy Amatite. Put it on your roof and you will have ample protection for many years without care or attention of any kind.

Anyone can lay Amatite. It requires no skilled labor. Large headed nails and liquid cement are in the center of every roll. It is the modern, up-to-date roofing, and it is growing in favor more rapidly than any other.

Send for sample and booklet.

THE RUDOLPH WURLITZER CO.
163 E. 4th St., Cincinnati; or
295 Wabash Ave., Chicago, Ill.

through the waiting ranks before the branch bank near his shops, the line there seemed to him especially swollen in comparison with any other day in that week; and he recognized, as he hurried by, some score or more of his own men, who looked aside as they saw him.

He had met the demoralization even within the shops. Men whom he had never known to desert their machines in work hours before stood about idly in whispering, muttering groups; and as he passed between them he had felt them peering at him, some strangely distrustful and hostile, but others clearly confident, still, and hopeful.

"Harris!" he demanded from his secretary, then, as at last he reached his refuge and closed the door. "What has happened to the men? What do they know—what have they heard?"

"They have heard from somewhere early this morning, sir"—the secretary rose respectfully—"that the shops must close down, sir." He hesitated, doubtfully.

"Yes, I admitted the probability of that to one of them—Allen—who stopped me on the street last night. But I have just come up through the shops, Harris. That is not all."

"No, sir. I have been denying it, of course, sir, all morning. But some of the men think—they say they have it sure and straight, sir—that you received yesterday an offer from the Stokes-Campbells to buy you out and run the shops full force all winter; and that if you do not accept that to-day you must shut down. So, sir—so they—"

"I see!" The president started quickly. "But—so they what, Harris?" he demanded.

"So they are waiting, I think, sir," the secretary answered, "to see what you are going to do. But, sir, I don't understand; did you say—"

The president jerked away quickly, shutting the other off, and took up the correspondence waiting him upon the desk. He scarcely glanced at it before he hurled it down again, impatiently.

"The banks, Harris—what have they done?"

"Regretted again, sir, that they are unable to extend further aid under the present conditions."

"Even the Merchant and Traders'?"

"Yes, sir."

"Then the material men—Beals and the rest?"

"They have had to repeat their refusal to ship without a better guarantee of payment."

"There is nothing else here, then, Harris?"

"Nothing, sir."

The president jerked himself about again and stood, studying a moment, at the window. His hand, as upon the evening before, closed upon the papers in his pocket. But now, as his secretary watched him closely, he did not crumple them; but he turned and took them out and tossed them before Harris upon the table.

"You need not deny the Stokes-Campbells offer for me any more, Harris," he continued. "There it is. I received it yesterday. Read it."

"You mean, sir?" the secretary stammered. "You mean—"

"Read it, Harris," the president commanded again coldly, "and then—"

He shoved back, roughly and almost angrily an hour later, the push of his men waiting him outside his door; he strode defiantly between them and, reaching the outer door, he sucked in deeply the keen, free air of the street. As he still met his men outside that morning, he put three hurried, breathless blocks between him and the shops—in which direction he scarcely noted—before he dared even slacken his pace to think. Upon crossing another street, then, he half slipped upon the ice in the gutter; and the shock, as he caught himself up, steadied him and he slowed a little.

Well; he had decided it now, at last, and done it. He found himself reflecting as strangely without satisfaction as without bitterness just yet that Harris was reading at that moment his decision to his men, and would post it up afterward to let the more doubting reassure themselves with a personal reading.

"On and after Monday, the 16th, these shops shall be owned and operated by the Stokes-Campbells Companies as one of their plants. Full time for the entire force is assured for the year," etc., etc.

He laughed a little, as he recollected now, that he had included in that preliminary announcement, that he himself would remain as manager for the Campbells. It amused him, now, that he had let Harris convince him half an hour before that the men could care for that. They were assured now of their jobs and they themselves were safe. That was what was vital to them, and what set them whispering and peering at him when he came in, and, pushing and exclaiming, to hinder him when he rushed out.

The Sign Board of Civilization

Wherever you see this sign, it stands for civilization. It is the sign of one of the most powerful influences for broadening human intelligence.

The universal service of the Bell companies has provided it—has spread an even, highly developed civilization through the land. It has carried the newest impulses of development from town to town and from community to community.

Bell telephone service has brought the entire country up to the same instant of progress.

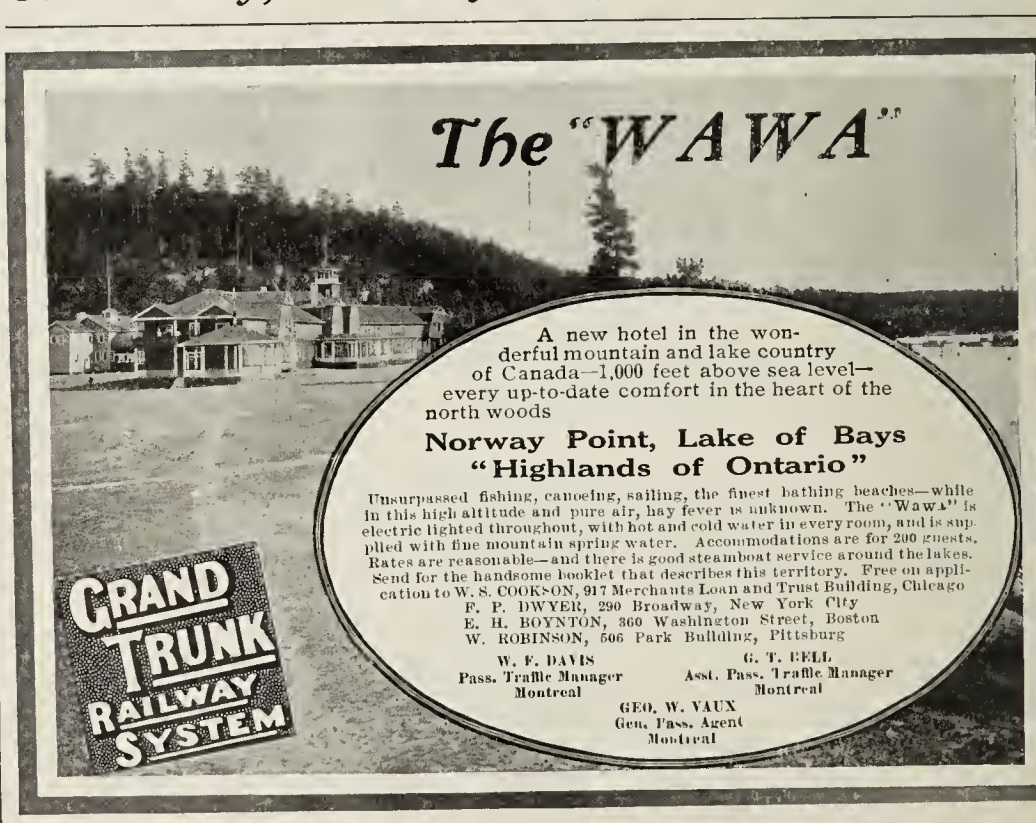
It has unified the Nation.

As soon as a new town springs up in the woods, on the plains, at the cross-roads, or walled in by mountains, the signpost of civilization is erected—the sign of the Bell. Telephone service puts the people of that town into communication with one another and with the outside world.

It puts the town on the map.

You can see this march of progress right in your own neighborhood. Every little while some neighbor has a Bell telephone put in. If you have one, every new subscriber enlarges the scope of your personal contact. If you have not, every new telephone makes you the more isolated—the more cut off from the activities about you.

Just as individuals in your locality use the telephone for mutual convenience, so towns and cities in *different* localities are served and advanced by the long distance telephone.



Each contributes to, and benefits by, the broad universal service of the Bell.

The busy man who wants to accomplish more than he is now doing can well afford to make use of the Bell Long Distance service. It is the most efficient office assistant imaginable. Every Bell Telephone is a Long Distance station.

"A Kalamazoo Direct to You"

Kiss Tire Troubles Good-By

Here's an equipment that would be worth many times its cost if only because of the mental relief which comes with it. For it removes entirely that constant dread—that fear that "something will happen in a minute" which is ever present with the man who owns the car. Particularly if there's company aboard. When your car is equipped the Goodyear way you can leave on any trip with confidence and will return rejoicing. You can know beforehand that a puncture is unlikely.

And you will not dread this ill-luck because you will know that a puncture means a stop of only a few short minutes—a pleasant break in the trip. Then you are again on your way—with unruffled temper or nerves, your clothing unsoiled, not even a perspiration started.

GOODYEAR
AKRON, OHIO.

It costs so little to equip a car the Goodyear way that every motorist should consider it.

The Goodyear way of equipment—which makes trouble an incident—embodies three factors:

The first is the Goodyear Quick Detachable Tire, which is so made that it's extremely difficult to puncture, and is so perfect in construction that single tires have made 10,000 to 15,000 miles so frequently as to make this mileage an "every day occurrence."

The second is the Goodyear Quick Detachable Rim, which, *without special tools of any kind*, can be unlocked and tire removed or replaced in *less than a minute*. Yet which, after the common valve nut has been tightened, holds the tire so firmly in place that no strain which would not wreck the wheel can force it off the rim, even though deflated.

The third—and last—is the Goodyear Air Bottle, filled with pure compressed air, which will fully inflate from 4 to 35 tires, according to size, by simply turning a valve. It will partially inflate many more. No gas or chemicals to injure the tire or corrode valves—just AIR. The first cost of these bottles includes our charge for refilling for TWO YEARS. These bottles are small and convenient—will easily go in any carrying space.

To sum up briefly—the Goodyear way insures extreme mileage at a minimum of trouble—and provides means whereby repairs can be made on the spot, the tire inflated and the trip resumed in a few minutes' time. And all this without involving anything which could be called *work*—without soiling the clothes or starting a perspiration.

You'll better appreciate what the Goodyear way means to you when you've seen by a demonstration how it simplifies tire trouble. Call at our nearest branch at your convenience and let us show you what this modern equipment means to you in money saved and the pleasure of motoring increased.

Good-as-New **Typewriters** *at Sacrifice Prices*

We're starting a most unusual clearance sale of slightly-used typewriters, as serviceable as new. **You'll Save Two-Thirds by Buying Now.** We've an overstock of typewriters sold to us by money-pinched owners during the past year. Among them are several hundred excellent Smith Premiers, Remingtons and Fay-Sholes machines. We've rebuilt them and put them in perfect condition. Send for catalog and list of unprecedented bargains. **Machines shipped for approval** to any point in the U. S., also rented anywhere. ROCKWELL-BARNES COMPANY, 1114 Baldwin Bldg., CHICAGO

As surely as a streak of "yellow" marks an all-smiling loser, a streak of black insincerity marks a man who can sacrifice his life achievement for anything and at once glory in it. Ford found no glory. At that moment his whole performance came to him chiefly as the act of a coward, he told himself, and a cheap sentimentalist.

As a cheap sentimentalist, he assured himself, he had listened to his man the night before; and as a coward he had been shaken and swung by his wife and son later. As a sentimentalist he had returned that morning; and as a coward again he had been driven finally to his decision before his men—his men who knew all that morning.

He merely had not had the nerve—the plain courage to face them and tell them practically that those shops must shut because he couldn't make the profit from them that year; and that they, the men, must go without work because he could not set them to work for him.

Yes; he was a coward and a cheap sentimentalist, he told himself again. He drew back, with a greater loathing for himself than for them, as he passed the poor and idle in the streets and glanced at them with a cheated hate. He had to admit bitterly in his revulsion from these poor who had bullied and betrayed him to his ruin, that his wife was right. Now that he had done it, what would any of these people—his own workmen—think to do for him? They were selfish—all selfish. He had imagined what *he* would do in their place—not what *they* would do.

He recollected, with a pitying smile at himself as he passed a certain street, how he had turned down it twice in the cold the night before to hear of his men and their hopes. Well, who of those men cared for his? He rasped his heel as he thought again of what he had done. And he must face his wife and sons now in a moment, and tell that to them! He found it even a proof of cowardice in his decision that he had not driven at once or taken a car to tell them; but he had let himself walk and take an indirect way.

Again he caught himself back, angry and self-accusing under his breath, he forced forward again. He had not only sacrificed himself, as his wife said, for his cheap sentiment; but—yes, he had sold his sons too—and his men, they— He hurled himself up the steps of his house to have it done with his wife and sons at once. But when Harold opened the door for him and his other son stood looking at him so strangely behind, he knew that they knew already. For they could not speak to him nor he to them. He turned upon them dizzily; but heard the voice of Harris, his secretary, down the hall. That was how they knew. And his wife too, for she came to him and had been crying.

"Edith!" he started to her. "Edith!" he called bitterly.

"Edward! Oh, Edward!" she caught close to him. "Oh, Edward, Harris has just come on the car, and—he told us what you did. But he says that a quarter of an hour after you left, and he had made the announcement to the men, the Merchant and Traders' telephoned him that they had reconsidered and will give you the money you need—in time!"

"Edith!" he held her. "Edith!"

"But before he came, Edward, before Harris came, Allen—the man who came with you last night—he came with some more of your men."

"Allen!" the employer faced his men the moment later. "Allen!"

"I was still here in the hall, sir, last night," the foreman flushed redder as he had to reply, "after you thought I was gone. And before I could tell you, I heard—how it was with us, sir."

"With us?" the employer repeated, "with us, Allen?"

"I heard you say, sir," the man explained, reddening deeper, "that the trouble for us—yes, sir—was you couldn't get the banks to give you the money; so you would have to give up. But I told the boys this morning that we could save you if we would only get the banks to give us for you—what we had there. So we brought it—but I'm glad, sir, you don't need it now."

"But you brought your money for me and—I told you, Allen—I told you all," the president stammered, "that you were safe—your work would go on—without me—owning things."

The foreman raised his head a little more boldly. "You said to Mrs. Ford last night, sir, that you found what it meant for us to lose—though we wouldn't starve. And maybe we—we found too, sir, for the first time how you felt; and perhaps we felt—we men, sir—the same way."

THE NATURAL FLAVOR

of the richest and purest cow's milk is retained in Borden's Peerless Brand Evaporated Milk (unsweetened). It is especially adapted for use either plain or diluted on breakfast fruits or cereals. In coffee and chocolate it is much better than fresh cream. It enriches all milk dishes. —*Adv.*

The Howard Watch

AT night—with the train tearing through space—do you ever think of the man in the Engine Cab, his hand on the lever and his eye straining at the dark of the track ahead?

One thing shares with him his terrible responsibility—his *watch*.

Do you wonder that the TIME INSPECTORS of one hundred and eighty leading railroads of America have officially certified and adopted the HOWARD—the most accurate watch that money will buy?

Despite any opinion to the contrary, American railways are the safest in the world—millions are spent for safety. Official inspection of employees' watches exists in no other country. The foreign railroad man carries no such watch as the HOWARD.

A HOWARD Watch is always worth what you pay for it.

The price of each watch—from the 17-jewel in a fine gold-filled case (guaranteed for 25 years) at $35.00; to the 23-jewel in a 14-k. solid gold case at $150.00—is fixed at the factory, and a printed ticket attached.

Not every jeweler can sell you a HOWARD Watch. Find the HOWARD Jeweler in your town and talk to him. He is a good man to know. Drop us a postal card, Dept. A, and we will send you a HOWARD book of value to the watch buyer.

E. HOWARD WATCH COMPANY
BOSTON, MASS.

"Lundstrom" **Sectional Bookcases**

The Lundstrom Sectional Bookcases are made for and universally used in the finest homes and offices throughout the country.

Artistic appearance, solidity of construction, with the latest practical improvements, combine to make them the leading Sectional Bookcases.

Rigid economy, acquired by the manufacture of a single product in large quantities, combined with our modern methods of selling direct to the user, enable us to offer a superior article at a considerable saving in cost to the purchaser.

ON APPROVAL FREIGHT PAID $1.00 PER SECTION AND UP

Send for our latest Catalogue No. 41 in which we illustrate the different grades from the neatly finished Solid Oak to the highly polished Solid Mahogany cases for the more elaborate library.

In the World's Workshop

Devoted to Facts, Observations, and Thoughts Concerning Common Industrial Methods, Products, and Influences

By WALDO P. WARREN

A NEGLECTED ART FIELD

IT IS not unlikely that artists will some day discover a new world of subjects for pictures in the field of business. Although the activities of industrial pursuits occupy such a large part of human life, and art is supposed to be an expression of the human spirit in its typical phases, the fact remains that very few pictures really deal with business. There are perhaps a few book illustrations showing a business man seated at his desk with a scowl on his face and some half-scared individual trembling beside him. Occasionally you see a picture of a man at work, or a row of factory chimneys, or a business street, or something of the kind. But, aside from a limited number of such pictures, it is fair to say that business life does not figure in art at all. Almost every such picture is made as an accessory to something else, either as an illustration or an advertisement, and the true art motive is secondary, if present at all.

With all his millions the railroad president can not buy a really suitable picture to adorn the walls of his private office. He may have a painting, but it would be as appropriate in the office of a shoe manufacturer as of a railroad man. He may have an enlarged photograph of some bit of scenery through which the railroad goes, or even a lithograph of the car shops. But art—something that suggests the poetry of railroading, such as the engineer plunging forward into the night, the lonely switch-thrower in his tower at the end of a long watch, the crowd waiting for the train in the country town, the greetings of friends when the train comes in, the men at work in the freight yards—few such pictures are available either in originals or reproductions.

The same is true with other industries. There are few pictures that make you feel the spirit of the human being at work in the world. You see pictures showing a great telephone switchboard, but no pictures expressing the life and feelings of one human operator. You see pictures of commercial travelers, illustrating some story, or adorning some advertisement, but no pictures conveying to you the feelings of the human being at some critical and typical point of his strenuous work. Check down a list of occupations, from agents to zinc etchers, and you may realize how paltry is the art which undertakes to express the common emotions of human beings under the thousands of trying situations which go to make up the world's work.

There seems a real opportunity for service in such pictures as would put business men in touch with the actual and typical feelings of their workers, or would in any way emphasize the human element in business. Business life is sadly in need of more poetry, and there is a vast amount of unexpressed poetry in it, awaiting the eye of sympathy and the brush of an artist.

STEEL TREATMENT

WHEN the average person undertakes to judge the relative value of automobiles, without such information as the manufacturer alone can supply, he little realizes how much of a task he has attempted. If he is accustomed to think of a bar of steel as being merely a bar of steel, and that is the way many people think of it, he has much to learn. Even if he attempts to go by the names of the various kinds of steel, such as Bessemer steels, nickel steels, chrome-nickel steel, vanadium steel, and the like, he is totally in the dark as to the quality and treatment represented by a given bar. Experiments have shown that a half-inch square bar of nickel steel, six inches in length, supported at both ends, would resist a load of nine hundred pounds, but take a permanent set. The same steel, after proper treatment, sustained a load of twenty-seven hundred pounds before taking the slightest set. A vanadium-steel bar, under the same conditions, resisted nine hundred pounds before treatment and four thousand pounds after treatment, and even then did not take the slightest set. Of course no one could tell from merely looking at the bar which would stand the strain and which wouldn't. The manufacturer's statement that it was thus and so would be the only means of knowing about it.

The problem of steel treatment has been one of the most important in automobile manufacture. At one time the success of the whole industry was threatened by the inability to make certain parts stand the strain to which they were apt to be subjected.

PREVENTING ACCIDENTS

THE idea of preventing street-car accidents by educating the public through a series of newspaper advertisements is the latest thing in street-car management. A Boston operating company has recently issued such a series in various parts of the country where its lines are located. Each advertisement takes up some typical accident, and explains "How It Might Happen." By picture, diagram, and text the public is warned against those common errors of judgment to which almost all street-car accidents are attributable. One picture shows two cars passing each other, with a woman alighting from one and going directly behind the car to cross the tracks, only to be struck by the other car. This is clearly a case where nothing but public education could prevent accident, and numerous other diagrams prove that the company is getting at the root of the trouble by showing the people how to do their part. Although it costs the company thousands of dollars to put out these advertisements, it is considered cheaper than the cost of accidents and damage claims, as well as an obligation to the public.

PRINTING A PAPER

THE mechanical work connected with printing a periodical, whether daily, weekly, or monthly, differs from that of ordinary manufacture in one important particular—it must be done according to a schedule. If a flour-mill receives more orders for flour than it can produce, the order either waits until its turn comes or is given to another mill. An accumulation of orders waiting to be filled is the normal condition of any prosperous manufacturing business. But with a periodical it is different. The full number of copies must be printed and distributed regularly on time, no matter how much trouble or expense it takes to do it. The presses can not start until every line of type and every cut is in perfect shape. One thing waits on another, and no man, no matter how hard he works, can do his full part until the previous workers have done theirs. The pressman may have everything in readiness, but he can do nothing until he gets the plates. The stereotypers or electrotypers can not turn a hand until they get the type forms, and the type forms can not be passed on to them until every line is correct and every doubtful point verified. The strain of making everything fit into the schedule is very great, in some cases more trying than almost any other form of occupation. The relief which comes when the last thing in each department is successively O.K.'d is very welcome, and is marred only by the recurring imminence of another issue of the publication, demanding the same kind of strain, with ever-varying features of delay. Every well-printed publication is a significant achievement of ingenuity and skill, and hard work.

TOUCH-BUTTONS

The Metropolitan tower began its career as a pencil mark on the back of an envelope.

Whatever ceases to grow must some day cease to live.

More business battles have been won with a pointed anecdote than with a blunt argument.

The chief asset of humanity is the conviction that the game is worth while. To lose that would mean universal bankruptcy.

"TWIN GRIP"
PAPER FASTENER

It's just that double grip and the turn-down lips at the tip that make this fastener ideal for your office. Neither top, bottom nor middle paper can become loose—the twin prongs hold them all.

RUBBERSET COMPANY

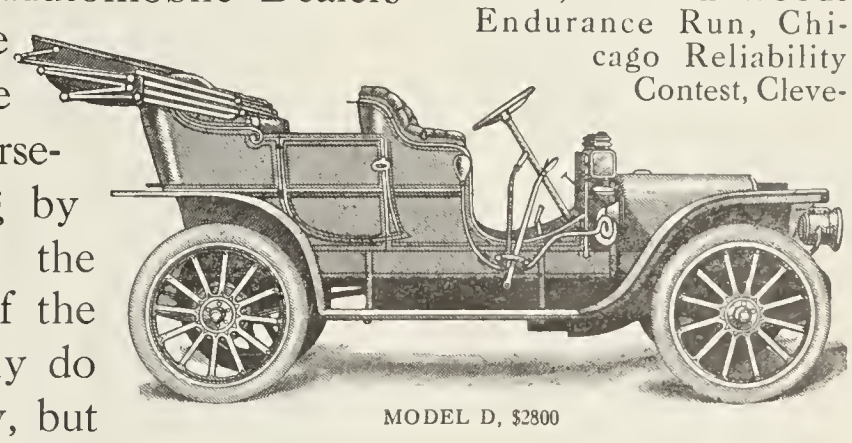
Bristles Held in Hard Rubber

Franklin automobiles run with less tire trouble and less tire expense than any other automobile—because we use larger tires for less weight. You may not mind the heavy expense of tire trouble, but you do mind the delay and the annoyance. Ninety per cent of road stops are due to tire trouble. The reliability question of automobiles then is one of tires. And Franklins with their tire equipment are by far the most reliable automobiles on the road today. Franklins have practically no tire trouble. Light weight and large tires is the secret. Franklins run with less spring trouble and with greater riding comfort than any other automobile—because we use full-elliptic springs in combination with a shock-absorbing laminated-wood chassis frame. Ask any expert spring maker if like results can be obtained by any other form of construction. Franklins make the best time over American roads—because with their light weight, reliable tires and easy riding you go along smoothly and consistently. And for the same reason you can ride more miles in a day without fatigue than in any other automobile. In fact, lameness and "motoring headaches" are never experienced by Franklin owners. Franklins in all respects are comfortable—and comfort is what you want. They are the easiest to handle and control. There is none of the burden and none of the anxiety that goes with the heavy-weight automobiles. It is well known that the Franklin engine delivers more power for the same weight and gasoline consumption than do water-cooled engines. We won and still hold the gold cup of the Automobile Club of America for the best record on two gallons of gasoline. Again, on May 7 last, a Franklin touring-car against nineteen competitors established a new world's record and won the grand prize offered by the New York Automobile Dealers Association by carrying the greatest load the greatest distance on one gallon of gasoline. Horsepower does not mean anything by itself. The thing that counts is the power actually at the disposal of the driver. In the Franklin not only do you get highest engine efficiency, but the power is not handicapped by a useless load—there is no dead weight anywhere. Then with non-jarring, easy-riding construction you can apply the power; you can make time; the automobile is not racked and strained; you are not jarred and jolted.

Franklin Model H is different from other six-cylinder automobiles in a very essential feature.

The average six-cylinder automobile has excessive weight. Practically the whole advantage of the six-cylinder principle is missed—the chief gain being an enormous horse-power output applied more smoothly than it could be in four-cylinders.

The main advantage of a six-cylinder engine in an automobile is to get a high proportion of power to weight. A six-cylinder engine gives steady torque, an explosion every one-third of a revolution.



MODEL H, $3750

Steady torque, since it reduces the stress on all working parts and supporting members, permits lighter construction throughout the whole automobile.

In Model H this advantage is fully utilized. We get practical results—high power with light weight. With 50 per cent more power than Model D with its four-cylinders, Model H, though seating two more passengers, weighs only 20 per cent more.

Model H is the automobile selected by men of experience who know automobile economics, who study automobiles from the efficiency and endurance standpoint, who want a large automobile, free from useless weight and tire annoyance. Model H holds the San Francisco–New York Record of 15 days, the most severe test of strength and endurance ever made. It also won a perfect score in the last Glidden Tour, and although it carried a much heavier load than required it went the 2000 miles without any tire trouble.

MODEL D, $2800

There are many reasons why you should own Franklin Model D.

In the first place it has been chosen by so many who know automobile merit, who are familiar with motor-car construction and have had automobile experience, that if you are to be guided by others you can make no mistake in selecting Model D.

Then there are the Franklin principles, every one logical and demonstrated correct through eight years' use. And when it comes to the question of service, the fact that this automobile will stand for hard work every day in the year is another reason for your owning Franklin Model D.

In tests for endurance and economy Model D outclasses all automobiles. One of its late achievements was winning the Governor's Trophy, the highest award in the Harrisburg 700-Mile Endurance Run. In the Pittsburg Endurance Run, April 30, Franklin Model D had no penalization for car troubles. It also won perfect scores in the Glidden Tour, Bretton Woods Endurance Run, Chicago Reliability Contest, Cleveland Reliability and Efficiency Contest and the Worcester Endurance Run. It also holds the Chicago–New York record of 40 hours, 18 hours better than the record of any other make of automobile.

Many more reasons could be given for your choosing this automobile, all of them convincing, but what you want is an actual demonstration, some real live proof—the experience of others. This can be had by asking Franklin Model D owners or calling on Franklin dealers for any kind of a demonstration you may desire.

Follow the Lead of Col. Roosevelt and

Take It With You on Your Vacation Trip

No matter where you go—to the mountains, to the country, to the seaside—whether you travel by rail or water—whether your recreation is boating, fishing, driving, motoring, golfing or hunting—the Thermos Bottle adds immeasurably to your pleasure and comfort and makes your vacation trip more enjoyable ten times over.

You Know What the Thermos Bottle Means

It means a freezing-cold or a steaming-hot drink always at hand—whenever you want it—wherever you may be, miles away from your base of supplies—in the forest, on the lake, on the road—anywhere. The Thermos keeps ice-cold liquids freezing cold, without ice, for 72 hours, and hot liquids steaming-hot, without fire or heat, for 24 hours.

In the new model Thermos Bottle, the inner bottle can be easily and cheaply replaced in case of accidental breakage. The Thermos is the only bottle in which this separable-case feature has been patented. Pints, $3.00 up; Quarts, $5.00 up.

Get all the pleasure possible out of your vacation trip this year. Take a Thermos Bottle with you. It's guaranteed by 30,000 dealers. Look for the name "Thermos" on the bottle. If the dealer tries to sell you a substitute, hand it back, and go to a reputable dealer who handles genuine goods.

Send 10c for a great treat

When you send a dime to pay the packing and postage, I will send you as my gift a generous sample package of my newest candy—"White Cherries in Maraschino, Chocolate Dipped"—

It makes one's mouth water just to think of them. Yet you can hardly imagine the enticing flavor of this happy combination.

Johnston's

WHITE CHERRIES

In Maraschino

CHOCOLATE DIPPED

The plump, luscious white cherries are smothered in Maraschino—then dipped in rich, pure chocolate.

One taste of this nugget of goodness, and you get the delicious flavor of all three, fruit, liqueur and confection. It's more than mere candy.

I pack this "combine of sweets" in handsome white embossed packages—daintily tied with red satin ribbon—in 25c, 40c, 50c, 80c and $1 sizes.

My gift package is an exact fac-simile of the regular sizes with plenty chocolates to know their goodness.

I make also, Dutch Bitter Sweets and Swiss Style Milk Chocolates in handsome boxes. I will send a sample size of either for a dime.

When you send the 10c—say which candy you want and address me—

Johnston

Here's a new Stetson Last that gives real snap and style without the least sacrifice of wearing-ease or comfort.

THE "STYLENFIT"

This latest Stetson model is the best demonstration yet that style and comfort in a shoe at times go hand-in-hand. Note the foot-room—note the graceful, tapering lines. No extreme of either style or comfort, yet both are built together in this shoe. And wear! Try STETSON shoes—just once.

Your STETSON dealer has the "Stylenfit." You can locate him by the "Red Diamond Sign." Look him up. Try on the "Stylenfit." $5 to $9 the pair.

THE STETSON SHOE

Write for our book, "The Right to Know," and learn how to judge a good shoe when it's shown you. Send for this book and read it.

Alaska-Yukon-Pacific Exposition Number

¶ *Next week's issue of Collier's will be largely devoted to the Alaska-Yukon-Pacific Exposition at Seattle.*

The Art features will include an appropriate cover design, many photographs of the Exposition and of the Northwestern Pacific Country and Alaska.

¶ *Hon. Walter E. Clark, recently appointed Governor of Alaska, will contribute an article in which he will discuss the great industrial and commercial possibilities of Alaska. The facts contained in this article will doubtless come as a surprise to most of our readers. Few have more than a vague idea of the almost untouched mineral resources of Alaska in gold, copper, and iron. And yet, great as are the possibilities in mineral development, it is as an agricultural country that Alaska is destined to show its greatest strength. Incidentally, some of the grandest scenery on the American continent is to be found in this wonderful country, so that its growth as an objective point for tourists is also assured.*

¶ *An article entitled "A Fool's Bargain," by Richard Lloyd Jones, will deal with the significance of the Exposition. If it hadn't been for the "fool," there would have been no Exposition. The "fool" in question was William H. Seward. This rather uncomplimentary title was bestowed upon him by a large number of his well-meaning but shorter-sighted fellow citizens in the year 1867, because of his activity in effecting a treaty with Russia, whereby what was then known as "Russian America" became the property of the United States, and was thenceforth known as "Alaska."*

¶ *The price the "fool" paid for this "Iceberg," as it was then called, was $7,200,000 in gold. Of course the people who thought this treaty a foolish act could not know that within the next forty years the "Iceberg" would yield products worth more than $300,000,000 and still be in the infancy of its development.*

¶ *The popular idea of Alaska has been greatly modified since Seward's time, but it needs still further revision. The average American citizen can shut his eyes and think of Alaska, and there will rise before him a few scattered mental pictures of icebergs, gold-mining camps, seals, and impassable mountains. It was chiefly to displace this fragmentary picture, and put in its place an impression of a wonderful country, alive with growing industries, and teeming with possibilities, that the present Exposition was designed.*

¶ *Outgrowing its original conception, the Exposition came to include the Yukon, and the countries, American and foreign, that are washed by the shores of the Pacific. The purpose of the Exposition, upon which ten million dollars is being expended, is to give to Americans—and others—a clear comprehension of what has been accomplished in the great Northwest during its first half-century, and to demonstrate the future possibilities of its natural resources, its industries and progressiveness, and its promise as a field for the investment of capital.*

TRAINING Means Confidence

Training COMPELS Success. The man with a specialty *knows* that his services are in demand, and that there is always room for the *trained* man.

Are *you* a specialist in your chosen line of work? If not, you can easily become one *in your spare time* through the help of the International Correspondence Schools of Scranton. No leaving home. No giving up work. *No age limit.* No books to buy.

Mark the attached coupon and learn how the I. C. S. can help you. Besides putting you to no expense and under no obligation, marking the coupon entitles you to six months' free subscription to the I. C. S. illustrated monthly, "Ambition." On an average, 300 students every month VOLUNTARILY report salaries raised through I. C. S. Help. During April the number was **364.** I. C. S. training *compels* success.

PENNSYLVANIA RAILROAD

Bulletin

THE PENNSYLVANIA SPECIAL THE IDEAL IN TRAVEL

The highest art in transportation is to make the service so perfectly comfortable and convenient that it is just as pleasant to make the trip between New York and Chicago, for instance, as to spend the night in the city. Such service makes business a pleasure, as it no longer robs the business man of the conveniences of his club or of the comforts of his private apartments.

The best exemplification of this high ideal is found in the "Pennsylvania Special," which makes the run between New York and Chicago in eighteen hours. Leaving New York at 3.55 P. M. practically after business hours, it arrives in Chicago at 8.55 the next morning, or before business begins, and leaving Chicago at 2.45 P. M., it arrives in New York at 9.45 the next morning. This means that there is no loss of time. The equipment of the Special—buffet parlor smoking car, drawing-room state-room sleeping cars, dining car, and compartment observation car, with bath rooms, barber who presses clothing, copies of the evening and morning papers, magazines, illustrated periodicals, the Bible, libraries, electric lights, telephone, and stenographer—means that there is no loss of comfort, convenience, or mental entertainment. An evening on the "Pennsylvania Special" is like an evening in a first-class club or hotel; and there is the added zest of swift, easy motion and constantly changing scene.

The next time you travel between New York and Chicago take the "Pennsylvania Special" and see how closely it measures up to the test of perfect service.

A Speed Indicator must be Accurate

otherwise it is Worthless

You wouldn't carry a dollar watch to indicate the time? Nor have a 35 cent alarm clock in your parlor.

What reason, then, for equipping your Automobile with a centrifugal "speed indicator"—which because of the principle on which it is made is far less accurate than the dollar watch.

—Which because the principle is wrong gives no indication whatever under 5 to 10 miles per hour.

—On which for the same reason the speed hand flutters over a space representing 5 to 10 miles per hour until you can't read it and have to guess at the real indication

—And which because of the principle on which it works must be made so frail and delicate that a 35 cent alarm clock is a marvel of durability and accuracy beside it. (Ask to see the inside of one and know.)

The Auto-Meter is built on a different principle—the true principle—the only principle which will accurately indicate *every range* of speed from zero to 100 miles per hour.

—Which, notwithstanding this sensitiveness and accuracy, permits of a construction so durable that no shock which would not ruin the car will affect its wonderful accuracy in the slightest.

—And which is so well made—every bearing sapphire jewels or imported Hoffman Balls—that it will withstand a MILLION MILES of the roughest riding without appreciable wear and without losing in accuracy more than *ten feet to the mile.*

* * * *

The Auto-Meter is built like a Chronometer, by the same men using the same expensive machines.

It is absolutely accurate when you get it and *will remain accurate* as long as you have a car to use it on. *It will not wear out.*

* * * *

The Warner Auto-Meter

Guaranteed Absolutely Accurate

The Odometer used in connection with the Auto-Meter is our own construction. It is as strongly and durably built as the Auto-Meter itself. Season dial registers 100,000 miles. Other odometers register 10,000 miles only. This is often insufficient for a *single season.* Future mileage has been lost. The trip dial registers 1,000 miles and repeat. Other odometers register 100 miles only. A single turn of a button resets to zero.

* * * *

Those who demand and can afford *the best* invariably specify the Auto-Meter because of its extreme sensitiveness, unfailing accuracy and wonderful durability.

Ask us to send you our book in which we compare principles—prove every claim we have made—and show you plainly why, to buy any other speed indicator than the Warner Auto-Meter, is to actually *waste your money.*

NOTICE TO SUBSCRIBERS.—Change of Address—Subscribers when ordering a change of address should give the old as well as the new address, and the ledger number on their wrapper. From two to three weeks must necessarily elapse before the change can be made, and before the first copy of Collier's will reach any new subscriber.

ADVERTISING BULLETIN

NO. 7

OUTDOOR AMERICA

THIS issue contains Caspar Whitney's monthly Outdoor America Supplement, a department that strikes a responsive chord in every one. The word "outdoor" makes the blood tingle. It suggests hunting, fishing, baseball, golf, tennis, automobiling, canoeing, gardening, and photography. You will find here not only practical suggestions but the kind of reading that makes you fairly ache to get out into the open.

As you read you will agree to this or that suggestion, and say: "I need some fishing tackle, or golf clubs, or tennis racquets, or garden tools," or a dozen and one things that seem to be necessary. This is how we have reasoned with advertisers and it is pretty logical reasoning. It is the power of suggestion.

Collier's has been soliciting advertising for these Outdoor America issues, knowing that the desire created by reading will be so strong that advertisers must reap the benefit of it.

A large sporting goods advertiser ran a page advertisement in March 13th, which was the Outdoor America issue for the month. It appealed to the sportsman, hunter, fisherman, motorist, camper, canoeist. So compelling was their argument, following in the wake of the needs created by Outdoor America, that over 7,000 replies came to this advertiser from Collier's readers.

In the editorial department Collier's endeavors to picture the joys of outdoor life and sport. In the advertising columns the advertisers tell you the practical side—cataloging the tools needful to accomplish your desires.

TOURS

AMERICAN, EUROPEAN [illegible]

Information regarding Tours to the world will be furnished free upon application to COLLIER'S TRAVEL DEPARTMENT 420 W. 13th Street, New York

Around the World in Luxury

The GREATEST VACATION TRIP the WORLD Can Afford for a FRACTION of the USUAL COST

Circling the globe ordinarily requires 6 months, 12 changes of steamers, with indefinite connections, trouble and discomfort, and costs nearly $3,000.

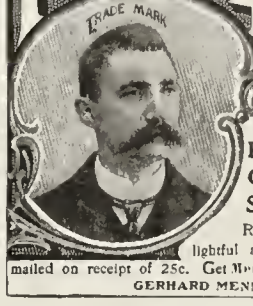
Clark's Cruises AROUND THE WORLD

start Oct. 16, '09, from New York, and Feb. 5, '10, from San Francisco, by the superb, new S.S. Cleveland, 18,000 tons, large, luxurious, unusually steady; berths now available from $750 to $1,500, shore trips, hotels, etc., included. Avoids all the changes, delays and worry. Visits ports usually accessible only by "tramp" steamers or sailing ships, a route that would require 18 changes to cover otherwise. Less than 4 months. All first class. No steerage.

The FIRST OPPORTUNITY in HISTORY

made possible by the enterprise of the most successful cruise conductors. Write for itinerary.

12th Annual Orient cruise Feb. 5, 1910, $400 up, by Lloyd S.S. "Grosser Kurfuerst"; 73 days, including 24 days Egypt and Palestine.



F. C. CLARK, 412 Times Building, NEW YORK

New Zealand and Australia New Service via Tahiti. Delightful South Sea Tours for rest, health and pleasure. S. S. Mariposa sails from San Francisco July 1, etc., connecting at Tahiti with Union Line for Wellington. The only passenger line from U. S. to New Zealand. Only $260 1st class to Wellington and back. Tahiti and back, 1st class only $125.
OCEANIC LINE, 673 Market St., SAN FRANCISCO

Yellowstone Park Camping Out

If you plan a trip to Yellowstone Park this Summer be sure to learn about **THE BRYANT CAMPS.** The ideal way to see Nature's Wonderland. Write for illustrated booklet.
BRYANT TOURS, 435 Monadnock Block, Chicago

MENNEN'S BORATED TALCUM TOILET POWDER

A Positive Relief For PRICKLY HEAT, CHAFING, and SUNBURN, and all afflictions of the skin.

Removes all odor of perspiration. Delightful after Shaving. Sold everywhere, or mailed on receipt of 25c. Get Mennen's (the original). *Sample Free.*
GERHARD MENNEN COMPANY, Newark, N.J.

The Day After Tomorrow

SOME people live only for today, some wiser ones provide also for tomorrow—but the thoughtful man is the one that is saving for the "day after tomorrow." A little money in a bureau drawer is a good thing, a little more in the bank is a better thing—but a definite compelling saving plan that saves $10 a month or more is the very best. It is this we have to offer you and your money earns 4½% from the day that we get it. The security is guaranteed first mortgages on New York City real estate—the safest thing there is.

Send postal or the coupon below for our free booklet THE SAFE WAY TO SAVE. The plan is worth knowing about even if you do not care to use it.

Unveiling the Monument at Gettysburg to the Regulars Who Fell in the Civil War

Close by the spot where Abraham Lincoln delivered the "Gettysburg Address," Miss Helen Taft, daughter of the President, on Memorial Day unveiled the monument erected by Congress to the regular soldiers who fell in the Civil War. After Miss Taft had pulled the cord which released the flags about the shaft, and the national salute had been fired, Secretary of War Dickinson, in a short speech, transferred the monument to the Gettysburg National Park Commission. Lieutenant-Colonel John P. Nicholson, chairman, responded. President Taft dedicated the monument. He sketched the history of the regular army, and pointed out the fact that half the number then on its rolls was engaged in the battle of Gettysburg. He recounted the disasters which befell the country during the War of 1812, owing to the fact that the Government was without regular forces. After paying a tribute to the effectiveness of the regulars in the War with Mexico and the Indian campaigns, he made a strong protest against any reduction of the standing army. Among his concluding words, the President said: "All honor to the regular army of the United States. Never in its history has it had a stain upon it's escutcheon. With no one to blow its trumpets, with no local feeling or pride to bring forth its merits, . . . it has gone on doing the duty that was its to do"

Is President Taft a Man of Personal Pride?

AS AN ESSENTIAL, but yet one of the least important, elements in the framework of this editorial, and the deductions therefrom, we reprint first this sentence from the platform written by Senator HOPKINS and his committee and adopted by the Republican National Convention at Chicago one year ago:

"The Republican Party declares unequivocally for a revision of the tariff by a special session of Congress immediately following the inauguration of the next President."

This sentence does not contain the word "downward," nor yet "upward." The rest of the paragraph containing the tariff-revision pledge is equally lacking in internal evidence of the intent of those who wrote it.

WILLIAM H. TAFT ran for President on this platform. At the times and places enumerated he spoke these words as to the kind of revision that was meant (italics ours):

"There are many schedules of the tariff in which the rates are excessive. . . . It is my judgment that a revision of the tariff in accordance with the pledge of the Republican platform will be, on the whole, *a substantial revision downward*. As the temporary leader of the party, *I do not hesitate to say, with all the emphasis of which I am capable, that if the party* is given the mandate of power in November it *will perform its promises in good faith*."—Milwaukee, September 24, 1908.

"It is my judgment, as it is that of many Republicans, that there are many schedules of the tariff in which the rates are excessive. . . . It is my judgment that a revision of the tariff, in accordance with the pledge of the Republican Party, will be, on the whole, a substantial revision downward."—Des Moines, September 26, 1906.

"Another thing that the Republican Party pledges itself to, fixes the date when it shall do so, and tells you how it will do it, is the revision of the tariff. *The Dingley tariff has served the country well, but its rates have become generally excessive*."—Cincinnati, September 22, 1908.

"At Mitchell, South Dakota, at a meeting at which I was present, he declared for thorough revision of the tariff, and in reply to a voice in the crowd which asked, 'Which way, upward or downward?' he answered that in his opinion the revision would, in most cases, be downward."—Senator C. I. CRAWFORD'S account of what he heard TAFT say publicly during the campaign.

That indicates Mr. TAFT'S interpretation of the pledge. Read now the meaning attached to it by those two members of the United States Senate who, because of their dominance in the Finance Committee and their leadership in the Republican Party, are most powerful in forging the Senate bill:

Senator NELSON W. ALDRICH of Rhode Island on the Senate floor, April 22 (Congressional Record, p. 1499)—"Mr. President: Where did we ever make the statement that we would revise the tariff downward?"

Senator HENRY CABOT LODGE of Massachusetts on the Senate floor, May 8 (Congressional Record, p. 1911)—"Nobody ever pledged me to a revision downward, any more than to a revision upward."

Just as an additional evidence of the interpretation put upon the platform by the Republican machine Senators, and of their present intentions as to the tariff, we quote two more:

Senator W. B. HEYBURN of Idaho on the Senate floor, May 10 (Congressional Record, p. 1942)—"An imaginary promise to reduce the tariff. . . . There is no such pledge resting upon us, and there is no such duty resting anywhere."

Senator EUGENE HALE of Maine on the Senate floor, May 19 (Congressional Record, p. 2275)—"Those who perhaps exaggerate the constant cry of revision downward, which was never put into the Republican platform."

The question of fact at issue here is of minor importance. What Mr. TAFT said, he said *before* the election; the four Senators quoted have spoken *since* the election. (Just as a stunt in intellectual projection, try to imagine Messrs. ALDRICH, LODGE, HALE, and HEYBURN saying these things last fall, on any one of the many rostrums upon which they stood, exhorting men to vote the Republican ticket.) We should like to hear from that man who, when he voted for TAFT last November, thought he was voting for some other kind of revision than revision downward. If there are any such, they belong, like these four Senators, to a close cabal in the inner places of Republican power, and no man will so far impugn the honor of President TAFT as to suggest that he shared their mental reservation when the Republican Party openly promised "substantial revision downward."

But these are mere minor animadversions. The important thing is this: President TAFT has an equal voice with the Congress of the United States in making a tariff. Merely, Congress talks first. President TAFT speaks at a time fixed by the Constitution of the United States. The exact date, as it now seems, will be in the latter part of June. On that day he can write, upon the bill that Congress presents to him, one Latin word of four letters as potent in determining the next tariff as all the twenty-six hundred pages of Senatorial talk that now compose the Congressional Record for the special session. And, after all, it is proper enough that President TAFT should be the one to whom the public will look for the redemption of the promises which Mr. TAFT made. The Senate made no campaign speeches.

Not Invidious

IT IS A SMALL MATTER OF FACT, probably more interesting than important, not likely to be denied by any one, and possible to say without the effect of odious comparison: If ROOSEVELT had been in the White House, the tariff bill, as it stands to-day, would have been a very different thing. There would have been a good deal more excitement throughout the country and many bleeding heads at the other end of Pennsylvania Avenue. ROOSEVELT would have made his fight item by item, schedule by schedule; when he had made Congress yield all it would on woolen goods, he would have accepted the compromise cheerfully, and jumped with equal zest into the fight on iron ore. By the end of the session he would have got the lowest figures he could from Congress and would promptly sign the bill. TAFT, on the other hand, has made no seriatim fight. All that he will have done to affect the new tariff bill will be by signing or not signing the bill. It is merely, as Mr. TAFT once said in comparing himself and ROOSEVELT, "a difference in method and temperament." TAFT has yet the opportunity to accomplish in ten minutes all, and even more than, ROOSEVELT would have accomplished in a day-by-day fight throughout the session.

The Last

SOME WEEKS AGO, when we printed Mr. JOHN R. MCLEAN'S assurance to us that his Cincinnati "Enquirer" would stop printing immoral "Personal" advertisements, we stated that, so far as we knew, every American newspaper was finally clear of the class of advertising which sent the proprietor of the Chicago "Dispatch" to the penitentiary for some years, and caused the owner of the New York "Herald" to plead guilty to a crime and pay a heavy fine. That our hope ran ahead of the facts is proved by several Baltimore friends, who have sent us clippings from the Baltimore "Sun." These appeared on a single day last month:

"REFINED Middle-Age Lady with furniture would like a Middle-Aged Gentleman to ASSIST HER TO GO HOUSEKEEPING at once; object, matrimony. K 916, Sun office 1tp

"WIDOW (36) desires to meet gentleman; object, matrimony. Address F 962, Sun office. m5-eo3t

"GENTLEMAN, widower, retired merchant, like to meet refined lady, not over 35; object, matrimony. E 921, Sun office. 1t

"GENTLEMAN wishes to meet lady about 30; object, matrimony. X 835, Sun office. 1tp."

The smug old "Sun-paper," as Baltimore people affectionately term it! We should be no more surprised to discover that a venerable maiden lady with a class in the Sunday-school for the last twenty years had a half-interest in a brothel. The "Sun" knows as well as we know, and the United States Department of Justice knows, that the phrase "object, matrimony," which it unctuously compels its customers to use, has, by long custom, become so identified with immoral advertisements that instead of adding a smug and conventional respectability to an illicit traffic, it serves rather to make the purpose of the advertisement more clear and definite. We think the "Sun" will divest itself of this source of revenue very soon.

The Red Gods Under Canvas

PAUSE, reader, within the narrow walls that bound your money-making rut. Glance at this advertisement from a Western paper:

"WANTED—Repertoire people, all lines. Swell dressers on and off. Soubrette who can cook. Preference to those doing specialties. S. and D. and B. F. Also musicians, B. and O. cornetist who can double in drums. Opera House, Nebraska, until July, and then canvas. Irene Stewart, where are you? Rep. Show, Hartington, Neb."

A fig for respectability! What ho, for the open road and vagabondia! Who would not go a-gipsying? Gone are the days of the jongleurs, the troubadours, the bards, the minstrels, and such merry rogues; but the little road show, playing its one-night stands in country [illegible]

or four canvas, strolling with an itinerant carnival troupe, or opening at the county fair, offers opportunities for those who still would heed the call of the road. The requirements for the life are simple. Versatility as well as specialization is an asset. The soubrette who is an adept with the frying-pan, the trombone artist not too dignified for street parades, and a willingness to "double in drums" are the kind who are wanted. We sober stay-at-homes miss a good deal. Whether it be with a "Rep. Show" playing "Camille," "What Happened to Jones," and "The Holy City"; whether it be with an "Uncle Tom's Cabin" outfit, a "Dora Thorne" Company, or "The Quaker Medicine Show, No. 3"—life on the road is good. The panorama passes constantly before you; the scene shifts, and the curtain rises on a new "set" every day. The towns merge into a confused jumble of hitching rails, fair grounds, and absurd hotels. You see before you in your dreams row upon row of upturned chin whiskers. You study human nature at first-hand. You fall in along the way with jolly companions. Hum, ho; one can be young only once.

Early Summer

IN RIVERS, bays, and the running brooks the boys are beginning the daily swim. Examination time is hard by, and you can see the scared scholars almost everywhere, under shady trees and curled up on the piazza. If they are just "kiddies," you will hear them scratching away at "sums" with a stubby pencil. But the children of a larger growth are tightly gripping a dark brown book in the hand, and trot-trot-trotting through the Mantuan hexameters, or "J. Cæsar and his Gallic scraps, which made him lord of other chaps." Inside the city walls the city children are screaming up and down the smelly asphalt streets. Out beyond the region of clanging trolley-cars and steel-clad skyscrapers, the morning sunlight lies rich and heavy on the green grass, and all through the day till milking-time the cattle are placid in the meadows or knee-deep in the cool mud of scummy ponds, where turtles slide in and out, and bullfrogs plump in on a high dive at the approach of undesirable citizens. When the day is quite done, and the farm-hands are cutting across lots after chores, sometimes you can hear the mellow lin-lan-lone of evening bells drifting in across the lush green intervales from over the purple rim of the hills. Silently, one by one, the loveliest days of the year—the days of the early summer—are passing.

We Tell a Story

NINETEEN YEARS AGO a young man of twenty-five, having graduated at the State University at Lawrence and been admitted to the Kansas bar, boarded a westbound Union Pacific train in search of a good town to make a living in. He thought he would go as far as Seattle, dropping off at various towns en route to size the prospects up. He did not travel in the sleeping-car, nor yet in the parlor-car. The first night, between troubled naps in the day coach, he got to talking with a traveling salesman for mowing machines who showed him a map of Idaho, and told him that Boise was a good likely town for a young lawyer to settle in. The next night the man who shared his seat in the day coach was a professional gambler, with a friendly heart and a quick and accurate knowledge of strangers, acquired in the course of his livelihood. He was, like many of his class—setting aside his profession—a good citizen, with all the qualities of a likable man and brother. The gambler, too, told young Borah that Boise was a good town to begin in; also he said that he himself lived at Nampa, about twenty miles away from Boise, and that if the period of waiting for clients turned out to be long and lean, the young lawyer should just drop him a line. (The gambler was the only man who did offer to lend the young man money.) So Borah dropped off at Boise, not knowing one human being of the four or six thousand who then composed the town. After much misgiving, he decided to stay; probably the governing reason was that he had money enough to keep him in Boise thirty days, whereas, if he paid his railroad fare on to Seattle, he wouldn't have any money left at all. During the early homesick and friendless days he asked an old lawyer in the town to hire him as a clerk, but the lawyer didn't want a clerk; and that, too, was fortunate, for it compelled Borah to stake his future on his own efforts altogether. About that time, in the town where the gambler lived, the telegraph operator at the station killed the Chinese cook at the hotel. The telegraph operator used to go to the kitchen at night after his work was done to get a bite to eat. The Chinaman did not like this variation of the fixed order of things, and after many quarrels the murder resulted. The professional gambler, who had been writing encouraging letters to Borah every few days, sent for him to defend the accused before the local justice of the peace. At the hearing, the prosecuting attorney read the complaint, charging the telegraph operator with murder. The justice of the peace thought the charge ought to be changed to manslaughter, since it was only a Chinaman. The prosecuting attorney explained that he couldn't quite do this: that he would have to draw the complaint for murder, but that if the justice wished, he could, later on, hold the defendant for manslaughter. The justice did more, for Chinamen were not highly thought of in that community. He set the prisoner free, and the lawyer for the defense got fifty dollars. That was William E. Borah's first fee, and probably it looked larger to him than any of the many others he received from that time until he stopped practising law to take a place easily among the first four of that generation of United States Senators who at between ages of forty and fifty.

We Point Several Morals

THE STORY in the preceding editorial is its own justification, because it's interesting and it's human, which are the same reasons that justify Tom Lawson and the writings of William Shakespeare. Moreover, the story is not without usefulness to some thousands of young men who, this week, are turning clear young eyes from the quiet green of campus and college yard to ugly streets and harsh city walls. We would not willingly seem to share the flippant spirit of cynicism and cheap humor in which it has become a newspaper conventionality to hand out advice to graduates. Who can contemplate that great body of hope and enthusiasm without sympathy, and who has an imagination which is not touched by the spectacle of all those unlived lives? But we wish fewer of the college graduates were just now seeking a soft snap in father's office, just because it's the path of least resistance. We wish more of them had, as a governing motive, the pride to cut loose from the aid of family and friends, and possessed the initiative and courage to begin at the bottom, far from old associates. We confess to an initial prejudice against the young graduate who turns up at your office with sixteen letters of introduction from college professors, old school friends, and distant connections of your wife's family. Also, in getting on in the world, George Ade would probably put it this way: A Disposition to Mix and be Friendly is Better than Father's Pull. There are few greater handicaps either to service or to success than the social consciousness which classifies people as desirable and undesirable acquaintances for reasons other than fundamental ones of character. Finally, we wish more of the Eastern graduates would go to the small towns in the West. The average of college men per square yard is too high in New York and New England. If college has given a man something of value to the world, he should carry it to the place where that thing is least common. Moreover, if it has equipped him with any especial capacity for success, it is good sense to begin where that possession most distinguishes him. If a young man thinks he can't be happy where he won't have a chance to see Anna Held's new show each winter, or where he can't spend two evenings a week with his old friends at his college club, he won't go pioneering very far, and he will deprive himself of his best chance to develop self-reliance.

Laying the Ghosts

LORD CHARLEY BERESFORD knows how to pour oil on whirlpools, and how to create peace where once turmoil bubbled. Hear him, and remember he is talking to the English nation, which just at present is panting with terror, discovering a squadron of murderous Teutonic airships every time a summer cloud sails by, finding bombs in sausages, invaders in the pantry, and fear in everything. He says of the British naval inquiry, now going on:

> "If the committee finds that things are not as they should be—which I have no doubt they will—there is no necessity for panic. There will be many points which will become public and which will cause dissatisfaction, but don't let us have a panic—don't let us get hysterical!"

This is the perfect method for allaying terror. It can be adapted to many trying situations. Enter a young ladies' boarding-school and state simply but candidly to your little hostess: "A mouse is nibbling your left boot, but don't jump." Tell your friend at the club: "There is arsenic in that glass of sarsaparilla which you just tossed off so jauntily, but don't grow pale." It is the same sort of friendly advice that we once read in a public park in Carlisle, England, where stood a mighty historic cannon. From its silent muzzle depended a printed notice: "Do not roll newspapers into a ball and force into the muzzle of this gun."

The Short Story

THERE ARE MANY clever things to be said of the short story, and Frank Munsey recently uttered some of them. He classifies stories simply by their commercial value and puts pathos first, love second, adventure third, and humor last.

> "Any one can invent love plots and adventures, and some men can not put pen to paper without being humorous; but the pathetic story is always from the heart, and if it is genuine it always reaches the heart of the reader. Those are the stories that are hard to find."

But there is a detail of construction which he omitted. And that detail is the quality of all the enduring short stories. It is speed in construction. Is there one memorable short story that does not move to its end like the rush of a torrent? Is there a single leisurely short story that has gripped and held the public? "The Man Who Would Be King," "The Luck of Roaring Camp," "The Horla," the parable of "The Prodigal Son," "The Man Without a Country"—they are all tense from the staccato opening to the rapid accumulating climax. They vibrate from engine-room to bowsprit with the beat of their creative energy. That blind, headlong dash for the goal, like the gasping Dorando at Shepherd's Bush, is the essence of the short story. And the reason is plain. The three-decker novel has time and scope to give the tide of life, to give the sense of flux and change, by the diversity of incident, the shifting scenic panorama, the multitude of characters twinkling on and off. The short story can only render that unending motion and ceaseless change, which are the core of life, by its own intensified stride. Its self-generated momentum must compensate for its lack of space and time. It must be breathless in order to show the significance of the news it carries.

BASEBALL

IV. The Business Side of the Game.—*This is the Final Article in the Present Series. The First, "Before the Professionals Came," Appeared May 8; the Second, "Working Out the Game," was Printed May 15; and the Third, "The Art of Pitching," was Published June 5*

By WILL IRWIN

"Remember this, gentlemen: you are dealing with a professional sport, and the tendency of professional sport is downward."—A. G. Spalding to the National League.

THE professional baseball player, as such, was unknown before the Civil War. One finds, indeed, signs in the newspapers of the period that our "sporting men" drew no very sharp line between the amateur and the occasional professional. That, perhaps, was only natural. Athletics were a new thing to us. We had yet to learn the dangers and the finer ethics of sport. For example, the first convention of amateur clubs, held in 1859, felt called upon to pass a rule against paying players. There was no money in the game as yet, only glory; but certain rich non-paying members of the fashionable clubs had begun to lure stars from other clubs by offers of money or "jobs."

The foundation-stone of professional baseball, however, was laid when the Atlantics, the Eckfords, the Mutuals, and the other crack teams of Brooklyn began playing on the old Union Grounds. This arena was a fenced basin, used in winter as a skating rink. In 1862 the owners decided to make it continuously profitable by turning it into a summer baseball park. Experimentally, they charged a regular ten-cent fee at the gate. They found that spectators were willing to pay, even when they raised the price to twenty-five cents. Half of these fees went to the ground owners and half to the clubs. So came the appetite for gate receipts, and "business" had entered the game.

The Early "Inducements" to Star Players

BY 1866 baseball was in a condition of ethical chaos. At every convention the association heard charges and counter-charges of professionalism. Certain old-timers say that Al Reach, a ship-caulker, was the first baseball player to receive a salary. Others deny that Reach was the first—no old-timer makes any assertion about baseball which is not promptly contradicted by some other old-timer. It became a matter of common knowledge in 1866 that three members of the star Atlantics of Brooklyn were receiving $10 a week. New York remained the stronghold of baseball; and Tweed ruled in New York. His familiars were "sports," heavy patrons of boxing, racing, and baseball. Any good player could count, when he joined certain New York teams, upon a lucrative job with short hours and unlimited leave of absence. In the same way the Federal Government helped the Olympics of Washington. The custom traveled westward. A. G. Spalding was the star player of the Forest Citys, formed in Rockford, Illinois; he ranked with Brainard and Martin among pitchers. He received a "flattering offer" of a clerkship in Chicago. Only after he had accepted it did he find that it meant—baseball.

This indeterminate state of affairs could not last. Harry Wright made the first move toward fair and open professionalism. When he went to Cincinnati in 1867 on a business venture that failed, he carried with him the idea of an all-professional team. He gathered the best local players and added the best that he could hire in New York and Brooklyn. So from the beginning was established our American fashion of non-resident players.

Incidentally, Wright furnished this team with the first knickerbocker uniforms—up to that time men had played in long trousers. From this they got their name, the "Red Stockings." His first year's salary roll is still on record: Harry Wright, center-fielder, $1,200; George Wright, shortstop (then greatest all-around player in the country), $1,400; Asa Brainard, pitcher, $1,100; Waterman, third-baseman, $1,000; Sweasey, second-baseman, $800; Gould, first-baseman, $800; Allison, catcher, $800; Leonard, left-fielder, $800; Cal McVey, right-fielder, $800; Hurley, utility, $600. Their record for 1869 remains unapproached and unapproachable in baseball. They toured the country from Boston to San Francisco, meeting all teams with even the shadow of a reputation, and never lost a game! They made money, and Harry Wright became the first "baseball magnate."

A new evil, worse than masked professionalism, had appeared in New York and Philadelphia and spread until it tainted the sport in every city. Loose, unsystematic betting had grown into organized pool-selling and book-making. John Morrissey, champion pugilist, and a towering figure in sport after his retirement, did his little all to assist this tendency. As in every sport where betting takes firm hold, "crooked play" followed. Of the Atlantics of Brooklyn and the Athletics of Philadelphia, the "Baseball Chronicle" announced in 1867: "No game played between these two teams is to be trusted." At every important game gamblers walked before the stands waving rolls of bills and calling odds.

The Fans Pay the Bill

At the ticket windows of the New York Polo Grounds, 3:30 P. M. It costs from $250,000 to $500,000 a year to support the "Giants"

Cleaning up the First Professional Association

THE Amateur Association gave up the struggle in 1871; though it lingered for several years as an unconsidered entity, it had influence no more. The power passed into the hands of the first professional league—the National Association of Professional Baseball Players. On all counts except that of clean sport, this was a great step forward. Professionalism was now open and definite; and something like system came into the game.

The first professional league went on for five years with varying membership and with a constant downward tendency. More and more venal grew the Athletics of Philadelphia and the Mutuals, who represented New York and Brooklyn. With them, baseball became an excuse for betting. When the wives and daughters of the players watched a game, they did so secretly from behind the club-house door. On the Philadelphia grounds, the dressing-rooms stood over a bar and pool-room. The players, passing out to the field, used to stop and place bets there—sometimes, we know now, they bet on the other side. Because of the wholesale slaughter of tainted players which occurred later, old-time baseball men are chary, even to this day, of talking about the crooked deals which they witnessed in that time. Now and then, however, they will tell tales—with names and places carefully disguised. One has told me of seeing a pitcher divide $700 with two of his team-mates on a hotel bed—their price for throwing a deciding game. A star pitcher on one of the "straight" teams went into a game with $500, the price of betrayal, in his playing clothes. His manager got knowledge of it. When the pitcher began to falter, the manager called the game for a minute and stepped over to the box. "If you lose this game," he said, "I'll have you stripped in the dressing-room and take that money off you before the whole team!" The pitcher won. And the stock excuse of the fans became: "Aw, they threw the game!"

Baseball was going the way that racing has gone, the way that professional boxing has gone—since crookedness, more than brutality, has put the prize-ring under ban of Legislatures and City Councils. Pulpits, by 1875, were raging against baseball; reformers were assailing it. On the other hand, there were those, like the defenders of racing to-day, who maintained that betting was an integral part of the sport; that its abolition meant ruin for baseball. The Western managers did not agree; neither did the Wrights, by this time associated with Boston.

In 1875 the Association expelled Chicago for refusing to play a return game—there were as yet no circuits nor schedules. Thereupon Spalding, McVey, and a few other Boston players "jumped" to Chicago. Spalding signed with W. A. Hulbert, owner of the Chicago Club, as manager and captain. In 1876 Hulbert, Spalding, Harry Wright of Boston, "Nick" Young of Washington, and others planned and carried out a revolt. They had their organization so well perfected before they sprung the mine that the managers of crooked teams had to come in or get out of baseball. This is called "Spalding's revolution"; in fact, he was probably the prime mover, though Hulbert was a great deal more than a figurehead.

The National League of Professional Baseball Clubs they called the organization. It had one main object: to make the game a clean, popular sport, free from gambling. In this, Spalding at least was not all altruist. He had seen the future in sporting goods. A popular professional game, with large audiences and many imitators, meant a huge demand for balls, bats, shoes, etc.; the contemporary tendency meant a diminishing demand. This move was business—of the most enlightened kind.

Eight clubs comprised the first circuit—Chicago, Boston, Mutuals (of New York), Athletics (of Philadelphia), Hartford, St. Louis, Cincinnati, and Louisville. The Washington Club did not come in; but the league took Nick Young over as secretary. On Hulbert's death, Young became president and served in the chair until age forced his retirement. The strong rule against gambling, passed in the first meeting, was a lecture to the Mutuals and the Athletics. They disregarded it; by the end of the first season they were expelled. New York and Philadelphia went without league baseball for seven years. Boston and Chicago are the only cities with a continuous record in the big leagues.

The Hard Struggle Toward Honesty

MORE effective than the expulsion of the Eastern clubs was the action which the league took with Louisville. At a time when that city had the championship nailed down, four Louisville players were caught red-handed taking bribes to throw a game. Out of the league they went forever. The directors resisted all appeals on their behalf. The wife of one of them approached Hulbert; told him that the league had stolen her living; that the children were hungry. "Here's a hundred dollars; take it and eat," said Hulbert. "Come to me again if he doesn't get work. I will never reinstate him." Somehow, this lesson burned itself into the souls of professional baseball players. From that day the league has regarded gambling as the devil of the game.

Teams came in and went out. The game struggled and faltered; but it struggled always forward. In the early days the National League included such towns as Syracuse, Troy, and Worcester. Not until the eighties did it turn the corner.

As yet there were no other leagues. But baseball was thriving in cities which knew not the National. In most of these places, truth to tell, the baseball park was only the annex to a profitable bar. A semi-professional team, hired by the ground-keeper, would play Sunday games with any able contenders. Sunday ball was forbidden in the National League, as were bars, but some of the Western teams, on off Sundays when the schedule permitted, would play exhibition games in such towns as Louisville and St. Louis. Louisville had dropped its league membership after the exposition incident. The St. Louis Club [illegible] under the patronage of Chris V[illegible]

(Continued [illegible])

After a Big Game on the Polo Grounds, New York

The franchise of the New York National Baseball Club is worth $2,000,000 or more, according to John McGraw, manager. Outside of New York and Chicago, a "major" league club has an average value of $400,000. About $20,000,000 a year is spent by the American public on professional baseball

For the International Polo Championship

Royal Sport

By HENRY L. HERBERT

Chairman of the Polo Association

A match for international polo honors between the best of England and the pick of America will be played, beginning June 23, on the Hurlingham field, England. It will be the second attempt of America to regain the Cup won by the Englishmen over twenty years ago at Newport

POLO is a game which requires and brings out all of the strength and skill and courage of which a player is capable. To be high-class a man must think and act as quick as a flash, and at the same time adhere to the rules and avoid all that is reckless or dangerous to himself or his opponents.

The Hurlingham rules, under which the game is played in England, differ from the rules of our Polo Association, particularly in the one pertaining to offside, which makes a radical change in the system of play as compared with the game under American rules.

The general theory of the English game is one of obstruction—that is, to prevent the opposing team from scoring. The American game, however, with less restriction, brings out more racing between ponies, more freedom and fun for the players (particularly the No. 1), and greater excitement for the spectators.

One of the thrilling features is the scientific passing of the ball from one player to another, followed by the racing sprint and try for goal.

Under the American system of handicapping, which is done by a committee of the Association according to the individual merit of each player, it is possible for a team of moderate skill to enter and play against teams of the highest class with an equal chance of winning out.

As an illustration—one team of four players, each handicapped at two goals, would make a total of eight goals, meeting a team of two five-goal men, one six goals, and one four goals, their total would be twenty goals—thus the eight-goal team would be allowed the difference, which is twelve goals; consequently the higher class team must score twelve times and as many more as their opponents may have made before the score would be a tie: and so have usually to keep up a genuine American hustle in order to win out.

Such is the system which has brought about much of the growth of the game in the United States.

The Association when organized in 1890 was made up of eight clubs, while now there are thirty-seven clubs in the membership, nearly all of which have private grounds, so the public really has few opportunities to see and therefore to understand this greatest of all games. At the championship games played in Prospect Park, Brooklyn, in 1895 to 1900, the spectators numbered twenty to thirty thousand every clear day, all showing the keenest interest.

Nearly all ponies enter into the spirit of the game and appear to enjoy it quite as much as the players or the spectators. Altogether it is a "battle royal" from start to finish; and while it is a grand sport to witness, it is the greatest of all to take part in.

Were it played as publicly as baseball, it would draw equal crowds. It has been the purpose of the Association, however, to eliminate all money-making features, and the game is mostly played at the several club grounds throughout the country and at many of the army posts. Squadron A of the New York National Guard, however, has the use of two grounds in Van Cortlandt Park, New York City, which are always open to the public. The military authorities of America and of England recognize the advantage of polo as a means of discipline, higher horsemanship, and healthful exercise, and the game is encouraged and aided by the Government at thirty of the army posts; there are a hundred and twenty members of the army on the handicap list of the Polo Association.

American poloists believe the present Meadow Brook team would be pretty sure to defeat the best English team on American ground under American rules, but are not sure of the result in England, owing to the difference in conditions.

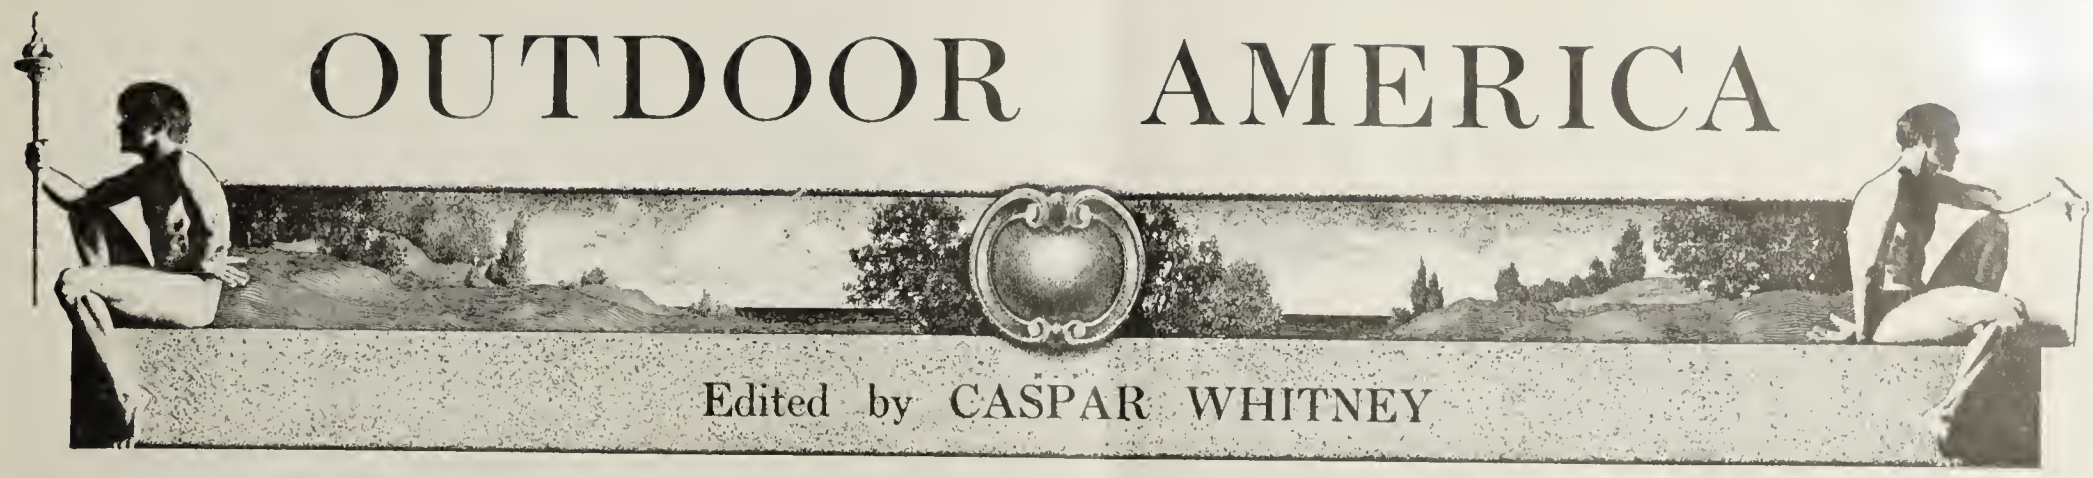
Harry Payne Whitney—No. 3



Lawrence Waterbury—No 1

The American Team which has Gone to England to try to Lift the Cup

OUTDOOR AMERICA

Edited by CASPAR WHITNEY

Another Try at England for Polo Honors

THE outlook for America in the international polo match, which begins on the 23d at Hurlingham, is encouraging for the first time since the Englishmen drubbed us so thoroughly twenty-three years ago at Newport. That was the time R. Belmont, Thomas Hitchcock, Jr., Foxhall Keene, and W. K. Thorn, were overwhelmed in two matches by Captain Malcolm Little, T. H. Hawley, Captain Thomas Hone, and the late John Watson in the day of the around-the-field play, before backing the ball had become the skilful element it now is—and the American team was like unto the man who fell out of the balloon. On the next international effort Foxhall Keene, W. and L. McCreery, and F. J. Mackey lost a one-game match against John Watson, Captain Beresford, F. M. Freake, and W. S. Buckmaster in England, by a score of eight goals to two, in 1900. The play in this contest showed much improvement on both sides over that at Newport six years before, the game itself having considerably advanced—but the Englishmen were still too good. In 1902 the first really serious attempt was made to recapture the Cup by a team comprising Foxhall Keene, J. E. Cowdin, R. L. Agassiz, and J. M. and L. Waterbury—the best five players of America. Varying combinations of these men played through a short preliminary practise season, with seven matches won, one tied, and three lost to their credit; and the score surely raised the hopes of American sportsmen.

In the international matches, however, the Americans were decisively defeated—winning the first game two goals to one, but losing the second and third, in each of which games they were able to score only a single goal, while the Englishmen scored six and seven goals, respectively.

Why We Have Always Lost

HERE in America was much heart-burning and criticism a-plenty, followed by explanations galore, relating to the difference between American form in practise and in match play; and the apparent slump in strength from the first game of the match to the second and third. As usual, in long-distance criticism, much of the comment was based on ignorance of fact. The contributing causes to the defeat in 1902 were: first, lack of team-play; second, ponies unequal to the demand made upon them. The lack of team play came because of repeated shifting of the players among the different positions; and the inefficiency of the ponies was largely inbred and partly through meeting conditions and going not only entirely new, but much more strenuous than those to which they were accustomed. Similar mistakes will not be made this year.

Individually, the team of 1909 does not represent as high skill as the one of 1902, because it includes neither Cowdin nor Keene, unquestionably the two greatest players America has developed to date; but apart from these two, it is the strongest four America could send. What is more important—the men are harmonious in spirit and will get together as no American four in England has ever before done. If one feature characterizes English polo, it is playing to position—always the American weakness.

For the first time Americans on English soil will be on level terms with their opponents in the matter of ponies. The sixteen ponies, with which Harry Payne Whitney is mounting the team, are mostly English-bred, and will be fit to the hour. The disadvantage of much heavier turf and longer playing periods, under which the American-bred and trained pony plays in England, is scarcely understood on this side. For short bursts the American is quite as serviceable as the English, but on the heavier going and in the longer periods, the American pony is outclassed. It is to be remembered that in England they play six ten-minute periods with three-minute intervals; whereas in America we play ten six-minute periods with three-minute intervals; the reason we do not adopt the ten-minute periods of England is because the longer period in our summer heat is too severe on both player and pony. In 1902 our ponies were as good as the English for the first five minutes of every period, but were out of it the rest of the time; and 'twas in the last half the Englishmen did their scoring—some of the American ponies actually falling from exhaustion during play. We used to take out two minutes' rest every time a goal was made, but that has been abandoned in our endeavor to get nearer the English standard.

What We Need in Order to Win

THE four prime requisites to success in this match are: first, fitness (men and ponies); second, team play; third, ponies; fourth, individual (men) quality. All of these appear to be supplied by the proposed American combination of Lawrence Waterbury at No. 1; J. M. Waterbury, Jr., No. 2; Harry Payne Whitney, No. 3; Devereaux Milburn, No. 4. Next to putting Keene and Cowdin at Nos. 2 and 3, respectively, and moving J. M. Waterbury to No. 1, this is the strongest four America can produce. It remains to be seen what Lawrence Waterbury can do in his new place; he has always played at No. 4, and will, therefore, understand the tricks of the opposing No. 1, which is the reason assigned for giving him this position on the international team. He is a splendid horseman and a quick, clever player. J. M. Waterbury is one of the very best No. 2's in the country. Certainly only Cowdin is better. As a No. 3, Whitney perhaps ranks next to Keene. He has good direction and force, is a sure hitter, and uses his head. He is not Keene in an emergency, but then Keene is without an equal in a close corner. Milburn is the best No. 4 in the country, the strongest hitter, and altogether the stoutest player in this position. The American team at this writing is not provided with a substitute, but one will no doubt be supplied in season, and, assuming Keene and Cowdin out of the reckoning, René La Montagne seems next best qualified for the post and the logical selection.

England's team will be the strongest the Empire affords, and that means it will be a powerful aggregation indeed, including P. W. Nickalls, No. 4; Walter S. Buckmaster, No. 3; and F. M. Freake, No. 2. These men were all on the team against us in 1902, and are the strongest players of England. The man for No. 1 is in doubt as yet. Likely L. C. D. Jenner will be chosen, or R. Grenfell, or Captain Herbert Wilson—all of whom are high-class. The first match is for June 23, the second June 26, and the third on June 30, if a third is necessary. While the odds are all in favor of England, I feel we have more than a fighting chance, provided the Americans stick to their positions. Only by doing so is there the ghost of a hope of escaping defeat, for Nickalls and Buckmaster and Freake not only are the three greatest players of England, but they have played together for about ten years. The Americans can win only through unfailing team-play, plus the mental alertness and the brilliant individual work in which they have on the last two occasions excelled the Englishmen. But individual dash without high-class team-work will never succeed against the infallible combination play which the Englishmen are sure to show. We can not count on any weakness developing in the English team to favor our chances. They have the men, they have the ponies, and their effort will be to the limit of both; for there is no sporting title Englishmen would not rather lose than the polo championship, which they have held against all comers time out of mind.

Good Polo at Home

AT HOME the current season prospect is quite the most enlivening of recent years. Notable is the increase in players, for a total of thirty-one clubs in the Association, to about two hundred, in addition to the score or so of cadet recruits at West Point. Most significant evidence of the game's auspicious advance is furnished by the added numbers of what may be called second-grade men, which is to be attributed, in my opinion, to the junior championship events, always the hobby of the Association's prescient secretary, Mr. W. A. Hazard. Further evidence of the game's growth is the expanding moral force of the Association as represented by its temerity in legislating for the game's real interest despite a tempestuous insurgent element that likes its game "wide open." For example, the admirable and timely decisions of the Executive Committee, of which Mr. H. L. Herbert is chairman, reveal determination to cut out the unnecessary roughness and to establish a premium on good horsemanship. Severe penalties for dangerous crossings, reckless mallet-swinging, and foul riding are in the right spirit and show an understanding of what serves the game best.

The Perennial Rowing Bugaboo

EVERY once in so often somebody gets hysterical over the four-mile rowing course. Any oarsman, however remote his connection with rowing, who dies, is at once seized upon as the text for a preachment against the "deadly fourth mile." Obviously these critics expect a certificate of immortality to go with membership in a 'varsity crew. The wonder is so much space is given so thoroughly thrashed-out a subject. Always there are those who, either to boil the pot or to serve a fetish, will exploit the thesis at the expense of trustful editors and spaceful periodicals. Specious reasoning may, of course, be indulged in favor of a three-mile over a four-mile racing course, and no doubt the unknowing reader is impressed by a plea to reduce the duration of the struggle from twenty to fifteen minutes. Those who have sat in 'varsity boats and rowed four miles and three miles agree on the four-mile race being less severe than the three-mile. Men who have had experience in running know that the quarter-mile race is much harder than the one-mile run—that it is, in fact, the hardest race a man can run. Reducing the "duration of the struggle" is clamor—no more, no less; and its argument, sophism. Men enter a race—crews enter a race—with just so much energy to spend, and it is burned slowly or rapidly according to the length of the struggle. But the energy is all consumed, whether it feeds the human furnace during four miles or goes up in one roaring quarter-mile flame. Experienced oarsmen claim that the most exhausting rowing race in the world is the one-mile and five-sixteenths on the Thames. Reducing the distance from four miles to three miles would make the race practically a sprint all the way without the breather the men now get to ease their efforts. The stroke would be higher and sustained, and the contest much severer. Nor is the leading crew at three miles necessarily the winning eight at four miles, as has been demonstrated.

Shorten the Training Period

AS FOR ill effects—years ago Dr. Morgan of Oxford published full authentic statistics as to the effect of rowing upon several generations of Oxford oarsmen. His investigation covered the period from 1829 to 1872; and during those forty-three years only five per cent had suffered any ill effects. In America a similar investigation was made by Dr. Darling, covering Harvard crews from 1890 to 1900. He reported that "no ill effects which could reasonably be attributed to training were discovered nine months after stopping it."

There is ground, however, and good ground for criticizing college rowing, but it is as to length of the training period, not in the length of the course. The American college crews now train nearly six months, a period altogether too long and wholly unnecessary—one more on the list of charges against the professional coach, whose demands and teachings are harmful in influence and sport-destroying in results.

College committees can take a little time from rule-making and give it with profit to a closer study of this prolonged-training-period subject.

American-bred Dogs Winning

ALTHOUGH the season's bench shows developed nothing especially new, they did emphasize the improving quality of American-bred dogs, as illustrated by Mr. Rutherford's fox-terrier bitch, Warren Remedy, which secured the blue for the best of any breed in the New York show; by the victory of Miss Lucille Alger's French poodle, The Miller, and by the triumph of Gamin II as the best male French bulldog yet bred in this country. But perhaps the most noteworthy event, as well as the most surprising, was the victory of Sabine Fernie, that native-bred fox-terrier dog from Texas, over Warren Remedy, which only a week or so before had been declared the best of some three thousand dogs gathered at Madison Square Garden.

Bench shows have not been, in my opinion, a real benefit to the breeding interests in field dogs or in the working terriers. The delicate-shouldered, long-headed, and slim-backed examples are enough to bring tears to the eyes of a sportsman. The only real dog shows for sporting dogs are the field trials. The bench shows around the country are pleasing tributes to fashion and fancy. And by the same token I am sorry to observe that the professional is getting such a firm hold; he comes nowadays mighty near running the show; even aspires to appointing the judges. And that's a great mistake, gentlemen of the kennel clubs, and had better be rectified before further damage is permitted.

An Intelligent Board of Education

BY ITS decision to open for Sunday recreation the four city athletic fields of the Public Schools Athletic League, the New York Board of Education has earned the gratitude and is entitled to the unqualified support of the citizens of the Empire State. It is the wise step of an educator who is also a humanitarian and indicates a comprehending appreciation of what the children of a city need most of all. Also it is the simplest and most direct manner of supplying that need, and offers a worthy example to the other cities of our country.

Of course there will be protests from that type of religionist who seemingly gives no intelligent thought to debauching influences so long as an appearance of the traditional Puritan Sabbath-keeping is maintained. The Board of Education can afford to ignore the carping of those who would rather see boys hobnobbing with the devil on the street corner or stealing into saloon back doors than playing wholesome games openly. Clear-headed people will heartily commend the Board's action. I find myself always wondering why the "other denominations" do not take a lesson from the Roman Catholics and their Christian-like and common-sense view of Sunday with relation to its place in the life of workaday people. The most Christian-like, the most intelligent, movement that could be set in motion in America would be a law to compel the closing of all business at noon on Saturday, and make of Sunday a joyous [illegible] of clean recreation for the multitude.

"An auction is a diversion . . . . dooryard and barn are overrun by a curious, shrewdly calculating crowd discussing the family history and the values of its goods and chattels"

Abandoning the Old Farm

The Invasion from Town

By RALPH D. PAINE

THOUSANDS of city folk fare forth every year in quest of "the abandoned farm." New England is the favorite hunting-ground of these pilgrims with rural aspirations, who discover by the side of the turnpikes and lonely back roads of Maine, Vermont, and New Hampshire those gray, weather-worn, low-roofed dwellings, empty barns, and gaunt, stone-walled fields that are no longer tenanted. The great square chimneys, now crumbling, warmed sturdy generations of pioneering farming folk aforetime, the raftered chambers and their massive hearthstones were home to young men and maidens who toiled and loved and sorrowed and rejoiced, and in due time were laid to rest in the family "burying lot" over yonder by the pine grove where the lichen-covered headstones lean this way and that, and the grass grows wild and lush in June.

A new race, an invasion from the town, is making country homes of these old farms which are everywhere in process of rejuvenation, and the memories of the stout-hearted people that made and tilled them are scattered to the four winds. How came these farms and roof-trees to be deserted and left to decay as melancholy relics of an earlier era? Many of them were peopled for a hundred years on end, and here and there you may find one which maintained one family, from father to son, for nearly two centuries, the timbers of the house hewn by strong arms long before the Colonies dreamed of rebelling against the crown.

From my library window I look down a long slope of hay land to a New Hampshire meadow, a corner of which is dotted with the graves of ten generations of one name that lived on this farm. The last of them sold out and went away only a little while ago, and thus finished the story of another "run-out family" and its worn-out acres.

At Last Comes the Auction

THE most conspicuous character in the last act of the humble tragedy of the abandoned farm is very often the rural auctioneer. He it is who rings the curtain down with careless quip and boisterous jest. Perhaps his burly presence has been menacing the household through long years of gripping struggle with adversity. The land has been becoming poorer, the ambitious men of the family have gone away to seek their fortunes elsewhere, and on the heels of misfortune has followed the chattel mortgage. Unsung heroism, incredible economies, toil unceasing, have not sufficed to check the steady decadence of the farm and its affairs. Some day, when the ultimate disaster can be no longer held at arm's length, a printed bill, announcing the sale at auction of stock, tools, and household goods, is posted in the village store and the post-office.

The idlers scan the bill with curious interest, but with no marked symptoms of surprise. The auction has been a foregone conclusion for some time. The storekeeper remarks to his leisurely customers:

"Old Jonathan Woodman has been livin' alone on the farm for years and years. He's the last of 'em. All petered out, ain't they? He's going to live with his granddaughter in Newmarket, so they tell me. Hung on longer than I expected, the old man did. Too old and much farming and no money to hire help."

"Couldn't make his boys stay at home," comments the man who has dropped in to buy an ax-handle. "It was a fine farm in its day. My father remembers when it cut sixty ton of hay and kept forty head o' stock."

"It won't cut ten ton this year," puts in another. "Fields all run out, pasture growed up with juniper. You could throw a bull calf through the cracks in the barn, and the house ain't fit to live in. Nobody's goin' to buy it. Guess that's why Jonathan didn't put it on the auction bill."

"The Woodmans was the smartest, most prosperous family in this town fifty years ago," pipes up a withered grandsire. "Think I'll go to the auction and see what's left. Must be a lot of old furniture and junk in the house. It's been accumulatin' most since the Revolutionary War."

On the morning of the sale the roads leading toward the Woodman place are populous with vehicles more serviceable than elegant—concords, democrats, buggies, carry-alls, and rattling wagons. An auction is a diversion, a mild excitement, and the women-folk forsake their spicy kitchens to enjoy a day's outing, with the bulging dinner-basket tucked under the front seat. Long before the auctioneer is ready to begin his task, the Woodman house, dooryard, and barn are overrun by a curious, shrewdly calculating crowd discussing the family history and the values of its goods and chattels.

"Two dealers in old furniture hover near the prizes they have marked for their own"

The day is fair, and the furniture has been stacked outside for ready inspection, just in front of the lilac bushes planted by the great-grandmother of old Jonathan. There are some genuine antiques on show, four-posted beds, slender-legged high-boys, bureaus with pillared fronts, a pile of straight-backed, rush-bottomed chairs, while two dealers in old furniture hover near the prizes they have marked for their own, and eye each other sourly, like duelists on the field of action.

These few pieces of battered furniture, dignified even in their shabby estate, tell their own story. They stand for vanished generations of Woodmans who enjoyed a solid, substantial kind of prosperity. Piled nearby are many rude utensils and implements of the farm and household which were wrought by hand long before the age of machinery and of shoddy. From the attic have been fetched dusty spinning-wheels, the hanks of wool and flax still in place, and spindles threaded just as they were last used by industrious housewives. Carding-combs, reels, and swifts are thrown on the heap as so much junk. Beside them are tossed a pillion and a pair of mildewed saddle-bags. In another "lot" is a kit of carpenter's tools, some of them fashioned for splitting clapboards from the log. The square was obviously hammered out on the farm forge, and the block plane bears the marks of the jack-knife that whittled it. Powder-horn and shot-pouch are flung down beside a long musket of prodigious bore, which was altered from flint-lock to percussion cap to keep pace with the march of modern improvements a few generations ago.

Everything Under the Hammer

THE women, bless their sympathetic hearts, cluster about two-rocker cradles built of bits of hewn plank. Babyhood has not grown old-fashioned in this country district, and the emotions of these mothers are moved at sight of the clumsy cradles in which so many tiny Woodmans were sung to sleep. It is rather difficult to realize that children ever played in this forlorn old house, now so bleak and gray and empty. Old Jonathan, wrinkled, grim, and bent, is pottering about from room to room, in everybody's way, waiting for his granddaughter to take him to Newmarket after the sale. His hard hands are tremulous to-day, his voice unsteady, and his aspect dazed and helpless as if the end of his world had come. Strangers are pawing over the log-cabin quilts and the linen bed canopies that his wife and his mother made. The rag rugs they sewed in winter evenings have been gathered from kitchen and bedrooms and hung on the dooryard fence for the convenience of the auctioneer. Jonathan wipes his faded eyes with the back of his hand and wanders outside, his mind busy and distraught with Heaven knows what poignant memories and resurrected sentiments.

Groups of hard-headed farmers are inspecting the livestock, squinting knowingly at the horses' teeth, or poking the pigs in the ribs. They are moved to profane mirth at sight of the ancient high-backed sleigh, the horse-rake built of timber and spikes, and the wooden plow sheathed with strips of iron which have been laid away in the barn for years and years, memorials of the tillers of a wilderness country. The mowing-machine and other modern implements look oddly

out of place amid their archaic surroundings. Inspection is cut short by the stentorian voice of the auctioneer, who has mounted a chest in front of the doorstep and is proclaiming:

"All goods to be sold for cash to the highest bidder. Nothing to be removed from the premises until paid for. Now, now, what'll it be first?"

The village postmaster is acting as clerk of the sale. He is an elderly man of solemn visage. Perchance he feels the import of the humble tragedy in which he is a minor actor, for he is old enough to recall when Jonathan Woodman and his wife "held up their heads with the best of 'em." By this time Jonathan has retired to a stone bench beneath an apple tree nearby, where he sits with his chin in his hands, mumbling to himself, gazing with a helpless air at the good-natured auctioneer who is droning in his professional, sing-song manner as if this were the most commonplace occurrence:

Old Pewter Treasures

"A BUNCH of cowbells, three flatirons heavier'n boarding-house biscuits, a carpet bag—just the thing to go to Boston in—and a gilt-framed motto worked in worsted, 'God Bless Our Home'—all in one lot. Ten cents I'm bid—who'll make it fifteen?—ten—ten—ten is bid—ah, fifteen it is—going strong, ain't you, Abner Davis? Those cowbells will come in handy for your wife to hang on your neck and follow your tracks when you go out nights; who'll make it twenty—twenty is bid—make it a quarter, Abner—quarter, quarter. Bill Hedges makes it thirty cents; Bill's courtin' a girl over Strafford way, I hear—mebbe he wants the motto to furnish the home he's aimin' to get for her. Are you all done? Thirty—thirty—thirty, last call—and sold to Bill Hedges. Take 'em away, Bill."

"I'm going to give the motto to Jonathan," sheepishly stammers the rosy-cheeked, strapping young farmer. "Seems as if it belonged to him and nobody else."

A wintry smile gleams for an instant athwart the flinty countenance of Jonathan as Bill presents him with this offering. The old man holds the frame in his lap, and the faded legend, "God Bless Our Home," thus displayed in its garish embroidery of red and green worsted, has become pitifully ironical. The auctioneer holds aloft a nest of pewter platters, and the blasé dealers in antiques prick up their ears. The farmer folk have no intention of bidding against these sharp-eyed gentlemen from the city who have somehow got wind of the auction. Old pewter such as this is coveted by persons with more wealth than ancestry. What a pity that Jonathan can not sell a few dozen ancestors along with his pewter, for he has his own burying lot filled with rows and rows of them.

The auctioneer addresses himself to the rival dealers with impassioned earnestness. First the one nods to indicate a higher bid, then the other deliberately wags his head, and so sharp and determined is the competition that presently the twain are bobbing away like automatons wound up for all day. At length one of them, whether from prudence or a pain in the back of the neck, nods no longer, but shrugs his shoulders,

The old high-backed sleigh that grandfather used

turns his back on the scene, and leaves the spoils to the victor.

"Them pewter plates was a wedding present of my grandmother's," Jonathan mutters to another patriarch. "I asked my granddaughter to hold 'em out of the auction and keep 'em, but she said they was ugly rubbish and the dealers 'nd give a lot of money for 'em. Pewter is grand when it's kept bright," says I, "but she couldn't see it that way. I always was fond of that set of plates."

Fun for the Neighbors

"A WARMING-PAN, pair of tongs, a footstool, and three tall hats," cries the auctioneer. "The hats is a leetle mite out of style, but they'll do fust rate to set hens in. The warming-pan is just the thing for boilin' maple sap, and the tongs are strong and heavy enough to extract a dollar from Deacon Maxwell's pocket. Could I give 'em a better recommendation? Ah, there you are, Deacon. I didn't see you. Half a dollar I'm bid—make it sixty—here, I'll throw in a hymn-book dated 1834—crammed to the covers with orthodox melodies—same as they used to carry to singin'-school when that old high-back sleigh yonder was new. Sixty—seventy—eighty—eighty—eighty—eighty, and sold to Mrs. Henry Brown."

"I just can't help going to auctions and buying all kinds of things I haven't a mite of use for," said Mrs. Henry Brown. "My attic is full of it. I guess it must be my besetting sin. What in the world am I going to do with another old warming-pan? Seems as if I lost my head at an auction."

The monotony of the auctioneer's task is varied by many a rough-shod joke and personal thrust, at which his hearers laugh uproariously. The dealers in antiques appear more and more bored until the interminable catalogue of odds and ends has been disposed of and the furniture is put up for sale. The old pieces bring such high prices that Jonathan's granddaughter from Newmarket is amazed, because they are such hideous, somber, dilapidated old things compared with her shiny, spick-and-span parlor and bedroom sets from Grand Rapids.

The Empty Barn

"HE TOLD me some of these dealers had been snooping around trying to buy the old furniture more than once," says she. "But I didn't pay much attention to him. Grandfather is getting kind of childish anyhow, and he wouldn't sell a piece or stick of the old things for love or money, bad as he needed it. He'll do real well with the auction at this rate."

As for Jonathan, he has wandered off to the barn. He hasn't much to say, but the sight of these friends and neighbors wrangling for his possessions like a flock of crows in a cornfield is painfully depressing. Before long the auctioneer will be invading the barn, with a clamorous crowd at his heels. Jonathan wants to say good-by to his team of horses. He raised them as colts. Now they are as lean and unkempt as the neglected, impoverished fields. Too poor to buy grain, too feeble to raise it, Jonathan has let the faithful team "run down" until it matches the farm. Jonathan feels that he is a silly old fool, but maybe he would like to say good-by to the cows, too. He almost stumbles over an old dasher churn stored in an empty stall with other discarded utensils. His father made that churn, his mother used it forty years, and his wife after her. He halts and says to himself:

"By eriekets, they can talk about their new-fangled churns, but no butter ever tasted as good as what our women used to make in the dasher. Yep, there's that durned old churn. I dunno as I've seen anything hauled out to-day that brings the place back to me as it was fifty years ago."

The spacious hay-mows are almost empty. Daylight streams through innumerable cracks and knot-holes of roof and walls where age has shrunk and rotted the shingles and weather-boarding. But the great hewn timbers of the framework tower aloft with something of the enduring strength and dignity of a cathedral. These beams and trusses and sills have withstood the winter gales of a hundred years, and look stanch to endure through another century. Jonathan peers into the warm, fragrant dusk of the cavernous barn and falls to musing. What will he do with himself with no stock to feed, no cows to milk, no other chores? What if nobody buys the old place? Will the stout barn rot and tumble in a heap of unsightly ruins? This possibility worries Jonathan. The barn is so intimately in-

Shipmates with Gasoline

The Motor-Boat Has Become a Prominent Feature in the Holiday Equipment

By WINFIELD M. THOMPSON

OUR summer home stands on a pine-clothed hillside by the sea. In the granite shore at the foot of the hill is a pocket of harbor that has a bit of white beach and water pale green to a good depth over gravel bottom. In this sheltered spot, always in view from the cottage door, swings on a long mooring line our cruising launch, the *Captain Kidd*.

You are to believe there never was a power-boat more nearly perfect in its owners' eyes than this one. Some of our neighbors, not in this secret, who own larger and swifter boats, affect sympathy when they pass us in the bay; but in our breasts no envy is roused by them, and Lillis, with woman's philosophy, declares that no added essence of sea and air is extracted merely by speed and mahogany.

We had never been shipmates with gasoline until we built this boat. Months of planning, drawing, estimating, corresponding with engine manufacturers and boat-builders, had preceded the boat. Although new in the power game, we had certain well-defined requirements. They were: A well-built, graceful hull, easy to drive and suited both to seagoing and river work; sleeping quarters for two and room for cooking; a simple engine of reliable type, adapted to moderate speeds; finish to be plain and substantial; the cost to be moderate.

Planning the Boat

THE pleasure of planning the boat and seeing it grow under the hand of a kindly old builder was as sweet as mortals would want to know; and its usefulness when in commission was perfect proof of the pudding. The boat suddenly widened the scope of our summer life. The coast far and near was soon to us as one neighborhood. Markets ten miles off became accessible daily. Friends we did well formerly to call on once a season now stood ready to receive us even before breakfast. Our boat is better than a magic carpet, and gasoline a more reliable magician than the genii, either for the performance of duty or the pursuit of pleasure.

There is variety in the expeditions we make in the *Captain Kidd*. Bays, rivers, and the ocean are fretted by our wheel. Hamlets, villages, and cities are within our cruising range. Sometimes we head offshore, and,

Inland water gives opportunity for land excursions

on the compass bearings of an old sea fight, cast anchor and engage in fishing for cod or haddock. We are guided back at night by the cheery red wink of the lighthouse off our point, and in glassy calm glide swiftly past silent bell-buoy and weed-brown rocks into our little cove with its crescent beach of white. Many a picnic we make to odd places on the coast. We know a little and ancient harbor on one of the eastern islands, where lobstermen keep their catch, and we may buy the sweet meated shellfish red from a steaming pot. In the next bay we have built a stone fireplace on a rocky islet, where at times we land to cook our fresh-caught fish over coals of driftwood or flame of pine cones.

We are pilots also for farther journeys. We explore the rocky inlet at the head of the bay and the salt river that comes into it, bordered by farms with houses snug and white, having the greenest of green blinds. We make a longer voyage now and then up the great fresh river to the west of us that comes down past forest, field, and town, an amber flood, from the big lakes among the mountains.

First Lessons in Gasoline

IN LITTLE lessons to Lillis when the boat was new, I explained the action of the gasoline engine:

"A jet of gasoline, which is thinner than water, is sprayed, as one would spray any liquid from an atomizer, into the chamber of the engine's cylinder head, which it reaches in the form of vapor, having been mixed with air. Here it is compressed by the rising piston, and when it is at its smallest compass an electric spark is introduced into the chamber. The result is an explosion of the compressed vapor. This sends the piston downward. The shaft is turned, and with it the boat's propeller. This operation, repeated from four to six hundred times a minute, constitutes the continuous action of the machinery which sends the boat ahead."

Lillis had read humorous writings on stubborn engines that cause sweat, toil, and profanity, and she asked:

"But how do you start the thing if it stops?"

"The moves are simple," she was told. "First turn on your gasoline as you would turn a [illegible] The gasoline fills the carbureter (that's the [illegible]

Going through the lock is always interesting and sometimes exciting

feeds the engine, acting automatically). Then turn on your electric switch (that's for your spark). Then turn the flywheel two or three times—sometimes once will do—to move the piston up and down and get your first explosion, and off she goes. Then open your oil-cups, to keep the bearings lubricated while the engine is running.

Only Ordinary Care

"IF SHE stops, look over your sparking gear, batteries, and wiring; see if the gasoline is feeding properly, then try her again. There are many causes for an engine stopping, but generally a simple one is found. A gasoline engine needs only half-decent care, and it will do anything for you."

And other words to this effect.

The *Captain Kidd* is a plain, simple, usable boat twenty-five feet long and eight feet wide, with bow and stern cut off plumb, making the hull compact and "all boat." The cabin is ten feet long, with strong oak sides and brass-rimmed ports for ventilation and light. The cockpit—a boat's outdoor sitting-room—is the same length. The engine is a moderate-cost, plainly and solidly built machine of a type proved good by the hard service of fishermen in our neighborhood. It has a single cylinder, and is rated at eight horsepower. It is installed under a short bridge deck at the end of the cabin-house. The fuel tanks, holding forty gallons of gasoline, are under the cockpit seats. The piping for conveying the fuel is direct, simple, and strong. Leaking gasoline could not generate vapor in the cabin. Therefore there is no danger of explosion.

The cabin has two slatted berths with hair mattresses, a removable table, an ice-chest, a small coal range for cold days, and an alcohol stove for ordinary use. Storage lockers and water tanks have capacity for a week's supply of stores for two persons. We can take out a party of eight for a day. Even thus laden, the *Captain Kidd* is good for eight miles an hour.

All this was secured at an initial outlay of $900—not the lowest price for a cabin boat of that size, but the lowest at which a good boat can be built in our part of the country. The cost of half a dozen boats like ours scarcely would buy a car for the road, and a boat outlasts a car by many years. One finds unctuous comfort in this thought, even though admitting that the road does not appeal to him.

Satisfaction also is ours for the merit of taking up with so great an economic agent as the gasoline marine engine. In the field of industry, as well as in sport, it has had marvelous development. Since the windmill first spread its arms to the breeze in the East, no other piece of mechanism has had a more marked effect than the gasoline engine on the pursuits of outdoor toilers. Labor gleaning the sea from shore now depends on gasoline as on its right hand. The Down East lobsterman has an engine in his sloop; the Cape Cod fisherman in his catboat; the Long Islander in his sharpie; the Virginia oysterman in the bugeye; the sponger of the Florida keys in his schooner; the New Orleans boatman in his lugger. The river freighter, the coaster, and even the amiable smuggler of Chinese, each has his engine. He may cling still to the sail, but its passing is foreshadowed for this kind of craft by the cutting down of spars, the reduction of sail spread, and the less and less frequent hoisting of canvas. Saving of time and regularity of movement more than compensate for the cost of gasoline.

Tempting Busy People

FURTHER, we may well believe no other single agency has done so much as the gasoline engine to lead busy Americans into habits of periodic relaxation. It gratifies the national love of motion, speed, and change, bringing the active money-getting classes as near real leisure as they may expect or care to be brought.

The man accustomed only to yachting with the sail finds new ideals in the sport of power-boating. Directness of course and capacity to cover distances in stated times make the power-boat's performance one of reasonable precision. Plans in this sport, therefore, are positive and not tentative as when one waits on wind and tide. The gasoline engine is always ready for action, and can work equally well in calm or tempest.

Power-boats used for pleasure are found on every water. Lakes and streams that once knew in navigation only the Indian's canoe, next the woodman's bateau, and then the modern rowboat, now bear hundreds of power craft. Recreation grounds hitherto inaccessible ordinarily are now within touch of town or city. On a summer week-end in all parts of the country the power-boat hosts, in holiday spirit, head for places cool and green—islands, lake-shore coves, river banks, seaside harbors, or sylvan groves beside clear streams.

When we go out in the *Captain Kidd* we feel ourselves kin to all other shipmates of gasoline. Social barriers melt when power-boat men meet in friendly converse at docks and anchorages, and question each other thus:

"What is the make of your engine?"

"What power have you?"

"How many revolutions does she turn up?"

"What speed do you get on that?"

To Suit Every Purse

OUR friend the clam-digger, using a cheap little two-horse engine in his dory, talks "bo't" in easy confidence with the millionaire who has a 300-horsepower machine in his yacht and an electric-lighting and heating plant to boot. We of the *Captain Kidd* feel quite free to discuss spark-plugs, carbureters, cylinders, timers, grease-cups, and the like with our neighbor the banker whose boat cost $10,000 and makes twenty-five miles an hour. It is merely a "ferryboat," the owner explains. The fifty-foot hull is of mahogany, polished like a rosewood grand. The engine has 175 horsepower. The owner grieves if this machine does not take him over the seventeen miles of water between his house and the railroad in forty minutes. Contemplation of him does not dull our enjoyment of the *Captain Kidd's* passage of two hours for the same distance. The gasoline ferryboat is the rich man's luxury, and is built largely for speed. On 50 feet length it has a cabin merely large enough for shelter from rain. In the cabin one notes a mahogany ice-chest.

Utility and Speed

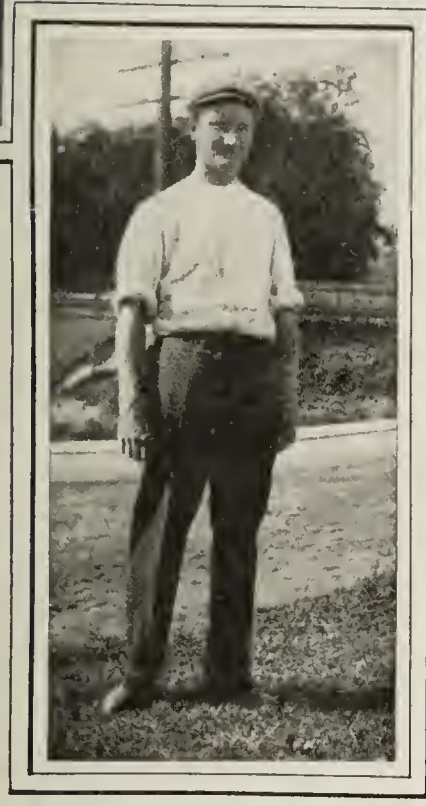
THE private ferryboat represents the greatest utility of high speed in a launch. The speed boat, pure and simple, has no other mission than to create records or race against other speed boats. A knife-like hull of the lightest woods, its sides hardly thicker than the back of a violin, its interior filled with its engines, will last but one season. Such a hull, forty feet long, weighs about 1,500 pounds. Its engines, of about 200 horsepower, weigh about 3,000 pounds. But this frail craft can cover a single mile much faster than the *Mauretania*, 790 feet long, with engines of 70,000 horsepower and weight of 45,000 tons. The *Mauretania's* record speed across the ocean is 25.62 knots, or about 30 land miles, an hour from shore to shore. Her best speed for a short distance is 29 knots. An American power-boat 39.95 feet long (the *Dixie II*), having engines of 190 horsepower, has covered a mile at the rate of 31.09 knots, or 35.08 land miles, an hour. An English boat 50 feet long, but having 700 horsepower, had bettered that, but only by about two miles an hour.

The short life of the speed boat and its high cost make it the exotic of power-boating. Racing such boats is still experimental. The racing of cruising power-boats, chiefly on long courses, on the other hand, has become a feature of sport at home and abroad, and flourishes particularly in America. Such a race is run annually from New York to Bermuda, on a course of 675 miles. Another is between New York and Marblehead, 285 miles, while similar races are held on the Great Lakes, the Gulf, and the Pacific. These races are valuable in demonstrating the merits of engines and fittings, and determining the best sea-going models. A race across the Atlantic is a possibility of the not remote future. One gasoline-driven boat has crossed the ocean already, the *Gregory*, of 90 feet length.

Difficulty in carrying sufficient fuel for the passage has discouraged similar long voyages. A large gasoline cruiser of to-day—they are now built 125 feet over all, with engines of 500 horsepower—could cross easily with extra fuel-tanks installed.

The larger power yacht has taken the place of the medium-sized steam yacht of a few years ago. With less bulky machinery, no boiler and no coal bunkers, a power cruiser affords better accommodation than a steam yacht of the same length. The cost of operation is less, and the speed attained equal and often greater.

The power yacht of 100 feet length, for family use, often takes the shape of a broad-beamed and comfortable houseboat. In such a boat a party of ten or a dozen may cruise from north to south in winter, and the reverse in spring, making a new harbor whenever fancy dictates, and lingering in pleasant ports.



Cruising and the every-day uses of thousands of substantial craft conservatively engined are the life and body of the sport of power-boating, of which racing is only a variant. Of the workable, usable, economical, and dependable power-boat, the *Captain Kidd* is a representative; and with her engine running well her owner cares not how the winds may blow or who is richer than he.

The Poor Man's Game

The Triumphant March of Golf

By VAN TASSEL SUTPHEN

"GOLF is the poor man's game," says Mr. Taft. but that generalization is narrow; for golf is also the game for everybody. It is the one purely athletic sport in which woman comes the nearest to holding her own against masculine rivals. We may begin its practise as soon as we are able to walk, while only recently the papers reported the passing, at eighty-two, of a well-known North Berwick amateur who had played his last round but three days before death. Mr. Rockefeller and Mr. Carnegie enjoy their game to the full, but so do the penniless caddies playing at tomato-can holes with cast-off clubs and battered balls. A native-born Maori won the amateur championship of New Zealand a year or so ago, contending against a field of white men. Mr. Louis James, while still a schoolboy, became amateur champion of the United States, and Mr. Charles Hutchins won the like honor in Great Britain, although he was well over fifty years of age and a grandfather. In very truth, golf is for all sorts and conditions of men—everybody's game.

And yet golf might be distinctively the poor man's game, here as in Great Britain, if only the poor man himself would awake to its possibilities. For example, golf is a sport that does not necessarily require the cooperation of other players, as do baseball and football and hockey. A man may play against a single opponent, or he may take on "Colonel Bogey" and make the round all alone—perhaps playing two balls. Again our match may be at the orthodox eighteen holes, or we may play just so long as time and daylight permit. In many localities golf may be enjoyed throughout the year. The true golfer minds a little rain no more than a duck; nothing short of a heavy fall of snow makes the game impracticable.

What it Costs to Play the Game

THE question of expense. Well, the cost of three or four clubs (all that are really necessary) is not prohibitive, and a properly made ball will often play for a dozen rounds, and then only require repainting. Only the very near-sighted man is actually dependent on his caddie, and there are mechanical devices on the market that save the player the fatigue of stooping to pick up his clubs. A pair of hob-nailed shoes is the one special article of costume required, and the player's consumption of Scotch whisky and other forms of refreshment is purely a matter of personal taste—and capacity.

To be sure, there is the consideration of a suitable playing course; and, as compared with other games, golf does require a large area for its exploitation. But here comes in the public playground, an idea of slow growth in a republic, but one whose value is being better realized as time goes on. New York now maintains three public links, Chicago has two, Boston one, and Philadelphia will have two in the near future. Many of the smaller cities of the Middle West already possess public courses, or intend to establish them. For instance, there is the Waveland Park Links at Des Moines, a town whose population is only 56,000.

But even where golf is not a public utility, cooperation among those interested may make it a possibility for the small community. There is always some comparatively valueless land in the vicinity whose rental is cheap, and the members of the club can care for the upkeep of the course themselves. The regulation eighteen holes is not imperative. There are plenty of nine-hole links; even a course of six or five holes is not to be despised. Portable "knockdown" houses are sold at very moderate prices, or an old barn may be transformed into a good enough club-house.

Public Courses Spoiled by Politics

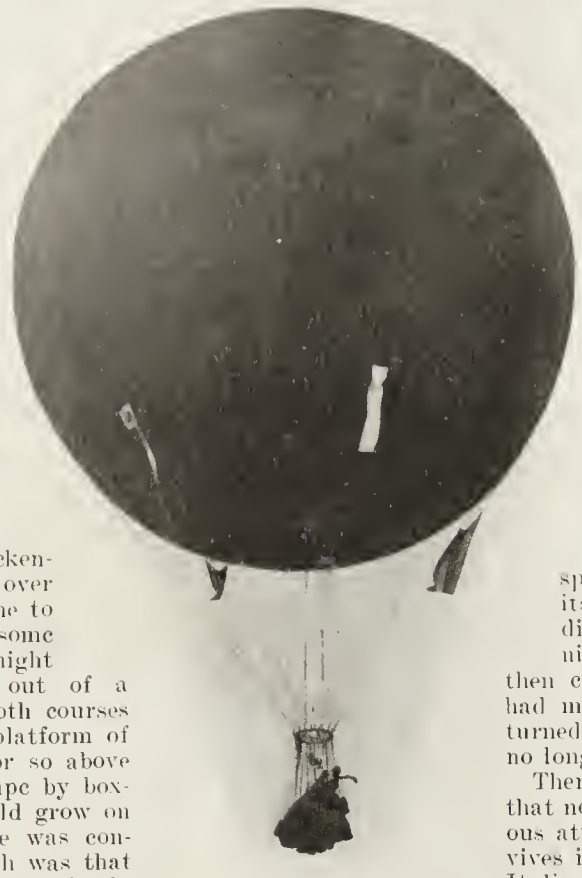
THAT the poor man does take to golf, if given half a chance, is abundantly proved. Last season, at Jackson Park in Chicago, over eighty thousand course tickets were issued. The public links of New York City are well patronized, and there would be a still larger number of regular players if conditions were what they should be. But, unfortunately, many of the public courses are controlled by local politicians with the usual results.

Golf the game for everybody? Well, the year-book of the United States Golf Association gives the number of associate and allied clubs at 286. A careful estimate would place the number of unattached clubs at something over eleven hundred, or say fourteen hundred in all. Probably the average value of the property held is around $10,000, an aggregate of $14,000,000 of invested capital. The membership runs from seven and eight hundred, in the larger clubs, down to twenty-five. An average roster of 125 would give a total of 175,000 players. Adding the unattached golfers, who use the public links, and the whole number can not fall short of 200,000 players. Finally, it is conservative to say that the golfers of the United States are spending at least $10,000,000 a year on their favorite amusement. Most assuredly golf can not be classed with polo and court-tennis as a game for the favored few.

With all this in mind it seems difficult to realize that, until fifteen years ago, our acquaintance with golf was restricted to casual paragraphs clipped from the English papers. For two or three years before that time the "Apple-tree Gang" had been playing at golf around Yonkers, but no one paid any attention to these harmless lunatics. Then "society" awoke to the possibilities, sartorial and otherwise, that lay perdu in the new game, and enterprising women of the Morristown colony followed the lead of Newport and Shinnecock and organized a club. There were men members, but they were only for ornament; it was not thought possible that the masculine mind should ever take golf seriously. This was in the early summer of 1893.

The Boom Starts

THE Morristown men came to look on, perhaps to scoff, but they saw Willie Park perform the miracle of pitching the easiest kind of a stymie, and forthwith they were convinced that there was something after all in this "Scotch croquet"; in a word, the boom was on.



So golf started on its march of conquest, and links multiplied on every hand. Not that all of these early courses were worthy of the name. There were links in Florida quite innocent of any description of grass, holes where a vast sand-bunker extended from teeing ground to the very edge of the putting "brown." There were northern courses where golf was not played at all, its place being taken by a game which might have been called "getting out of trouble." But the interest continued to grow apace.

As a general thing these early courses were divided into two main groups. First, the "park" links where the playing area was a huge field scrupulously cleared of every possible encumbrance, and with the fair green trimmed and cropped to within an inch of its life. True, there were hazards, but these consisted, for the most part, of enormous cop-bunkers, extending, at mathemat-

The Country Club at Haleiwa, Hawaii.—*It is built of lava and shingles, and half-clad native caddies may be seen grouped on the pi*

and right angles near across the fairway. It was customary to place one of these fortifications about sixty yards in front of the tee: and, at nearly every hole, the green was guarded by a similar erection, situated as close as possible to the flag. The one idea of these primitive golf architects was to compel the player to hoist his ball over something: if he could do that he was a golfer, and the fact that he was all the time playing at blind holes mattered nothing.

The antithesis of the "park" course was the "sporting" one, so-called. Here the idea was to make the game as difficult as possible, and its typical hole was a narrow (far too narrow) neck of land bounded by innumerable terrors. In doing a round on a "sporting" course the golfer was obliged to dodge around pigeon-traps and ice-houses, loft over kitchen gardens and stables, negotiate "Liverpool jumps" and chicken-wire hurdles, struggle painfully over plow and stubble, and finally come to hopeless odds with his ball in some yawning, rocky chasm that might have been transported bodily out of a Wagnerian stage setting. On both courses the typical teeing space was a platform of hard-baked clay, raised a foot or so above the ground-level and kept in shape by box-sidings. Of course, no turf would grow on this inhospitable area, and none was considered necessary. Another fetish was that all putting greens must be mathematically level. At Shinnecock a civil engineer was actually employed to plot out the greens with his instruments, to insure a perfect grade, the least undulation being rigorously excised.

There was little appreciation of the real nature of the game in those early days. Pompous persons in red coats obstructed the landscape, or battled valiantly at the "nineteenth hole." Medal play was preeminent, and competitions for innumerable prizes abounded. Poor, indeed, was the golfer's sideboard that displayed no specimen of the silversmith's art, while the champions were obliged to seek storage space for their loot. Fashion ordained the wearing of the red coat, knickerbockers, and heavy woolen stockings, a costume manifestly unsuited to our semi-tropical summers. But the golf balls were carried packed in ice—how subtle the irony implied. The club-makers did a roaring trade, it being well understood that golf was merely a question of finding the club with which one could play. Fearsome, indeed, were some of those golfing tools! For example, the iron soup plate that was called a lofter, and the driver that looked like the section of a horse's hoof. And, of course, every one invented a private putter, and played with it more or less badly. So it went.

And yet the game flourished in spite of the cheerful ignorance of its supporters and the stupid prejudices of its detractors. For eight or nine years the boom went on, and then came the reaction. The motor-car had made its appearance, and "society" turned eagerly to its newest toy; it was no longer "the thing" to play golf.

There must be good stuff in a game that not only holds its own in the poisonous atmosphere of snobbishness, but survives its withdrawal. And this golf did. It lived through its critical period, and came out stronger and better than ever: it was here to stay.

Our courses are steadily improving, and all of the older links have been arranged and rearranged, with the single-minded idea of making them better tests of golfing skill. This real progress is almost entirely due to the intelligent work and interest of a small group of men, among whom may be mentioned Mr. H. C. Leeds, Mr. W. J. Travis, Mr. C. B. Macdonald, and Mr. Devereux Emmet. The Myopia course, at Hamilton, Massachusetts, is admittedly the finest test of golf in the country, and it is all the product of Mr. Leeds's brains and energy. Mr. Macdonald and Mr. Emmet have been jointly interested in the laying out of the new "National" links near Shinnecock, and every effort is being made to make it the model of its kind. Ideas have been borrowed freely from foreign sources, but there has been no attempt at slavish imitation, and only a few of the holes have been copied in detail from famous old country prototypes.

The modern tendency in golf course construction is to eliminate the cross-bunker entirely, and to provide innumerable traps for the long and wild driver. It is a question if this theory has not been worked to death quite as effectually as was the earlier one of omnipresent cross-hazards. It used to be: How far can you go? And now it is: How straight can you go? But the whole of golf does not lie in either of these perfections. A golfer should be encouraged to keep straight, and he should be rewarded for being long. Fortunately, there is a working theory under which both of these essential conditions may be satisfied—that of the alternate line to the hole. The hard hitter, who goes for the long carry, finds himself with a shorter or easier approach to the green. Conversely, the player whose strength is in his short game, passes the long risk, with its attendant temptation to pressing, and trusts to his skill with the irons to pull him up even. Under such tests golf becomes a game that must be played with the head as well as with a club.

The Flower of Courtesy

THE true foursome exists only in name, and its successor, the four-ball match, is a nuisance, as witness certain legislation lately adopted by the Montclair Club to suppress it. Admittedly the four-ball match is a very pleasant form of the game—for the players engaged in it. It promotes sociability, and it affords large opportunities for the satisfaction of the petty gambling instinct. One may bet on the match, and lay minor wagers with his partner or opponents; extras may be won on the "birds" and the "eagles"; the by-holes decide who is to pay for the luncheon, and so on. No one could seriously object to all this, if only the four-ball match did not clog the green; if only these selfish players would remember to recognize the undoubted rights of the single matches behind. And to recognize these rights is quite another

(*Concluded on page 26*)

Scouting Among the Clouds

The Balloon as a Manageable Carrier

By DAVID TORREY WELLS

WHEN a four-funneled, twenty-seven-knot steamship sets out from New York Harbor toward Europe, the officers of the company at the dock and the captain on the bridge do little worrying about the ocean currents which the big boat is going to meet on her journey across the sea. They may worry a little about the possibility of her meeting head-winds, but only then because the head-winds may make her passage a little slower than the record. She is almost sure to plow through on near to schedule time. When a man goes up in a balloon, with a circular bag, a dirigible, or an aeroplane, the winds of the air are his all-concerning problem. Take the man in the circular balloon or aerostat, if the wind is toward the west, why west he goes unless he can find another current, whether or not in that direction lies a body of water where a landing means sure death or a very narrow escape.

If, on the other hand, when the four-funneled, twenty-seven-knot steamship got outside Sandy Hook, it were sure to find a current, itself going at twenty-seven knots, which would land it near Southampton, it would mean that to Europe in two days would be an established fact and that the ocean would do most of the work for which the stokers now get credit. If the man in the ship of the air can find such a current in the heavens, then the perfected ship of the air has that much advantage over the perfected ship of the water.

The wind has been one of the greatest causes that have retarded the navigation of the air. When the airship is perfected, and Jules Verne is justified, the winds which have kept back the fulfilment of the narrator's prophecy will be the very elements which will make aerial travel superior to crossing the land in trains or the sea in ships. The current which in the sea would take the steamship from New York to Liverpool in two days waits in the air for man to use. Already the man in the spherical balloon with his tiny basket dangling beneath it has made use of this current—only partial use because he has to submit himself entirely to it—but when man brings forth the airship that can successfully combat the wind and that can stay up until its pilot wants it to come down, the wind will do easily and noiselessly what is now done by the soft coal and the stoker with much black smoke and sweat.

Regular Currents in the Upper Air

THE study of the winds of the air is still in its swaddling clothes. Until within the last few years, when the navigation of the air, the real, useful navigation which means commerce and increased speed in transportation, seemed possible, there has been very little incentive to the study of the upper air currents. The study of the currents near the surface of the earth, especially the most variable ones, has been given a great deal of attention because their presence might mean storms which were to be feared by the sailor and the farmer, but even their study is of comparatively recent date.

The general laws of surface winds are known to every one who has ever studied a weather map. Almost every one knows the generality that winds blow out in spiral [illegible] from [illegible]ons of high barometric pressure, and in [illegible] in spi[illegible]urses toward regions of low pressure. The barometers reporting from all sections tell the weather men pretty definitely the direction of the winds near the surface of the earth. They know, too, of the steady winds, like the trades, and the general direction of the surface currents.

The winds near the surface of the earth were the only ones about which it was necessary for man to know as long as he kept near the surface of the earth. But when he began to take balloons and go to the upper levels of the air, higher than the surface currents go, it was needful for him to know what winds he was likely to meet.

The study of the air above the surface currents has been carried on in a number of different ways. The first was the observation of the clouds, which are the seaweed of the air, and tell by their drift the course of the currents. It was easy to see by the most casual observation that the upper air currents differed from those near the surface of the earth. There was also the method of the investigator going up into the upper current himself to study it. But this meant that for each observation the cost of an ascension, which is considerable, had to be undertaken.

So the "balloon sonde" was invented, the sonde balloon which goes up to make soundings of the upper air, which bears the same relation to the navigator of the air that the lead bears to the navigator of the water. It is a small balloon, from fifteen to thirty feet in diameter, and the latest ones are made of a rubber design introduced by Dr. Richard Assmann, director of the Royal Prussian Aeronautical Observatory. These balloons are capable of rising to a height of from six to eight miles before they burst. To them is attached a parachute, from which is suspended a basket containing an instrument which registers temperature, barometric pressure, and humidity. From the course of these balloons, which are visible a long distance, it is possible for the observer to get the directions of the winds at the various heights which the balloons reach, and they can reach a height where man would die because of the rarity of the atmosphere.

It is these balloons which have practically proved what the observers have for a long time believed—the existence of regular winds which are constant in the upper air. For north of the thirtieth parallel of latitude in the upper air is a constant steady wind blowing toward the east.

It is the existence of this wind that strikes the newcomer into the realm of aeronautics as the most wonderful fact and the greatest propheey for the future. Its presence has been known for a long time from the movements of the clouds and the observations of aeronauts, and all experiments which have been made bear out the fact that north of the thirtieth degree of latitude there is this constant easterly wind, which becomes more pronounced and stronger the farther it gets from the earth's surface.

Its distance from the earth's surface varies according to the depth of the lower air currents, but above him always the aeronaut knows that there is this "sure-

Getting ready for the international race at Berlin

Looking down on the Springfield Country Club

thing" wind. It was the "sondes" that proved very conclusively that this current exists.

Of the "sondes" that were sent up at St. Louis by the staff of the Blue Hill Observatory of Hyde Park, Massachusetts, in experiments which they made and which extended over some months, every small balloon, almost without exception, that reached any considerable distance from the earth took a generally eastern course, no matter what was the direction of the wind at the earth's surface. How strong this upper wind is at some heights can be gathered from the fact that one of the "sondes" sent up from St. Louis landed four hundred miles away, just four hours after it had left the hands of the observer at St. Louis.

Not only have the "sondes" proved the existence of this steady wind traveling toward the east, but the men who have gone up in the spherical balloons or aerostats have noticed it and have found that, although it varies as to its height from the earth, they can almost invariably get into it without going where the air is too rare for comfort.

The general impression rules that the man who makes an ascension in a plain spherical balloon has no way of knowing where he will land. It may be to north or to south, to east or to west, on land or in water, and the direction and the place are known only to the winds themselves or the Power that makes the winds. This is a fallacy, for the man who has studied the winds can tell with a surprising degree of accuracy where his balloon will alight unless something unforeseen should happen.

A study of the weather map will show him in what direction the surface winds are blowing. If their course is favorable, he can take the surface current and tell with a great deal of certainty where his basket will land. There are a great many variations to the surface currents caused by the inequalities of the land and the local conditions of the places where the winds exist.

A mountain, for instance, will change the course of a wind, for there seems to be a little individual breeze of its own blowing around every mountain or range. For example, if a wind blowing in a generally easterly direction strikes the current going around a mountain in a southerly direction, there is an average of the two forces struck and the wind goes on toward the southeast. On the other side of the mountain, however, the mountain's current is going in a northerly direction, and the wind toward the southeast, meeting the wind toward the north, goes on in a generally easterly direction again.

There are also the land and water currents, for the temperature of the water changes much less rapidly than does the temperature of the land; the wind flows from the warmer land to the colder water, or *vice versa*. These are only a few of the conditions that have an effect on the winds near the surface of the earth, and all of them must be taken into account by the balloonist who wants to use the surface currents to propel his airship.

If, however, he does not want to trust to the variable currents near the earth, the aeronaut can go higher. There at some height he will find his easterly trade wind of the upper air. How far he may have to go to find it, he can not be sure.

Aeronauts disagree as to the distance from the ground, which varies according to the strength and depth of the surface currents.

Mr. A. Holland Forbes, an aeronaut who has made a careful study of ballooning, states that he has never failed to find this current under 12,000 feet, except once when he had to go 18,300 feet to find it.

Some Advantages of the Balloon

WITH the upper and lower currents to choose from, the aeronaut can take advantage of both to get to the place for which he has set out. That is another advantage a balloon has over a ship. The ship can get only the surface currents of the water and the wind, the air machine can go through the depths of the upper air searching for the wind it needs.

When Oscar Erbsloh of Germany and H. H. Clayton of the Blue Hill Observatory left St. Louis in the Gordon Bennett race of 1907, the general direction of the surface wind was toward the northeast. That would have taken them directly over the Great Lakes and would have made landing a dangerous feat. So they rose through the surface wind, got the easterly trade wind of the upper air at about a mile from the ground, and went directly toward the Atlantic Coast. When they found that they were going to be able to get that far, they formed the plan of coming down to catch the surface wind and be taken northeasterly again to New England.

A cemetery and a race-track

PHOTOGRAPHS FROM A BALLOON BY JAMES H. HARE

They were compelled, however, to go up into the easterly wind of the upper air again to escape a range of mountains, and when they got down into the surface current they were so close to the coast that they were compelled to land. They reached the ground a few miles south of Sandy Hook on the New Jersey coast. Their record of 872¼ miles, however, won the race. This is just an instance to show how already the men in the spherical balloon, who can not steer or propel themselves, can make use of air currents to bring them where they wish to go in a short space of time.

Mr. Forbes left North Adams one day, with an easterly wind driving him dead west over New York State, at a height of from 1,000 to 3,000 feet. When his ballast was half used he ascended to about 6,000 feet, found the current and returned to within five miles of his starting-point. He has demonstrated this current many times, and believes that he can always go toward the east, provided he is in a large enough balloon to go at a height of 20,000 feet if necessary.

Theory of the Constant Wind

THE origin of this constant easterly wind in the upper air seems to be a combination of the difference in temperature between the poles and the equator and the motion of the earth. The tremendous mass of hot air at the equator rises, and when it reaches a sufficient height makes a dash to fill the space made by the contraction of the cold air at the poles. As it goes outward it receives an impetus from the revolution of the earth toward the east. The result of this is broad spiral bands which have a direction slightly north of east, north of the thirtieth degree of latitude.

Between this parallel and the equator at the vortex of these spirals, however, the centrifugal force seems to have a directly opposite effect on the winds of the upper air, for from this point to the equator there seems to be a broad band of strong wind that is going directly west.

At the time of the eruption of Mount Krakatau in Malaysia in 1883, an immense cloud of dust was thrown up miles into the air. The main cloud immediately struck this equatorial wind and started around the earth toward the west at a terrific pace. It went around the world at its greatest diameter in two weeks' time, cutting Nellie Bly's record in half and maintaining an average speed of approximately seventy-five miles an hour. The edges of the dust cloud, on the other hand, got north of the point where the easterly wind commences and were swept around the earth toward the east in a direction absolutely opposite from the motion of the main part of the cloud. This is one of the many phenomena which have led to the belief that between 30° and the equator exists a westerly wind as constant as the easterly wind which is between 30° and the north pole.

These are two of the upper air currents which the investigators have discovered. When the navigation of the air approaches nearer the perfection which the navigation of the water has reached, other constant currents may be found which the aeronaut can use to carry him where he wants to go. Particles of dust frequently come from Africa over Spain to England, and there are other signs which seem to point to other constant currents which will show themselves when man comes to chart the air.

With his present knowledge, give him a dirigible or an aeroplane which can reach any level where a human being can live, can stay up indefinitely, and has the power to combat wind and steer successfully, and the air currents will do the rest. Considering the strides that have been made during the past few years, an airship with all these attributes does not seem too much to predict. The fulfilment of the prediction will mean travel at a terrific rate of speed with no discomfort and all the exhilaration of the upper air.

Suppose, for instance, a man wishes to go to Europe from New York. His airship rises above the city seeking the eastern current. It finds it.

How swift this current is at the lower levels is shown by the fact that in the upper air higher than man can go it reaches a velocity of from 100 to 200 miles an hour. Much of this speed remains in the lower levels where man can live. When the airship strikes the current that it wants, it starts eastward. To its own speed is added the speed of the steadily swift wind. Without motion or jar to its passengers, above fear of clouds or fogs or surface storms, it keeps its even, smooth way and lands softly in its London dock two days after it has left New York.

But how is the airship going to return, beating its way against the wind that brought it? It does not beat against it. It seeks a surface wind toward the south. If it can not find it, its force is great enough to beat its way to a place where it strikes the wind of the equatorial regions. There with the westerly-going wind and its own speed to push it, it sweeps back to the Southern States, and there, seeking a northerly surface wind, finds its way back to its New York dock. It has taken it longer to return than it did to make its trip eastward by the day that was spent in finding and returning from the westward current, but even with that handicap it has left the quivering keel of the four-funneled twenty-seven-knot water boat far behind in its race across the hemispheres.

This is not in the nature of a prophecy. The winds are there to use. The man in the aerostat uses them now as much as the imperfections of his machine will allow him. What are the possibilities of these currents that have kept man from conquering the air when he once gets them trained to do his bidding?

Clearing logged lands by means of a donkey engine

A settler's home made on logged-off land

Turning the Logged-off Lands into Farms

Land cleared of logs and the first crop growing

IN CLEARING *a logged area in Washington or Oregon there are two bases upon which the problem may be attacked. The first is that of saving the enormous refuse and making it pay for the land, which if carefully conserved it will always come very near doing, oftentimes will more than do. To the man who is in a hurry to get the land in shape for tillage, fire is the first agent invoked. But in every logged tract where settlement has begun there is usually set up at an early stage a shingle mill of greater or less capacity. All the small logs—that is, logs from eight to fifteen or sixteen inches in diameter, the tall stumps, the fallen fragments, the faulty timbers which, while of mill size, have been left, owing to rot having attacked some part of them—these are all food for the shingle mills. The loggers say that a competent man can clear an acre in six weeks, and that the acre, where the timber has been heavy and none of the merchantable stuff has been destroyed by fire, should produce five hundred cords of bolts, the net revenue from which, on this basis, would plainly be substantial.*

These farms, purchased by individual settlers in the logged-off country, run from ten to thirty acres, and their cost, fairly quoted, is from five to seventy-five dollars per acre, the last named being for the best of bottom land. Where the settler is a poor man, coping with his task unaided, all the after-work of removing stumps and roots is accomplished by hand, assisted only by horses and a modicum of dynamite. In cases where the tracts are large and speed in clearance is preferred to profit from the refuse timber clearing of the sage-brush desert, but no irrigation is called for, and where the swifter method of operation is employed the actual production of market crops is not more than a year later. Some of the most fertile lands on the continent, producing in incredible measure grains, alfalfa, vegetables, and small fruits, have thus been rescued from the wastes. These lands, once the fir, spruce, pine, and cedar have been removed, have been held by the timber companies as more or less of a drug and an excellent thing to be rid of at almost any price. The new gospel of conservation, however, which the big timber owners have now begun to view in some of its phases with keen favor, bids fair to make material change in the fate as well as in the price of these logged-off acres.

The new gospel of conservation, however, which the big timber owners have now begun to view in some of its phases with keen favor, bids fair to make material change in the fate as well as in the price of these logged-off acres.

*This is the story, briefly told, of the logged-off lands and what can be done with them. Thousands upon thousands of acres in the States of Washington, Oregon, Montana, Idaho, and California have thus been treated. It is a far harder proposition than the method is wholly different. In case no standing tree of sufficient strength is available, what is known as a "gin pole" is set up, with a block at the top. With the aid of a donkey engine, stumps, logs, and heavy fragments of all kinds are dragged up from a considerable distance around, to make a lofty pyramid, of which the pole is the center. Then follows the breaking crop. In the Pacific Northwest oats are usually employed, seeded down to timothy or clover. The oats are fed as green fodder, and the land left in grass for a year, after which the seed crop is plowed under and the farm is ready for broader agricultural operations. It is singular that in the Northwest buckwheat is never used, since it is easily grown, of benefit to the soil, and the grain brings four dollars a bag where wheat can be bought for two

What the World Is Doing

A Record of Current Events

A Fortnight

THE fanatics of Asia Minor are staying their hands from slaughter. Constantinople is resting after her busiest month in five centuries. Mohamed V and the Young Turks are apparently each to have a quiet chance at working out their ideas.

In France the strikers are back at work, but other strikes will flare up until the grievances of the men are dealt with.

England, which has still a touch of hysterics, is nuzzling at the budget in excitable all-night sessions of Commons. The argument reduces itself to "Social Reform *versus Dreadnoughts*." The wrangling will continue as far into the hot weather as our own tariff debate.

Germany saws and hammers at Destroyers, and preserves her masterly and unbroken reticence.

In the United States peace spreads her wings at Lake Mohonk, while the mails of Georgia are held up in a race strike. Jerome, like a plumed knight, returns to the arena, not without murmurings and gibes from the other combatants and the cloud of witnesses.

Jerome

WILLIAM TRAVERS JEROME, District Attorney of the County of New York, faced his enemies, accusers, and questioners on the evening of May 26 in the Cooper Union of New York City. For three and a half hours he dealt with the Metropolitan Traction Company, the insurance scandals, his preelection pledges, the Ice Trust, and the other episodes of his troubled career.

What the questions and attacks all came to was this: (1) Had he been as active against public-service corporations and wealthy offenders as the legal evidence warranted him in being? (2) Was there one law for the rich man and another for the poor man.

His defense was of two sorts—to make a specific charge of corruption or "interested" motive against the man presenting the question or charge, and to describe in detail the means he had taken to hunt down wrongdoers.

He pleased the people with his charm, his fearlessness, his renowned gifts of repartee, the sudden lunge back when he is apparently being pushed to his corner on the defensive. He satisfied his audience of his personal honesty, his wholesomeness, the lovable and masculine traits that endear him to his friends.

Those who have campaigned with Jerome in the whirlwind red motor-car month of October, 1901, and then have followed him around in his flashing reappearances during the last eight years, missed the old-time crackle of retort, the kindling power of the man that surges out from him over the people. Some of his little melting ways with an audience, as of two intimates that understand each other from of old, were sloughed off on that evening. The humorous asides, the grace-notes of his musical drawl, the swift thrust and the answering roar of laughter and cheers from ecstatic crowds—these were absent. The man was more serious, more on the defensive, less cock-sure of love and laughter.

He was wise in turning from the whimsical fascinating tricks and arts, which make him the most dexterous platform campaigner of the generation, and dealing out swift fact talk.

It was not a "packed" audience on either side, and the occasional instances of unfairness were easily suppressed. Mr. Jerome's staff and other friends in the Criminal Courts building were sprinkled around in the 1,600 seats, and there was the old guard of Mr. Hearst's supporters. So the honors were even on strong-arm and bitter-tongued men.

The questions fell readily into three classifications—those that were specific and detailed, such as those of William N. Amory and of Henry S. Bullock; those that were put by chronic enemies, newspaper and political, to heckle and bait him; and the questions put by East Side boys, party Socialists, working men, sometimes ungrammatical, naive, futile, but thoroughly honest and with a desire to get at the truth about his motives and his efficiency.

Some of the ill-will shown toward him is like that aroused by a beautiful woman among rivals. Lonely and embittered men have resented the radiant quality in Jerome, the joyous swing of his advance. The chief merit of the evening was that a public official had come before the people who elected him, rendered an accounting of his service, and answered the questions put to him in open meeting.

The candidate for reelection who will do this in the future will have a large advantage over the candidate who sticks to the regulation uninterrupted political speech. This practise of giving your audience a say on your ideas and record is familiar enough in England, but is practically unknown in this country. It is conceivable that Jerome has struck out a democratic idea that will become a political habit.

Jerome desires to win back the public that has adored him, elected and reelected him, turned on him, and reviled him, but never defeated him. His problem is twofold. It is, first, to answer specifically as to whether he has done his best legally on such evidence as he had. That answer he gave at Cooper Union, and again on a full page of the New York "Times" on May 30. And, then, it is to work a change in the general atmosphere that hangs in varying densities around New York County—to the effect that he has failed in activity against the criminal rich. He has proved himself a master meteorologist in former times. Such episodes as the Liberty Hall dinner on June 10, tendered him by his East Side neighbors, will give him his chance to strike at the heart of his public.

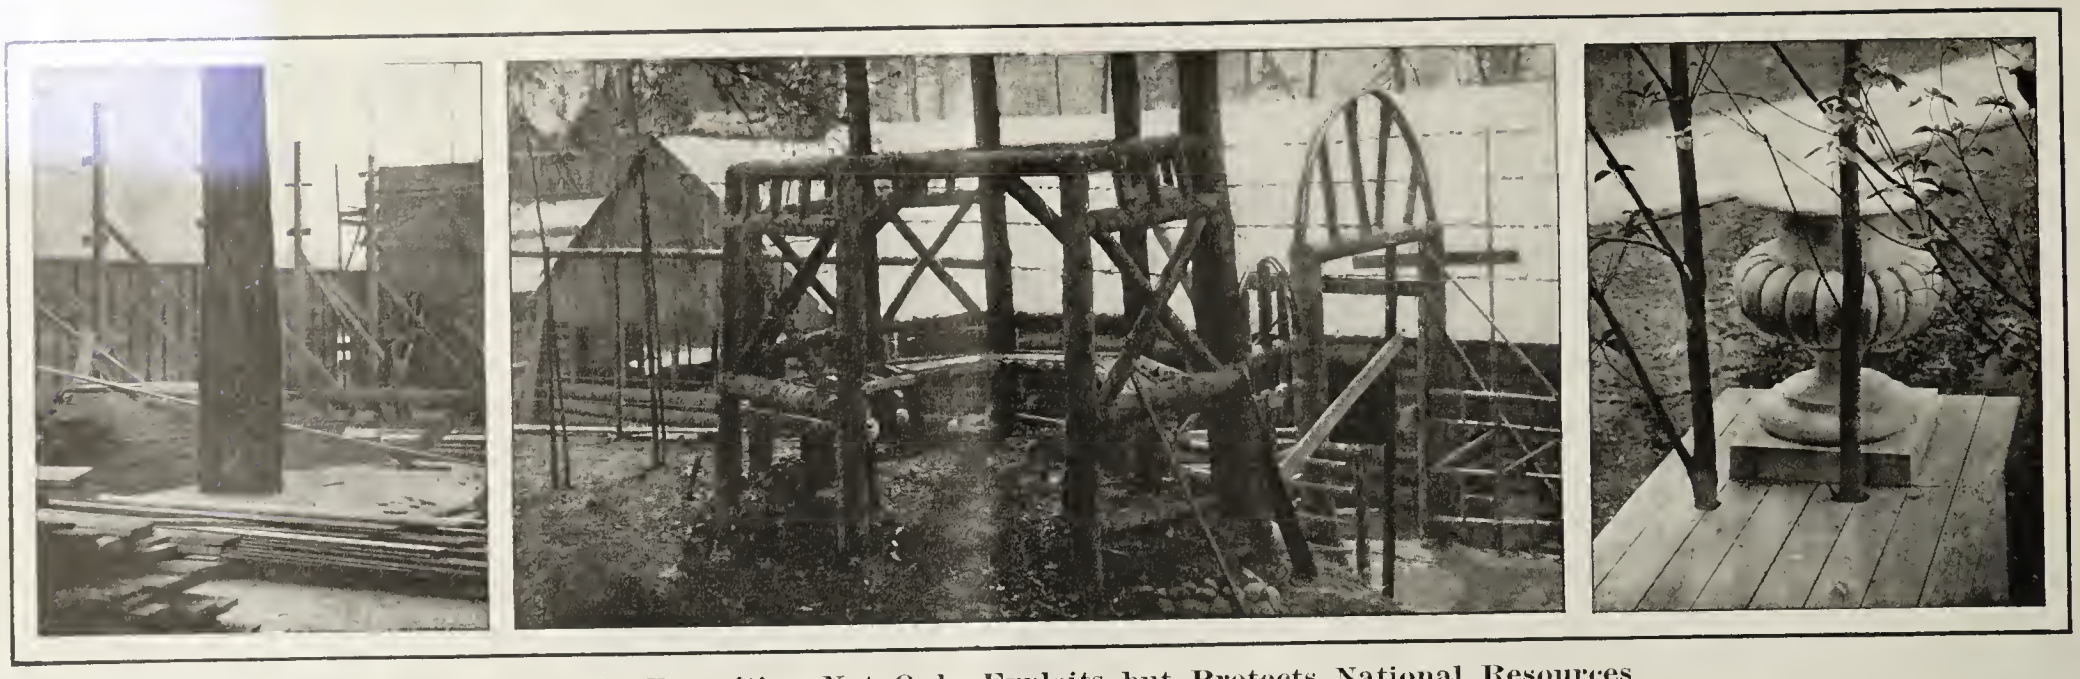
Another U. S. A.

ONE more great, free, self-governing unit in the British Empire has sprung, full-fashioned, into being. It is the Union of South Africa, and is made up of the four colonies of Transvaal, Orange River, Natal, and Cape Colony. This large area and population will rank with the Dominion of Canada, the Commonwealth of Australia, and the Dominion of New Zealand, as an integral self-governing white community inside the empire. Out of the black waste of the English-Boer War a nation has got itself born.

At Bloemfontein the South African National Convention signed the draft-amended Constitution on May 11, which, after a little further detail, projects the united community into being. At the Imperial Conference of 1911, South Africa will come to the Old King's presence, as a new national unit, "in the Hall of Our Thousand Years—in the Hall of the Five Free Nations that are peers among their peers."

The new constitution for the four states—now to become provinces—provides for a Governor-General, with an Executive Council, a Senate of 32 elected members and 8 nominated members, and an Assembly of 121 members, elected by the four provinces in proportion to their white population.

Proportional representation (that is, representation of the minority in each district) is granted in elections to the Senate, but not in those to the House of Assembly.



The laws of the new Union will be made in Cape Town; its administration will be conducted in Pretoria. To the Cape Town Legislature will come 51 Assemblymen from Cape Colony, 36 from Transvaal, 17 from Orange River Colony, and 17 from Natal.

The problem of Kaffirs and colored people is evaded in the Constitution.

The English "Nation" says of the Union:

"A virtually adult male white suffrage will elect a Union Parliament which will enjoy full powers of legislative and constitutional growth under a virtually formal control of the Imperial Government. No constitution, operative in any important civilized state, either now or in the past, confers so full a power of constitutional amendment as will be conferred upon the Union Parliament of South Africa, if this Act is sanctioned in its present form."

The first thought of the now completely unnerved London "Spectator" is what these people will be worth to England in war. It speculates on the amount of "help which, from the military point of view, the four self governing nations could give us in the event of our being unhappily engaged in a great European struggle, or in military operations in India on a large scale." "At least one per cent of the white population of the self governing communities would desire to volunteer for service in Imperial contingents. But the

would give us something like 150,000 men of the very best fighting material."

More than their fighting blow, that which interests the world is that one more full-blown nation has quietly come into being.

William Williams and His Job

ELLIS ISLAND is a live wire. Eight hundred and fifty thousand people a year become a part of American life by that port of entry. Millions of dollars of money are directly and indirectly concerned. The official in charge, the Commissioner of Immigration, is under ceaseless and enormous pressure, and is the target for a rapid running fire of criticisms. The politicians have looked with hungry eyes at the political opportunities of the position, and have criticized whatever management failed to meet organization requirements.

Equally lynx-eyed, but entirely sincere, have been many well-known intelligent citizens who believe that immigration policy has been too liberal in recent years. They wish a strict enforcement of the present laws, and many of them wish a change in the law with severer excluding clauses.

Their theory of immigration has tended to make them hostile to officials swinging wide the open door, and popularizing that policy of hospitality.

Those, then, are two of the forces that watch "The Gate"—politicians and the immigration theorists—both those that are friendly and those that are unfriendly to the hordes from the South of Europe and the Russian Ghetto.

The requirements of the work are for an executive:

1. Personally honest. His position gives him power over doubtful cases—with powerful interests backing them, such as the Vice Trust; and over patronage—appointments to salaried positions.

2. Humane. He is dealing with ignorant, easily duped, timid aliens. He sits as judge in deciding their entry or return to their home country.

3. Able to communicate his humane treatment to his subordinates. His large staff, if not dominated by his kindliness of attitude, would be in a position to practise small brutalities on the unresisting peasants.

4. A skilled executive in his care of the buildings. Many of the immigrants are forced to remain overnight or for one or more meals. Clean, sanitary dormitories, an orderly dining-room, are factors that lessen disease and increase comfort.

5. Open-minded and ready to act on learning of the injustices and abuses that are visited by a hundred predatory interests on the new arrivals. Such are the hangers-on at the Battery and railroad stations, the steamship and railroad companies, ever ready with petty and unjust exactions levied on their foreign passengers.

6. Skilled in the assignment of contracts. There are important contracts, catering, etc., with opportunities for overcharge.

Those are the six elements of the Ellis Island situation. No man, however gifted, could be so omnipresent and alert as to cover the total field with equal intensity and efficiency. The stiff disciplinarian will lack certain elements of sympathy in dealing with human beings in the raw mass. The kindly executive will make mistakes in assigning contracts, will more than once select the wrong man for a piece of work. The correct estimate will balance all the requirements and then O. K. or condemn the work.

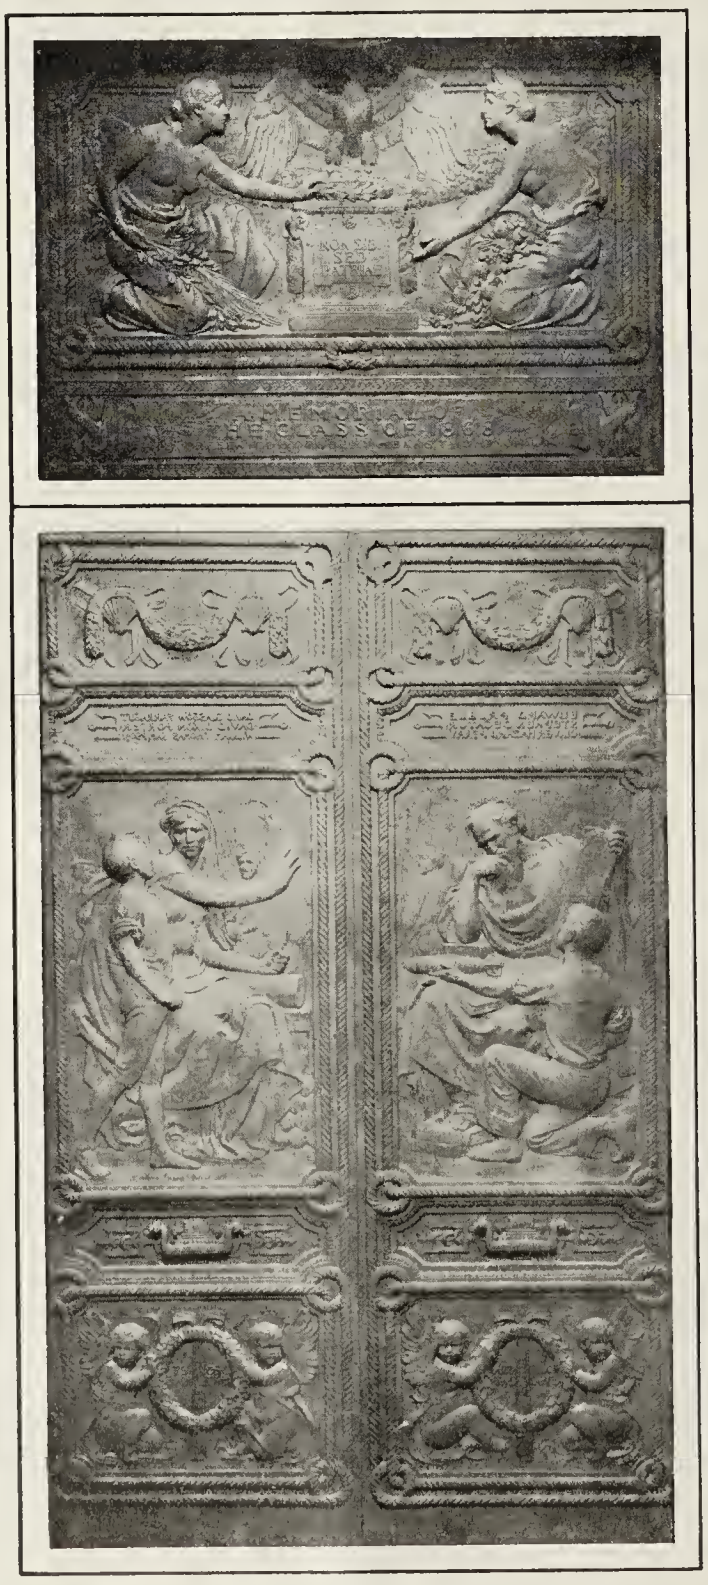
Such is the job. President Taft and Charles Nagel, Secretary of Commerce and Labor, have appointed a clean, competent man in William Williams, whose former occupancy of the job gives high promise of his adequacy in the future.

The new Commissioner is a lawyer of New York City, a graduate of Yale in the class of 1884. He has been the head of Ellis Island, once before, for a period of over two years. What appealed in Williams to the present Administration and some of its supporters was his proved efficiency and, also, his belief that the office is "to strictly execute statutes enacted to restrict immigration."

The Philadelphia Strike

PHILADELPHIA has been walking for several days because of the trolleymen's strike. The month of June opens there with some rioting, the importation of strike-breakers, and a system of substitutes for the trolley. Less than half the cars are in operation. As we go to [illegible] the strike leaders are urging their men to avoid all disorder and any possible conflict with the police. An effort is under way to win over the Central Federated Union, call out all the unions and tie up the town.

The Philadelphia Rapid Transit Company made an issue against its employees that it would never consent to seeing a committee of the union. The men chose a peculiarly apt time for calling the strike. May 29, 30, and 31 were three holidays running, and the tie-up has meant the severest loss to the company that could have happened in the twelvemonth for the same space of time.



C. O. Pratt is running the strike for the men.

Whenever you have a street-car strike in America, you have C. O. Pratt. His business in life is to live in the storm centers of labor wars, and this week he is in Philadelphia. He worked out his inspiration to this call while he was a conductor himself, fifteen years ago, and since that time he has been looking for likely street-car men whom he could organize and lead upon the corporations employing them. It is Pratt's belief that a street-car man deserves the wages of his brother of the steam-car, not his older brother of the mule conveyance.

Pratt teased out just such an ultimatum as that of the Philadelphia company from the street-car company in Salt Lake once when Joseph F. Smith, president of the Mormon Church, was at its head, and again when E. H. Harriman's forces were the power behind the management. But in both cases conferences were held, and in both cases Pratt came off a winner. Patrick Calhoun of San Francisco has met Pratt, and so have the Cleveland car line owners. He has worked his way up in the carmen's union while he has won its strikes, and he comes to the Philadelphia situation with an unbroken line of victories and the prestige of being chairman of the carmen's National Executive Committee.

Pratt's first move in Philadelphia was to get the people with him. He paraded an endorsement from the local branch of the American Civic Federation, and was quick to notify the chief of police that there would be no violence and no need to assemble police reserves. When later cars were mobbed, he defied the press and the police to show a single carman among the rioters.

Pratt early found a way to get into a strike center without forcing himself as an agitator. While he was in Philadelphia two weeks before the men walked out on the morning of May 29, he had no authority there until that very day. When first the men stated their "grievance"—that twenty cents per hour was not enough pay and uniforms should be bought in the open market—he urged them to try to adjust it by themselves. Later, Pratt entered, elected by a monster mass meeting on the night of May 28 to take charge.

The Paul Jones Memorial Doors

Dedicated at the Chapel, Annapolis, June 2. They are cast in bronze from models by Evelyn Beatrice Longman, N. A.

Victorious Woman Sculptor

FIGHTING John Paul Jones continues to be honored in bronze. At the John Paul Jones Memorial Chapel at Annapolis, on June 2, bronze doors, exploiting his name and deeds, were unveiled. They are the work of Evelyn Beatrice Longman, who received the $15,000 contract in the face of thirty-two competitors. The young sculptor has been the pupil of Lorado Taft and Daniel Chester French. She has just been elected to the National Academy, the second woman sculptor in its history to be admitted.

The doors are of bronze, six inches thick, and each of the panels weighs 2,500 pounds. Yet so delicately poised are they that a child could move them. The work was cast in three sections, consisting of the two panels and the transom. The work of modeling and casting consumed two years, Miss Longman spending the first year in studies in Italy.

Fire!

OUR country allows $737,535 worth of property to be burned up every day. A lot of this flare-up is due to carelessness and ignorance, for our per capita loss is from ten to thirty times greater than that in European countries. Over a quarter of a billion of dollars is the average annual fire loss in the United States for the last five years.

These were a few of the startling figures that President J. Montgomery Hare recently flung at the National Board of Fire Underwriters. Since 1880 population has increased 73 per cent, and the annual fire loss 143 per cent.

We have better appliances and, probably, better water facilities, at least outside of the large cities, than has Europe. So, after every allowance has been made for differences of construction and climate, the charge of recklessness holds true. Europe uses "care, forethought, and wise supervision." In a list of 522,716 fires in the United States during the last five years, at least one-half were ascribed by Mr. Hare to carelessness.

The underwriters have made the following recommendations to the National Conservation Commission:

"First—That the public should be brought to understand that property destroyed by fire is gone forever and is not replaced by the distribution of insurance, which is a tax collected for the purpose.

"Second—That the States severally adopt and enforce a building code which shall require a high type of safe construction.

"Third—That the States establish and maintain an official or officials who shall be required to investigate the cause and origin of all fires.

"Fourth—That municipalities adopt ordinances governing the use and keeping of explosives, especially in-

(Continued on page 24)

Comment on Congress

By MARK SULLIVAN

JUST for the sake of making this record complete, although the repetition may be tiresome, we reprint once more the free lumber plank in the Democratic national platform:

"We demand an immediate repeal of the tariff on wood-pulp, print paper, lumber, timber and logs, and that these articles be placed upon the free list."

The United States Senate has voted on lumber. Senator P. J. McCumber of North Dakota introduced an amendment which did exactly what the Democratic platform demands—put lumber and the products of lumber on the free list. When the vote came, that amendment was rejected by a vote of 56 to 25, ten men not voting. Among the fifty-six Senators who voted against this amendment, voted against free lumber, against what was demanded by the Democratic platform, were these Democrats:

Augustus O. Bacon, Georgia; John H. Bankhead, Joseph F. Johnston, Alabama; George E. Chamberlain, Oregon; John W. Daniel, Thomas S. Martin, Virginia; Duncan U. Fletcher, James P. Taliaferro, Florida; Murphy J. Foster, Samuel D. McEnery, Louisiana; Hernando D. Money, Mississippi; Lee S. Overman, Furnifold M. Simmons, North Carolina; John Walter Smith, Maryland; Robert L. Taylor, Tennessee; Benjamin R. Tillman, South Carolina.

Here are sixteen Democrats voting against the pledge of the party and the expectation of the country. (Only ten Democrats voted for free lumber.) Of the repudiation practised by these sixteen Democratic Senators, the New York "World" used this language:

"These are political sins for which punishment is certain. They affront decency and good faith. They reveal a degradation in our political life which almost passes belief. They put the Democratic Party on trial, not for its principles, but for its honesty. Errors of judgment may be defended and excused, but perfidy finds no apologist anywhere."

The "World's" words are not intemperate. The degradation of the Democratic Party is a profoundly sad spectacle. The complete seduction and disintegration of all organized opposition to the party now dominant in this country is a matter for sadness, too, but even more for serious thought and effective action. The most unfortunate aspect of it is the complete helplessness to which it reduces the voter. He is full enough of indignation, but how shall he express himself? For which party shall a man vote who believes there should be no tariff on lumber? How shall the voter, through his ballot, express his conviction that the present revision of the tariff by Congress has not been done in good faith? If he should want a genuine revision of the tariff next year or the year after, how can he show his desire?

Sheer Cussedness

The Democratic national platform is earnest for tariff reform. So, too, are practically all the Democratic leaders not in Congress—men like Governor Harmon of Ohio and Governor Johnson of Minnesota. The Democratic papers, especially those in the smaller Southern cities, continue to stand by the party's best tradition. But eighteen out of thirty-one Democratic Senators voted against free iron ore, and seventy-two Democrats in the Lower House have voted for a protective tariff

FROM THE NEW YORK "WORLD"

Know What You're Getting

THE people of Duluth and the Eighth Minnesota District elected Miller in the belief that they were striking Cannon and his régime by defeating one of Cannon's inner cabinet, J. Adam Bede. The people got nothing out of this change except the noise of making it. The Illinois Senatorial election is a similar case. It was of little use to defeat Hopkins if William Lorimer was to succeed him. It is of little use to know the records of Congressmen, and to drive them out of office on those records, if the successor is to be any chance soldier of opportunity who takes advantage of the situation. Electing good men is quite as important as defeating bad men; only the two together result in practical effectiveness. Just here is where the lack of an honest opposition party becomes serious. Does a New York Republican who wants to rebuke his party for its subservience to the corporations accomplish that result by voting the Democratic ticket? Can a Georgia farmer who knows he is oppressed by the Republican policy of protection vote against that policy by casting a Democratic ballot? The Democratic Congressional delegation from Georgia is more protectionist than the Republican Congressional delegation from Kansas. By one rule may the voter know he is effective: *Vote for an insurgent.* The ten insurgent Senators led by La Follette, Cummins, and Dolliver, and the thirty insurgent members of the Lower House—chiefly men from the Middle West—led by Murdock of Kansas, are to-day the only honest and effective organized opposition to the Republican Party's subserviency, through Cannon and Aldrich, to wealth and corporate interests.

304 Days

IT IS not too early to begin to look around for good insurgents for the next Congress. It is 304 days from the date of this paper until any American citizen will have the opportunity to vote for a candidate for Congress pledged to vote against Cannon for Speaker. The Illinois Congressional primaries occur the second Tuesday in next April. The Iowa and Michigan primaries come next—the second Tuesday of next June. Among the entire twenty-five Congressmen from Illinois, there is not now any insurgent. Nor is there one in the Michigan delegation. Among the members from Iowa there are already six insurgents: Elbert H. Hubbard of Sioux City, Charles E. Pickett of Waterloo, Frank P. Woods of Estherville, Gilbert N. Haugen of Northwood, N. E. Kendall of Albia, and James W. Good of Cedar Rapids. The public sentiment of these three States is, as in all the Middle West, overwhelmingly insurgent and anti-Cannon. Who is the man, in each of these Congressional Districts, responsible in character, intelligent, of insurgent convictions, and willing to pledge himself against Cannon, who is ambitious to sit in Congress?

Again, 304 Days

IN THAT long series of Congressional primaries next summer, which will streteh from the second Tuesday in April until the following November, the chief issue will be Cannon. It is inconceivable that, with the eyes of the country focused on this one issue, he should win. He would have been beaten last year but for the popularity of Taft at the head of the ticket. Every Republican Congressman that comes up for reelection must bear the burden of Cannon. Because of Cannon, district after district will be lost by the Republicans to the Democrats. They say that Uncle Joe is a man of pride. He has told his intimates that, even after he was elected Speaker in March, if his power of appointing the committees had been taken from him, he would have resigned. Those who like him say, too, that loyalty to his friends in Congress and devotion to his party are chief among the qualities that have made him powerful in the Republican organization. All these traits, if he really does possess them, call him to an act of self-saerifice.

The Climate of Japan

WHOSE is the pen that can paint the delights of a trip to Japan and a long, long rest among the flowers and lovely gardens of those gentle islands? From San Francisco to Tokyo is twelve slow settings of the sun, twelve days of quiet peace upon the long Pacific swell, each carrying a harassed man so much farther away from tumult and unlovely contention. How tired old eyes would freshen and brighten with long contemplation of the restful ocean! And, then, to see the soft colors of those islands rising from the sea! Weeks and weeks and weeks of rest among the cherry blossoms and the roses. Long afternoons on an easy chair, Ruskin or Wordsworth at hand to read, and, when reading tires, a lovely vista of soft green hills for the quickening eye to rest upon. The air is shot through and through with perfume; the very pores drink it hungrily in, and a cracked and grizzled old skin would assume again the soft pliancy of youth. In quiet lakes behind the hills, the swans float double, swan and shadow. In such a scene and such an air, anger, resentment, strife—all unlovely moods and malevolent impulses would fall away from the spirit like unlovely patches of old fleece from a sheep in spring. How a man would renew his youth! How long forgotten aspirations for beauty, sweetness, and serenity would lift their trampled heads and swell again with life. How far away and how humorously unworthy of effort, how like a half-forgotten nightmare would seem that huge room in Washington filled with three hundred and ninety-one turbulent men. For a man of seventy-four, at the end of a long life filled with fighting and scheming, whose age now calls him to physical repose and spiritual contemplation, how infinitely more desirable the climate of Japan, the scenery and the air of those gentle islands, than the harsh winters and the unlovely surroundings of Washington, District of Columbia, or Danville, Illinois.

SEE ONE AT YOUR STORE

before you forget it. It's worth seeing. All hardware, gun or sporting goods stores will gladly show it whether you're buying or just looking. Most notable invention in fire arms since that of the revolver over 35 years ago. ¶ Handiest handful that ever got into your hand. ¶ You can point it and hit the bull's eye if you can point your forefinger. Specially built to be easily aimed by the inexpert. ¶ Its quickness is unbelievable. ¶ Shoots

10 Shots Quick

4 shots per second. Gets the first (vital) shot, backed by 9 more; then a whole arsenal of ten-cartridge magazines can be inserted in a flash. ¶ .32 calibre. 6½ inches long. Only 19 ounces. Flat; fits handy even in trouser watch-pocket. ¶ If you wish to know its remarkable features, see it, or send today for the new, free, Savage Automatic booklet. Buy it from us if your dealer doesn't keep it. ¶ Made by the makers of the

FAMOUS SAVAGE RIFLES

flammable commodities and other special hazards; such as electric wiring, the storing of refuse, waste, or packing material."

Elongating the Jap

IS IT possible by paying money and following instructions to add a cubit to the stature? The Cartilage Company of Rochester, New York, thinks so. Read their guarantee, accompanying the magic apparatus:

> "Those who purchase our apparatus and follow the Cartilage System will actually grow from two to five inches after they commence using the method."

What men in all the world so responsive to that sort of propaganda as the Japanese, whose infantry and cavalry in the Russo-Japanese War were by regulation five feet two inches high and some reserves a scant four feet nine? It was humiliating to fight the mighty Russians and be looked down upon by the very men you were conquering.

Artfully through Japan were scattered the advertisements of the Cartilage Company of Rochester, that for twenty yen (ten dollars) each little Jap of any age under fifty could be made in six months to grow "from two to five inches." K. Leo Minges, originator of the Making-Tall Apparatus, impressively promised:

> "I can positively broaden the shoulders and make men and women taller, if they will faithfully follow my instructions and directions. I first used the method upon myself. I have broad shoulders, stand six feet one inch in my stockings, weigh 180 pounds, and have a perfect figure. . . . In my method I use an apparatus for lengthening the entire body; every muscle, sinew and cartilage is influenced by its action. This is accomplished without any inconvenience on the part of the patron and is absolutely harmless and painless."

It was science, and science had helped them to the forefront of nations; it was full of all sorts of wonders. Candid, indeed, was the explanation to inquirers: Broken legs which have been reset sometimes shorten, so the surgeon hitches weights to them, hangs the weights over the bottom of the bed, "causing a pulling sensation."

> "This is done to cause an expansion of the cartilage, which stretches the leg to its normal length. Any physician will tell you that this is true. If this is true, and it admits of no argument to the contrary . . . if the leg can be stretched, why cannot every part of the body also be stretched?"

Japanese "fell for" this circular in thousands. If any one hesitated, he received another, insisting that:

> "Short people cannot possibly be admired from a physical standpoint, except by those who have failed to develop an eye for the artistic."

More thousands fell. Those who still resisted were told that, since the secret was for mankind, regardless of money, they might receive it for eight dollars. Three dollars was the last price. As the manufacturing cost is no more than sixty cents, there remained a good profit. Some 15,000 to 20,000 became purchasers last year.

When the apparatus arrived it was found to consist of:

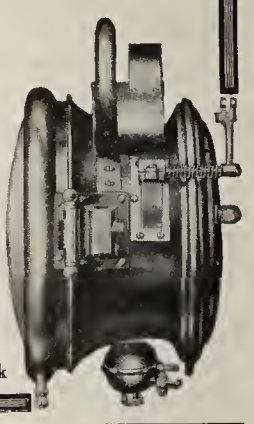
(1) Two staples to be affixed to the floor.
(2) One hook to be screwed into the ceiling.
(3) One leather harness to go under the chin, and under the arms.
(4) One rope to be attached to the top of the headgear, and thrown over the hook in the ceiling.

All you had to do was to thrust your feet into the floor staples, fasten on the headgear, then pull down hard on the rope. Do this morning and night for half a year, taking meantime plenty of beef and milk, and you'd hamstreteh your body into something admirable, enviable.

Imagine 20,000 little homes fitted with the Rochester appliance; 20,000 little Japanese hanging themselves morning and night to a hook in the roof-tree! Many half-years have passed, and the answer to "If the leg can be stretched, why not every part of the body?" is that the Japanese are still short.

Here is a cry from one of them, in actual words, not by "Hashimura Togo" either:

> "There are thousands kickers who complain for their fruitless attempt to grow tall and denounce to waste further time and money in vain. Ninety-nine out of one hundred grow tired to take further exercise without increasing even one-quarter of an inch. The poor people could not afford to take so much beef and milk—beef and milk uniquely found in Japan country—for so long with no sign of increasing as it is instructed to do so.
>
> "They complain and some ask for the return of the full amount he paid according to the guarantee, and others ask for the return of the half that he paid. It is the Company's usual advice to be little more patient and follow the instructions, in the meantime you will obtain your desire.
>
> "Warned by their false kindness, the poor people return to that former toil with renewed courage but daunted again without success. They began to complain again and are warned back with another instruction that will help for growing tall with no effect of course. They ask for the return of the money and were flatly refused under the pretense of not following exactly to the instruction. It is paid in advance with 50 cents extra charge for express.
>
> "The Company has been always very prosperous, and at present they keep more than fifty employees who handle these mails. They sold more than 15,000 apparatus and their annual income reaches above one hundred thousands dollars."



Two Distinct Rays

Only motor lamp throwing two distinct rays.

SOLARCLIPSE

The Solarclipse Headlight provides two to three times more light than any other lamp. The light is thrown in *two distinct rays*—one having the penetrating power of 1000 feet—the other a short distance ray, throwing the light directly in front of the car. The **Automatic Self-Eclipsing Mechanism** is operated *from the dashboard.* You can "cut out" instantly the long distance ray when driving in the city streets, thereby doing away with the blinding rays of the powerful headlight in congested, traffic-crowded districts.

The Poor Man's Game

(Concluded from page 18)

thing from waiting until they are formally claimed by the aggrieved players. Courtesy is a beautiful flower, but it does not appear to flourish on most golf links.

And so the years pass, and golf continues to be the royal game for all who truly love and follow it. Evolved from the simple elements of the legendary shepherd's crook, a round pebble, and a rabbit's hole, golf is perhaps the profoundest and the most infinite in its variations of all mundane avocations. But then it is something more than a game; it is an epitome, or, rather, a microcosm, of human life, and above all of human nature. For whatever a man is at heart that golf surely proclaims him; it is the mirror of truth in which, sooner or later, every lineament of his soul will be revealed. The coward, the bully, the thief—these have no business on the golf course, if they would preserve their masquerade; and just as certainly is virtue recognized and made to shine forth as the sun. But these are speculations in a vaster field; the psychology of golf would require a volume for its proper exploitation. Enough that golf the game continues to endure, a well-spring of perpetual refreshment and delight, the joy of our youth, the supreme pleasure of our meridian years, the serene consolation of our declining days. *Crescat et floreat!*

\+ \+ \+

Pace and the Four-Mile Race

(Continued from page 20)

The method employed in England, that of pace-making, is little understood in America. The common belief is that the English races are shorter than ours; that their stroke is designed for a short race and not for a long one, and that their university crews would easily be defeated should they attempt to meet us upon our waters and over our distances.

The fact of the matter is that the English have had in the last fifty years vastly more racing experience than we on courses of all lengths, from a mile or less to four or even in a few cases more.

Their stroke is the result of a gradual development, and is pure and simple a racing stroke. They discovered long ago the tremendous advantage that pace gives to the crew with the even gait, and they have endeavored, successfully, to combine the two. To their minds a crew that is unable to row and get pace at thirty-eight or forty strokes to the minute is an inferior crew and not to be classed with the average university eights; and such a crew, no matter how fast it may be at a low stroke, is never regarded as a favorite in the 'varsity race.

The Useful Thole-pin

THE clearest demonstration of the racing qualities of the English stroke lies in the stroke itself. Well measured, clearly marked at either end by a firm, hard catch and finish, its beat is so regular that a pace of forty-two to the minute will not upset it.

Why do the English stick to thole-pins in their eight-oar shells? Simply because the rattle of the oars in them at the finish serves as a rallying point for the entire crew. No matter how high the stroke is wound up, slam-bang go those eight oars with a simultaneous crash, and the time for the recovery is marked. Likewise with the hard, vicious catch. Yet we wiseacres in America, with our theoretically fastest-time crews, laugh to scorn the tradition and convention ridden English who stick to those antediluvian thole-pins!

Of course it may be that swivel-locks are superior in many respects—the English admit that and use them in their fours, pairs, and singles—but, according to their arguing, so much better time can be taught an eight with thole-pins that this advantage offsets all other disadvantages.

If one cares to follow this line of reasoning out in the other peculiarities of the English stroke, he will eventually satisfy himself that it is firmly based on the principle of pace, and that it is what it is as a stroke because it is the best way of obtaining pace.

It is customary in England for the Oxford and Cambridge crews in their annual race to go off the mark at a high stroke and fight for the lead till one or the other gets it. So it was that a few years ago both crews rowed at the rate of forty strokes to the minute for the first mile, covering that distance in less than four minutes, when one of them broke up

Camp Guide SENT FREE

Our new 1909 catalogue and camp guide brings to your home the entire line of Tents and Canvas Specialties of the largest manufacturers of canvas goods in the country. Everything you could want is listed and it is the most elaborate and complete catalogue ever issued.

It protects you absolutely against frauds which now exist so extensively in canvas goods.

If you will study this catalogue you will never again buy a "market grade" tent (made only to sell) or other canvas goods from the small stock of a small dealer.

This catalogue will convince you **at once** of the great advantage of buying—not from the retailer or even the wholesaler, but from the **largest manufacturer with unequaled equipment,** whose stamp on any article means merit and perfection.

THIS CATALOGUE WILL SAVE YOU MONEY ON ANY CANVAS ARTICLE. Hammocks—Beds for out-door sleeping—lawn comforts—all at rock-bottom prices.

Our catalogue, besides being an authority on buying, contains the most valuable collection of CAMP SECRETS ever published in any catalogue. Highly interesting chapters on everything pertaining to camp life, hunting, fishing, trapping, etc.

completely and the other paddled home an easy winner.[1] So common is this occurrence that it is considered unsportsmanlike for the victorious crew to beat the losers by more than a couple of lengths.

The only example that we have had recently of such a contest was the race in which Harvard defeated Yale last year at New London. The Yale men rowed till they cracked—till they actually had to stop and put one of their men out of the boat—and Harvard won by considerably more than a half-mile of open water. No time for Yale was taken. It is not inconceivable that this Yale crew could never have finished at all—at one time it looked as if they would not—and yet Harvard continued at her racing stroke till the bitter end.

The Principle of Pace-Making

THE sight was unusual, unexpected, startling; incomprehensible to the average spectator, because that individual had never before seen two racing crews decide a race at the offset. But this is a matter of small importance compared to the fact that in America a new principle was laid down in four-mile racing—the principle of pace-making.

To go for your opponent from the start and to last as long as you can is game if nothing else. It may not always be the best way of beating him—that depends upon your opponent—but if you go down you will go down fighting.

So it was with the Yale crew last year at New London, and so it will ever be with a *racing* crew that gets beaten, for a racing crew will never lose sight of its opponents until its eyesight fails and its limbs refuse to work.

Now this ability to sprint, to put up the stroke and get pace, to race, what you will, is not a sudden acquisition on the eve of the race instilled into the men by the fiery words of the coach, but it is the result of weeks and months of hard, careful training. A crew that is to row well at a high stroke must have perfect control over their slides, must waste no time on the turns, must be quick with their hands, and, above all, must observe faultless time. The coach begins with the first day of practise in the fall to plant the seeds for the high stroke which he expects his crew to be able to row in the final race of the season, and he finds it the hardest task of all to so plant those seeds that they will bear fruit properly.

Impeding the Sprint

THIS ability to sprint also depends largely on whether the stroke, or method of rowing employed, is suitable for high pace work. Great length of slide, shortness of body swing, and consequent lack of beat can not but be obstacles in the way of a high stroke. Whether or not they result in greater efficiency at a low stroke is another matter.

As a long slide and short body swing are characteristic of the American stroke—that is to say, in general terms, of the stroke taught by our professional sculler coaches and rowed at Cornell, Yale, Pennsylvania, and, with some modifications, at Harvard—the interesting question arises of whether the average American college eight can effectively command really great pace.

Our only standard of comparison must needs be the English university crews and perhaps last year's Harvard crew.

Without going into any technical details, we can roughly compare the English and American methods as follows. To begin with, the English stroke has been developed entirely by amateurs who were primarily sweep rowers, not scullers, and it made its beginning with the fixed seat. When the slide was first thought of only a few inches was employed, but gradually, as its utility was proved, more was added until now the average length is sixteen inches. The body swing was never shortened one iota and the slide was used simply to supplement it.

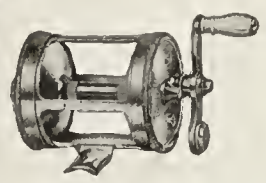
The Sculling Method

IN AMERICA, on the contrary, when rowing became general, there were no canons to follow, no principles or methods even of fixed-seat rowing, upon which to build with that dangerous invention, the slide. The coaching was all done by professional scullers, who had had little or no experience in sweep-rowing, and who naturally applied the principles of sculling to the propulsion of an eight-oared shell.

Sculling, in almost every particular the obverse of sweep-rowing, necessitates the long slide, short body swing, and comparatively easy beginning, for at the full reach in a single shell the oar-blades are so far forward that a hard catch simply tends to drive them out, with the result that the power applied, instead of driving the boat ahead, is wasted in jamming

[1] This fast time can be largely accounted for by the tremendous current on the Thames. Three minutes and fifty-six seconds for a mile, however, is fast under any circumstances.

WINCHESTER
THE RIFLE THAT WILL STOP HIM



The shots that will be heard around the world this year will be fired from Winchester Rifles. Their reliability and strong and accurate shooting have made them the first choice of experience-taught big-game hunters, who, when armed with them, consider daring a pleasure and danger a farce. Winchester Rifles are made in ten different models and in all desirable calibers from .22 to .50. From them 'tis easy to select a rifle suitable for hunting any animal, be it a squirrel or the armor-skinned rhino. A catalogue describing all Winchester guns and ammunition will be gladly sent free to any one upon receipt of name and address.

Winchester Guns and Ammunition—the Red W Brand—Made for Each Other—Sold Everywhere

WINCHESTER REPEATING ARMS CO., NEW HAVEN, CONN.

Like To Fish?

You'll have more fun and catch more fish if you use a Reel that always works

The "TAKAPART" $4 Reel
(Capacity 100 yds.)

Never fails! Test it under the severest conditions Put it in competition with reels of the highest price.

Note its perfect construction. See how light it is—how small for its reel capacity. Most reels of the same capacity are about a quarter larger and heavier.

See how delicately and noiselessly the spool spins around. How perfectly RIGID the frame is, because drawn from ONE SOLID PIECE of brass tubing.

How fine and true the BEARINGS are, and how impossible it is for anything to work loose, owing to the absence of screws and bolts.

Note the FRICTION DEVICE which prevents back-lashing.

ANOTHER THING—the head and end plates can be adjusted so that the HANDLE and CLICK can be placed in FOUR different positions. In this way the crank handle can be so arranged that it cannot hit the fingers or foul the line.

The "Takapart" Reel can be taken apart instantly without tools, simply by unscrewing the ring at either end.

No increase in price could possibly improve the "Takapart" Reel in these respects

Guarantee: We positively guarantee every reel to be perfectly satisfactory in every respect—to work every time.

Our "TRIPART" Reel, capacity 80 yds., carries the same guarantee as the "Takapart" Reel. Costs $3.00.

Lehn & Fink, 119 William St., New York

the ontriggers together. Not until the blades have reached a perpendicular with the main axis of the shell do they obtain their highest efficiency.

As a light single shell easily loses its momentum, the power must be applied as evenly as possible, and a good sculler, even when going at a racing clip, gives the impression that he is "greasing" his boat along. An eight, on the contrary, is so much heavier and carries so much more momentum that unless the oarsmen get a hard beginning she will run away from them, and, furthermore, the oar-blades in an eight never reach so far forward that any of the energy of a hard catch is lost in merely cramping the boat.

The English and American Strokes

THE English oarsmen swing far forward and begin the stroke with a hard, vicious catch, in which their backs, driven by their legs and acting as levers from their hips, heave over till they almost reach a perpendicular with the boat, when their legs commence to drive the stroke home. The American oarsman, on the contrary, more like the sculler, does not swing far forward with his body, but commences the stroke with what, in comparison to the English method, amounts to simply a shove of the legs.

Of necessity the American beginning can not be as hard as the English, and the English beginning is one of the essential reasons for their great command of pace; for, like the rattle of the oars in their thole-pins at the finish, it serves as a rallying-point for the entire crew, which, no matter how high the stroke is run up, never loses its distinctness.

The long slide common to American crews, sometimes well over twenty inches in length, is another stumbling-block, for the longer a slide the harder it is to control and the greater are the chances of rushing it. A mere mathematical computation will demonstrate this. If two crews, one sliding twenty inches and the other sixteen, row stroke for stroke, the former will each time slide eight inches more than the latter. In a mile, rowed at the rate of forty strokes to the minute, the former will slide, assuming that they cover the distance in five minutes flat, over 133 feet more than the latter. This is pointed out, not to prove that it is impossible for the crew with the long slide to obtain great pace and yet have perfect slide control, but to show that it is more difficult for them to do so than for the crew with the shorter slide and greater body swing.

To many the mere fact that it is more difficult to get pace under the American method is no valid reason for believing that the English method is superior. There would be no reason for believing this did the American method carry with it any advantages which would offset the unquestionable disadvantage, but the only possible advantages that the American stroke could have over the English would be the advantages of greater efficiency. That is to say, whether more actual power is developed in any given American stroke pulled through from beginning to end than in any given English stroke.

Actual Contest the Proof

THIS is a question, however, which must of needs be purely a matter of conjecture, and one which, until proved by an actual contest, we must leave to the theorists to thrash out.

For some time past the American stroke has been undergoing slight modifications which have brought it in character nearer to the English. Cornell, Yale, and especially Harvard, have all learned much from racing on the other side, but still the influences of the professional sculler are evident. Though Cornell has a longer body swing now than they had before they raced in England, and though their catch is somewhat harder and their beat more regular, still they are as different from an Oxford or Cambridge eight as black is from white. Even Harvard, the last to go over and the first to really learn great pace, has grafted on but little of the English method. Last year's Harvard crew had a firmer, quicker catch than any for some years past and was seated higher in the boat; in those two particulars alone they resembled an English eight, otherwise their rowing was but little different from what it has been since Wray took charge three years ago.

Last year's Harvard crew was one of the exceptional American crews that could command great pace despite the difficulties that have already been pointed out, and it is a vast pity that it could not have had an opportunity to race against a good English university eight. Whether or not it could have won would, in the writer's mind, have depended upon one condition; its ability to maintain its pace until it wore the English crew out.

Apparently Harvard had as great pace

Tents and Everything for Campers

There is wise economy in buying **full weight, high quality** Tents, made in **honest, ship-shape fashion of reliable, standard brands** of Duck—Tents that will give you not only the first year's wear, but many seasons of satisfactory service. These qualities are guaranteed in every product made or sold by

GEO·B·CARPENTER & CO.

Established 1840.

The Carpenter brands of Duck, **"Oregon," "Kenwood," "Lakewood,"** etc., have been on the market for years, and are known and used by discriminating manufacturers everywhere. Our sixty-nine years of experience have taught us not only how to make Tents, but have enabled us to determine the necessary attributes of high-grade Tent Canvas.

The United States Government is the most exacting buyer of tents and canvas goods anywhere, and we have supplied Uncle Sam with tents and paulins as far back as 1848. In the late war with Spain we made thousands of tents without a single rejection. Other Carpenter products are—Wagon Covers, Paulins, Binder Covers, Horse Covers, Bags, Hammocks, Camping Outfits, Porch and Lawn Furniture, Racing Sails and Motor Boat Equipment.

For sixty years we have been building prize winning sails for some of the best known Yachts in this country. We are also making a specialty of Auto Boat Tops, Life Preserver Cushions, Flags, Signals, etc., and—more important still—we have a strong personal interest, aside from business, in the Out-of-Door Game and its allied industries, and we feel, therefore, that we are in the best possible position to fill your requirements.

We will give you the name of the nearest store where you can secure Carpenter goods. We will ship anything desired direct to you, if no local dealer is available.

Our 1909 Camping Catalogue is now ready.

Send for Catalogue No. 20 describing our full line of Tents, Covers, Flags Awnings, Yacht Sails, Camp Equipment. Our No. 99 Catalogue illustrates and lists a full line of Marine Hardware and Motor Boat Supplies. Please indicate the catalogue you desire.

Who Taught You How to Strop a Razor?

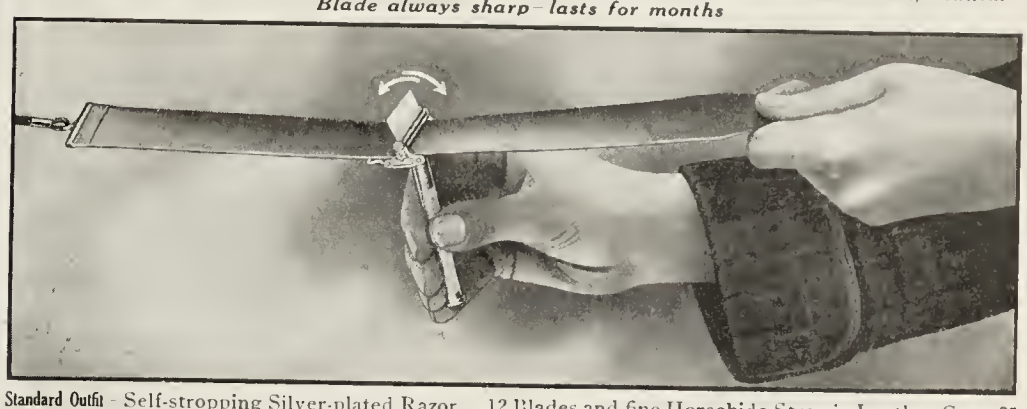
Or who led you to believe that you could shave in comfort *without* stropping?

If you have been untaught or if you have been misled by non-stropping fallacies, let this fact sink it. *You have got to strop a razor to get a perfect shave.* Each shave, each stroke, takes something from the blade's keen edge.

Stropping *only* will keep it at its best, and since stropping is an art that the average man has neither time nor patience to master, the

AutoStrop SAFETY RAZOR

(Automatic Stropper and Razor in One—Strops Itself)



is the average man's shaving salvation. It is the only razor which *anyone* can strop automatically, correctly and quickly without "knack" or inconvenience.

No taking apart to strop or clean, and a new, sharp edge for every shave. As simple as the "old style," as safe as the safest of "safetys" and as comfortably effective as the best of barbers.

Ask your dealer or write for our free booklet "Shaving Sense"

AUTO STROP SAFETY RAZOR CO., Dept. K., 345 Fifth Ave., New York

IN ANSWERING THESE ADVERTISEMENTS PLEASE MENTION COLLIER'S

as the average Oxford or Cambridge eight, though this is purely a matter of opinion, but she did not have as regular a beat. In the stress and strain of a hard race this comparative lack of beat might be the one thing that would defeat her.

This very point embodies the only conclusion that can be arrived at in such a comparison as has just been made between the English and American methods of rowing. It is easier for a crew rowing the English stroke to get pace than for one rowing the so-called American stroke, and, to carry it a step farther, easier for the former to maintain it under the stress and strain of a hard race.

Aeknowledging the value, if not the actual necessity, of pace for a racing crew that is to row any distance at all, it would seem that the stroke whose fundamental principle was pace held out greater promises of victory than the stroke which largely disregarded the utility of pace and aimed at achieving the theoretically fastest time.

✣ ✣ ✣

Abandoning the Old Farm

(*Concluded from page 15*)

terwoven with the memories of his long life that it means as much to him as the house itself. He is aroused by the booming voice of the auctioneer.

"Lead out the hosses and let's have a look at 'em. A sound, kind, and willing team—weigh twelve hundred apiece—up to any kind of farmwork. A leetle thin, but graining will bring 'em up all right. Who'll start 'em off at two hundred for the pair? They're worth three hundred easy. What's that? A hundred for the two of 'em? You are the village joker all right, Frank Parlin."

Jonathan moves away, then halts to look at the high-backed sleigh, and mutters in his white beard, "I used to go a-courtin' in it," and returns to his seat under the apple tree. The purchasers are packing their plunder and stowing it in their vehicles for the homeward journey. The hall clock stands on the stone doorstep. Some one had wound up the weights and set it going. Tick tock, tick toek—its solemn, measured message has a new meaning to-day. Time passes and finishes the story of an ancient family and its fortunes as linked with this melancholy, deserted house and farm.

The granddaughter from Newmarket bustles up to exclaim with pleased animation:

"There, I'm glad we've got rid of all those useless old things. We did better than I expected. Most eight hundred dollars in cash. That ought to make you chirk right up, grandpa. You look dreadful tired. Don't you think we'd better be starting for home? It's a long drive to the railroad station. We can come over here some Sunday, and you can poke around the old place to your heart's content."

"Starting for home!" echoed Jonathan. "Sounds kind o' queer, don't it? Starting for home! Well, Mary, if you don't mind, I'll just take one more look around the house. Then I'll be ready to go with you. Did you do up the few little things I asked you to save out for keepsakes?"

"Yes, they are in the wagon. Your clothes and the heavy things went yesterday; don't you remember?"

The Old Farm Redeemed

THE house is empty, silent, stripped, and bare. As Jonathan Woodman passes slowly from one room to another, the ghosts of other days bear him company. He lingers in the front chamber that faces the south. It used to be his wife's. She died in there. With gentlest tread he advances to a small-paned window and stares out at the family "burying lot" and one white stone a little apart from the others. Then he goes downstairs, out of the front door, past the guardian lilac bushes, and so to the wagon and the long road to the railroad station.

Shaded by noble elms, girt about by green hills, the old house waits another tenant who will pass some day and pause to admire its air of homely comfort and its picturesque environment. And this seeker, caring not a whit whether the farm cuts one ton of hay or a hundred, will have come to the end of his journey in quest of an abandoned farm. Gladly will he pay old Jonathan Woodman the few hundred dollars for "the buildings and 120 acres of fields, wood-lot, and pasture," and as soon as ever the springtime comes he will transplant his wife and babies from the crowded city to reap so rich a harvest of health and contentment that all the crops that once grew on this "worn-out" farm seem hardly worth mentioning. And thus a story which seemed doomed to end so dismally will have a bright sequel, the title of which might be "The Farm that was Redeemed."

Baseball

Continued from page 11)

der Ahe, a saloon man whose sulphitism of character and Teutonicism of vocabulary became afterward the joy of baseball. Akron, Ohio, had the only strong independent club of any standing. A visit of that club to St. Louis, and the public complaints which its players made, called attention to this state of affairs. And it led directly to the American Association.

The First Baseball War

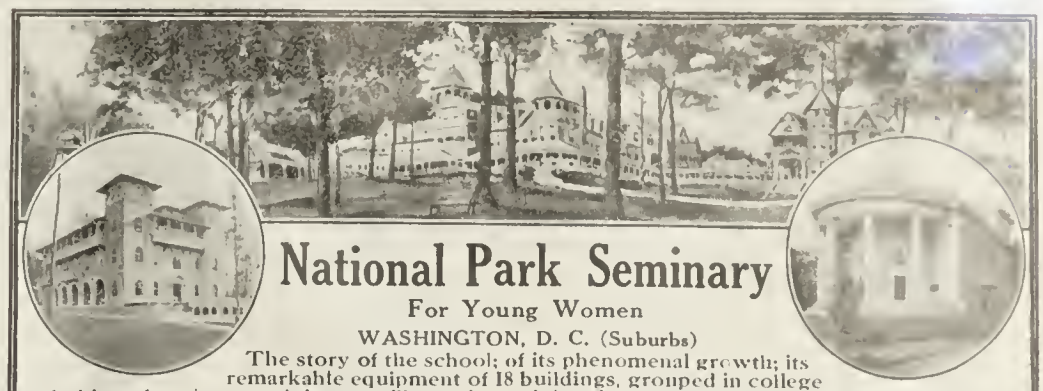
NOW ensued the first baseball war; an era of wholesale contract-jumping followed. When the League came to a final and definite agreement with the Association, it had fixed hard and fast in its constitution the "reserve rule" concerning contracts. A player was no longer his own man at the end of the season. By his contract, the club had the right to reserve him for another year, or to sell that reserve. At first only four or five men were reserved; but the League teams, year by year, agreed to extend the number until they held the right over every player on their rolls. When the first minor leagues, like the Eastern, arose, they hastened to crawl under the shadow of the giant organization; so began the "drafting" system.

No one doubts that this close organization worked to make baseball popular and profitable. It systematized things; and it imparted to the smaller leagues the excellent professional ethics of the National. The game took a sudden boom. On the other hand, no one doubts that the players, in that period, got far less than their share. Having a giant's strength, managers used it like giants. Salaries were but little better than those which Harry Wright paid to his old original Red Stockings. Two thousand dollars a year was rare; many players who are heroes yet received less than $1,500.

"Whenever the game got good, something always happened," says Jim Hart. "Now our next trouble came because Johnnie Ward was studying law and wanted a little practise."

In 1887 the players, with John Montgomery Ward at their head, organized a union—the famous Brotherhood. It did nothing for two years, except to growl a little in 1888, when the League instituted a "classification system" which nailed the drafting custom hard and fast. But at the League meeting of 1889 the "magnates" passed a law establishing a salary limit of $2,000 a year. Ward was in New Orleans when he heard of this. He rushed to New York; with Dan Brouthers and Ed. Hanlon he appeared before the League meeting.

"We'll treat with you as individuals and not as a union," said the directors, with a Steel Trust expression.



The Players' League Starts

"WHAT difference does that make? Let's hear them," said the fair-minded Spalding. Ward stated his case. The directors listened—and retained the rule. The Brotherhood formally struck. Players deserted their clubs wholesale—the generous managers suffered with the ungenerous. John B. Day of the New York Club, for example, was paying salaries which would be good to-day. He got around League rules by "buying jack-knives" from his employees. His pay-list was $65,000, and his maximum salary was $4,500. They left him only two first-class players, and they broke him. All that winter, Ward, Hanlon, Brouthers, and Arthur Irwin worked to persuade capitalists and to find grounds; and they opened the season of 1890 with the Players' League, a semi-cooperative organization. It began well. They had the best players and, on the whole, the better games. The National went in to fight for its life. First it brought action against Ward, enjoining him for breach of contract. He won. Then the National changed tactics. It brought over some players by increased salaries; it worked to kill the game, temporarily, in cities where the Players' League had things its own way. Up to the 4th of July the Players' was winning; after that it lost steadily. The final stroke came when the National took into partnership the owners of the Brooklyn and New York Clubs. The other owners of Players' League clubs, save only Johnson of Cleveland, who went down with his ship, hastened to amalgamate or to sell out. By 1891 the National League had regained its hold on baseball.

This strike, failure though it was, lightened the lot of the player. Salaries went higher and remained there; and never again did the League dare whisper of a salary limit. The next war came from the outside. The American League, founded in 1900 by Charlie Comiskey and Ban Johnson, started to divide territory and

profits with the National. For three years it bid up salaries; and when, in 1903, it was established beyond fear of failure, the National League took it into the "Trust." These two were the high contracting parties to the National Agreement, signed in that year. Under these giants gathered nearly all the minor leagues of consequence. In 1908 there were thirty-nine minor leagues in the National Agreement and only two in revolt.

The Game and the Trade

"THE baseball trust" its critics call it; and while it is hardly a trust in the legal definition, it is certainly a trust in understanding and method—none other has such a tight hold on raw materials and markets. It is intimately associated with the trade in sporting goods; that gives it still another hold. Al Spalding of A. G. Spalding & Bros., Al Reach of A. J. Reach Company, George Wright of Wright & Ditson, are famous old players and managers; their relations with the baseball combination are close and intimate; one or another furnishes nearly all the paraphernalia of the forty-one professional leagues under the National Agreement. Reach puts his brand on half of the baseballs, and Spalding's trade-mark goes on the other half; but they all come from the same factory.

Underneath is the player, in a system of slavery mitigated by public acclaim and managerial generosity. From the time when he enters a class D team at a salary of ten dollars a Sunday, through his period of big league fame, and on to the day when, a stiffened veteran, he drifts out to the bush league team to which his bosses have relegated him, he is never a free agent. He must play where the National Commission orders, and for the salary his manager sees fit to give. If he shows such ability that his services are worth a purchase price to a team higher up, the money goes not to him, whose native ability made it, but to the manager who discovered him.

The system which makes this slavery is too complicated for description here; let me simplify. The leagues are divided into "Major"—which means the National and the American—and Classes AA, A, B, C, and D. Under certain restrictions as to numbers and seasons, each "league higher up" has the privilege of drafting players from the league below. Class A teams may draft from classes B, C, D, and the major league teams from them all—first come first served. For these regular drafts, the higher leagues pay a stated sum "per player." In an emergency, and out of the regular drafting season, the major league team which wants a minor league player must buy him at his manager's terms—that alone rests in the discretion of the vender. The New York Giants, toward the close of the last playing season, bought "Rube" Marquard, a promising pitcher, from Indianapolis for $11,000. Marquard, notice, got none of it—only the Indianapolis Club which held his contract. His salary is probably not more than $2,000 a year.

The Salary Bluff

SUCH being the condition, the player has no possible way of striking effectively for a raise of salary. In any other line of employ, a man may threaten to go to a rival; in baseball there are no rivals except certain small and struggling "bush leagues." So much as play one game with an "outlaw" league—and you are blacklisted forever by National Agreement clubs. It is take our terms or get out of baseball. Threatening to quit the game—that is the only possible strike. So, every winter, the sporting columns tell how this or that great player intends to go into "business." That is only a "salary bluff." Nine-tenths of them are back when the season opens, playing to win on any old terms, so oblivious to financial considerations that they will insult the umpire even when that insult means a hundred-dollar fine. "I'm in this game for a business—not for glory," says the player, jauntily, in February. "To blazes with the money—we want that series," says the same player in August. For to play baseball supremely a man needs a dash of that artistic temperament which prefers perfection to reward, and the game to the gage.

The public opinion upon which baseball is so directly dependent keeps watch and ward over salaries; that helps the player. It may be said that the rank and file do very well after all. The injustice lies in the salaries of certain star players, worth their tens and hundreds of thousands as drawing cards. Take Mathewson and Brown. No outsider knows what they receive; baseball players, by a professional code, are clams about salaries. But no one has ever guessed Mathewson's salary at a higher figure than $6,000 a year. Mordecai Brown of Chicago, his

T. G. HELM and E. M. HARTMAN, Principals.

rival as the "greatest pitcher in the game," receives less than that. Compare this with the salaries of theatrical leading men, with whom Brown and Mathewson may fairly be compared! And it is almost a certainty that no simon-pure ball player receives more than Mathewson's hypothetical $6,000. The salaries higher than that go to playing managers, who combine art with business.

When all this is said, there remains another side. No intelligent player denies that the reserve rule saved organized baseball, that it was the foundation of the game's prosperity. It systematized the business, gave it the stability without certainty of which capital will not venture far. Only recently has the game become a "paying proposition" to managers. Once, only the leading teams in the League could be certain of a profit; the tail-enders could be just as certain of a loss. Not until the last two years have all the teams made money.

Business and Sport

STILL another reason: baseball is both a business and a sport. In the past, some managers have had more sporting blood than business head—the attitude of one who runs a gentleman's racing stable at a loss. What, except the reserve rule, is there to prevent a sporting manager, in a city where attendances and receipts are large, from cornering all the best players and spoiling pennant races? Chicago is, at present, the "best baseball town" in the country, as Boston was once. Charlie Murphy, owner of the Cubs, has made a fortune from his team in two years. Remove the reserve rule, give Murphy a little more sporting spirit—and what could prevent him from making the Chicago team identical with Billy Sunday's All-America team? Other cities, hopelessly out of the race, would lose interest and refuse attendance, to the destruction of the game. Cleveland is not nearly so profitable a city for baseball as Chicago or New York; the reserve rule alone has held Lajoie in Cleveland. Pittsburg is not so profitable as Chicago or New York; the reserve rule alone has preserved Wagner to Pittsburg. Abolish it wholly, at this late date, and you would destroy the game as a business. Perhaps it would be a good thing for the nation; perhaps it would be better for us to play our own ball than to watch hired men play it; but that is aside from the consideration.

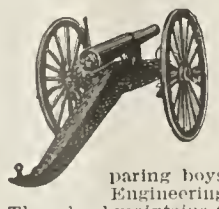
Little by little this strong control of a body of men with ethical responsibility toward a Puritan public has reacted on the profession, raising its standards and its personnel. The first professionals were graduate amateurs, a fine set of men for decency and manners—Spalding, Wright, Reach, Morrill, and Murnane are living exemplars of this class. On the gambling wave entered a tougher class with the ideals of pugilists and the manners of navvies. In the late seventies, the Chicago team, *en route* to New Orleans, stayed over Sunday in a small Ohio town. The country reporter "wrote them up" for his newspaper. "Some lounged in the hotel," he said. "In the afternoon some quietly pitched horseshoes, and three attended service in the Union meeting-house, where they took devout part in the singing. In general they comported themselves more like Christians than like professional baseball players!" That reveals what the public thought of the profession then; and by large the opinion was justified. The old-timer drank hard if he was drunkenly inclined; and he gloried in being tough.

Morals and Manners

WHEN it became a business, and when "inside baseball" put a premium on brains, the young players heeded the advice of their managers and considered the state of their profession. In no sport is the normal man at top form after thirty-five; most men begin earlier than that to lose the cream of their nervous force. Then, for the major leaguer, "back to the bush" and to the low salaries of small-league ball. Players of sense began to realize that their bodies were their capital—capital overprecious to be fritted away on all the concomitants of the tough life. When clubs became infected with this spirit, enforced training rules became dead letters. Year by year, both morals and manners have improved. Undoubtedly, baseball players, as a class, are to-day the cleanest body of professional athletes in the world.

Manners have improved with morals. "We're a school of etiquette for farmhand recruits," says the philosopher-pitcher. "You ought to see what we do to a sword-swallower."

PURE MILK FOR BABY



Sanitary milk production was first started by Gail Borden in the early '50's. The best systems to-day are largely based on his methods, but none are so thorough and so rigidly enforced as the Borden system. For over fifty years the Eagle Brand Condensed Milk has proved its claim as the best food for infants.—*Adv.*

VERITAS H VERITAS H VERITAS H VERITAS

President Eliot's
"Five-foot Shelf of Books"

Cambridge, May 1, 1909.

I have undertaken to select from the best literature of the world a five-foot shelf of books to be published by P. F. Collier & Son under the title of "The Harvard Classics." The selection is intended exclusively for English-speaking people. As a rule, only complete works will be included in the series.

In making choice among the different works of a great author the aim will be to take the author's most characteristic work or that one which will be most intelligible to the people of to-day, or that which has proved to be the most influential.

Each separate work will be preceded by a concise introduction; and notes and glossaries will be provided whenever they seem likely to increase the reader's enjoyment and profit.

It is my belief that the faithful and considerate reading of these books, with such rereadings and memorizings as individual taste may prescribe, will give any man the essentials of a liberal education, even if he can devote to them but fifteen minutes a day.

Charles W. Eliot

Summer Dust Troubles Overcome

By the

Ideal Vacuum Cleaner

Operated by Hand

It Eats Up the Dirt

Or Electric Motor

The season of open windows and doors is the season of the housekeeper's greatest trouble with dust. Every vehicle that passes stirs up the dust, and every fitful breeze that blows carries it into the home, there to be ground into carpets, rugs, upholstery, and wall decorations, and to fill every nook and cranny. With broom, brush, or carpet-sweeper, the work of getting out this dust is an endless task—a continuous round of hard, laborious toil.

How different it is with the IDEAL VACUUM CLEANER!

With the IDEAL VACUUM CLEANER, you just take the nozzle and gently agitate carpet, rug, upholstery or curtain, and—whisk!—all dust and dirt, all germs, moths and eggs of vermin, are sucked out of it and gobbled down into the machine's capacious maw, never to trouble you again.

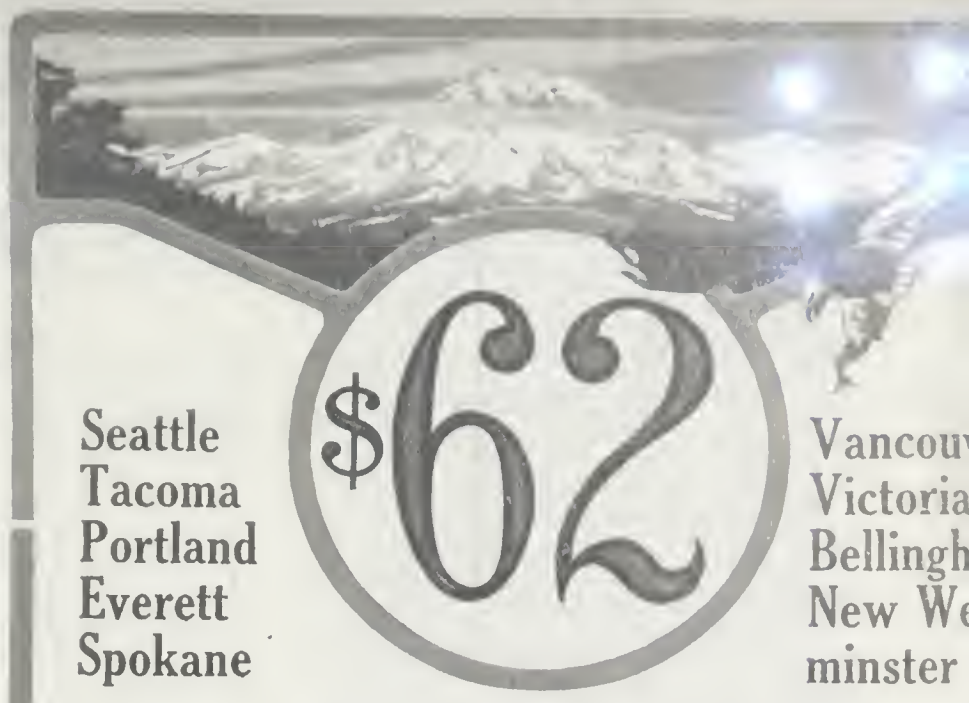
Sent to You Direct for $25

The IDEAL VACUUM CLEANER is in the great majority of cases operated by hand. It requires no strength or skill of any kind compared with sweeping, it is play. Weighs only 20 pounds, and is easily carried about.

Completely equipped for hand operation, the IDEAL VACUUM CLEANER costs only **$25**. So tremendous is the saving it effects in time, labor, health and actual money—that its small price is quickly returned many times over.

The electric motor attachment of the IDEAL VACUUM CLEANER is not a necessity, but a luxury. The motor is of the best standard type. It is readily attached to your electric light fixture, and uses only about two cents worth of electricity an hour.

Equipped with motor for direct current, the IDEAL VACUUM CLEANER costs $60; with motor for alternating current, $65. When ordering, give voltage as well as kind of current.



Any physician will tell you that summer's dust is laden with the germs of disease. Both at city residence and country home, the IDEAL VACUUM CLEANER will serve you well and faithfully in keeping everything clean, wholesome, sanitary and sweet.

This neat, strong, compact, portable machine brings within your easy reach the only thoroughly efficient and strictly sanitary system of cleaning that the world has ever known. How can you afford to be without it? Get ready for the summer by ordering one at once.

Send to-day for our Free Illustrated Booklet. It gives complete information about every phase of the cleaning problem.

A Practical Trademark

The Keen Kutter Trademark is a practical one.

It means something to you—it protects you—it makes an expert buyer of you—and it costs you nothing.

This trademark means, wherever and whenever you see it, that the tool upon which it appears is the best that can be bought—that it will outwear others—that it is perfect in quality, temper, balance, adjustment, and adaptability.

KEEN KUTTER

QUALITY TOOLS

E. C. SIMMONS KEEN KUTTER TRADE ST. LOUIS MARK U.S.A.

are made to work. They are thoroughly tested at the factory to make sure they will do their work, then stamped Keen Kutter.

The guarantee of the maker goes with them, protecting you and the dealer who sells them. They are the only tools you know before trying will give long, hard, satisfactory service.

"The Recollection of Quality Remains Long After the Price is Forgotton."

Trade Mark Registered. —E. C. Simmons

Ask Us About

THE Detroit ELECTRIC

YOU, too, will concede the *Detroit* the laurels it has already won if you will give us the opportunity to tell you all about this car and why—

It will travel more miles on one charge;

It will go faster and still give you this excess mileage;

It established the world's record for electric reliability on its 1060-mile Detroit-Atlantic City trip—a journey made without a broken part or repairs; and after which the car, without adjustment, ran 113 miles in Detroit on a single charge.

If you will post yourself thoroughly about the *Detroit*, you will find it furnishing not only greater mileage and speed; but you will admit, of your own free will, that you have seen no other electric so superbly upholstered—no other one embodying such sound ideas in mechanical and electrical engineering.

These will be so far in advance of what you have encountered in cars to which you had heretofore given preference that you will immediately and unhesitatingly transfer your allegiance to the *Detroit*.

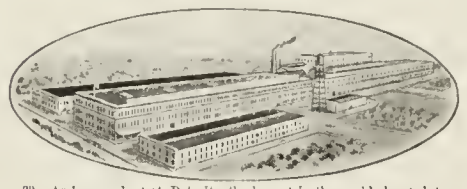
We can do no more here than barely mention a few of the fifty points of acknowledged and absolute superiority in this car.

The doors are larger. They open forward instead of back.

The windows are larger—the curved front windows larger—nothing whatever obstructs the operator's view straight or obliquely ahead, with the windows raised or lowered.

All the cushions are deeper—the rear ones 20 inches where others are 18 and 19 inches; the front 15 instead of 13 to 14 inches.

The metal trimmings—door handles, etc.—are all silver finished.



One lever controls the five forward and three reverse speeds, the alarm and the motor brake—a concentration and resultant simplicity exclusive to the *Detroit*.

The motor is mounted on the body and frame, relieving rear axle and tires of undue weight and strain. It is accessible from front, rear, top or bottom.

We have told you enough for you to know what to expect in this dignified, refined carriage, haven't we?

When you understand and appreciate the *Detroit*, you will be reluctant to consider any other car.

Write for the literature and complete description—and the booklet on the Detroit-Atlantic City run, a feat attempted by no other electric.

The Anderson plant at Detroit—the largest in the world devoted to the manufacture of electric vehicles—represents years of successful vehicle manufacturing experience.

An Opportunity To Learn

Shorthand by Mail Instruction by Expert Reporters

The most important element in the business education of the successful young man or woman of to-day is a knowledge of SHORTHAND. Fifty years ago there were less than a score of expert shorthand writers in the United States. Today there are thousands, and the constantly increasing demand for more is not met by the supply. Two decades ago a large share of the business correspondence of this country was conducted in longhand. Today an army of men and women stenographers conduct the business correspondence of modern enterprises, and, by reason of the superior facilities which stenographers have for learning the business where they are employed, they are qualifying for advancement where they will take the places of our present-day successful business men. This is demonstrated by the fact that a large proportion of our leading business men, lawyers, judges, statesmen and executive heads of great industries are former stenographers.

The more competent the stenographer the better are his opportunities to advance from shorthand to a higher position. This is self-evident.

The number of court reporters in the United States has doubled in the last few years, and the demand for court reporters has correspondingly increased, and is continually increasing. Court reporters are considered expert stenographers. The school qualified to teach court reporting by mail is that much better qualified to teach commercial shorthand by mail. Expert shorthand is more easily learned than shorthand which does not produce expert reporters.

The Success Shorthand School is conducted by expert shorthand reporters. It teaches shorthand by mail. It trains the pupil in the duties of expert stenographers, private secretaries, high class and well paid shorthand writers.

The following are a few of our successful graduates:

Salem Ford, Court Reporter, Court House, Birmingham, Ala., formerly wrote Gregg.
W. F. Cooper, Court Reporter, Tucson, Ariz. (recently elected Judge), formerly wrote Graham.
D. T. Wells, Court Reporter, Monticello, Ark., a beginner.
L. J. Luce, Court Reporter, Box 93, Delta, Col., formerly wrote Graham.
Miss Lena Alfman, Court Reporter, 709 B'ount Bldg., Pensacola, Fla., formerly wrote Pernin.
H. H. Ford, Court Reporter, Savannah, Ga., a beginner.
John R. Slenker, Court Reporter, Court House, Peoria, Ills., formerly wrote Benn Pitman.
Harold B. James, Court Reporter, Amboy, Ills., a beginner.
W. A. Seiler, Court Reporter, Kansas City, Kans., formerly wrote Benn Pitman.
Elmer G. Powers, Court Reporter, Beaver, Ia., formerly tried to write Boyd Syllabic.
Geo. H. Miller, Court Reporter, Ottumwa, Ia., formerly wrote Graham.
Geo. W. Reichard, Court Reporter, Olathe, Kans., a beginner.
Geo. A. Mahone, Court Reporter, Woodland Ave., Sta. E, Arlington, Maryland.
W. C. Brown, Court Reporter, No. 1 Russell St., Worcester, Mass.
B. D. Connolly, Court Reporter, 1277 Wabash Ave., Detroit, Mich., formerly wrote Gregg.
I. W. Neucom, Court Reporter, Crookston, Minn., formerly wrote Munson.
Chas. A. Cheney, Court Reporter, 3802 Windsor Place, St. Louis, Mo., formerly wrote Barnes.
R. P. Jackson, Court Reporter, Great Falls, Mont., formerly wrote Benn Pitman.
Alonzo G. Stewart, Court Reporter, 1141 Mattison Ave., Asbury Park, N. J., formerly wrote Gregg and Benn Pitman.
W. H. Ungles, Court Reporter, Alamagordo, N. M., formerly wrote Benn Pitman.
C. H. Gorman, Court Reporter, Eureka, Nev.
C. W. Elmer, Court Reporter, City Court, New York City, N. Y.
F. C. Eastman, Court Reporter, Warsaw, N. Y.
Miss Mathea Nymon, Court Reporter, Fargo, N. D., formerly wrote Benn Pitman.
James A. Newkirk, Court Reporter, Cleveland, Ohio, formerly wrote Benn Pitman.
Sam R. Criswell, Court Reporter, Durant, Okla.
S. Z. Culver, Court Reporter, Salem, Ore., formerly wrote Cross Eclectic.
Miss Carrie A. Hyde, Court Reporter, Erwin Block, Terre Haute, Ind.
Harry A. Folk, Court Reporter, Paul Jones Bldg., Louisville, Ky., formerly wrote Gregg.
Parker D. Hansel, Court Reporter, Memphis Trust Bldg., Memphis, Tenn.
C. R. McGinnis, Court Reporter, Fort Worth, Texas, formerly wrote Gab'esberger.
O. F. Johnson, Court Reporter, Logan, Utah, formerly wrote Gregg.
Geo. B. Munday, Private Secretary to Gov. Swanson, Richmond, Va.
E. C. Winger, Court Reporter, Point Pleasant, W. Va., formerly Benn Pitman writer.
Frank N. Steele, Court Reporter, 123 Seventh Ave., Seattle, Wash., formerly wrote Gregg.
V. T. Neander, Court Reporter, Ashland, Wis., formerly wrote Benn Pitman and Graham.
Walter A. Evers, Court Reporter, Wausau, Wis., formerly wrote Munson.

Upon application to whichever school is nearer to you, you will receive a catalogue of the Success Shorthand School, entitled "A Book of Inspiration." No charge is made for this catalogue. If you are a stenographer and desire to improve your knowledge of shorthand, state present system and experience.

The Eastern office of the Success Shorthand School is Suite 67, 1416 Broadway, New York City.
The Western Office of the Success Shorthand School is Suite 76, 79 Clark Street, Chicago.

Those applying for our catalogue are not annoyed by personal solicitations,—we do not bother one with urgent and persistent letters. We are glad to send our catalogue to any one who is interested.

Why is the Cadillac "THIRTY" replacing higher priced cars?

You doubtless will find in your own city numerous instances of such change.

And this presents a serious and significant question for all automobile buyers.

These men who have changed must have had some strong irresistible incentive.

How did they come to the conclusion that a thousand or even two thousand dollars more would buy them no greater service or satisfaction than they secure in the Cadillac?

It is not easy to answer that question; because it is not easy to tell you, in this limited space, how good a car the Cadillac is.

Thirty minutes' study of the Cadillac plant would send you away convinced that no car in the world—*at any price*—is more painstakingly, scientifically made.

Most men who have owned costlier cars are good judges of construction and better judges of service; and to them, as to expert engineers, the mechanical goodness of the Cadillac is an open book.

They see at a glance that a thousand or even two thousand dollars additional can buy them nothing more save—size.

And yet, the Cadillac "Thirty" is by no means "small." It is a large, roomy, five-passenger car.

Thirty minutes in any other plant devoted to the manufacture of fine cars selling for several thousand dollars more would reveal no single superiority either in method or equipment.

In no other plant would you find the same fineness and precision throughout—the same elaborate equipment for the attainment of absolute interchangeability.

After such an inspection you must perforce say: "I understand now why the Cadillac Company was awarded the Dewar Trophy. No car could be better than this."

Again, you would come to the same conclusion without visiting the plant, if you were even moderately versed in engineering or in motor car construction.

The expert, examining the Cadillac chassis, announces his decision boldly and immediately: "The finest piece of work I've ever seen at any price."

As to the man who has never bought any car before—he can convince himself by what thousands of Cadillacs have done in the past, by the wonderful things the Cadillac "Thirty" is doing in every community; and by the extraordinary enthusiasm of competent authorities of his own acquaintance.

ADVERTISING BULLETIN

NO. 8

COLLIER'S ADVERTISING COLUMNS AND SOME FIGURES

IN this number of Collier's there are 197 advertisements. Each one, from the little 4-liner which costs the advertiser $10.00, to the beautiful color page for which the advertiser pays $2,400.00, has its own part to play in present day commerce. Whether or not *you* answer any of the advertisements, you are nevertheless in some way affected by them.

Hundreds of persons, skilled in their various crafts, have had to do with the preparation of these advertisements, and the total cost to the advertiser for their work has been well up in the thousands.

To place these 197 announcements in your home and in the homes of half a million other subscribers, these advertisers have paid Collier's a total of more than $22,000.00.

Every one of these announcements of merchandise news (for advertising really is merchandise news) large or small has its influence upon the Collier half million. Many thousands of letters will go to the advertisers represented in this issue from Collier's readers in every state of the Union and in foreign countries as well, who want further information regarding the goods advertised, the places where they can be purchased, etc.

Consider that as a direct result of advertising in this one number, Collier's readers will spend say $300,000 (and this is only an average of 75c per subscriber) to secure the various benefits advertised. Then you will more surely appreciate how careful Collier's must be that none but honest manufacturers and merchants are admitted to our columns and that the claims they make for their goods are in every way reliable. With everyone represented in this issue you may deal with that feeling of security and satisfaction that you have when you buy from a man with whom you are personally acquainted.

SMALL ADVERTISEMENTS CLASSIFIED

A Short Story to All Amateur Photographers

In the Fall of 1905 an advertisement appeared in Collier's on films developed and printed through the mail, and from that one advertisement the situation has developed to the extent that it is to-day; and that advertiser is using these columns in this issue. They are successful because they are delivering the goods to amateur photographers in better shape and at a lower price than local firms. Their business depends on your reorder and your reorder depends on the satisfaction of the first order. Surely these advertisements are worthy of your investigation. To their offers the usual Collier's guarantee as to reliability applies.

Self-Respect

PRESIDENT TAFT is a solid man. The country believes him to be like GROVER CLEVELAND, substantial, dependable, rock-like in his regard for the sacredness of his given word. Mr. TAFT knows what his campaign promises were. If those promises were not sufficiently substantial to hold him now to the keeping of them as a matter of good faith to the whole public, he can not be held by considerations of private esteem. If he is not stirred by motives of public welfare, still more futile would be any consideration that pertained to him as a man among men. And yet those subtle things which determine a man's standing among his immediate fellows, those aspects of his bearing by which those who see him every day take his measure, the estimate which is expressed in unconscious deference or lack of deference, that impression of a man which is acquired by those who are near him, through close observation and daily conduct, which is expressed less in the words of the tongue than in the shading of the voice—these things do, after all, go to a man's foundation rocks. No man can afford to ignore these things—not even one so fortunate as the President in the predisposition of the public to think well of him. If President TAFT will read the tariff debates in the Senate, particularly if he will read those passages in which his promises of a reduction downward are alluded to as a reason for lower schedules by Messrs. BEVERIDGE and DOLLIVER on the one hand, and scorned on the other hand by Messrs. ALDRICH, LODGE, and the majority who are actually making a revision that is *not* downward—if President TAFT will read those passages, he will not anywhere find a word of overt disrespect; but he will be conscious, through page after page, of a spirit that can be expressed in these words: *His* promises? Shucks!

The Test

IT IS PRESIDENT TAFT, not the Senate, that must make good to the people. The Senate made no promises. President TAFT must either veto the tariff bill or prove to the people, face to face on the public platforms where his promises were made, that the tariff bill which he signs is a substantial revision *downward*. And this proof can be made by no long compilations of confusing figures, by no devil-and-stump hippodrome of how the maximum will reduce the differential, and the ad valorem will sit on the minimum's neck. There is but one test clearly intelligible to the plain people to whom the promise was made: whether Mrs. John Smith, frugal housewife in Spokane, gets her sugar next year *cheaper;* whether Farmer Williams of Lyon County, Kansas, buys the lumber for his barn next year substantially *cheaper;* whether the underclothes, the stockings, the woolen winter suits, and the other items that make up ten million household budgets are, next year, substantially *cheaper*. This, and this alone, will make the difference, when Mr. TAFT makes his next trip among the people, between a friendly sea of faces, or a justly indignant one.

Not Downward

LET THERE BE NO MISTAKE about the facts. In the Senate the tariff is not being revised *downward*. The people will know this a few months hence by the prices they pay. But it is important they should know it *now*. Not only is the revision being made upward in the sense that twenty-five per cent is greater than ten per cent, as in one of the cotton schedules; in more devious, cunning ways the figures are being raised—in ways that make it possible for Mr. ALDRICH to throw smoke around the facts, and by sublime bluffing confuse even many members of the Senate. He has at his command several tariff experts, skilled in intricacies, intimately familiar with all the court decisions on tariff cases. It is these men, as Senator LA FOLLETTE has repeatedly pointed out, who are really writing the tariff. They are able to so change the terminology of the Dingley bill, to so classify the schedules, to so word the law, as to get the maximum of upward effect with the least appearance of raised figures. They know just what language must be so interpreted by a court as to give the very highest protection. Finally, Mr. ALDRICH proposes now, as an incident to the new bill, to take all tariff cases out of the jurisdiction of the regular United States courts, to create a special customs court, and to pack that court with the very experts who are now writing his bill for him. Mr. ALDRICH is fond of these star-chamber experts. When he was engineering the Dingley bill through the Senate he had one who was secretly in the pay of the woolen manufacturers, but officially clerk to the Senate Finance Committee.

The Bogy

MR. TAFT need not be frightened at the bogy of delay. Very soon after his veto a chastened Senate, freed from the Aldrich autocracy, would give him an honest revision. Mr. TAFT should not be the man to be swept off his feet by tales of palpitating prosperity straining at the leash. Better two weeks of delay now than ten years of tribute.

Shorter and Uglier

THE MORE ENLIGHTENED among Uncle JOE'S friends, while admitting most that this paper has from time to time said about him, have claimed for the Speaker certain old-fashioned personal virtues of straightforwardness and veracity. We are compelled to doubt these extenuations. In an article in the June "Century," to which Mr. CANNON'S name is signed, we find this sentence:

> "A New York publisher conducts a campaign against the Speaker and the House rules, and at the same time sends his confidential agent to the Speaker's friends with a demand for an appropriation of $50,000 from the Federal Treasury for his own pet project."

By "a New York publisher" Mr. CANNON means the publisher of COLLIER'S; "his own pet project" is the Lincoln Farm Association. The inference intended is a new variation of an old falsehood. Last fall, when Uncle JOE was deep in a desperate fight for reelection, the Hoopeston (Illinois) "Daily Chronicle," and others among his partizan papers, brought to his defense the stupid invention that COLLIER'S had offered, for $1,000, to print a laudatory article about the Speaker, giving Uncle JOE himself as the authority for their story. Subsequently, CANNON said he had been misquoted. About the same time one of Chairman TAWNEY'S papers, the Winona (Minnesota) "Republican-Herald," accounted for COLLIER'S opposition to CANNON and TAWNEY by saying that these gentlemen had "declined to assist COLLIER'S in looting the United States Treasury in the interest of COLLIER'S private graft." It is true that COLLIER'S has criticized Mr. CANNON'S political course pretty steadily for the past three or four years. It is true that the publisher and the editor of COLLIER'S are associated with the Lincoln Farm Association, which undertook to raise, by popular subscription, $250,000 to place a memorial on the farm where LINCOLN was born, at Hodgenville, Kentucky. This association did petition Congress about a year ago for $100,000 to add to the $150,000 already raised, because it had become apparent that, owing to the association's refusal to accept more than $25 from any one private subscriber, the entire sum could not, as a matter of time, be raised early enough to complete the memorial for the Lincoln centenary, last 12th of February. COLLIER'S did not vary its course toward Mr. CANNON while this petition was pending. The naïveté of our failure to do this was suggested to us at the time by many of Mr. CANNON'S friends, as it is frankly pointed out by Mr. CANNON now. As a matter of fact, the two articles of ours at which the Speaker has taken most offense were printed the same month when the Lincoln Farm Association's petition was pending before Uncle JOE'S Appropriation Committee. It had not occurred to us that it was necessary to keep editorial silence about Mr. CANNON in order that a patriotic association might get a hearing before the House of Representatives. Apparently it had occurred to Mr. CANNON to purchase immunity from criticism with the funds of the United States.

An Obituary

THE FAITHFUL SERVANT in a republic is said to be a rare thing: but is not gratitude for loyal service unusual also? At any rate, it moves the heart to read such a tribute as Dr. HENRY G. SPOONER of Stanton, Florida, paid to his "mammy" in the obituary notice which he wrote for her:

> "Aunt TINA JAMISON, beloved wife of MACK JAMISON of Stanton, Florida, died early this morning of apoplexy. Tired as her old feet were, she never failed to do her duty. In washing a dish or roasting a joint of meat, she took infinite pains, and no horse or cat or dog left in her charge ever suffered for water. Aunt TINA was of the type of the old-fashioned colored woman, fast disappearing from the face of the globe, who reared the children and tenderly guarded their infancy. For four generations she worked for the writer's family, but never failed once to keep her word. GOD bless her."

She kept faith, and did what came to her hands to do with infinite pains! This is a tribute which would equally well fit the tombstone of a particularly good king.

One Man

NEVER A CLASS DRIFTS out of New Haven on graduation day but sings the song:

"Good-by, Charley, we must leave you.
Good-by, Charley Dean."

His name isn't Charley. It is HENRY P. WRIGHT. But he is Dean of Yale, and has been for twenty-five years. This Commencement the singing will have a new and deeper accent, as he ends his active life with the close of June. There are few of the thirty thousand graduates that do not have a personal fondness for Dean WRIGHT. He is reserved, shy, sensitive beyond most, but every inch a man. And somehow, without the poor instrument of words, he has been able to express a tenderness of heart, a vigor and justice of discipline, that won the respect and then the hearty liking of the thousands of young men that have passed through his office. Because of his manifold and intimate duties, he has been in closer personal relation to the student body than any other person on the campus. He knew the demerits of the men, their lapses in scholarship, their tardiness, absences, escapades. He believed in men. He was in harmony with his work. There was no loss in "waste motion," in friction, in ill-aimed blows. Every hour of his working life was fertile in results.

Books of the Day Before Yesterday

ONE BRIEF PARAGRAPH in the accounts of GEORGE MEREDITH'S career recalled the fact that a single year, 1859, saw the publication of four mighty books: "The Ordeal of Richard Feverel," "Adam Bede," "A Tale of Two Cities," and "The Virginians." What year since has equaled this record for permanent worth? This is the season when women, making up their lists to take away for summer reading, eagerly post themselves on books of the day and the late best sellers. To women who spend their summers in seaside and mountain hotels it probably doesn't avail much to speak a word for the books of the week before last. Only a few persons, anyhow, read books for acquaintance with noble minds, or have the intellectual independence to choose their reading according to their own tastes. Unhappily, most people choose their reading largely as a social matter, with as sharp an eye to the current fashion as in choosing their clothes, in a panicky fear lest they be found not well posted on what other people are talking about. This, in books as in everything, is fundamentally the case of persons who, having no standards of their own, are feverishly eager to be like the great majority and agreeable to it. Is that woman, who insists upon lightness and amusement to leaven her summer, sure she has exhausted the possibilities of "Miss Kilmansegg and Her Golden Leg," whose quality may be guessed from the distinction that it is best among the humorous poems of an author who wrote the best pun in the English language? If children are not led to like good books in their youth, they will never acquire the habit later on. Persons who like the disjointed remarks in this editorial will find much more in a similar vein in FREDERIC HARRISON'S "Choice of Books."

The Mouth of the Blistered Nose

WHEN THE TENNIS PLAYER begins to wind fresh tape on the handle of his racket every few days and the one who wears glasses pulls a sweat-band low on his forehead, summer is running her furnaces chock-full. It is a time when five hard sets of singles will test the stamina of the best-seasoned. (Who was it, in the credulous past, that said tennis is a young lady's game!) To acquire color—pale-brown freckles, smooth tan, or blistered red—there is no outdoor laboratory like the tennis court. Here one abandons his hat, loosens his shirt collar, and plunges about in the thinnest of clothes—wind and sun have their way with him. Saturday afternoon, early, is the time to enjoy tennis. If one plays on grass, there is the sweet-hot odor of it floating close under his nose, and there is no strong breeze, such as usually springs up later in the afternoon, to drive it away. In the early afternoon a dirt court is liveliest, the gut in the racket "pings" most musically, and the balls are never "dead." And, best of all, the sun pours down upon face and ears and neck most generously. Sweat will prevent the sort of blistering that comes to the swimmer. And when the match is finished, in sweater and wide hat, it is a pleasant thing to sit by, in intimate gossip with a late opponent, and watch the later comers chase the elusive tennis ball and get friendly with the sun.

Open-Air Theatricals

EVEN IN OUR THEATRICALS we are rediscovering the outdoors. Not only has PERCY MACKAYE'S "The Canterbury Pilgrims" been played in the open air at a score of colleges and elsewhere this spring, but the Yale undergraduate dramatic club is preparing scenes from "The Merry Wives of Windsor," Miss MAUDE ADAMS is going to act SCHILLER'S "The Maid of Orleans" in the Harvard Stadium, and many towns have presented or are going to present historical pageants. Even settlements and unacademic dramatic clubs have acquired the pleasant habit now, and working girls enact "Twelfth Night" on a Dedham lawn, while boys convert a grove in Riverdale, New York, into Titania's abode. It is not beyond the bounds of possibility, if this keeps on, that some one of our playwrights may turn poet and write a modern mask. When the extreme simplicity of the open-air stage is considered, especially at night, darkness and foliage serving as flies and wing pieces and back-drop and "atmosphere," and when the enormous aid to the amateur actor of natural setting in creating a sylvan or poetic mood is borne in mind, one is astonished only that the revival of open-air theatricals has been so long in coming. Why give "The Deestrict School" in a stuffy town hall, when you can give "A Midsummer-Night's Dream" just as well on the edge of a real grove, of a warm June evening? Why serve only strawberries and melty ice at your charity lawn party, when you might more charitably offer a charming play? Have any amateurs tried ROSTAND'S "The Romancers" out-of-doors? One doesn't need the Bohemian Club's grove of redwoods for a stage. A corner of John Smith's lawn, between the beach and the syringa bushes, can become a Forest of Arden, ringed by the darkness and touched with SHAKESPEARE'S magic wand. And what small town is so poor in tradition that it has no story of Indian massacre or pioneer caravans that might be reproduced after the manner of the English historical pageants?

Divorce

AN AGGRESSIVE AMERICAN HEROINE with an insatiable appetite for freedom and a genius for selfishness is presented by Mrs. HUMPHRY WARD in her latest novel, "Marriage à la Mode." This heroine, having led a wilful girlhood, secures a Dakota divorce from her English husband for these reasons: That he did not love her very much, that he married her for her money, and that he was shilly-shallying with an old sweetheart. A good many Americans of feeling will agree with all English of sensibility about the validity of this excuse for so serious an offense against public welfare as a divorce, particularly since there was a child in question. But while we recognize the arraignment Mrs. WARD tacitly brings of intrinsic selfishness in American women, we wonder not a little why she fails to condemn the equally offensive selfishness of her Englishman, who crossed the Atlantic, at the bidding of his mother, for the purpose of securing a rich American wife, needed to repair the ruined fortunes of the English house. And by what conjuring with the virtues is she able to make the woman detestable and the man pathetic, when each was basely and cruelly self-centered? Apparently our standards differ. Americans are romantic. They detest the idea of a mercenary marriage; and it takes a stern morality to look upon this romantic quality as a fault. This insistence upon romance is at the bottom of no small proportion of American divorces. When love flies out of the window the expectant and sentimental American, who hates failure, sorrow, patience, dulness, and resignation, looks about for some avenue of escape from an untoward destiny—and often finds it. That this appetite for happiness is inordinate there is no denying; that such ideality, which must decorate life even at the cost of personal integrity, is wild and extravagant, all must admit; but at least the chill offense of the marriage for money seldom is ours. Not to defend our tolerance of divorce, how can Mrs. WARD, that rigid moralist, ask us to sympathize with a mercenary hero, who sinks marriage to a mercantile transaction? Here, it appears, the English cousin differs substantially in his point of view from us, and if he is frankly amazed at our domestic facility, we are sincerely surprised at the *sang froid* with which he confesses to the venal motives which frequently prompt his courtship.

Of the Dead, Nothing but Good

THERE DIED IN BUTTE the other day one of the last of an almost extinct race—the old-time frontier gamblers. Of them little good has been written. Now and then some churchman, seeking the salvation of the mining camps and disheartened by the barren soil, was given such moral help as the fraternity was capable of, and riotously of its substance. Singularly enough, these men of the cloth have borne the only eloquent written testimony to the white charity of the gambler. In the pages of fiction he was the central figure in evil brawls and plots. Yet truth compels the statement that this product of a fiercer civilization had qualities, other than marksmanship, that commanded no mean respect where he was best known. Perhaps because the fraternity was wholly bad, as a rule, did these better men of their class stand out as strong leaders in the forces that moulded our frontiers into cities and States. Alert and keen they were, as men who survived a time when the pomp of power and the kingdom of men were both represented by the six-shooter. Their business was, until a few years ago, lawful in many of the Western States. Legislators haggled over stud-horse poker, faro, roulette, and fan-tan, and the tax these games should pay. When frontier society got to the point of derby hats, four-in-hands, and polished shoes, the gambler asked no place in the social order. In the changing fashion he felt the indignity of his calling. Outlawed, he fought pitifully for his ancient rights; but his race was run. He was a part, nevertheless, and, outside of his calling, a not unworthy part, of those courageous, dynamic forces which finally became abiding communities; and in a world where virtue is often comparative, and where surely it shines the more brightly for its evil setting, let us pay him that meed of praise. At least he looked his victim in the eye, defended by no greater barrier than a three-foot table. Perhaps he was no worse than the man of our own time who, secure in the deepest labyrinth of organized society, takes, under form of law, toll from the food and clothes of the poor, or the one who lures to financial distress by flaring advertisement the dupes of this foolish world.

Alaska in 1959

By
WALTER
E.
CLARK

Recently appointed
Governor of Alaska

A Glance at the Future of a New Empire

NO MAN can tell what Alaska will be in fifty years. Violence is done to the best tenets of journalism by this observation, when it is considered that the subject assigned to me calls for some views, opinions, or beliefs as to what may be expected to transpire in Alaska between now and 1959. Even the cub reporter seldom introduces his "story" with such a statement as, "There was no news at the City Hall today," and forthwith writes a column, for his city editor naturally expounds, perhaps with profanity, the elementary rule that the writer should not "play down" his subject. "No man can tell," nevertheless, will do. It is intended to convey the impression, not of a barren subject, but of possibilities so vast that the powers of adequate—or, at least, accurate—prediction are baffled. Alaska is a natural empire of extensive proportions to which the eyes of adventure and capital alike are turning. The intelligent old men who are living in 1959 will be able to say that they "knew" fifty years before that a wonderful development of natural resources was on the way.

A Land of Vegetables and Flowers

THE inertia of public opinion is very great, and the geographical and other misconceptions of Alaska, which are legion, are difficult to overcome. Apologies, then, to the exclusive circle of the truly well-informed, while it is remarked that the northern empire which was acquired by the United States in 1867 is not coextensive with that region which immediately surrounds the poles of the earth. It is singular that the popular notion of Alaska peoples the greater part of the Territory with Eskimos, clothes at least its northern area in perpetual snow and menaces navigation with icebergs. Of course, it is now pretty generally understood that white men are carrying on great mining and fishing industries in Alaska. Certainly it is not as well known that vegetable and flower gardens as far north as Fort Egbert are being cultivated with much success. It is fairly well known that there is a great and growing commerce between Alaska and the States. But how many thousands of intelligent persons know that all of the Alaskan ports except those of Bering Sea are open in winter as well as in summer? Not many. Under the circumstances one hesitates to tax the popular mind with the preposterous truth that the winter climate of Alaska's capital is as mild as that of Washington, District of Columbia, and that January weather is perhaps less severe in the Tanana Valley, which is in the very heart of the Territory, than in Montana and the Dakotas. Such a blizzard as attended the inauguration of President Taft at Washington three months ago has seldom been known in Juneau, or Sitka, or Wrangell, or Ketchikan.

It is easy to learn the truth about the geography and the climate of that great territory which, immediately following the purchase from Russia forty-two years ago, was known as "Seward's Folly," and it requires not much gift of prophecy to foretell that in the next half-century there will be an enormous development of natural riches in that part of the world. It is not so easy, and I have not the inclination, to predict what the political status of Alaska will be in 1959. Several eminent statesmen of the old school see constitutional or social objections to the admission of outlying Territories to the privileges of Statehood. Some of them even object to the organization of Territorial forms of government. If these objections are overruled by the statesmen of a new generation, it will be no more surprising than was that reversal of old traditions, now approved, which resulted in the acquisition of Hawaii, of the Philippine Islands, and of Porto Rico. Statehood for Alaska is surely not a question which need engage our attention at present. There are those who hold that a fully organized Territorial form of government for Alaska is not a legitimate issue at this time, although there are others who declare that this northern possession of the United States should immediately be organized as a Territory, with a Legislature elected by the people, as in Arizona and New Mexico. Avoiding this discussion, which has no place in an article which deals with the commercial possibilities of a great region during the next half-century, we may devote ourselves to a consideration of what is in prospect for the progress of Alaska along commercial and industrial lines.

On this subject the imagination runs riot in a territory which covers more than 586,000 square miles, and is approximately as large as all of the United States lying east of the Mississippi River, if we subtract the areas of Alabama, Florida, Georgia, Mississippi, North Carolina, and West Virginia. At present the industrial and commercial activities of Alaska are being carried on within the Territory by perhaps thirty-five thousand white people. Exception will be taken to these figures; there are those who estimate the white population to be not more than thirty thousand, and there are those more enthusiastic, but certainly less accurate, who place the number as high as sixty thousand. The Federal census of next year will tell the story.

Commercial and Mineral Wealth

RELATIVELY to the population, the ocean and inland water commerce of the Territory is large. The shipments of merchandise and precious metals between the States and Alaska and between Alaska and foreign countries has already approximated $50,000,000 in a single year. In the fiscal year 1908 the merchandise shipments alone amounted to $26,875,373. The growth of this commerce has been steady, year by year, and on the whole it has been surprisingly rapid. Prior to 1903 the customhouses were not required to make separate reports on shipments of goods to and from Alaska, but in the fiscal year ending June 30 of that year the merchandise shipments in both directions between the Territory and the States was $19,454,724. The gain in five years was $7,420,649. Adverse factors have been encountered from time to time, such as a reduced catch of salmon, and the decline in the price of copper, which made the operation of certain mines in southeastern Alaska temporarily unprofitable. Nevertheless, the commerce of the Territory has increased in varying degrees year by year, and it has almost always accompanied the inauguration of new industrial enterprises or the enlargement of established projects. In the statement of these figures no account is taken of the shipments of precious metals. The gold shipments are, of course, very large, for within the last three years the annual production of gold in Alaska has been larger than that of any Territory or State except one.

By far the largest product of this Territory is gold, although the output of the fisheries has been, and still is, enormous. Probably the relative importance of these

outcomes will be substantially the same in 1959. The remark has often been heard in the last few years that unless some sensational new gold strikes are made in the placer regions, Alaska's gold output will certainly decline before long. A more thoughtful judgment is that there is no prospect that the production of gold will be smaller for many years than it has been since 1906. It is true that there has been no great discovery like that which caused the world-wide stampede to Nome in 1900, but that was hardly to be expected, for the whole Seward Peninsula, of which Nome is now the thriving capital, was known only to the geographers as a waste of land prior to 1898. The discoveries that have been made since the Tanana Valley excitement of 1902 and 1903 have been local in character, but highly significant and valuable, nevertheless. What justifies the belief in the lasting future of the Alaska mining industry? Simply a semi-scientific but absolutely convincing appraisal of what we now have, coupled with a reasonable expectation that the surprises of the past are to be repeated at intervals during the next twenty-five or fifty years.

The Vast Wealth of Gold

THE familiar saying by those who know this northern country is that "the surface has only been scratched." Now, could it be otherwise in a period of not much more than two decades, in a country covering hundreds of thousands of square miles? Some of us earned less than low wages by mining the beach gravels close to the surf at Nome in 1900, but few of us surmised what riches were held by the unpromising tundra at our backs. Two or three outfits with drills prospected for a short time on the tundra and were laughed at while they did it. They found no prospect worthy of notice, yet it was discovered only a few years later that an ancient beach-line, blanketed by the frozen muck of the tundra, was richer in gold than the sands of the present beach. A little later a second beach-line, a few hundred yards farther from the sea, was discovered, and then a third which yielded large returns. These discoveries are cited to encourage a more general belief that Alaska gold will be found for years to come in places where its presence now is least suspected.

Precious metals have been found in Alaska from the southernmost extremity of the panhandle to the shore of the Arctic Ocean. The geologists think they know about what to expect in large portions of this area, their conclusions being based upon a series of valuable reconnaissances and surveys by the United States Geological Survey. These conclusions in given instances have been upset, for even the science of geology may err. There are many well-defined areas in which it is demonstrated that the gold-bearing gravel is of low grade, and where no rich spots are to be looked for. If one insists upon having a prediction as to what will be going on in these places in 1959, it is not hazardous to say that these gravels will be made to give up their treasure by methods of mining which require large outlays of capital and extensive equipment for handling a maximum yardage economically.

This reminds us of the frequent discussion as to whether Alaska is really a "poor man's country." The right of discovery is not restricted, and although the mining laws might be improved, the prospector who has no money except what he has invested in his grub-stake may be well assured that he will not be robbed of the fruits of his enterprise. Somewhat recently large bodies of capital have been invested in Alaska mining enterprises, and railroads are being constructed to tap new fields. Unrestricted, the joint owners of mines and railroads might be in a position to oppress the poor prospector or the poor mine owner; but it is already provided by statute that the rates on all Alaskan railroads which are now building or which may be built in the future are subject to review by the Secretary of the Interior.

High Wages for Labor

ALASKA is a "poor man's country" in the sense that the poor man who works with his hands is able to earn large wages—large, even when the high cost of living in the interior of the Territory is considered—and it is a poor man's country in that the prospector and small miner of the future will have an opportunity to sell the ground which he has acquired to one or another of the large operators without fear of being forced to make sacrifices because some large capitalists own the railroads. The greatest safeguard for the poor man in Alaska to-day is that freight rates on railroads are subject to a strict Federal supervision and adjustment. Under this administration, at least, it may be confidently expected that a proper supervision will be exercised.

As for mines of gold quartz and coal and copper, poor men usually do not operate them anywhere; but it is safe to say that the poor prospector who discovers a big deposit of ore in any part of Alaska that is accessible to a railroad will have no trouble in selling it at a fair price to any one of a score or more of large investors who have recently become identified with activities in the Far North. What has been said of wages is not to be taken as final or as covering every case which has arisen or may arise in the Alaska mining field. The general statement, subject to possible exception, is justified, however, that labor in Alaska is well rewarded.

Population, Mines, and Fisheries

ENTHUSIASTS will say that Alaska's people will number ten millions within the next half-century. Obviously no warrant exists for such a prediction. No such number will ever be supported by the activities of the mines or of the fisheries or of the forests, and the problem, therefore, becomes one of the soil. Of the soil more will be said later. The subject of the fisheries may be disposed of briefly with the statement that the output of canned salmon has for many years been valued at from $7,000,000 to $9,000,000 annually, and that the industry of packing and shipping other kinds of fish has grown rapidly within a comparatively recent period. The fishing industry will certainly suffer in the future unless the wise precaution is taken to replenish the stock of fish. Some encouraging progress has been made in this direction within the last two or three years, but not enough to allay entirely a feeling of uneasiness lest the supply of salmon be seriously depleted at a day not distant in the future. It is, by the way, an example of superlative Alaskan enterprise that halibut in a fresh condition taken from Territorial waters are being shipped to markets south and east, even to the very shores of Massachusetts Bay. What may not happen in fifty years!

Fifty years hence the forests of Alaska will, it is conceived, be producing an abundant wealth. They are producing now enough for the needs of the people in the wooded parts of the Territory, and the lumber business is capable of large expansion. Proper conservation of this great natural resource was ensured years ago when Congress enacted a law forbidding the shipment of lumber out of the Territory, and the Forest Service exercised an abundance of caution, under the circumstances, when it established several vast natural reserves. It is not to be claimed that the Alaskan forests compare in absolute value with those of Washington and Oregon, but their usefulness to the people of the Territory can not be measured. The tracts of heavy timber are not very large, although the total area is extensive. Some of the largest trees are found in almost inaccessible regions in the southeastern archipelago; but the supply is large enough to meet the needs of the people for ages to come. One of the most promising resources of southeastern Alaska is the abundant material for the manufacture of wood pulp. Enormous water-powers are waiting to be harnessed; and the time may come—perhaps before 1959—when Alaska will supply all of the print paper required by all of the news publishers of the United States. The lumber industry in Alaska at present is of considerable proportions; and it is not the less important because, being limited by the non-export law, it is developing strictly in proportion to the demands of the local market.

A Great Future for Agriculture

IN TRYING to anticipate the developments of the next fifty years, it is necessary to estimate the possibilities of agriculture. Judging from the progress of the last decade in this department of Alaskan activity, it will not be necessary to wait much longer to predict with confidence what may be wrought in the next half-century. Ten years ago comparatively few persons even in Alaska knew that it was possible to raise as fine garden vegetables there as are raised anywhere in the world. Now there are gardens in nearly every settlement south of the Arctic Circle, and truck gardening for profit is not an uncommon business. Some of the finest gardens of vegetables and flowers to be found anywhere in the North are in Fairbanks, a town situated near the geographical center of Alaska. In the mean time, the Department of Agriculture is experimenting in the Territory with cereals, and an effort is being made to develop a hardy wheat which will surely ripen before early frosts come in the fertile valleys of the Tanana and the Sushitna.

Three years ago I visted a homestead farm a few miles from Fairbanks, and was impressed with the intelligent optimism of the Norwegian proprietor. The date was about August 25, and so rapid had been the growth of his crops during the midsummer period of almost constant sunshine that his harvest time was at hand. Indeed, this farmer already had reaped a small field of barley, and the yellow sheaves of grain, hard and fully matured, were stored in his barn. Almost every variety of the common vegetables was growing luxuriantly, and weeks before he had sold cabbages and other green products of his farm in the Fairbanks market. Cattle may graze among luxuriant grasses in southern Alaska, and even in central Alaska; near the coast stock has wintered without artificial shelter and with no serious loss. One may reasonably doubt that farming will ever be the prime industry in Alaska, but the idea is not to be dismissed that the soil of a Territory whose oldest towns are below the latitude of St. Petersburg will, before 1959, be the chief support of a hardy and frugal, though not unthrifty, people.

Start of the National Balloon Race at Indianapolis

Six balloons, racing for the distance trophy of the Aero Club of America, and three others, competing for the Endurance Cup of the Indiana Aero Club, set sail from Indianapolis on June 5. The balloon "Ohio" of the Endurance Contest came down in Brown County, Indiana, on the evening of June 5; the "Chicago" in Allen County, Kentucky, at 1:30 P. M. June 6, and the "Indianapolis" soon after at Westmoreland, Tennessee. The "Indiana" remained longest in the air of the entries in the distance event

Westchester's Pageant

THE Westchester County Historical Pageant, rendered by a number of writers and artists, including Tudor Jenks, Gouverneur Morris, Violet Oakley, and others, was enacted at Bronxville, New York, on May 29. A special performance was also given on May 31 for Governor Hughes and other distinguished guests, including Mayor McClellan.

The seven episodes of the pageant, divided into scenes, formed an epic of Westchester's history; and these events, as the Prologue argued, while peculiar to Westchester County, are illustrative of the whole development of the American type.

In the open air, among the trees, the pioneer struggles and dangers were represented in a primeval setting —Indians and white men crept through the foliage upon each other's trails.

The first episode depicts the figure of Adriaen Block at The Hague before the Prince of Orange, 1614, petitioning for his charter to trade in New Netherlands; and the second scene gives the arrival of Jonas Bronck and subsequent purchase from the Indians of "The Bronx."

Episode two dramatizes the fate of Anne Hutchinson's colony of religious fugitives, massacred by the Indians; and the vengeance of Captain John Underhill, which quickly fell upon the tribe of Wampage.

Episode three takes up the settlement of Yonkers,

Governor Hughes and his staff, in the central box, witnessing the State performance of the Westchester County pageant

The arrival of Jonas Bronck, who purchased "The Bronx" from Chief Tackamuck, in 1639

The reading of the Declaration of Independence from the steps of the White Plains Court-House June 19

in the patronship of Colen Donck, and the later encroachment of English Puritans from Connecticut.

The fourth episode is concerned with the French—the Huguenots who fled from France and founded New Rochelle—showing their quaint ceremony of presenting the annual fatted calf to John Pell, Lord of the Manor, and their twenty-mile march to church at New York on communion Sundays.

Scenes of the Revolution

THE first suggestions of the imminent Revolution appear in the "Election on the Green," episode five. In 1733 Governor Crosby deposed Justice Lewis Morris from the Supreme Court. The voters of Westchester County reelected him over the Governor's head, and also over the crafty disqualification of the Quaker ballots.

Episode six gives four scenes from the Revolution as it "crossed and recrossed Westchester County." A meeting of the Provincial Congress on horseback, which appropriates its funds to the Continental Army, is followed by the reading of the Declaration of Independence from the steps of the White Plains Court-House. The Battle of White Plains comes next, wherein General Washington is represented, and finally the capture of Major André.

The last episode is in the years of peace, and clusters around Washington Irving. An imaginary company of famous literary men is gathered at "Sunnyside"—Holmes, Longfellow, Hawthorne, Bryant, Cooper, Poe—when Rip Van Winkle appears among them, with "Heinrich Hudson and his mystical crewe."

The Book of the Words

THE booklet in which the lines of the actors were published, as well as descriptive paragraphs explaining and illuminating the various scenes, contains also a poem—"An Invitation to the Pageant"—by Richard Watson Gilder. Miss Violet Oakley, designer of the pageant, contributed the historical introductions and the prologue.

The different episodes and their divisions were interspersed with musical numbers, harmonizing with the time and scene under portrayal—Dutch folk-songs, old battle hymns, and psalms. The costuming was as faithful as it was picturesque.

Among the patrons of the affair were Governor Hughes of New York, Mayor McClellan of New York City, Mayor Warren of Yonkers, Mayor Howe of Mount Vernon, and Mayor Raymond of New Rochelle. The Colonial Dames of New York and the Daughters of the Revolution also assisted. The various committees of details and arrangements numbered almost a hundred people.

This is the first of the three celebrations in which the State of New York will participate during the festival year of 1909. The Lake Champlain Tercentenary will be observed in July, and the end of September will bring the third and culminating Hudson-Fulton memorial.

"A Fool's Bargain"

Secretary Seward's One-Hundred Per-Cent Investment for Uncle Sam, which is no Longer a Joke

By RICHARD LLOYD JONES

Porcupine Mountain, Alaska

Why seek foreign Alps?

WHILE angry debates of Reconstruction were engaging the politicians "on the hill" in Washington in 1867 the Department of State was quietly negotiating a treaty, the importance of which is just beginning to dawn upon the American people. Secretary Seward thought he saw real military and commercial advantage in the acquisition of Alaska. The heroic Cassius Clay, then United States Minister to Russia, was sure of it. Russia was eager to turn over to the United States her American possessions, that our Pacific defenses might be carried northward and married to her own Asiatic fortifications at the point where the waters of the Arctic and the Occidental Seas caress. This was the Czar's dream. To Secretary Seward came an Arctic vision of great commercial reward in the development of vast seal and fish industries. People who had been there had reported to him that the country in all particulars was much like Norway and Sweden. Scandinavia had great cities, cultured capitals, valuable commerce, a proud and industrious people, and happy homes. Would the great country through which flows the mighty Yukon some day parallel this? It might take centuries, perhaps; but the great unseen things have ever been the world's most benignant boon. Concluding some friendly diplomatic dickering, Secretary Seward offered to the St. Petersburg Government $7,200,000 for their "Russian-America." Even against the whole world's unbelief, at this price it was a bargain.

Make the Treaty To-night

ON THE evening of Friday, March 29, Mr. Seward sat in his parlor playing whist with his family when the Russian Minister was announced. "I have a despatch, Mr. Seward, from my Government by cable," said Mr. Stoeckl, the Russian Minister. "The Emperor gives his consent to the cession. To-morrow, if you like, I will come to the Department and we can enter upon a treaty." Pushing aside the whist table, the impatient Seward replied with a smile of satisfaction: "Why wait till to-morrow—let us make the treaty to-night."

Between midnight and dawn long panels of light fell from the Secretary's windows across the shadowy lawn of the State Department building. In these solemn midnight hours the silent wilderness of centuries was released, and to a nation's pillowed ear the low north wind whispered: "Gold." When the sun's rays fell upon this parchment and the world was told what that night had been done, the whole nation coupled the name of Seward with the epithet: "Fool." The press everywhere declared his acquisition a "barren, worthless, God-forsaken region," whose crops were "icebergs"—a country where the

"Stately polar bears
Waltz around the Pole in pairs;"

where the ground was "frozen six feet deep in summer"; the streams were "glaciers"; "it should be named 'Walrussia'"; the fish were "only fit for Eskimo food"; it was "Seward's folly" and his "polar bear garden"; it was "a fool's bargain"; "Oh, the shrewd Russians," etc., etc., etc. But the great Secretary only smiled, for was not Jefferson laughed at when he bought from Napoleon more than half of the country we now so proudly possess, and was not Columbus ridiculed when his timid little ships set out upon unknown seas?

In the half-century that has passed since the Senate ratified that treaty, this "Icicle" has produced a wealth exceeding $350,000,000, or nearly one hundred per cent per year on the "fool's" investment. Frenzied finance run riot indeed! And the pick and the plow have as yet barely pin-pricked its wonderful surface. Is there, then, room for amazement that the Alaska commissioner for the Lewis and Clark Exposition, at Portland four years ago, should have reported that his task was hopeless—that it would take an exposition in itself to even adequately intimate the sure future of Seward's purchase?

Alaska's exhaustless storehouse of precious metals was the lure that drew the argonaut, as did California in '49 and Nevada in the winter of '50. Seattle grew great from this argonautic traffic—from swapping picks and pans and warm woolen garments for bags of fresh-washed nuggets. Its rapid growth and perfect stability have fastened upon its people the chronic affliction of inflammatory enthusiasm. There is not a child in Seattle that can speak a two-syllable word who will not throw down his hat and fight for either Seattle or Alaska. When, therefore, the Alaska Exposition idea struck this Puget Sound port, something had to happen.

A Twice-Hyphenated Show

NEWSPAPERS, clubs, commercial houses, lodges, the men in the street, the schools, and even the churches, instantly took up the idea. The first suggestion of a hundred-thousand-dollar exposition soon expanded into a quarter of a million, and this became a million, and this million has now been multiplied by ten. In such a comprehensive plan Dawson hurried to claim a place. Indeed, the whole British territory of Yukon knocked for admission. The plan expanded into the Alaska-Yukon Exposition. If this were to be a Yukon show, why should British Columbia not have a chance to advertise its broad and fertile Fraser Valley? Already the exposition was international. Then Tacoma, Spokane, Portland, and Vancouver felt that they must share with

Seattle in demonstrating their claims to posterity. The fruit fields of the wonderful Yakima Valley must come in. So also must Idaho and Montana. Oregon, too, had her picturesque story to tell. California followed. Apparently, only time limitations prevented the representation from reaching coastwise down to the kingdom of the old Incas, who in the days before the Spanish settlement of Peru used to hold great expositions, to which large crowds came long distances. The Alaska-Yukon-Pacific Exposition thus, with commendable hospitality, extended its welcome to any State or Territory that wished to exhibit its present and foreshadow its future resources—that was striving to go ahead. It crossed the Rocky Mountain States and expanded its purpose to include even all the Atlantic Coast States that would participate. Like all of Seattle's projects, it grew amazingly.

The Pioneer Platoon Marches North

THUS the Alaska Exposition expanded into a twice-hyphenated name and continued to enlarge its plans even after it could no longer further encumber its name. In trying to specifically define its primary objects, the directors of the fair have announced this threefold plan:

First—To exploit the resources and potentialities of the Alaska and Yukon Territories in the United States and the Dominion of Canada.

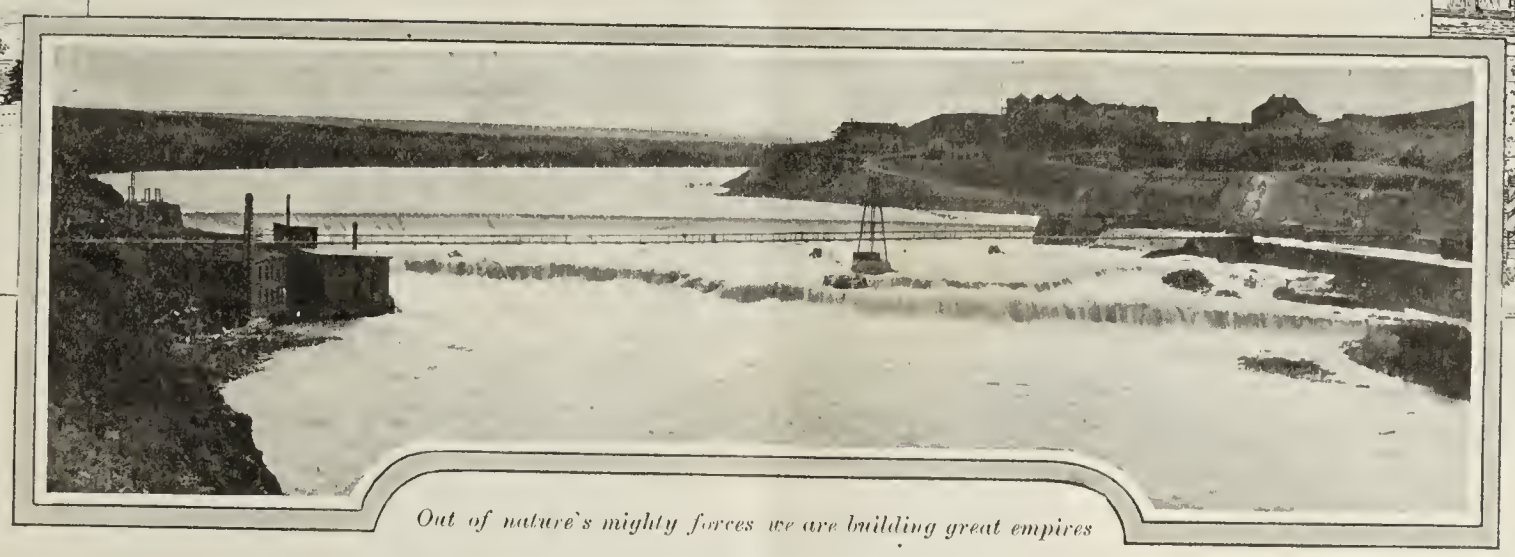
Second—To make known the vast importance of the trade of the Pacific Ocean and of the countries bordering thereon and to foster it.

Third—To demonstrate the marvelous progress of Western America, where, within a radius of 1,000 miles of Seattle, 7,500,000 persons live who are directly interested in making the exposition the true exponent of their material wealth and development.

Every State and Territory and Province that advertises its hospitable climate, wonderful resources, and contented people at this twice-hyphenated fair will do its utmost to persuade every visitor that his greatest future is linked with theirs. That is the constructive spirit of the Seattle Exposition.

The people of these great Pacific lands have a fanatical faith in real *things*—a wholesome and contagious optimism. The course of empire still takes its western way, the pioneer homesteads are closing in, dissolving the settler's isolation into neighborliness. But the real significance of the Seattle fair lies in the fact that it is the pivot on which the pioneer platoon wheels right and accepts the North star

Where Seattle plays



as its pilot of fortune. It takes a stout heart to face a wilderness. They were not a timid folk who made Plymouth Rock a precious part of history—there was sinew in the arm that split rails along the banks of the Sangamon, and hero stuff in the plowman who tore the wild grass roots in Dakota's wind-swept stretches. They were militant men who first blazed the trails through to the Puget Sea—scouts of progress who ventured the treacherous Chilkoot Pass—and they will be State-makers who carry the plow and the harrow on to the Yukon meadows.

The hills of Massachusetts, the prairies of Illinois, the treeless stretches of Dakota, and even the rugged Montana lands, became hospitable in time. With insistent promptness, Alaska will make her Statehood claim. The "Walrussia," so ridiculed fifty years ago, is just beginning to receive proper appreciation. Its capital lies south of St. Petersburg's parallel, with a climate more hospitable than that of New Hampshire or Maine. In its mountains and river banks are stored probably the world's richest deposits of gold and silver. The largest copper mine in the world is now being developed north of Valdez, and a railroad is building through the Chugach Mountains to release the ore. The coal and petroleum wealth of the Territory is reported to exceed that of all the States, while the lumber of Alaska is practically inexhaustible. The real future vitality of the Territory, however, lies in its agriculture. The winters are undeniably long and cold. But so they are in Saskatchewan and Vermont. The summers, though short, are hot, and ripen astonishing crops of wheat and short cereals. The Territory is as sure to be as populous as Scandinavia or the northern half of Russia, and it is very sure to be even greater than these, in that it will be the greatest wealth-producing country that is washed by a Polar sea. And to this industrial invoice should be added the picture value of Seward's purchase. The White Mountains are New Hampshire's biggest asset, for each summer season they double the Granite State's population. Experienced travelers unhesitatingly assert that Alaska offers the most picturesque tourist trips in the world. With the invasion of extensive railroads, and the multiplication of river and coastwise steamships, a real impression may be made upon America's annual hegira to Europe. With our Yosemite and Yellowstone, Lakes of Kootenay, Columbia River and Puget Sea, Banff, the mighty Yukon, and the Alaskan Archipelago, why need we so persistently seek foreign Alps or time-worn Pyrenees?

Alaska and the Yukon, through this exposition, emphasize Pacific Coast possibilities everywhere. The exhibits will be arranged as are all fairs of this kind. The Cascades and Geyser Basin form the general decorative scheme, around which are sunken gardens and the exposition buildings in well-arranged groups. In front of the United States Government Building stands the exposition monument—gaudy feature of the show, towering eighty feet in glittering splendor, covered with Alaskan and Yukon gold. In frivolous relief,

For nearly two thousand miles steamers ply up and down the Yukon River

Out of nature's mighty forces we are building great empires

Driving the new Pacific extension of the Chicago, Milwaukee and St. Paul Railroad through to the Puget Sea

the exposition will have its Pay Streak, which will correspond with the Midway of Chicago and the St. Louis Pike.

Two physical features of the fair give it distinction. First, it was complete in every particular, with all exhibits in place, on June 1, the opening day. Second, with rare good sense, it is largely created for permanent uses. Being placed on the campus of the University of Washington, these 350 acres, lying between Lake [illegible] Washington and in full view of the Olympic and Cascade Ranges, are embellished through skilful and artistic parking. To all this the great Exposition Auditorium, the Fine Arts Building, Machinery Hall, the Power house, the Forestry Building, the Washington, Oregon, and California State Buildings, together with several other State and foreign buildings, are made permanent purposely to benefit the University. A most praiseworthy idea and an object-lesson in interstate fraternalism that ought to be emulated whenever possible.

To the exhibits of gold and copper, wheat and lumber, machinery and apples, warships and strawberries, should be added the sixty-six conventions that go to Seattle this summer to consider problems ranging from prison reform to national conservation; from the prevention of tuberculosis to woman suffrage. By no means inappropriately, most of these conventions are of a scientific and engineering character. It's a big job to tame the rugged half of a mighty continent! The Rocky Mountains and the Pacific States are the world's great engineering schools to-day. To conserve and utilize a river's mighty force and not destroy its possible future value for navigation is a vital ethical issue in Oregon, Montana, and Alaska, and it should be no less so in Wisconsin, Arkansas, or Illinois.

A Land of Libraries and Colleges

THERE is nothing dead or dormant about the country this exposition represents. The cities claimed within the reach of a thousand miles are all growing and trying hard to grow. The booster's club is everywhere. Not to be a booster is to be a "tory," and there are no tories. They think *things*. Spokane will tell you she is the twenty-fifth city in size in the United States! Oregon will shout at you through a megaphone the fortunes that her orchards can create! Tacoma is as proud of her docks as Cologne of her cathedral. There is no chance in that great open-hearted, happy, hustling, booming country to launch a Ferrero sensation over so dust-laden an issue as Cleopatra's complexion. Theirs is a great big fortune-seeking life; and fortunes, after all, make libraries and museums and colleges and foster literature and art. The high snow-capped mountains, the big trees, broad rushing rivers, huge rocks, leaping cataracts, fragrant flowers run riot, the great big wonderful out-of-doors in-

Where Seattle works

toxicate! They formulate themselves into great human equations. They make and they unmake men. It is a teeming world—all new and building. And it is there, all the way from the Bay of Magdalena to Nome, and to it every earnest, big-hearted soul is welcome. That is the spirit of the Alaska-Yukon-Pacific Exposition.

Thus does it differ from other centennials and fairs. It is not an exposition of past achievements—a display of things done—over which the spectator is supposed studiously to ponder. This is the demonstration of fifty years to come, the exposition of opportunity. For this reason the majority of visitors to the Seattle Exposition will differ from the "World's Fairites" of other staff-and-plaster shows. To this hyphenated fair come homeseekers rather than sightseers—they who have read of the marvelous returns realized from the cultivation of small holdings of fruit lands in Washington and Oregon, where property is valued as high as $2,500 an acre and where the rewards for soil cultivation ofttimes go as high as $1,000 an acre. They are coming who have heard of Montana's wonderful awakening, of the amazing growth of her agricultural wealth. And it is these sure builders that will put the star for Alaska upon the blue field of our flag.

All this—and fifty years ago the chiefest thought for this wonderland was forts. How wasteful of time, energy, money, and life were these barricaded guns when compared to a beet-sugar plant, a ten-acre strawberry patch, a hungry saw-mill, or a smelter's flaming stack. The powerful force of peace is commerce. It is to-day our safest guaranty of comity and friendship with the Orient. Let Russia make hospitable her Siberian shores and we will indeed clasp hands across the Bering Straits and unite in an invincible control of the north Pacific seas. In view of this stupendous prospect, this patriotic panorama, no one longer expresses surprise that the great Secretary Seward smiled when the Russian Minister announced his Czar's willingness to part with this treasure of the North for less than two cents an acre.

To-day, with gratitude and pride, we celebrate this bargain, and in our unmerited praise of Seward we hasten to forget that through stupidity and blindness [illegible] heaped upon him an unkind epithet.

Kentucky Honors Lincoln

Adolph A. Weinman's Statue of the Emancipator President Unveiled in Lincoln's Native Town

Children taking away the flags that had veiled the statue

WHILE the Old Dominion and the Buckeye State have always prided themselves on the Presidents they have given to the nation, Kentucky is just beginning to realize that as the mother of Abraham Lincoln she has a claim upon birthright distinction that no other multiple of Presidential sons can ever shadow or diminish.

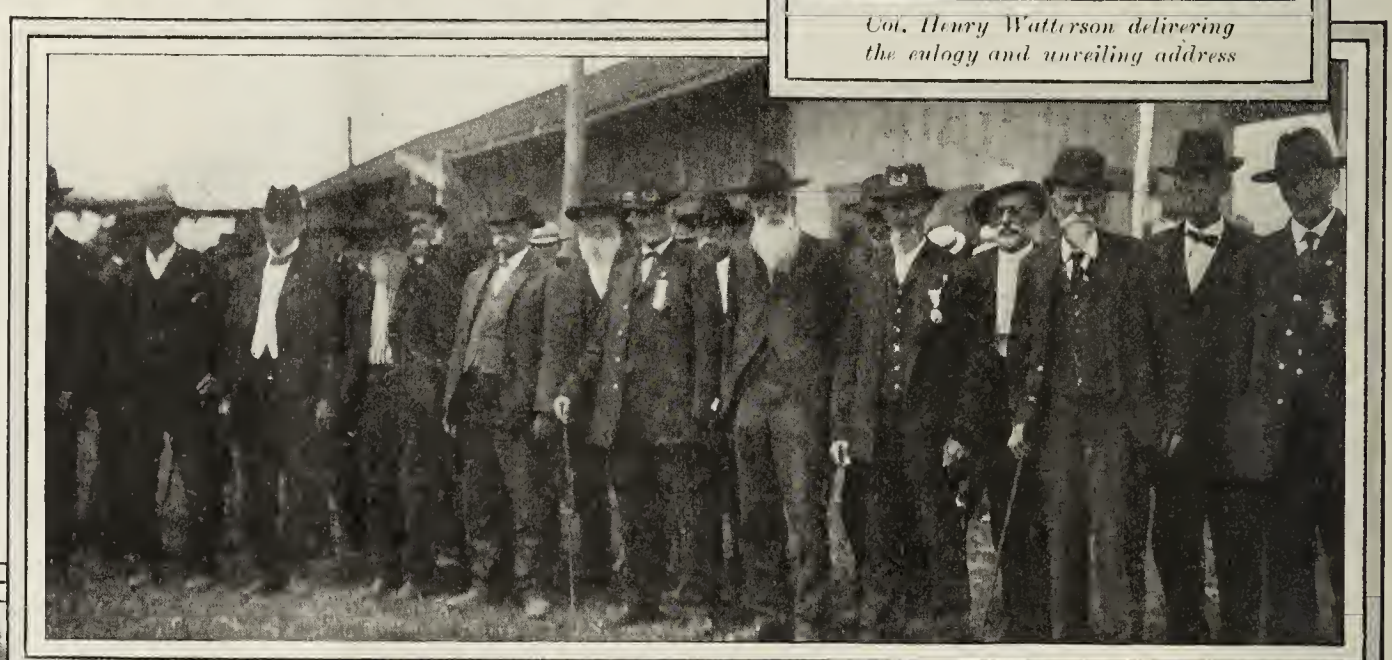
It was not, however, until after the Lincoln Farm Association had been organized by a group of patriotic men in New York for the purpose of conserving and caring for Lincoln's birthplace, in the very geographic center of the Blue Grass State, that Kentuckians realized their own lamentable tardiness in properly honoring their greatest son. Appreciating the fact that Kentucky had left the Lincoln birthplace shamefully neglected for the people of other States to care for, Mr. Robert Enlow, the grandson of the Lincolns' nearest neighbors a hundred years ago, introduced in the Kentucky State Legislature of 1906 a bill calling for an appropriation of ten thousand dollars to be expended in setting up in Hodgenville, Lincoln's native town, a worthy memorial monument. But the law-makers of Boone's commonwealth unappreciatively amended the bill to call for but one-quarter of that amount.

Ex-Congressman David Smith, of the Fourth Congressional District of Kentucky, feeling the inadequacy of the Frankfort appropriation, secured in the closing days of the Fifty-ninth Congress a Federal appropriation of ten thousand dollars. The two appropriations were put in charge of a commission of five, appointed by Governor Beckham of Kentucky. This commission determined upon a bronze statue of Lincoln, and commissioned the work to Mr. Adolph Alexander Weinman of New York, probably America's ablest sculptor to-day. This statue, much admired and highly commended both by art critics and friends of President Lincoln, who had a right to judge of its portrait value, was unveiled on Memorial Day. On this day Kentucky realized her own.

Among Lincoln's First Neighbors

TUTORED by the Lincoln Farm Association, which last February celebrated the Lincoln centennial on the birthplace farm with exercises of national significance, the people of Kentucky rallied to Hodgenville for the unveiling ceremonies of the already famous Weinman statue of Lincoln. It was distinctly a Kentucky day. The sons and daughters and the grandsons and granddaughters of Lincoln's first neighbors were there, not by hundreds, but literally by thousands. It was a prophetic day, for it signaled the coming of a people into the full appreciation of that which was their own. They came by buggy, mule-back, and iron tire. They came by special trains from over the State, until all the town's switches and sidings were crowded and the main track completely choked. The little town's population of a thousand multiplied to twenty times that for this one day. It was the State's just acknowledgment of its pride in its great Emancipator President.

For days prior to the unveiling, the women of Lincoln's native town were busy sewing rod-rings on flags, festooning tricolored bunting on the court-house walls, and wreathing flowers for the school-children to bear. The while the men-folks stood round and "calculated." And when the day came, praise to the industrious ladies, there was not a detail in arrangement or program that was not perfected.



Among the specials that rolled into Hodgenville that perfect summer day was the long Pullman train of the Louisville Chamber of Commerce, carrying its distinguished citizens, among whom were Governor Willson, Colonel Henry Watterson, Chief Justice E. C. O'Rear of the Kentucky Court of Appeals, Rabbi Enelow, Hon. John M. Atherton, Hon. Edward J. McDermott, and Judge George DuRelle of the United States Court, all of whom participated in the unveiling exercises. To this train was also attached the private cars carrying Mr. Robert T. Lincoln, his family and his friends. A great crowd had gathered at the station to cheer the arrival of these distinguished guests. A long procession of school-children, all in white, each carrying a wreath of roses and headed by a local band, acted as escort to the carriages from the depot to the Court-House Square. Before the veiled statue stood a picturesque company of "Union" soldiers, veterans of both the Blue and the Gray. As the procession approached, the battle-scarred veterans opened their ranks to let the children pass, each one carrying to the base of the pedestal and depositing there a floral wreath, singing "The Star-Spangled Banner" as they marched. One little fellow cried to put his flowers "at the feet of Mr. Lincoln," and he was promptly lifted up to the plinth that he might do so.

Over the statue were draped two huge flags lightly bound together by a silken cord. After Judge O'Rear

The New World of Trade

II

Fair Trade and Foul

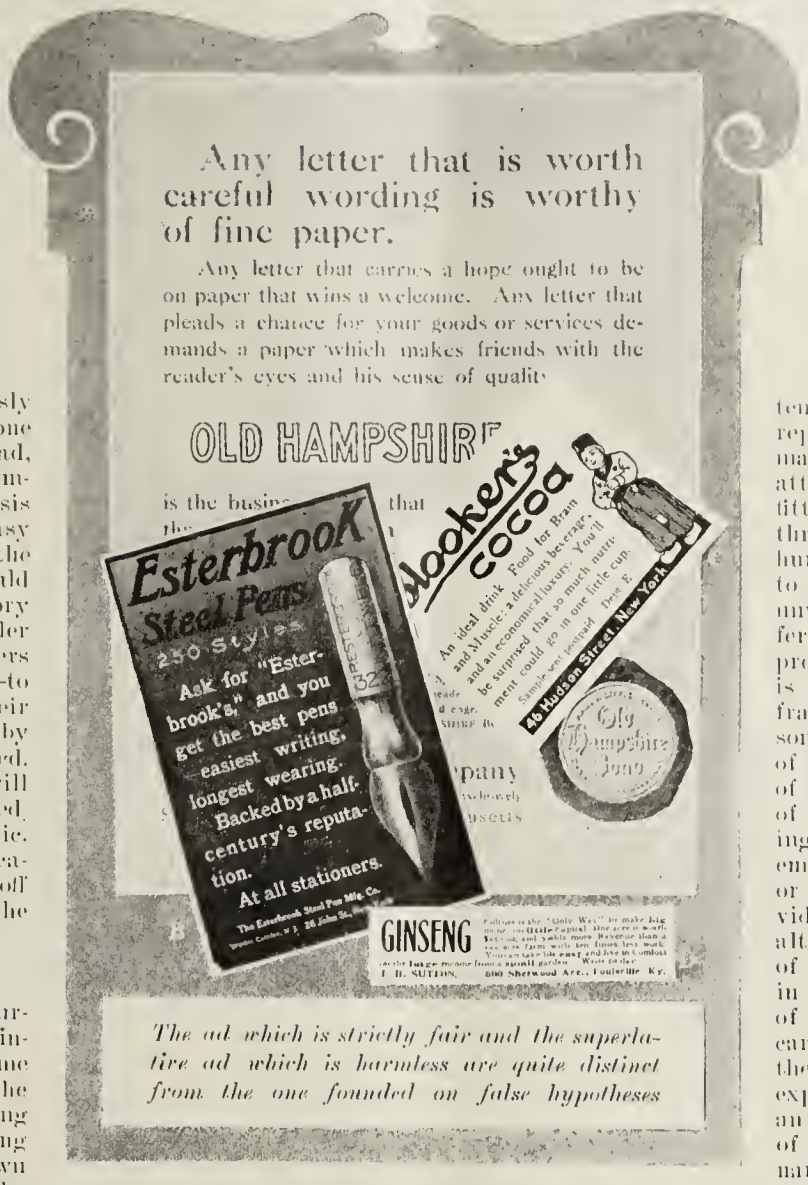
The first article of this series, "The Art of Advertising," was published in the issue of May 22; the next, "Traps and Pitfalls," will appear July 24

Where the seller hires the printed word as his agent, the buyer must needs go warily or have the worst of the bargain in the case of plausible offers

By SAMUEL HOPKINS ADAMS

IN ONE of his essays Stevenson half-humorously laments the fact that humanity is not all of one consistent piece. If bad men were wholly bad, and good men unexceptionably good, how simple would existence be! Carrying the hypothesis into the field of business, "if honesty were as easy as blind-man's-buff" (to quote the same philosopher) the determination between good and bad advertising would be as definite as the direction, in the unnatural history book, "How to tell the toucan from the pecan." Under such millennial conditions, magazines and newspapers would be able—supposing that they were willing—to exclude all that is dishonest or deceptive from their pages. As it is, a number try. A very, very few, by the exercise of eternal vigilance, approximately succeed. Many others, while pretending to high standards, will accept anything which is not too obviously crooked, holding to the letter of their obligation to the public, while blinking the spirit. The great mass of publications, however, take what they can get, and shrug off the responsibility. "It's between the advertiser and the purchaser," they say.

Safety Lies in Discrimination



THEREFORE, as a measure of self-protection, the purchasing public must judge of every advertisement individually. Ability to derive from the printed word some estimate of the honesty of the advertiser and of the goods advertised is the surest defense against being swindled. Fortunately, nine-tenths of all advertising done is reasonably straightforward. What are known as the "national advertisers"—the soaps, the foods, the musical instruments, the household furnishings, the typewriters, the cigars, the weapons, the motor-cars and razors and cameras—offer a certain definite bargain, expressed in terms as attractive as is compatible with fair representation. "Your money's worth" is almost invariably at the core of this class of merchandizing. On the other hand, there are a few easily definable classes, which may be set down, at once, under the heading "Swindles," and so dismissed: promises to cure or relieve, by mail, any disease, malformation, or abnormal physical condition, whether the method be by drugs, diet, mechanical appliances, medical treatment, baths, or "health foods"; mining, industrial, commercial, or real estate propositions holding out the lure, whether guaranteed or not, of high percentages on an investment; definite offers of salaried or guaranteed employment on any basis requiring the payment of money from employee to employer. Of this latter class I shall treat in another article. Quackery, both medical and financial, has already been exposed in past issues of this weekly. There remains to be considered the great mass of general advertising which fills the American prints and covers the American billboards.

Exaggeration, it may as well be admitted, is the keynote of business exploitation. That inheres, I think, in our national character. We are enthusiasts, optimists, "boomers," by nature and by the impulsion of our overstrained nerve-centers. We speak and think in capital letters, and, subconsciously, we allow for that not unamiable trait in our estimate of our fellows. There is no attempt at wilful deception in such phrases as "Best in the Market," "No Other Kind so Good," "Unrivaled," "Finest in the World," "We Defy Competition." These are recognized as the merest trade formalities, expressing a sort of conviction, perhaps, but certainly carrying none. Indeed, so much have they become the commonplaces of exploitation that one wonders if they are not wasted energy. If I am to take my magazines seriously, there are at least a dozen builds of motor-car, each of which is admittedly, undeniably, defiantly, the acme of mechanical achievement. The thing reduces itself to an absurdity.

Beyond the reasonable limits of inflated verbosity is the specious super-claim, if I may coin the word, put forth on behalf of some article which, while sound and valuable in itself, can not substantiate the statement. Food manufacturers and soap dealers are peculiarly susceptible to this form of temptation. They fall to advertising their worthy goods as if the panacea of ills or the springs of eternal youth inhered therein. Then there is the ingenious advertiser who, seeking to imply value in his goods which they do not possess, so plausibly words his little preachment as to render it incontrovertible as to specific statements, although in purport and effect it constitutes false representation.

Four Grades of Advertising

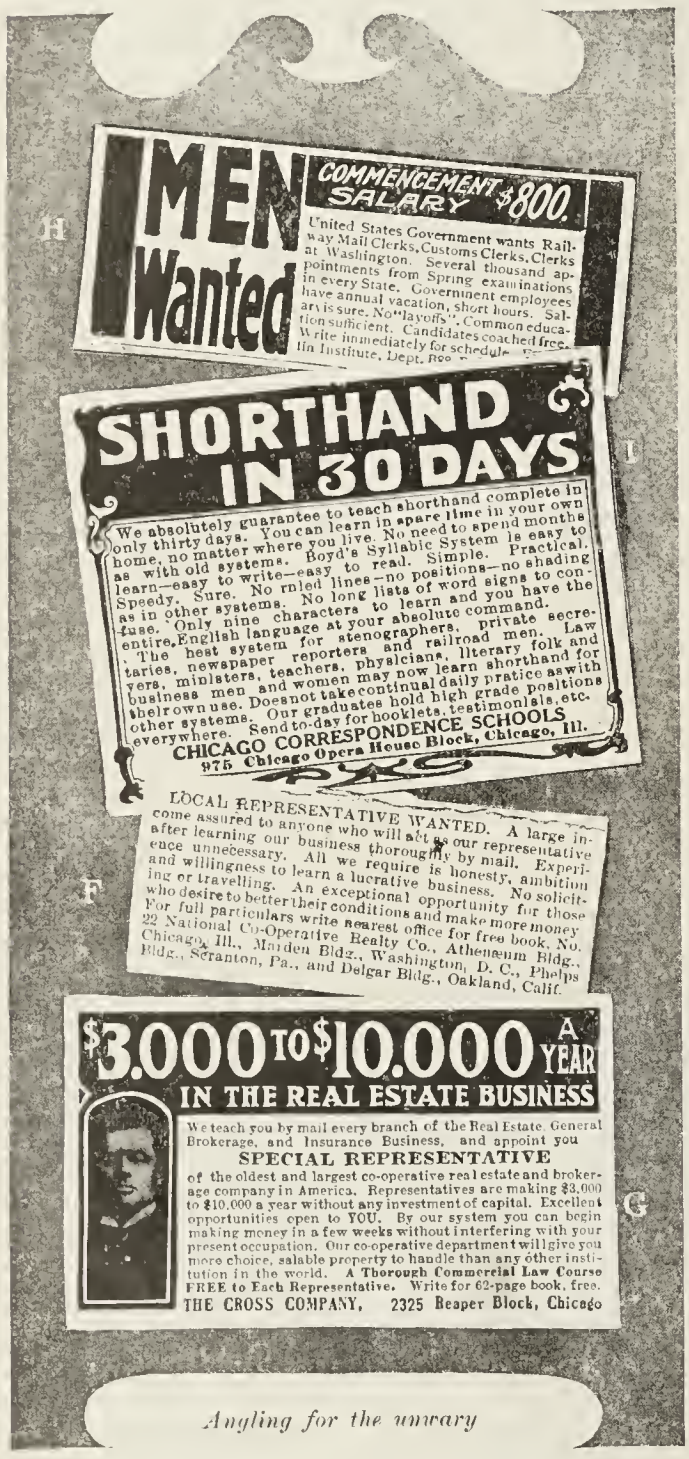
REPRESENTATIVE specimens of four grades of advertisements are presented in the illustration herewith. The writing-paper advertisement (A) embodies exact honesty, nor is it the less persuasive for that. Every claim is reasonable. One looks in vain for the superlative degree, and finds a pleasant sense of relief in its absence.

The ad which is strictly fair and the superlative ad which is harmless are quite distinct from the one founded on false hypotheses

Now compare this with B, the Esterbrook Pen copy. I daresay the pen is quite as good as the paper; the advertisement of the pen is by no means as good as the advertisement of the paper. It claims too much. "Best," "Easiest Writing," "Longest Wearing." Conceivably there are other pens in existence that are the equal, in some one respect, of the Esterbrook article. Still there is no fundamental misrepresentation here; the purchaser gets the first-class article which he expects. It may be regarded as a sample of the harmless exaggeration to which about nine-tenths of our honest and reliable advertisers are prone. Example C goes a little beyond the limits of what is permissible to honesty. Let us assume that Blooker's Cocoa is a perfectly sound, pure beverage, as I suppose it is. When it begins to exploit itself as "Food for Brain and Muscle" it gets on a false business basis. It is no more brain food or muscle food than peanuts or popcorn or Camembert cheese. In the instance of the "Ginseng" advertisement (D), the words are more nearly truthful than the purpose is honest. Probably it is literally true that one acre of ginseng somewhere—in China, perhaps—is "worth $25,000 and yields more revenue than a hundred-acre farm." But the whole affair is essentially fallacious, and the little paragraph is pregnant with misfortune and trouble for the innocent who regards it as gospel. What it doesn't say is the important part. No hint here that ginseng requires years of culture before it becomes marketable, that no little technical skill is required to bring it to maturity, and that the expense and the hazards of raising it are almost prohibitive. Of course, if that were explained in the advertisement, Mr. Sutton would not sell his goods. Hence he enthuses vaguely over acreage and a large income, and lets the unwary purchaser stand the loss while he pockets the profits.

Concerning Correspondence Schools

IN PRINCIPLE, absentee educationalism is sound enough, though in studying educational advertising the wise man goes warily. Languages, for example, may be taught by the phonograph. But there are limits to the possibilities of pedagogy by mail. The International Correspondence Schools of Scranton, which offer to make a man almost anything he wishes to be, overshoot the mark badly in certain particulars. It is not impossible that they should teach by correspondence certain features of chemistry, of architecture, or of mining engineering. It is wholly impossible that they should make a man a chemist, an architect, or a mining engineer by process of mail, and when they propose to do that they are simply angling for "easy money."



In the accompanying illustration (E) I have grouped together various types of the "Learn How" advertisement, verging from the arrant fake to the concern that attempts to give some return for the outlay. Common sense applied to these offers will reveal the inherent weakness. We may assume that certain subjects can not be imparted by mail—aerial navigation, boxing, or Arctic exploration, for example. As yet, so far as I am aware, no long-distance academies promising to perfect pupils in these lines have yet been established. But one of the best-known magazines prints the advertisement of a man who offers to teach horse-training through the postal system. Not less essentially absurd is the pretense of teaching music, illustration, or cartooning, and reporting or short-story writing by mail. A certain dismal proficiency of a mechanical kind, indeed, may be attained on the piano by means of a curious contrivance fitted to the keys, but any genuine musical achievement through this medium is impossible. And certainly no human being can teach any other human being, by letter, to perform on the violin except in such a manner as unwarrantably to increase the sum total of human suffering. The elementary difficulty of tuning without the presence of an instructor to correct deficiencies of ear is insurmountable. All this class of instruction is fraudulent. Of course those which pretend to give lessons "free" are doubly fraudulent, and the "guaranty" of success, as in the case of the United States School of Music, is a triple-plated swindle. As to the promise of efficient instruction by mail in illustration, cartooning, and writing, it is enough to say that these "academies" are conducted by persons of no professional note or eminence; that, under their system, no proper individual attention can be given to the pupil, and that, although in the aggregate they spend tens of thousands of dollars yearly in obtaining thousands of pupils, not in one single instance can any of them adduce a case of a first-class journalist, short-story writer, artist, cartoonist, or illustrator who owes his success to their methods. Nor are the "professors" themselves expert in the arts which they profess to teach. As an instance of an extreme type, the Press Syndicate of Lockport, New York, is run by a mail-order faker named Heacock, who is not above taking the money of a wholly illiterate person on pretense of making a successful journalist of him.

Some Correspondence Fakes

CAN the real estate business be taught by mail? Real estate dealers assure me that it can not, though certain principles may be imparted. Whether it can or not is unimportant to the National Cooperative Reality Company (F). The catch line, "local representative," is merely a set trap. Through that promise they snare ambitious innocents, charge them $25 for a long and tedious course in real estate, and leave them at the end, unfleeted and seeking in vain for the promised position as "special representative." The Cross Company (G) per-

Long-distance mis-education

Angling for the unwary

his career in a mail-order college of journalism, his genius would probably have survived. Presumably, no postal academy of fine arts could permanently have crippled A. B. Frost's pencil. But not one man in a thousand really gets anything from these institutions, except the expensive experience of having his mind stretched on a Protean bed of rigid and unyielding formulas. And the theory of chances of success has already been exploited by the advertising race-track tipsters, who, with twelve horses in a race, give out as a "sure winner," a different horse in every city, thereby ensuring themselves of being correct somewhere. The "scoop-net" methods of the correspondence schools are not essentially different from this. They promise everybody in the hope of "making good" to somebody.

Chinaware, Washing Machines, and Free Gifts

CHINAWARE is very little advertised outside of localized mediums. Why? I asked the question of a dealer who ships his goods from end to end of the country. Here is his reply:

"What is the use of my trying to sell dinner sets when other firms are offering to give them away free?"

"How can others give away china free?" I asked.

"They can't. But they can offer to. Look."

He ran through the pages of a widely circulated "mail-order" magazine, one of the kind which sells for twenty-five cents a year, and, at that price, must bribe its subscribers with premiums to take it. On every hand the word "Free" blazed forth. "Free" dinner sets, "free" cut-glass, "free" gold rings, "free" watches, "free" rifles, "free" accordions, "free" typewriters—but the biggest and most extravagant offers were in chinaware.

"Those swindlers have spoiled the market for honest dealers," said the china merchant. A typical example is the advertisement of the American Supply Company (K), in which a "handsome dinner set" is promised to any one selling four pounds of baking-powder—"Our plan 784" in parenthesis. There's the catch, the parenthesis. "Our plan 784" is a myth. It doesn't exist. It's a mere blind for a scheme whereby the four pounds of baking-powder is so mixed up with other merchandise that one must purchase a ten-dollar bill of goods before receiving the premium, which turns out to be much inferior to the one represented. The Hagood Manufacturing Company works the same game, with $30 as the cost of being fooled. So does the Pure Food Company (M), the price here being $12. All the rest of the "free" offers in the illustration involve either hard and underpaid work, or the purchase of goods at far above their real value. The "Beautiful Presents" of Stimson & Colby (N) are to be won only by peddling tooth-powder, though the advertisement specifically states: "You do not have to sell anything." The jewelry novelties, hatpins, etc., for selling which one may be blessed with various gifts (O, P, Q, etc.), are the veriest trash, turned out at ten cents a dozen or thereabout. The most impudent, because the most specific, fake of the lot is the Queen Washing Machine (R). "Absolutely Free. . . . We want to give you one of these famous Queen Washing Machines absolutely free, to be yours forever, for what advertising it will do for us in your neighborhood." That sounds like a definite, if almost incredible, offer. But disillusion descends upon the inocent housewife who sends for the washer. She finds that, in order to get the "free" machine, she must buy another at just twice the regular price. That is, the concern is trying to sell two washers on pretext of giving away one.

To the expert eyes the word "Free" in an advertisement is a danger signal. Alas for the rarity of Christian charity; something is not given for nothing in this hard world! Outside of samples or advertising matter, articles exploited as "free" will prove to be attainable only by harder work than would be involved in earning the money to buy them at a store. One surprising exception I must note: the "free" offer of the E. J. Schuster Company (S), which promises to give away foreign stamps to the number of two hundred, "collected by missionaries," to any applicant. This it actually does, and more: for—wonder of wonders!—the two hundred proves to be an understatement, and the stamps, while including many duplicates, nevertheless are of good variety and no little interest. The plan is, as the concern states in its circular, to stimulate, in the recipient, a desire to become a collector, and to purchase specimens from the devisers of this curious method of enlarging business.

Formulas Applicable to a Consideration of Correspondence Schools

1. *Satisfy yourself that the correspondence school is conducted by competent instructors.*

2. *If a guaranty is offered, or a position promised, hold the advertiser to a definite statement of such guaranty or offer before making any payment.*

3. *Do not attempt to learn by mail (unless you can afford to spend money upon profitless amusements):*

(a) *Any fine art—music, painting, sculpture, illustrating, cartooning, drawing (other than mechanical drawing or designing), or professional writing.*

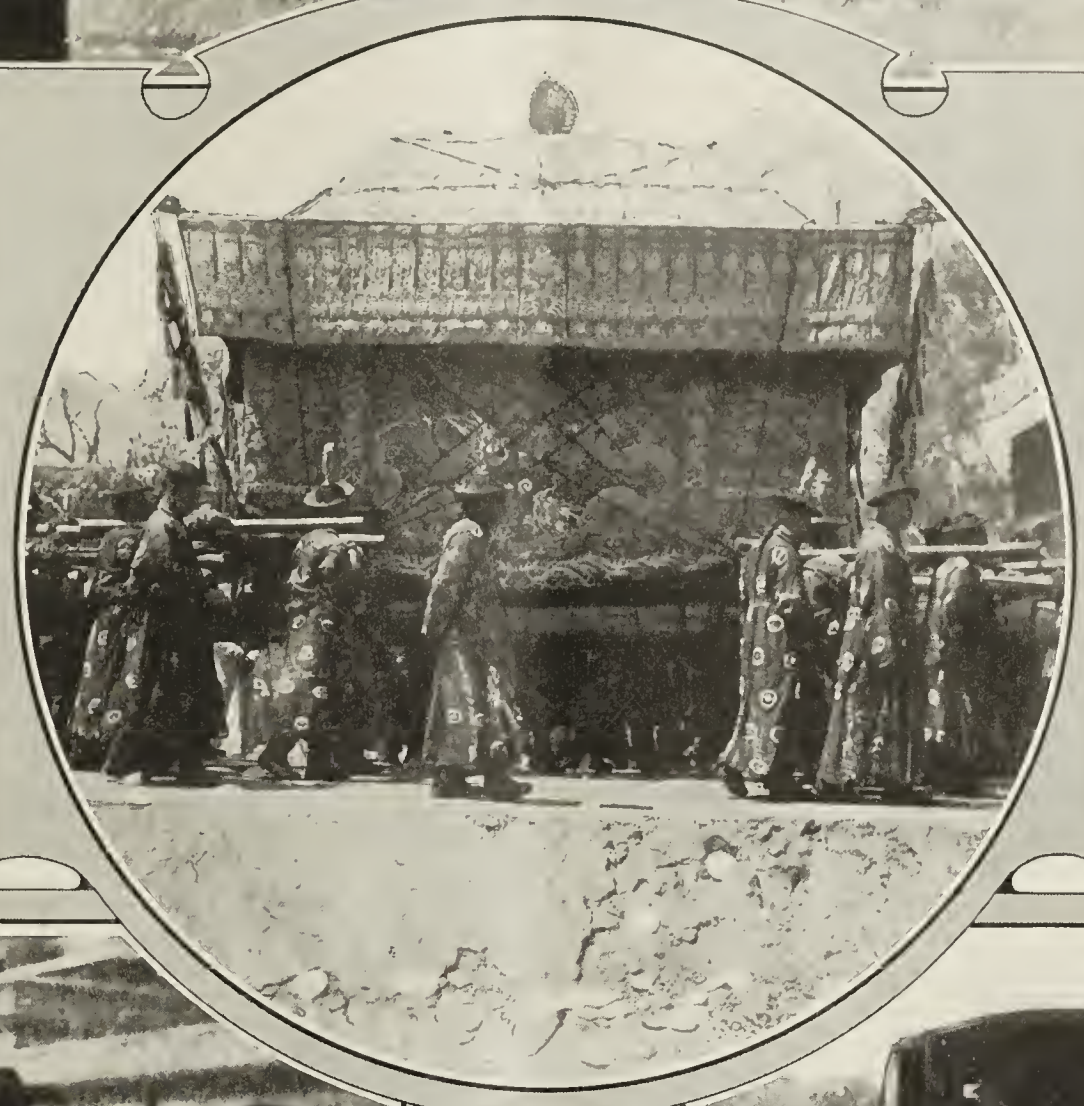
(b) *Any trade or profession wherein personal oversight and instruction and correction are essential; such as railroading, plumbing, engineering, chemistry, architecture, hair-cutting, or watch repairing.*

4. *If earning capacity is promised as a result of a correspondence course, demand references to well-paid employees who have obtained positions through taking the course, and do not be satisfied with half a dozen. Demand a hundred names. Out of the thousands of "graduates" which a correspondence school must have in order to pay for its advertising, there should surely be hundreds of successful ones. Otherwise how can you reasonably expect to profit by the instruction? Can you afford to pay for tuition in an institution which turns out ninety per cent of failures?*

Tell an "Ad" by the Company It Keeps

WHEN the Thermos bottle was first announced in the advertising pages of the magazines, I found a friend of mine laughing over what he termed "the rawest fake yet." The advertisement which so amused him was literally truthful. Every claim made in it could be substantiated; as my friend afterward found out by experiment. By questioning him, I arrived at the reasons for his mental attitude. In the same publication with the Thermos announcement were the advertisements of a guaranteed income for life from rubber stock, a panacea

(Concluded on page 26)



The "free offer" fakes

The new Prince Regent leading the dignitaries accompaning the royal bier

THE funeral of the late Emperor Kwang-Hsu of China, which took place at Peking on May 1, was observed upon the removal of the body from the mortuary in the Yellow City to the tombs which have been built for the royal family at the Western Hills. For the first time on record aliens were permitted to witness Chinese royal obsequies—the place of honor in the cortège being given to the special envoys of sixteen Powers. A pavilion also was erected in the Imperial city for the ladies of the Diplomatic Corps and other distinguished foreigners.

The ceremonies were in accordance with the enlightened progressiveness of Emperor Kwang-Hsu's reign. The images and household gods, usually displayed in a profusion equivalent to the wealth and importance of the deceased, were entirely absent, as also

The funeral chair borne upon the shoulders of eighty pall-bearers

were the chanting of prayers and pounding of gongs.

The courtiers and officials who marched in the procession wore robes of the plainest black, bereft of all ornament, as the symbol of extreme mourning. The uniforms of other groups in the cortège were likewise somber, although the use of color was more liberal.

At the head of the line were one hundred and fifty white camels clothed in yellow trappings, and after them followed companies of footmen, Manchu bowmen, and Llama priests. Behind the Imperial bodyguard were drawn the elaborate floral offerings of Russia and France. Finally came the Government officials and Chinese princes, led by the new Prince Regent, with the special envoys of foreign nations, and at the rear the funeral chair.

A relic of isolation.—The ancient manner of going to an emperor's burial

The modern way of attending since the innovations of Kwang-Hsu

A part of the procession, and above, the ladies' section of the Diplomatic Pavilion

The Funeral of the Late Emperor of China

Comment on Congress

By MARK SULLIVAN

ABOUT Senator Bailey there are many opinions. To us he occasionally seems far too ingenious at finding good reasons for doing wrong things. We sympathize with Colonel Watterson when he points out that while Bailey "*speaks* in favor of putting the steel barons in prison, he *votes* in favor of putting them in palaces." Bailey did vote for a tariff on iron ore. He voted likewise for a duty on lumber. For another specification to support the charge that many of his acts play into Republican hands, he took the floor of the Senate to repudiate the Denver Democratic platform and sneer at it. Nevertheless, any close observer of the Senate can say without reservation that, intellectually, Bailey is a very big man. He makes few speeches prepared in advance; but occasionally he rises in a debate and throws a quick big light which illustrates the distance between his head and the average level of thought in the Senate. One out of scores of examples is this paragraph upon the moral aspects of protection:

"I never have gone beyond the basic proposition that this Government has no right to take a dollar I have earned and give it to some one else, even if it does build up the business of the country. I do not believe that you can build a great and enlarging industrial fabric upon a foundation of injustice. I think every time you pass a law which takes the money I earn and gives it to some other man who did not earn it you perpetuate a foul injustice. No industrial system, though it be as broad-based as this continent, and though it should rear its splendid head until it reached the sky, can be permanent and sound if it is based upon a wrong. I denounce any law that takes what one man earns and gives it to another under the shallow and selfish pretense of building up a general prosperity. Unless all moral laws are at fault, no real prosperity can come out of any system founded upon an injustice to the humblest of our fellow citizens."

You can't get away from that. It may be that we must have Protection. Perhaps it is a necessity arising out of present expediency. Maybe we must look upon it like the social evil, as a thing that can not be abolished until the present state of society changes radically. But no man who values clear thinking should ever let himself forget that, fundamentally, it *is* a moral issue.

That Honor Roll

FROM a Texas friend, under date of June 6:

"Why do you make an honor roll of Democratic Senators who want to keep a high tariff on lumber to build our houses and barns, when I voted the Democratic ticket because it promised free lumber? I paid $4,000 for lumber for my buildings, and ten per cent of it, or $400, was tariff graft that the United States Treasury didn't get, but the lumber barons did. JOHN DOOSELY."

You read us loosely, Doosely. Further speeches and votes have made additions to that roll of Democratic Senators who are voting and speaking for protection. It is now longer than the roll of Democrats who stand by the party's ancient principles. The Democratic Senators who voted *for free lumber*, in accord with the Democratic platform, are:

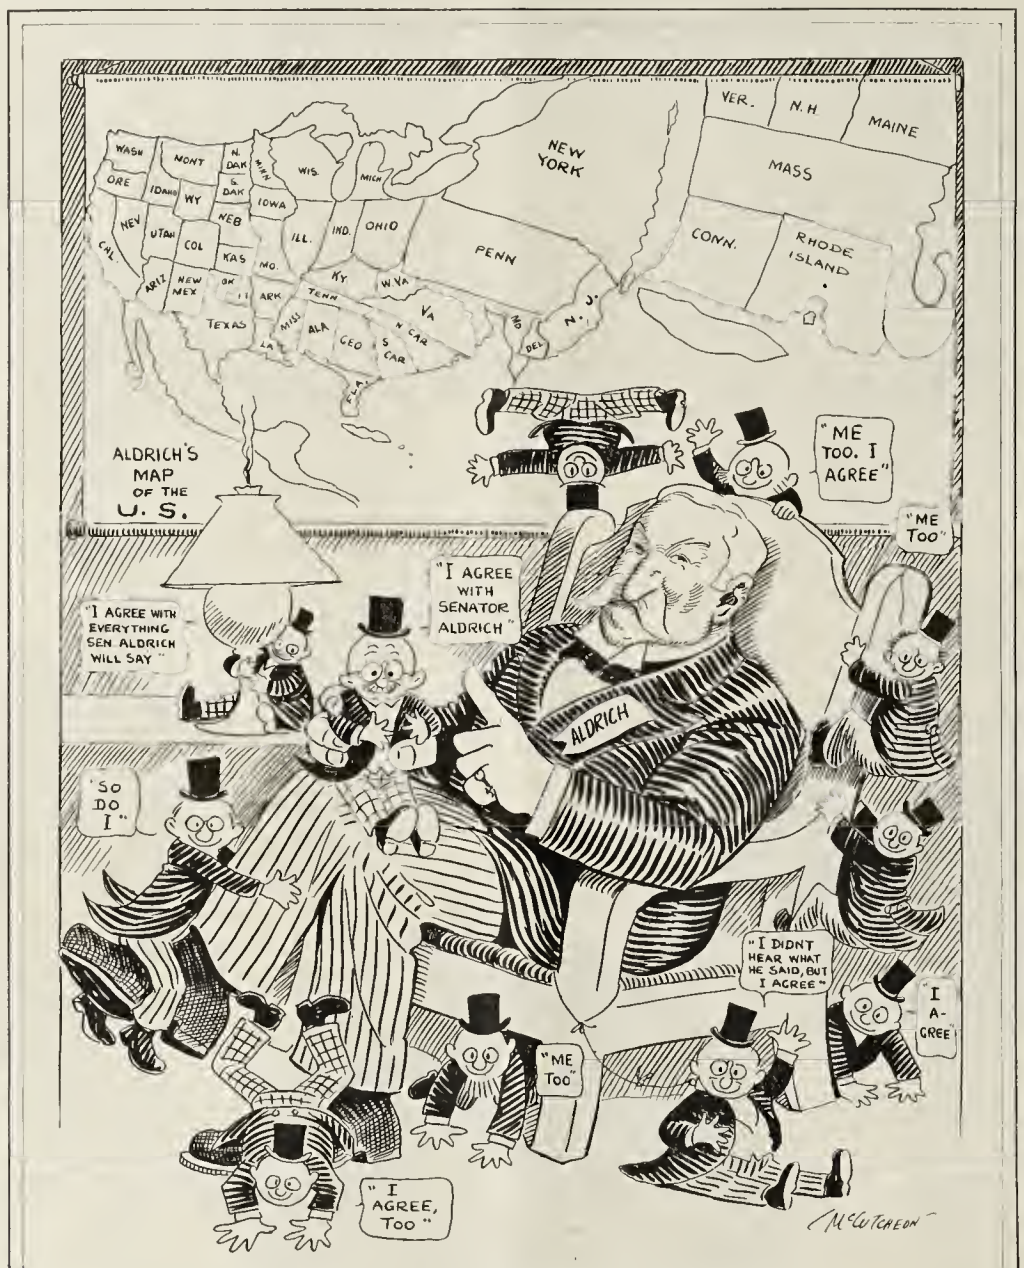
Alexander S. Clay, Georgia; Charles A. Culberson, Texas; James B. Frazier, Tennessee; Thomas P. Gore, Oklahoma; Charles J. Hughes, Jr., Colorado; Francis G. Newlands, Nevada; Thomas H. Paynter, Kentucky; Isidor Rayner, Maryland; Benjamin F. Shively, Indiana, and William J. Stone, Missouri. If any other members of the Senate than these are entitled to be classed as Democrats, we should like to know the reasons.

And Even Thou, Tillman

SENATOR TILLMAN, speaking of the amount of iron ore in the United States:

"I have been very much interested to discover that . . . we have also got a little patch or two of it down in South Carolina."

And so Tillman voted in favor of a tariff on iron ore. That Washington citizen had a good sense of perspective who proposed that the nation build on the banks of the Potomac a monument one mile square at the base and ten miles high in honor of General Winfield Scott Hancock, the man who first said: "The tariff is a local issue."



Looking Out for Number One

THIS passage occurred in the course of a debate in the Lower House:

"MR. SISSON—Will the gentleman tell this House what would become of the smoking factories and humming looms in New England if the South should manufacture all of her vast product?

"MR. CALDERHEAD—Do not be uneasy for a moment about New England. She has taken care of herself from the day the Pilgrim Fathers landed at Plymouth Rock until now, and she will take care of herself until the end. Do not be uneasy about that."

Congressman Calderhead spoke truly. In the Senate Committee on Finance, which is making the tariff, a Rhode Island Senator, Aldrich, is the all-powerful chairman. Out of thirteen others in all, two more come from New England—Lodge of Massachusetts and Hale of Maine. They will look after New England! By virtue of the tariff which they make, the rest of the country will pay tribute to New England for the next ten years. It will be as truly tribute and nothing more as was the gold that Solomon exacted from the Canaanites; or as was the tea tax, because of which New England led the revolt from the mother country nearly a century and a half ago. For a pictorial representation of this editorial, see Mr. McCutcheon's cartoon on this page.

Mr. Aldrich's Map—and His Senators

In this cartoon, in the Chicago "Tribune," Mr. McCutcheon has caught, with an accuracy as great as his humor, the dominant aspects of the way the present tariff is being made in the Senate

From the Heart

THE Hon. Joseph W. Fordney of Michigan is a powerful member of the Ways and Means Committee, which has charge of making the new tariff in the Lower House of Congress. Probably he would not speak so frankly if he were making a prepared speech; the following remark was taunted out of him in the course of an acrimonious debate:

"If I had my way about it I would not make a change in the Dingley law by the crossing of a 't' or the dotting of an 'i.'"

A Sigh for the Past

SENATOR NEWLANDS of Nevada, explaining how Taft might yet secure revision downward, assuming that the President would rather bring about this result without vetoing the bill:

"I can understand how the President of the United States, with his judicial temperament, would hesitate to force upon Congress his views upon a complicated piece of legislation, but I have not the slightest doubt that the President desires to fulfil the pledges of the Republican Party made to the country, and to fulfil his own pledges made to the country, and that he will hesitate to do nothing within his power to accomplish a very simple thing—the reduction of excessive duties. . . . While, therefore, the President, with his peace-loving and judicial temperament, may not be disposed to force prematurely upon Congress his views regarding this question, I have no doubt, when he realizes that his own party is in danger of repudiating party promises and his own pledges to the people, he will take action.

"The power of recommendation [by special messages to Congress] is one of the most valuable powers contained in our Constitution. It is the power given to the leader of a great party elected to the Presidency of the United States to indicate to Congress [by special messages] what he regards as appropriate legislation. It is the only way in which the attention of Congress and the country can be focused upon needed reforms. *That power* [of special messages] *was availed of by Mr. Roosevelt; and I undertake to say that if it had not been for the free exercise of that power by him not a single one of the reform measures of his administration would have been adopted.*"

At this point in Senator Newlands's speech, Mr. Aldrich became very restless, interrupted Senator Newlands, and, after some parliamentary sparring, secured an adjournment until Monday.

What the World Is Doing

A Record of Current Events

FRANCE, Turkey, and Asia Minor have faded from the headlines, and the inhabitants are doing the day's work in place of participating in a storm center.

The English situation is summed up bitterly, with some of the malice of impotence, by the London "Standard":

"The Government tacitly and stubbornly refuse to provide for the urgent necessities of naval and military defense, while the House of Commons is occupied with the passing of a budget conceived at once clumsily and vindictively in the interests of a class. His Majesty's Ministers have turned representative institutions into a mockery."

Germany's Count Zeppelin has flown 850 continuous miles in his dirigible balloon, and thereby proved that airships will be a factor in warfare. Straightway our Signal Corps busies itself in plans for the creation of a fleet of war balloons to act as a coast patrol.

The Georgia strike is settled in favor of the white firemen. The Philadelphia trolley men win their dispute at every point.

The temper of our statesmen grows acid with the heat. Penrose and La Follette clash, while the wilted, crowded Senate fights out the tariff items, article by article, with cotton one of the severest skirmishes.

Degrees are fluttering out to the earnest youth, boys and girls, in the thousand colleges, fitting schools, "finishing" schools, and grammar schools of our educating land.

Then follow the honorary titles sprinkled as holy water on the eminent sons of the Republic. Like the ancient order of knighthood, our captains of finance, wise lawyers, and far-seeing statesmen arise from the touch of the pedagogue, indued with a new mission. The railroad king becomes a master of literature, and the deft manipulator of rebates rejoices in the tinkling letters of the law.

The amusement places—the White Cities, Pay Streaks, Luna Parks—festoon themselves with electric lights and necklaces of bulbs, and hammer in the last plank of the scenic railway. The voice of the barker is heard in Dreamland. Airships drift along on the upper tides. Rockets splash the night with red. Summer is upon us. The gipsy millionaires, care-free wanderers, foot-loose waifs, arise and go from here: on the other side the world they feel they're overdue.

A Holy Convocation

A THOUSAND long-suffering brewers, who have been enduring the slings and arrows of Anti-Salooners, the wrath of fanatics, the ill-timed jests of clergymen and cynics, met for a little well-merited relief from persecution in Atlantic City on June 2. The occasion was the annual convention of the United States Brewers' Association. Away for a few brief hours from critics and enemies, these misunderstood men listened to the pounding waves and discussed the crape-lined future. They resolved many things. Among others, they resolved to put dives out of business. "Hereafter brewers will refuse to sell beer to persons whose places are under the ban of other brewers."

We hope they will. It will be a change from recent and long-established custom. There has long been an agreement among the associated brewers not to do business with a saloon-keeper who is in debt to any brother brewer. The financial status of New York liquor dealers, for instance, has been looked into each week, and a secret typewritten list of liquor dealers in trouble sent out by the Brewers' Board of Trade to the members. They were ready enough and competent to act together when a gluttonous self-interest was operative. But when one of them tossed away a noisome liquor dealer, who was trafficking in saloon girls, there was ever a plenty of welcoming outstretched arms for the man with his dirty money.

Granted that they have consented at the imperious demands of the public to extend their trade agreement, which is swift to act when their pocket is touched, over the domain of public decency, how do the Association members purpose to prevent non-Association brewers from taking over the rejected trade? That is no academic question, when you have companies like Bernheimer & Schwartz and Jetter grinning over the ramparts.

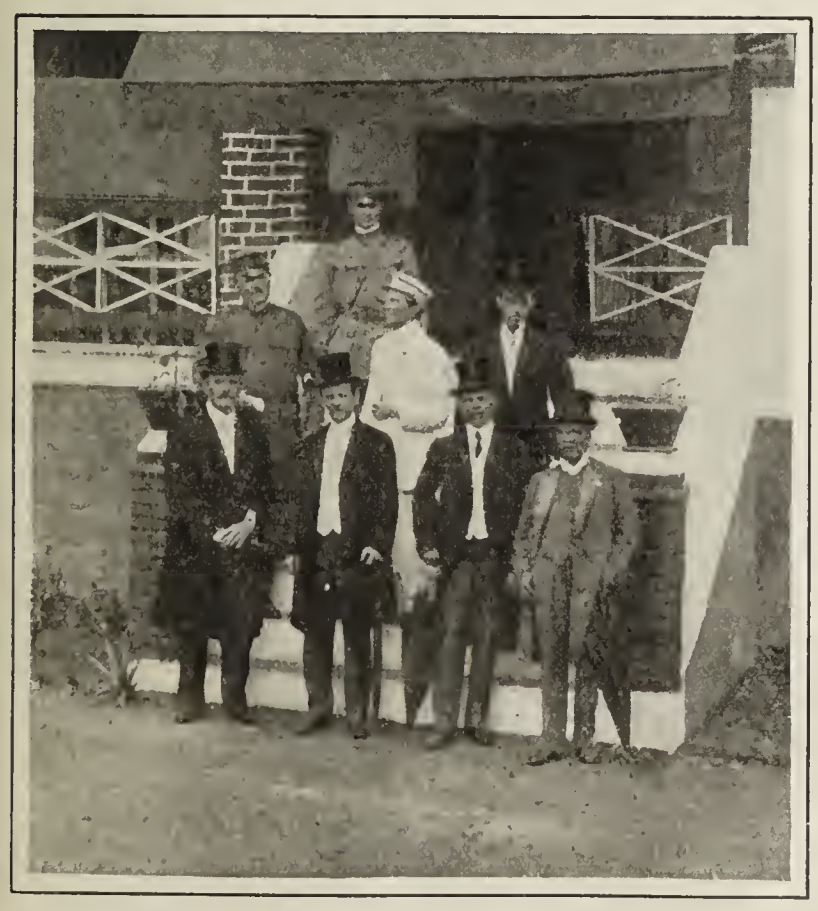
Julius M. Liebmann, the retiring president, is a clean, conscientious man and citizen with a sincere desire to purge his trade. He is not at his best in public address, as he is apt to overstate his side of a discussion. He said:

"The more our industry prospers the less will drunkenness prevail in our country. The era of temperate habits began with the impetus our trade received from the revenue system; nothing short of prohibition or local option can end it."

John A. Koren, whose knowledge on the liquor question is almost the widest of any person in the United States, said:

"No one understands so well the art of evoking social hysteria as the professional anti-saloon agitator."

For the unclean saloon he suggested as remedies, among others, a statutory limitation of the places of sale, a discrimination in licenses that will favor the sale of malt liquors as opposed to the whisky trade, and provisions to deter "a few men from monopolizing liquor licenses."



Mississippi Honors Her Battleship

The U. S. S. "Mississippi," the first modern battleship to navigate the Mississippi River, steamed up to Natchez, where a great demonstration was held in her honor on May 22. The city of Natchez presented a punch-bowl to the vessel and also an American flag, which was captured from a Federal gunboat during the Civil War

Cobo in Caracas

THE brilliant reception which Caracas gave to the new Colombian Minister, Señor A. V. Cobo, must have called from the bosom of President Reyes, the Colombian dictator, a glad sigh of relief. Cobo was quite too lively a neighbor to be comfortable in so quiet a little capital as Bogota. Last January, when Bogota began rioting over the treaty recognizing the independence of Panama—history moves slowly up the Magdalena River and over the mule trails to Bogota—Señor Cobo became Minister of War for thirty-six hours, cleared the streets, and put the place in order. It was said then that there were only two real men in Bogota — Reyes and Cobo. The former, however, is old and tired. Cobo is neither. He was freely talked of as the next President. In Caracas he will have plenty to do to continue the *entente cordiale* on which the two vivacious little Republics have just agreed—and from President Reyes's point of view he will be quite safe.

The Commission to the Negro Republic

The deputation sent by the United States to Liberia to study solutions of "the problem"—The commission and the American Minister on the Legation steps in Monrovia, Liberia

Curbing the Joy Riders

DRIVING recklessly, William Darragh, chauffeur, ran down and killed a thirteen-year-old boy on a New York street. On June 4 Darragh was sentenced to imprisonment for not less than seven years. The statute under which he was reached reads:

"The killing of a human being, unless it is excusable or justifiable, is murder in the first degree when committed by an act imminently dangerous to others and evincing a depraved mind, regardless of human life, although without a premeditated design to effect the death of any individual."

The judge who sentenced him said: "The next man who comes to the bar of this court charged with this offense may pay the penalty with his life."

Neglecting Rural Schools

MR. ROOSEVELT'S Commission on Country Life, which obtained much publicity because of its findings on neglected farmers' wives among other items, devoted time to the rural schools of the United States. It found that here, too, neglect was widespread—from Maine to Michigan. One of the reports to the commission deals with New York State:

"The entire system is at fault. The control of the schools is so decentralized that there is no control. The central board at Albany decrees the educational requirements of teachers, but it is an ignorant trustee, indifferent to these requirements, who has the hiring of the 'schoolmarm.' The Board of Education recommends the duties of the School Commissioner, but he [illegible]

You Should Read This New Bond Book

"The World's Greatest Industry"

Every investor, small or large, should ask for our **New Bond Book.**

It tells some facts, now too little known, about the most attractive bonds that we know. The book is written after fifteen years of experience in selling these particular bonds.

They pay **6** per cent interest—a higher rate than can now be obtained on any large class of bonds equally secured.

They are secured by first liens on valuable farm land. Some are tax liens—Municipal obligations.

They are serial bonds, so afford opportunity for either long or short time investments.

They are issued in denominations of $100, $500 and $1,000, so they appeal to both small and large investors.

They are by far the most popular bonds that we sell. You will want some of them when you know all the facts.

Send us this coupon or write us a postal. Please do it now.

tents and purposes responsible to no one but the county politicians who slated him for the office. The Board of Education outlines the graded system and issues uniform examinations, but it is the teacher, a sovereign without interference, who conducts the school and marks all papers. It is a matter of her own conscience whether she labors long and devotedly or writes letters to her 'beaux' to fill up school time.

"The great stumbling-block in the way of improvement has been and still continues to be the fathers and mothers of the very children who are cheated most in the name of education. Country people present a curious inconsistency in their attitude toward education. No people have sacrificed more to send their children away to high schools and colleges. Yet toward the school at their threshold they are indifferent.

"The present inspection of rural schools in many counties is a sham. The law requires one yearly visit to each school by the School Commissioner. There are schools in which a commissioner has not been for from three to six years. More than that, they have been known to evade the request to visit a school reported to be in a shameful condition. The commissioners are at best politicians. They take no stand which will threaten their reelection or promotion. If the schools are not what they should be, the inspectors attribute it to irrevocable circumstances. The form of register-keeping must be a useless system of filing, else the failure of graded classes would come to the ears of the commissioners. Attendance is most irregular. Neither the truant officer nor the teacher enforces the law. So far the joint political influence of these insignificant commissioners has been strong enough to thwart every reform bill yet proposed by Commissioner Draper or high school principals.

"It is a singular travesty upon the State's generosity in training teachers for public-school work to note an increasing inefficiency among rural teachers. The very system of free education has stamped all its shortcomings upon the rural teacher. The normal schools and training classes have trained for and interested teachers in the graded schools of towns and cities alone. This was a natural sequence of the rapid growth of towns and the subsequent demand for teachers. Those who had established good records as rural teachers hastened to secure full credentials and have likewise been drawn into the towns. Meanwhile the salary paid rural teachers has risen sufficiently to attract into the field girls who dislike teaching cordially. The salary is higher in relation to time and effort expended than sewing, clerking, or domestic service. Any girl who has attended a few sessions at a normal school or has secured a training class certificate at a neighboring high school may obtain a district school and receive for her services from $300 to $400 a year. Although the pecuniary advantage is now with the rural teacher who boards at home rather than with the graded teacher, social and professional reasons continue to draw the better qualified teachers to the towns.

"The true solution is centralization of school management, coupled with an effort to bring trustees up to some conception of their duties. Instead of the planning lying solely with the Board of Education in Albany, the inspection with the county politicians, the financing with the local trustee, and the conduct of the school with the teacher, these functions should be unified. The School Commissioners as now elected and ordained should be stricken out, root and branch. Instead, an inspector, qualified by experience in teaching, should be chosen and made responsible to a joint board of local trustees and the Board of Education. As soon after the district elections as possible the retiring and newly elected trustees and clerks should be called to the county-seat on a date arranged by the Department of Education. This convention should be presided over by a representative of the State Board of Education. The inspector should be elected for one year by these assembled trustees."

These emphatic and vivacious statements do not apply everywhere and in all cases. All School Commissioners are not mere politicians, and inefficient executively.

Rural school-teachers, in many instances, are more inefficient than their predecessors. But it is not a safe generalization to state that as a class they have deteriorated in recent years.

The "centralization bill" at Albany has not been killed by the School Commissioners alone. There is an entirely honest sentiment against centralizing power at the State Capitol, in addition to the opposition of "interested" persons.

But the main points of the indictment hold true, in the opinion of certain fair-minded experts. Definite and searching reforms are needed and will be urged till they are attained. Better supervision will be demanded till it is had.

The German Invasion

TWO more items have been added to England's pack of worries. She finds her army in a woful way, and she discerns a lack of fellow-feeling in the United States. Many times Earl Roberts has sat cool under fire, but the Tenton invasion is too much for even his imperturbable nerve. "Bobs," Son of Battle, cried out to the House of Lords, in a recent "Strength of the Army" session:

"We have no army. We have neither an army to send abroad nor an army to defend the country at home. While we are all sitting here and taking things so easily and so comfortably, *danger is coming nearer every day.*"

The English journalists turned themselves loose on this scene, and one man embroidered the affair thus:

"The noble lord; bronzed, taut-figured, with voice sharp, almost metallic, with the rap of soldierly command in it—an old man now, but the fire in his blood and yet something of the ring of despair in his tone. He dreaded the future."

The London "Spectator" is grieved by our general indifference to England's peril.

"It would be little short of a national disaster [to the United States] if the command of the sea were to be lost by Britain and to pass into the hands of Germany. The statesmen of Washington would rather see the command of the sea in almost any other hands than those of Germany.

"Germany, if she once obtained the command of the sea, would be quite out of the reach of any American pressure.

"But," says the "Spectator," "the ordinary American journalist sometimes shows an astonishing ignorance of foreign affairs. Like all ignorant people, the journalists in question are very suspicious of friendly expressions of feeling which they do not understand."

The World's Fair of the Northwest

AT FULL speed and with no friction, Seattle opened her World's Fair on June 1. President Taft in Washington touched a golden key and shot a transcontinental spark to Puget Sound. The banners blew, the fountains leaped, the great guns thundered from the battleships down the bay.

The American people always enjoy this sort of show—a Chautauqua, a political convention, a World's Fair. To have plenty to look at and listen to, to be part of a happy crowd, to trail along with a guide-book or a note-book—there you have the native-born citizen when fulness of joy is possessing him. An exposition is an extemporized university.

Part of what the Fair will do is to prove that Alaska is a good thing.

This Exposition reveals a country devoted to more sorts of life than snow and wild adventure. It shows a land fertile in minerals, fisheries, grains, and fruits.

The Seattle Fair is a partial and local answer to some of our modern problems. In the Northwest there is a cure for unemployment, for poverty, hunger, disease. For a hundred years to come men will find work there and a vigorous life.

James J. Hill helped to open the Fair. His talk, as often, showed an imaginative lift. He said:

"The greatest service to the nation, to every State and city to-day, would be the substitution for a term of years of law enforcement for law-making. There are four great words that should be written upon the four corner-stones of every public building in this land with the sacredness of a religious rite. These watchwords of the Republic are equality, simplicity, economy, and justice."

What a State Might Do

THE latest statistics in the report of the New Hampshire Forestry Commission state that over 800,000 acres of land, once improved and cleared, have since 1880 been abandoned to grow up in brush. If New Hampshire had been the municipality of Zurich, Switzerland, this land would have been taken under some form of the doctrine of eminent domain, planted with trees, and in the later generation have become an asset for its people. The people of Zurich once found themselves without the timber needed for its maintenance, for the building of its homes, and took this wise step. To-day, when the expense of operation is paid, the property yields to the government of that city something over fifteen dollars an acre.

What would be the opinion of the generation of New Hampshire citizens thirty years from now of the work of their forebears if they should find themselves possessed of several hundred thousand acres of white pine, planted and managed by a

It pays to buy Nufashond Shoe Laces

They are the best money's-worth because they easily outwear two or more pairs of other shoe laces. Being tubular in the center they slide freely through the eyelets, and are doubly reinforced to withstand the strain at this point.

It is worth something too, to always have nice-looking shoe laces. *Nufashond* are all silk and retain their lustre and beauty. And the bow is always neat and attractive because it does not crush in tying.

You don't need to simply take our word for these things. Every pair of *Nufashond Shoe Laces* is

guaranteed for 3 months

25 cents per pair at all shoe and dry goods stores, and haberdashers. Sold only in sealed boxes. If your dealer hasn't *Nufashond Shoe Laces*, we'll send them to you postpaid on receipt of 25 cents.

Write for our illustrated booklet that tells about *Nufashond Shoe Laces* and shows our full line of shoe laces at every price.

Our 10c tubular laces for high shoes are guaranteed for 6 months.

Are You Losing Power In Transmission?

CAN you answer this positively yes or no, Mr. Manufacturer?

If you are in doubt, there is danger that a big loss is going on right under your eyes that you have not discovered or have attributed to another cause.

Perhaps you are not looking for a loss of power in the right place. You are careful to economize in your engine room and in the operation of the machines which make your product.

But how about your "roadbed of power"—what is happening there?

Let us answer this question for you. We will do it gladly—give you accurate and truthful advice based on a quarter of a century's study of power transmission. The overcoming of thousands of power transmission difficulties in the world's greatest plants of all descriptions.

Write describing your equipment. We will advise you fairly and frankly regarding your requirements, telling you what power machinery will best meet your needs—how it can be most efficiently and economically installed and maintained.

"The Dodge Idea"

represents the one perfect type of power transmission machinery—standardized excellence. It embodies these special Dodge features:

Interchangeability wherever possible, the split feature in transmission equipment, the splendid economy of self-oiling bearings, friction clutches to control departments independently.

Here are some of the famous Dodge appliances for power transmission — Dodge "Independence" Wood Split Pulleys—perfect balance—100 per cent gripping efficiency. Dodge "Standard" Iron Split Pulleys with interchangeable bushings to fit all shaft sizes. Dodge Adjustable Shaft Hangers, Pillow Blocks, etc., with self-oiling bearings. Dodge Split Friction Clutches, etc.

Being made in halves, Dodge appliances can be mounted on the shaft or removed in a few minutes without disturbing other equipment already in place.

Write for our Catalog

—and our special plan for guaranteeing delivered prices on Dodge goods, giving you an exact price on transmission machinery, complete, laid down in good condition at your nearest freight station. If you want this information, be sure to mention the fact when you write.

Our Magazine "The Dodge Idea" Free to You For Six Months.

A magazine of practical help and interest, covering about everything worth while on the subjects of shaftings, bearings and general power distribution.

A complete compendium of millwrighting and mechanical transmission of power. If you are even remotely interested in this subject, we want you to receive this magazine. Just send the coupon.

in the light weight lisle are for men who care for *comfort* and *style* in dress.

The *comfort* of wearing suspenders that don't tug on the shoulders like the rigid back kind —and the *style* of having trousers that hang perfectly regardless of the wearer's position.

Light, medium and heavy weights. Guaranteed by makers. *Sold by all good dealers or by mail direct.* Price 50 cents.

THE C. A. EDGARTON MFG. CO.
1718 Main Street
Shirley, Mass.

had concluded his address on the Kentucky pioneer and Miss Florenee Howard had recited effeetively "The Blue and the Gray," Mrs. Ben Hardin Helm, a sister of Mrs. Abraham Lincoln, pulled the silken cord, and the flags fell apart, dropping gracefully into the arms of the six little girls who were stationed by the pedestal to receive them.

As this heroie bronze image of the martyred President looked out upon the seenes from whence he came, an impressive silence spread over the vast crowd in the Court-House Square. Then, like a rocket, a great cheer went up and the cheers spent themselves spontaneously into the singing of "America." It was one of those lofty moments crowded with inspiration and deep emotion. But in perfect harmony with the spirit and character of the living Lincoln, the moment was not without its humiliating humor. The local band that had done so proudly with "Dixie" and "My Old Kentueky Home" and a military heel-and-toe promenade polka, veered leeward toward the reef and broke hopelessly upon the rocks in the seeond stanza of the national anthem.

In concluding the exercises, Judge DuRelle, one of the eommissioners, aeeepted the work from the seulptor with words of appropriate appreciation. In turn, Governor Willson accepted the work from the commission on behalf of the Commonwealth and solemnly entrusted its care to the citizens of Hodgenville, by whom, through their Mayor, it was received.

Kentucky's happy recognition of pride in her greatest son was nowhere so well epitomized as in Colonel Henry Watterson's unveiling address. Himself a Kentuckian and a Confederate veteran, he voiced the spirit not of the border State alone, nor yet of the South, but of all the States, when, referring to Lincoln and the Union, he said: "We owe its preservation to his wisdom, to his integrity, to his firmness and his eourage. As none other than Washington eould have led the armies of the Revolution from Valley Forge to Yorktown, none other than Lincoln could have maintained the Government from Sumter to Appomattox. All of us are Unionists now."

✣ ✣ ✣

The Side Doors of the City of Churches

THE officer of the law was lounging easily near the "side entrance," his elbows planted back of him in a restful position upon the iron window-guard, his club dangling listlessly from his wrist. We took a similar attitude under a big gilt brewery sign across the street. It was Sunday afternoon, and we were doing the saloons about the Hamilton Avenue ferry in Brooklyn. Two of us were Manhattan newspaper seribes; the third, be it confessed, was a public-school teacher.

"Another one of those poor deaf and dumb, blind, and stringhaltered 'eops.'" quoth the pedagogue. "Look at him—too sleepy to turn his head!" At that moment a limply, struggling figure was flung out at the very feet of the officer, and a big man in a white apron appeared for an instant at the doorway. The loafers up and down Hamilton Avenue guffawed. The white-aproned man appeared for a seeond time and shoved a second "drunk" violently into the street. The policeman exchanged a word with the "barkeep," and, walking over to the edge of the sidewalk, poked the prostrate wretch in the ribs with his elub. "Move on there!" eame from the lips of authority. The bum staggered in a zigzag toward us, and ended by falling headlong into the open door of the saloon at our back. The "cop" returned to his *post of duty*.

In a large rear room of the saloon we found the "bouncer" and another, a middle-aged and rather pleasant-appearing fellow, industriously drawing beer at a small bar. Through an excess of caution, or some other motive equally superfluous in the saloon business in New York City, the proprietor was not serving drinks in the main barroom that day. The sehool-teaeher placed three nickels on the sudsy copper sink over the spigots and ordered a "short" lager beer. "Make it three," added my fellow-journalist, shrewdly calculating on the plainly-suggested five-cent limit. *They* were of gentlemanly "shortness" in comparison with the great urns of splashing yellow stuff that was set out to the herd. The big barkeep rang up the cash register, and, talking pleasantly to us the while, mechanically served a ragged man who was so drunk he could scarcely hold himself up by the slippery bar-rail. The poor fellow spilled half of it on his clothes, wobbled for a moment, and slid to the floor. "T'row that ——— out, too, Jake!" commanded the smaller man disgustedly.

Of Course you wear a cap

It is the badge of the out-door life for the good dresser, be he man of leisure, business man, professor or President. But what a difference in caps! The swell cap is the

HEIDCAP

It is the finest cap in the country. It has the lines and the "kick." It makes you look a thoroughbred.

NEW-SKIN

TRADE-MARK

Instead of Court Plaster

"Paint it with New-Skin and forget it"

For a Cut or Scratch

Clean the wound thoroughly. Then paint it with a coat of *New-Skin*. The *New-Skin* will dry into a tough, flexible film under which the wound will heal rapidly without further attention.

For a Hang-Nail

Trim the hang-nail close with sharp manicure scissors; then coat it with *New-Skin*, applying a second coat after the first has dried, if necessary. After that the hang-nail will not bother you and will proceed to cure itself.

For Split Lips

Flatten out the lip with the fingers and touch it lightly with *New-Skin*. Hold the lip flat for a moment until the *New-Skin* dries. There will then be no further annoyance and no further temptation to bite or touch the lips.

New-Skin is good for Burns, Blisters, Callous Spots and Chafed Feet.

Dept. J, NEWSKIN COMPANY, NEW YORK

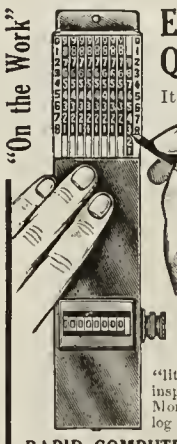
WATERPROOFED LINEN
LITHOLIN
COLLARS & CUFFS

FIT COMFORT

Summer Comfort

The Same Collar You've Always Worn—Only WATERPROOFED

ONE of the many reasons why **Litholin Waterproofed Linen Collars and Cuffs** increase in popularity is that, no matter what the weather may be, or the conditions, they hold their shape, do not wilt or fray, and, if soiled, can be wiped white as new with a damp cloth, in a minute. That cuts out the expense of the laundering,—a weekly item which counts heavily in the long run, especially in the hot months. So, you get style, and save, and have real satisfaction. There are imitations. Genuine Litholin Goods are ALWAYS sold in RED boxes—look for the trade-mark.



COLLARS 25c. **CUFFS 50c.**

If not at your dealer's, send, giving styles, sizze, number wanted, with remittance, and we will mail, postpaid. Booklet of styles free on request.

Adjustable Shelves
Sliding Doors

Here is the one sectional bookcase that suits all sizes of books. You can have one row on one side and two or three on the other. This is the Danner Sectional Bookcase.

The case is in double sections. It doesn't look like a sectional case. The double section means better designs.

This is the one sectional case with sliding doors—doors which are always out of the way, open or shut.

The doors run on rubber tired casters. They never jam. They are noiseless and dust-proof.

The One Sectional Case You Can Sweep Under

See how it stands up from the floor. This is the sanitary feature so popular now in desks.

No other case has a consultation leaf to rest heavy books on while simply referring to them.

We make Danner Sectional Cases in all styles and wood finishes. Plain or leaded glass doors.

Here are four separate and immensely valuable features you'll find in no other sectional case on the market. Don't you want our catalog?

THE JOHN DANNER MFG. CO.

DANNER SECTIONAL BOOKCASE

WIRELESS

gives you more genuine entertainment than anything you have known yet. IT IS NOT necessary to know the code. You can catch messages from any of the 900 U. S. Government and Commercial Wireless Stations with apparatus costing no more than $1.90!! Complete sending and receiving outfits from $5.30 up. Send TO-DAY two-cent postage for our wonderful 128-page electrical cyclopedia containing all about wireless, diagrams, instructions, etc.

Electro Importing Co., 86c West Broadway, New York
"Everything for the Experimenter"

"Jake" obeyed with alacrity. We followed him in time to see the "bmm" literally thrown under the feet of the people hurrying to the ferry.

In eleven contignous blocks in this vicinity we counted seventy saloons, all of them doing business. The one we had visited first was typical. "But," it will be contended, "this is one of the vilest sections of the city."

The next Sunday two of us inspected an entirely reputable section in the Sixth Ward. In the second saloon we visited we saw two little boys, neither of them over ten years of age, served with beer. The same saloon exposed no license and further violated the law by having the front windows entirely screened off. This is not a composite picture, but a real case.

Before our investigations were completed I had drawn a map showing the location of every saloon in the Brooklyn Heights and Red Hook section, and had

Saloons on Brooklyn Heights and Red Hook

personally investigated saloons in every ward. In this area of 2,300 acres I found 794 saloons, or one to every 290 people. All of them, or practically all of them, are selling liquor illegally every Sunday of the year. I am convinced that a majority of them are at the same time breaking laws other than those concerning Sunday closing. The most aristocratic "cafe" on Fulton Street is as guilty as the lowest saloon on Hamilton Avenue or under Brooklyn Bridge. All break the same laws and defy the same complacent public.

It is as a defier of law that the saloon is most menacing. The organized and aggressive liquor interests play too big a part in the making of legislators and legislation. When legislation is unfavorable to itself the saloon, through the deliberate connivance or indifference of its creatures on the beneh and in the city departments, contrives to obtain comparative security in the breaking of law. Hence the futility of most excise prosecutions.

It is a deplorable fact, too, that the friends of law enforcement lack efficient organization and real aggressiveness, and, above all else, are they wanting in practicality. Two years ago a Brooklyn clergyman visited an objectionable saloon near his church, ordered beer, dipped his cuffs deep into the foam, and the next day hysterically demanded of a grinning magistrate that his linen be submitted to a chemical analysis. Even with less ludicrous evidence it is ordinarily next to impossible to overcome the "burden of proof" demanded by a "party" magistrate for the conviction of his friend, the saloonkeeper-defendant.

May the present national anti-saloon agitation stir New York at least to the point where good citizens in and out of church may find themselves banded together for the enforcement of our excise laws.

A PLEASING DESSERT

always wins favor for the housekeeper. The many possibilities of Borden's Peerless Brand Evaporated Milk (unsweetened) make it a boon to the woman who wishes to provide these delicacies for her family with convenience and economy. Dilute Peerless Milk to desired richness and use same as fresh milk or cream.—*Adv.*

"ANSCO"
FILM

The Film that Lifts Amateur Photography from Guesswork to the Realm of Artistic Achievement.

WITH Ansco Film you can achieve the greatest possible success that your equipment will allow. The Ansco Film gives you not merely a photograph—but an artistically correct rendering of your subject—line for line, shadow for shadow, tone for tone.

The latitude of the Ansco Film is a revelation to the photographer—be he novice, amateur, or advanced. The marvelous pencilings of nature in light and shade—all the numberless gradations which the eye unconsciously catches—can be depicted with unerring fidelity by the Ansco Film. This is what makes successful photography.

Even if your judgment be inaccurate as to proper timing, the great latitude of the Ansco Film aids by giving you an unusually wide range, reducing to a minimum your losses.

The Ansco Film is the highest type of film. It has that fineness of grain of the emulsion so necessary in producing a well-balanced negative.

The speed, combining with the latitude, permits of snap shots, time exposures, interiors, portraits, flashlights—all the various branches in which the amateur is interested. More than this—the Ansco Film will render harmonious *color values*, presenting chromatic balance truly wonderful. This is especially noticeable when prints are made on Cyko paper, with which you get as truthful a reproduction in monochrome as is possible without special apparatus for orthochromatic work.

Ansco Film fits any camera; exposure numbers always register; non-curling.

Independent dealers everywhere carry full line of Ansco Film, Cyko Paper, and pure, carefully prepared photographic chemicals. If other dealers will not supply you, do not blame them. An agreement with their manufacturer forbids them. Look for the ANSCO sign.

YOURS FOR THE ASKING: A complete photographic library in two volumes, teaching the art of making prize-winning pictures. Write for it, or ask your nearest dealer.

Ansco Company, Binghamton, N. Y.

ACME QUALITY

Paints and Finishes
For the Home

At this time of the year there are many little jobs of painting and finishing about the home that anyone can accomplish successfully by following the Acme Quality plan.

Now is a good time to repaint the floors, to refinish the woodwork, to brighten up the furniture, to redecorate the walls, or to enamel the bathroom.

Acme Quality Paints and Finishes are put up in convenient form for ready use and easy application—just tell your dealer what you want to do and insist on goods bearing the Acme Quality trade-marked label, for—if it's a surface to be painted, enameled, stained, varnished or finished in any way, there's an Acme Quality Kind to fit the purpose.

Acme Quality Enamel (Neal's)
Gives that smooth, beautiful, sanitary enamel surface so easy to keep bright and clean. In white or dainty tints.

Acme Quality Kalsomine
For walls and ceilings. Mixes with *either* hot or cold water. Flows freely, covers with one coat and does no. show laps.

Acme Quality Porch Furniture Enamel
For finishing porch and lawn chairs, settees, swings, flower stands, railings, etc. Imparts a tough, durable finish and prevents rust and decay.

For example, a treasured old chair or other piece of furniture that is badly marred and scratched can be made as good as new. Simply refinish it with Acme Quality Varno-Lac—a stain and varnish combined that imparts the elegant effect and durable, lustrous surface of beautifully finished oak, mahogany or other expensive woods.

Acme Quality Text Book

The Acme Quality Text Book tells just how to get best results. It is an encyclopedia of paints and finishes, covering every phase of home painting. Tells what to use and how to use it. Free to any address on request.

Brickbats and Bouquets

Kind Words and Bitter Spoken by Editors, Subscribers, and Readers, Regular and Occasional, About Collier's

"CHARLESTON, W. VA.

"The fight you have been making for fair dealing in the courts between the corporations and the people is worthy the support of all good men, and I hope you will keep it up. The chances for justice to the plain people when fighting the rich corporations are growing less by leaps and bounds, and I tremble to think where the tendency will lead, unless the people can be awakened to their rights by such courageous journals as COLLIER'S. GEORGE BRYNE."

✣

"HOUSTON, TEXAS.

"*Resolved*, That the directors of the Houston Business League wish to express in a formal manner their appreciation of an editorial which appeared in COLLIER'S on March 6, 1909. In giving editorial endorsement to the efforts which Houston has made and is making to place and keep its municipal affairs on a high plane of efficiency, COLLIER'S has helped in a substantial manner. The directors of the Houston Business League feel that a vote of thanks should be extended to the publishers of COLLIER'S, and the secretary is authorized to so notify them.

"GEORGE P. BROWN, Secretary."

✣

"SACRAMENTO, CAL.

"COLLIER'S short stories are always first-class and written by the best authors.

"E. L. PORTER."

✣

"OMAHA, NEB.

"Who pays for this standing advertisement attacking Senator Cummins of Iowa—Aldrich or Joe Cannon? This is the first time I have ever written to any editor criticizing an article—I know better than to do it. But you seem to invite brickbats, and here is a pressed bat of full size, made in Omaha, the market town.

"WILL A. CAMPBELL."

✣

"ALLANDALE, R. I.

"I greatly admire the individual or corporation who can get ten cents per head from so many people in exchange for copies of that conglomerate mass of illustrated advertising, side-issue matter, and fiction, known as COLLIER'S WEEKLY.

"ALFRED COULTON."

✣

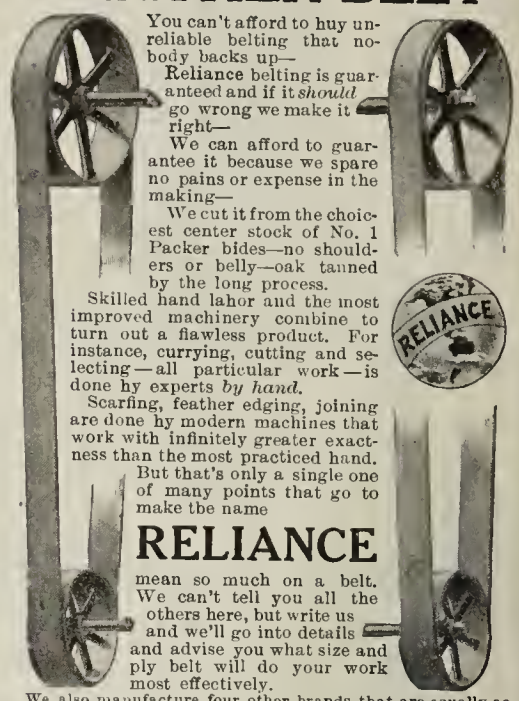
"ANDOVER, MASS.

"I have always had the greatest possible admiration for COLLIER'S, both in regard to business policy and literary ideals.

"H. WILMOT BLACK."

✣

"BIRMINGHAM, ALA.



"If COLLIER'S continues the consistent policy of its life so far, I shan't quarrel, even if I am accused of having COLLIER'S form all my opinions for me. Your editorials are the best; your stories are as good as the best; your attitude toward contemporaries of all grades and classes is noble, and is unique at least in being so outspoken; your work against quack doctors, patent-medicines, gold brick and gold mining schemes, United States Senators, and other public parasites and nuisances is unequaled and invaluable. No other paper has learned so well as you that it pays to defend the people's interests, and, under this high principle, your influence must grow immeasurably as the years go by. GEO. S. BROWN, M.D."

✣

"Taking into consideration the virile, talented men it has assembled in its editorial rooms and the widening scope of their influence, COLLIER'S seems destined to become a permanently potent factor in our national life. May the spirit of its brave, clean old founder live on in COLLIER'S. May it continue to represent all that is pure and square and valiant in the citizenship of the Republic!"

—Butte (Mont.) *News*.

Buy A *Guaranteed* LEATHER BELT

You can't afford to buy unreliable belting that nobody backs up—

Reliance belting is guaranteed and if it *should* go wrong we make it right—

We can afford to guarantee it because we spare no pains or expense in the making—

We cut it from the choicest center stock of No. 1 Packer bides—no shoulders or belly—oak tanned by the long process.

Skilled hand labor and the most improved machinery combine to turn out a flawless product. For instance, currying, cutting and selecting—all particular work—is done hy experts *by hand*.

Scarfing, feather edging, joining are done hy modern machines that work with infinitely greater exactness than the most practiced hand.

But that's only a single one of many points that go to make tbe name

RELIANCE

mean so much on a belt. We can't tell you all the others here, but write us and we'll go into details and advise you what size and ply belt will do your work most effectively.

We also manufacture four other brands that are equally aa good as Reliance for specific purposes.

Don't experiment with belts. No mill man or manufacturer can afford to. It means fearful loss before you get through. Specify **Reliance**—the guaranteed belt—and save needless expense and trouble.

Write for book today and learn more about **Reliance** superiority.

Chicago Belting Co., 16 South Green St., Chicago

They keep out the glare and the heat of tbe sun yet leave the porch airy and breeze-open.

VICTOR HERBERT *and* *The* EDISON PHONOGRAPH

Victor Herbert will make Records exclusively for the EDISON PHONOGRAPH

AN Edison Record made by Victor Herbert's orchestra, conducted by him and playing one of his own compositions, is a masterpiece.

Mr. Herbert was one of the first to see the possibilities of the Phonograph in giving the people good music. He recognized that Edison Amberol Records reproduced instrumental music best because of their length and their purity. That is why he readily made an arrangement which makes him practically musical adviser to the Edison Record-making department.

The arrangement includes the exclusive right to reproduce for the Phonograph Mr. Herbert's own compositions.

Securing Mr. Herbert will make the Edison Records as perfect musically as they are mechanically. The best music in the world is offered by Edison Records.

Write for free booklet, "The Edison Phonograph and the Home."

It contains articles of unusual interest, profusely illustrated by eminent American artists.

Ask your dealer or write to us for catalogues of Edison Phonographs and Records.

Edison Phonographs are sold at the same prices everywhere in the United States—$12.50 to $125.00.

Standard Edison Records, 35c. Amberol Records, 50c. Grand Opera Records, 75c.

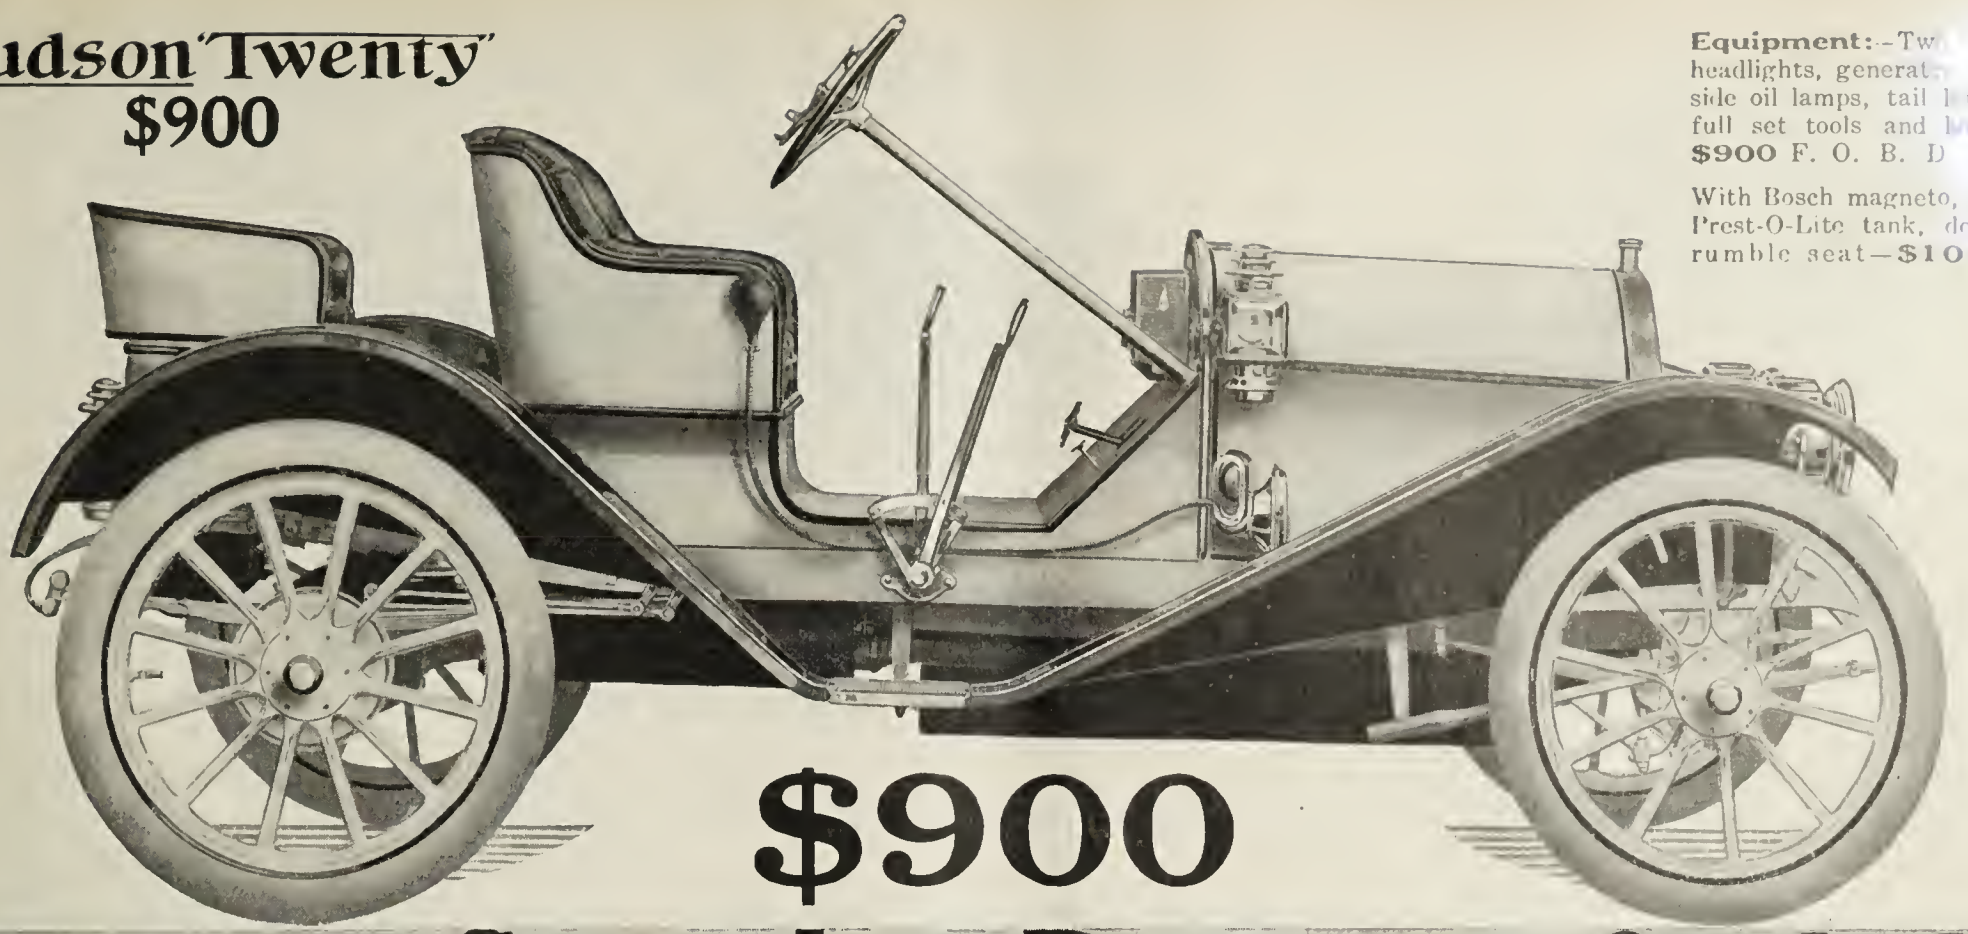
A Time-Saving Stove

The New Perfection Wick Blue Flame Oil Cook-Stove, thirty seconds after the touch of the match, will deliver at the stove top a strong, clean heat of great working power.

More than that, you may run it for hours continuously; bake bread and cake; prepare a meal or do the weekly ironing; and for the whole time never be conscious of undue heat because of the stove. In this respect the

NEW PERFECTION
Wick Blue Flame Oil Cook-Stove



is the only sensible stove for summer. Differs from other oil stoves in its strong, handsome, useful CABINET TOP which can be used for holding dishes *and for keeping meals hot.* Also equipped with drop shelves on which may be placed small cooking utensils after they are removed from the blaze. Has every improvement—even to racks for towels. All told, it is a stove of convenience, comfort, safety and economy. Three sizes. Can be had either with or without Cabinet Top. If not at your dealer's, write our nearest agency.

The *Rayo LAMP* gives a light more like that of the old-fashioned glass lamp than any other lamp or lighting device. Does not smoke, smell or flicker. Does not even tire reading by the Rayo. If not with your dealer, write our nearest agency.

Strong—Speedy—Roomy—Stylish

There have been many low priced cars, but never one so big, strong, speedy and good looking as this one. In the Hudson "Twenty" you get the best automobile value ever offered for less than $1000. In this car you find that something called *class*—that something which other cars at or near this price have lacked.

Most low priced cars have been too small. In the Hudson "Twenty" you get a *big* car. Note the long wheel base—100 inches. Note the big, strong wheels, the large radiator, big hood, staunch, clean-made frame.

This car looks a big car. It *is* a big car. Other cars selling under $1,000 have not been roomy. One felt cramped after riding in them. The Hudson "Twenty" has ample leg room. There is no Roadster made, regardless of price, that affords more comfort to those who ride in it. From the front seat to the dash there is a space of 31 inches.

Designers of other cars selling around the price of the Hudson "Twenty" have not seemed to realize that it is as easy to make a *good looking* car as it is to make another kind.

Here is a car that is good looking. It is big and racy looking. Note the graceful and harmonious lines. Observe the sweep of the fenders and the frame. There is no car with better lines. None from this standpoint more satisfying.

A man who can afford a half dozen cars will enjoy the Hudson "Twenty" as well as the man who can own but one.

Judged by every mechanical and engineering standard this car is thoroughly up-to-date without embodying any experimental features. It is a car that looks and acts like the more expensive. It is big, roomy, stylish, satisfying.

Some High Grade Features

The Hudson "Twenty" has a sliding gear transmission, selective type, three speeds forward and reverse, such as you find on the Packard, Peerless, Pierce, Lozier and other high grade cars. Most other low-priced cars do not have this type of transmission.

All the Power You Need

The motor is vertical, four cylinder, four cycle, water cooled, known as the Renault type. And Renault motors are the pride of France.

The Hudson "Twenty" motor develops all the power you can want. Any Hudson "Twenty" will do 50 miles an hour. On the Grosse Pointe race track one of them has been driven a mile a minute.

The frame of the Hudson "Twenty" is of the best open hearth stock. It is 3½" x 1½" section, accurately and carefully riveted together with hot rivets, and braced against all possible strains. Our frames are made by the Hydraulic Pressed Steel Company of Detroit, the company which makes frames also for the high-priced Stearns cars.

Single Piece I-Beam Axle

The front axle is a one piece drop-forged I-beam section, of the best grade of open hearth steel, carefully heat treated. The Peerless, Pierce, Matheson, Lozier and other high grade cars use drop forged front axles.

The rear axle is of the semi-floating type, shaft-driven, proved out by a score of makers.

Perfect Comfort Here

There is more rake to the steering post than is found on the average car. This allows the driver a comfortable position. The generous diameter of the steering wheel makes the car easy to handle.

The springs are of special steel, semi-elliptic in front, and three-quarter-elliptic in the rear, such as you find in the Renault, Chalmers-Detroit, Pierce and others

Lubrication is of the pump circulated, constant splash system, which has proved so satisfactory on the Oldsmobile, Chalmers-Detroit and other highly successful cars.

The body is composed of the best grade of ash, carefully placed and securely bolted to the frame. The seats are large and roomy and well upholstered.

It Pleases the Eye

In color the "Twenty" is a rich maroon, with mouldings and edges of bonnet striped in black. Leather is blue black. Fenders, fender irons, pedals, and top irons are enameled black. The radiator, steering column, side lamp brackets, hub caps, and side control levers are of brass. Steps are aluminum.

The tires are 32"x3" in front and 32"x3½" in the rear. The crank shaft has a tensile strength of 100,000 pounds; the clutch is leather faced, cone type; the clearance is 12½ inches under the steering knuckles.

Worm and segment type steering gear, with extra large bearings, is used, and the control is of the accepted standard sort, shifted by lever on the right hand side.

The Hudson "Twenty" not only looks like the more expensive cars, but it *acts* like them too.

Fulfills Every Demand

It can go faster than most careful drivers want to ride, it can climb all of the hills, and stand up on all sorts of roads, and it will do this work on a small amount of gasoline, and at a low cost of repairs and tires

The Hudson "Twenty" is the ideal car at the price. It leaves nothing to be desired.

Nothing experimental about it. Nothing untried.

The "Twenty" has been recognized by the Association of Licensed Automobile Manufacturers. It is the only four cylinder *licensed* car selling for less than $1,000.

Deliveries will begin in July, and orders will be filled in rotation as received. Please wire or write for catalog and name of nearest dealer.

The Men Behind the Hudson

J. L. Hudson, President—Mr. Hudson is a leading, conservative business man and capitalist of Detroit.

Hugh Chalmers, Vice President—Mr. Chalmers is president of the Chalmers-Detroit Motor Company. He was formerly vice-president and general manager of the National Cash Register Company.

R. B. Jackson, Treasurer and General Manager—Mr. Jackson is a mechanical engineer. He was factory manager of the Olds Motor Works from 1903 to 1907.

Geo. W. Dunham, Chief Engineer and Designer—Mr. Dunham was chief engineer of the American Motor Carriage Company from 1901 to 1904. In the latter year he became associated with the Olds Motor Works in a designing capacity. He was chief engineer of the Olds Motor Works from early in 1907 until March 1, 1909. Mr. Dunham's success in the past as a designer of high-grade motor cars that gave satisfaction to their owners is the best proof that the Hudson "Twenty" will give satisfaction.

R. D. Chapin, Secretary—Mr. Chapin is treasurer and general manager of the Chalmers-Detroit Motor Company.

H. E. Coffin, Vice President and Chief Engineer of the Chalmers-Detroit Motor Company, is a member of the board of directors.

Hudson Motor Car Company, Detroit, Michigan

THE AMERICAN

A CAR FOR THE DISCRIMINATING FEW

Three years ago the name of the American Motor Car suggested little or nothing to your mind.

Now, whenever and wherever the finest and costliest cars are discussed, do you not hear its name inevitably linked with the elect?

It has come to pass that the choice of the discriminating few, who feel that they cannot afford to own cars of questionable qualities, is narrowed down to a trio or perhaps a quartette of cars. You will find that the American is unfailingly considered in this select little company.

The story of the development of the American since the first car was built five years ago; and especially the Aladdin-like progress of the past twelve months, reads almost like a romance.

It is so interesting and so instructive that we have been constrained to tell this story in booklet form.

The little book which describes in detail the high honors awarded the American in 1908 and 1909 is well worth writing for.

The 175 American cars delivered this season are owned by the representative men of their communities—men who will consider none but those few fine cars which can consistently lay claim to leadership

It will impress and interest those substantial owners in each town and city who want the very best to read the book, which describes the remarkable rise of the American in the esteem of expert buyers. They cannot fail, likewise, to be impressed with the character of ownership represented by this random list (necessarily limited by this limited space) of men who have bought American cars since the present season began:

B. L. WINCHELL, Chicago

Prince Codadad

The Arabian Nights Prints

By Maxfield Parrish

These pictures, twelve in number, which were so greatly admired when they appeared as illustrations in Collier's, are offered to the public as fine art prints suitable for framing.

They are beautifully reproduced in all the wonderful richness of the artist's colors, size 9 x 11 inches, on fine art paper, on a 16 x 20 inch mount. The subjects to be obtained are as follows:

1. The History of the Fisherman and the Genie
2. Prince Codadad
3. The Story of the King's Son
4. Cassim in the Cave of the Forty Thieves
5. The Search for the Singing Tree
6. Sindhad Plots Against the Giant
7. The City of Brass
8. The King of the Black Isles
9. Aladdin and the Wonderful Lamp
10. Queen Gulnare
11. The Valley of Diamonds
12. The Brazen Boatman

These prints can be obtained singly at a cost of $1.50 each or the entire set in a handsome portfolio at $15.00. If your dealer will not furnish you with these subjects, any or all, we will send to your address on receipt of price. Money will be refunded if not satisfactory. Address

Print Department, P. F. Collier & Son, 412 West 13th Street, New York City

For 15 cents in stamps to cover charges, we will send you a copy of our new Print Catalog of 175 reproductions.

Order from any reliable art dealer in the United States or Canada. The dealers have them, or they can get them. Insist upon seeing them.

ADVERTISING BULLETIN

NO. 9

WHY YOU GET YOUR MONEY'S WORTH WHEN YOU BUY ADVERTISED GOODS

WHEN an advertiser uses a full page in Collier's, he pays $1,600 for the space—more if he uses color. If he happens to be a manufacturer of clothing, for instance, consider how many suits of clothes he must sell to make a profit large enough to take care of the $1,600 he must pay Collier's.

You will readily appreciate that the money he receives from first sales will not cover his $1,600 expenditure. He must have reorders to make a profit.

How does all this interest you as a reader? Just this way: You will not buy an article twice that has not given complete satisfaction. The article must be good and must come up to your requirements or you will not buy it again. The manufacturer must have your second and third and fourth orders if he expects to continue business. He is therefore compelled, if for no other reason than self-protection, to put quality—with a big "Q"—into his goods. You know his goods—his trade-mark. If the goods give satisfaction you will ask for them again; if not, you will remember to avoid them.

Advertised articles, whether they be shoes, clothing, hats, shirts, or any other commodity, are your safeguard against poor merchandise. Manufacturers of shoddy goods cannot afford to continue advertising. They soon realize that they cannot secure reorders for unworthy goods.

There are about twelve large manufacturers of boys' and men's clothing whose names are very familiar to you. They would not be in Collier's or in many other national publications if they did not have genuine merit behind their goods. Most of them have been advertising for a long time—and most of them are using Collier's. These two facts stamp them as absolutely reliable. (Of course, we do not mean to imply that all those advertisers who do not use Collier's are necessarily unreliable.)

That is why you get your money's worth when you buy advertised goods.

Editorial Bulletin

Saturday, June 26, 1909

England's Inevitable War

¶ *Armageddon is a strong, old Biblical word. It is the name of the plain where the Hebrews fought their great battles. Arthur Balfour sees England approaching an Armageddon in the North Sea which will settle the fate of the British Empire; Lord Rosebery says that Europe is drifting toward war without doubt, if without reason; Herbert Asquith cries to the Colonies for help.*

Thus the only two ex-Premiers and the present Premier, the three most responsible statesmen in England, join their trumpetings of pessimism to the clamor of press and music hall. Lord Rothschild, England's greatest financier, has been quoted privately as in favor of striking Germany now. Britain's position will never be better. She must grow weaker while Germany grows stronger. The conflict is unavoidable. Therefore, have it while the chances favor victory.

"An Empire in a Fright" will be the first of two articles by Frederick Palmer, who has just returned from England and Germany. His view is that of a detached observer of the facts and the humors of both sides. Two great peoples are being set against each other like fighting terriers for a mill. To say a word in favor of a German or of German civilization in England almost amounts to treason.

Pounds and sixpences inspire the shouting. The Englishman is awaking to the fact that the Armageddon is well under way. For the first five months of 1909 British exports decreased $69,119,405. Apprehension that a rival so successful in commerce may be equally successful in war keeps up the cry for more and more "Dreadnoughts," in which the Germans for their part join, with no disillusion in either country as to where the guns are to point.

The second article will be on "The March of the Germans." They laugh at the British panic. They are confident, sarcastic, and taunting. To every German the national objective is clear, and it is one of commercial self-interest. If England is in the way of the goose-step march, then England must fight. Germany believes that she has a system of education and industrial organization which ensures victory. It is this, as Mr. Palmer explains, which England lacks, and which every other nation must acquire if she would hold her own in the modern Armageddon.

Two Picturesque News Events

¶ *The Wright Brothers, who soared to fame after leaving Dayton, were heaped with honors and pelted with medals on their return. The celebration of June 17 was attended by all the noise in Ohio. It was a welcome of neighbors. The occasion will be completely pictured in Collier's next week.*

The Cobe Cup Race, of the Chicago Automobile Club, last week caused a great whiz in the Middle West. A national levee of motorists gathered in to see the Cobe and Indiana Trophy cars lap the thirty-mile square—to skate the turns on one wheel, and climb through the air down the straight-a-ways.

The photographer was right where the dust was thickest, and in our next issue there will be published snapshots of "The Western Vanderbilt."

$75.00 upward for THE BEST

Lackawanna Motors

NEW "DOUBLE" TYPE
BALANCES EXPLOSIONS
INCREASES POWER

Simplest—Most Efficient—Valveless

One to six cylinders 2½ to 45 H.P. for all boats. 41 years manufacturing and 11 years motor experience back of every LACKAWANNA engine. Complete boat outfits. Write for handsome New Catalogue of the "Silvered Cylinders." Not Price Alone—Better Quality!

Lackawanna Mfg. Co. 22 Coldwell St., Newburgh, N.Y. 126 Liberty St., New York, N.Y.

"TWIN GRIP" PAPER FASTENER

has double prongs that hold top, bottom and middle papers in an all-embracing grip. Just a pinch and it's on. Can be used over and over again.

Smooth, handsome and effective.

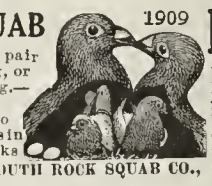
Send for free samples in four sizes.

The De Long Hook & Eye Company
Philadelphia
U. S. A.

MAKE MONEY FROM OTHERS' FUN

Owners of our famous Merry-Go-Rounds frequently make from $8,000 to $10,000 yearly. It is a big-paying healthful business. Just the thing for the man who can't stand indoor work, or is not fit for heavy work and has some money to invest in a money-maker. We make everything in the Riding Gallery line from a hand-power Merry-Go-Round to the highest grade Carousselles. They are simple in construction and require no special knowledge to operate. Write to-day for catalogue and particulars.

HERSCHELL-SPILLMAN CO.
183 Sweeney Street, North Tonawanda, N.



Rider Agents Wanted

in each town to ride and exhibit sample 1909 model. *Write for Special Offer.*
Finest Guaranteed 1909 Models . . . **$10 to $2**
with Coaster-Brakes and Puncture-Proof tires
1907 & 1908 Models all of best makes **$7 to $1**
500 SECOND-HAND WHEELS *All makes and models, good as new* . . . . . **$3 to $**
Great Factory Clearing Sale. We Ship On Approval *without a cent deposit, pay freight* and allow TEN DAYS' FREE TRIAL.
Tires, coaster-brakes, parts, repairs and sundries, half usual prices. Do not buy until you get our catalogs and offer. *Write now.*
MEAD CYCLE CO., Dept. M-54, CHICAGO

SQUAB BOOK FREE

1909

Mated pair billing, or kissing.—From eggs to squabs in 4 weeks

Write for our handsome 1909 Free Book, telling how to make money breeding squabs. We were first, the originators. Cloth-bound book now 5 cents, pages, 114 illus. It's great.

PLYMOUTH ROCK SQUAB CO., 325 Howard St., Melrose, Mass.

ROSSMAN LAWN FENCE

(STEEL AND IRON)

combines the strength of a stone wall with the beauty of a hedge. More durable than wrought iron and erected at medium cost. Ask for Catalogue B. Write to-day.

SLEETH MFG. CO.
366 Cortland St., Belleville, N.

Niagara Hydraulic Ram

The cheapest and most reliable water system you can install. Write for our catalogue J, which explains our method and gives you the cost. We furnish Caldwell Towers and Tanks.

NIAGARA HYDRAULIC ENGINE CO.
140 Nassau St., New York. Factory: Chester, Pa.

AGENTS—BIG MONEY

selling our new sign letters for office windows, store fronts, glass signs. Easily put on. Write to-day for a free sample.
METALLIC SIGN LETTER CO., 52 N. CLARK ST., CHICAGO,

WIGS and TOUPEES

Absolute non-detectable toupee.
Special rates to barbers. Send for Catalog.
Lombard Bambina Co., 113 Monroe St., Lynn, Mass.

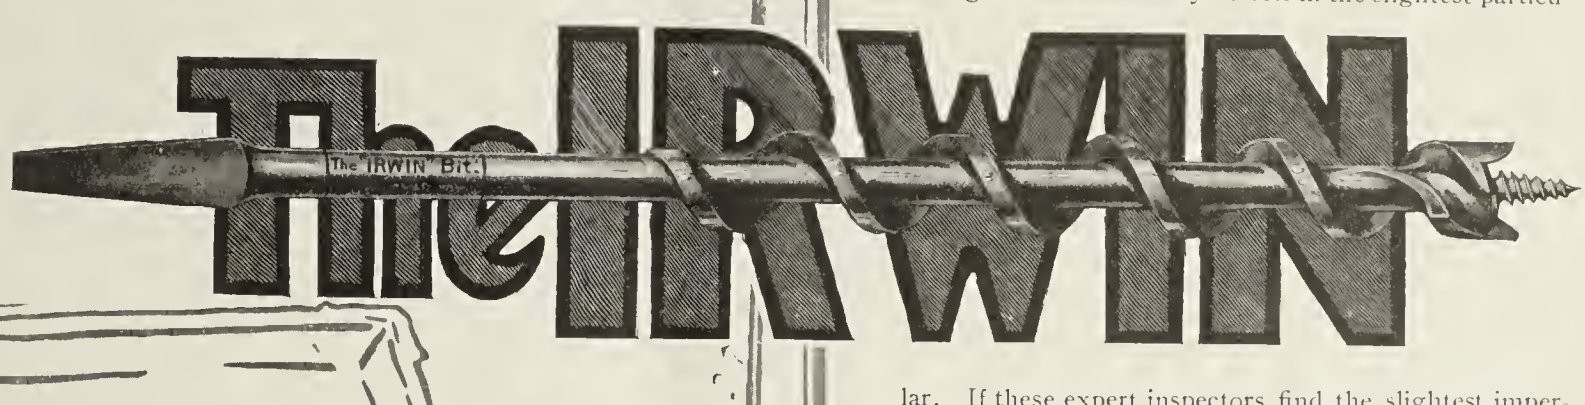
Household Tools Must Be Good Tools



YOU of the household brotherhood—you enjoy good tools and the good work they alone can produce, though your bread is earned in a downtown office, store, or what not.

The recognition of good work is universal—it extends to amateur as well as to professional. The amateur *must* have good tools—the professional demands them. Anyone can blame poor tools for poor work, but the wise man will not buy them. A good tool is an aid to good work. For amateur joinery, doweling, bracing and fitting—a set of Irwin Bits is absolutely necessary. For Irwin Auger Bits are perfect. Scientifically designed and made to the standard of perfection.

From the time the special quality of tool steel is tested for temper taking quality through the operations performed by 50 hands, there is but one end sought in the making of Irwin Auger Bits; that is—highest quality.

Drop-forged under a thousand pounds pressure, the metal in Irwin Auger Bits is solidified and strengthened, tempered in molten tin, oil and brine, a secret process exact in its results. Every Irwin Bit is lathe-turned by hand to the thousandth of an inch, heads and cutters are finished and sharpened by hand filing, polished from tip to tip. The Irwin Auger Bit in every detail is perfect.

When each Irwin Bit has received the finishing touches from the polishers, it is tested for boring capacity in the hardest of highly seasoned woods, such as lignum-vitae—a wood that will ruin most wood-working tools. Then each bit passes into other hands for final testing which detects any defects in the slightest particular. If these expert inspectors find the slightest imperfection, the bit is condemned to the scrap pile.

The IRWIN

But every bit that passes this final test is stamped with the name "Irwin." That is your guarantee of quality. Remember, that if the bit is not branded "Irwin," it is not the genuine Irwin Bit.

Sets sold in cases or rolls as you desire without extra charge. Cases are the handsomest, handiest bit cases ever made. Quarter-sawed hardwood, finely polished with folding lid and sliding drawer.

Each set of 20½ quarters contains one each 4, 5, 6, 7, 8, 10, 12, 14 and 16 sixteenths Auger Bits and one 6-inch screwdriver bit.

Each set of 25½ quarters contains one each 4, 5, 6, 7, 8, 9, 10, 11, 12, 14 and 16 sixteenths Auger Bits.

Each set of 32½ quarters contains one each 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15 and 16 sixteenths Auger Bits.

Irwin Bits are recognized everywhere as being the strongest, finest finished, most accurate—the fastest and easiest cutting and the least liable to choke of any bits made. They are uniform strength. All old style bits are weakest where the twist and shank unite, and that is where they usually break. Irwin Bits are guaranteed not to break there or any other place.

Irwin quality is guaranteed. Price refunded if not satisfactory. If a bit is not stamped "Irwin" it is not the genuine Irwin Bit.

If your dealer does not keep Irwin Bits, do not accept a substitute, but write us and we will tell you how to get them.

A Matter of Personal Integrity

IN THIS COLUMN two weeks ago were printed the words, the places, and the days of those speeches in which WILLIAM H. TAFT, speaking to the people face to face, and asking them to vote for him, promised that if he were elected the tariff would be lowered. Those promises were surrounded with words of good faith, of personal assurance, of confidence solicited. Mr. TAFT, by his simplicity, by the atmosphere of rugged forthrightness which his person radiates, raised the situation to a plane where the promisee relies not only upon the words of his contract, but also on his faith in the honesty of men.

In the same column we printed those declarations made during the past few weeks by the three men most powerful in the Republican Senate machine, which indicate their determination *not* to revise the tariff downward. These three men speak for the Senate; their majority has been secure on every vote; what they have determined has been done.

To those three declarations we add herewith one more, which says again, on behalf of the Republican Senate majority, that the tariff is *not* to be revised downward; and adds to that declaration unconcealed contempt for President TAFT and his promises. These words were uttered by Senator WILLIAM B. HEYBURN on the floor of the Senate June 8 (Congressional Record, page 2950):

"This talk of being under obligations to revise the tariff downward came from somewhere; I do not know from where; from some political, I was going to say swamp, like a miasma. . . . It was a concession, a sop, thrown by *those lacking in confidence* to the voters whose support they thought they had to have. . . . There is nothing in the platform of the Republican Party which requires us, as suggested by the Senator from Iowa, to make any concession, because some one or many may have promised a revision downward."

Senator HEYBURN'S use of the plural pronoun is a slight concession to the amenities. By "those" he means WILLIAM H. TAFT.

We would not willingly seem to enumerate, as one reason why President TAFT should veto the tariff bill, personal resentment of the Senate's flouting of him and his promises. The situation involves human qualities of a far higher order. *Mr. Taft can make his promises good.*

Credit President Taft With This

A SINGLE GOOD APPOINTMENT is one thing; a permanent moral advance is another. To President TAFT and to Secretary NAGEL is due the credit of accomplishing both these effects in one act. Selecting WILLIAM WILLIAMS to be Commissioner of Immigration at New York City, as successor of the admirable humanitarian administration of ROBERT WATCHORN, and making this appointment against the protests of the Republican organization which demanded the job as one of its perquisites, marks the raising of that post to the class of offices which are to be filled, like the higher judgeships and a few other places, on a non-partizan basis, with an eye single to finding the man of maximum character and efficiency, willing to accept. We think that President TAFT, as he goes on, will increase the number of government positions of this kind, especially among the judgeships. Only a careless President, or one with conspicuously defective ideals, will ever lose the moral ground thus gained.

Lawyers and Courts

OF ALL THE COMMENT printed on this page none comes back with so large a harvest of indignation as what we say about courts. Lawyers and courts have, concerning themselves, something of the same feeling that the medieval church had and that RICHELIEU expressed: "Around her form I draw the awful circle." And yet the farther we go the deeper strikes the conviction that among a buzzing multitude of clamorous duties, good will best be served if first choice be made of the business of putting courts and judicial systems in the light. With this introduction we print a story:

FRED. WARNER was a notorious boodling alderman in St. Louis. Mayor WELLS heard of his soliciting bribes, laid a trap for him with five marked one-hundred-dollar bills, and caught him, with two others. That happened the night of October 18, 1907. The two others have had various adventures in the courts—we are interested in the fortunes of WARNER. He was tried once, and the result was a hung jury. He was tried again and convicted. His lawyer appealed the case to the Missouri Supreme Court. The result of that appeal we transcribe from the report printed in the Kansas City "Times" of May 18:

"The closing part of the indictment against WARNER reads: 'Contrary to the form of the statute in such cases made and provided, and against the peace and dignity of —— State.' The word 'the' was left out of this last sentence, and the Supreme Court held, through an opinion filed by Judge GANTT and concurred in by the other members of the division, that the omission was fatal and at variance with the express provisions of the Constitution. As a consequence, the judgment of the trial court was reversed and the cause remanded for a new trial. This was the sole point in the case."

Our criticism, in this case is of the system, not the individual judges. As a St. Louis lawyer says: "One naturally feels like condemning the members of the Court for such slavish adherence to precedent, but, after all, they acted conscientiously, if not liberally. The Constitution is explicit in its definition of a sound indictment. It requires the indictment to contain the words, 'against the peace and dignity of *the* State.'" We content ourselves with stating the facts; and pass to the courts of another State.

California and the Southern Pacific

FOR CALIFORNIA, no remedy may be expected from the courts. That question has already been tested. The Southern Pacific dictates the nominations of the judges for the California Supreme bench, and, wherever it can, dictates as well the nominations of the local judges. The Southern Pacific Senators, FLINT and PERKINS, are in control of all Washington judicial appointments in which California is interested. Years ago California adopted a Constitution which had many popular provisions, but they have been reduced to a nullity by court decisions. One provision was this:

"Whenever a railroad corporation shall, for the purpose of competing with any other common carrier, lower its rates for transportation of passengers or freight from one point to another, such reduced rates shall not be again raised or increased from such standard without the consent of the governmental authority in which shall be vested the power to regulate fares and freights."

This is not the sort of thing that ought to be put in a Constitution, which should deal rather with general principles. But it was a pathetic attempt of the people to erect a permanent barrier against monopoly and provide against the seduction of future Legislatures by the railroads. But observe that, like the prescribed language for an indictment in the preceding editorial, it *was* in the Constitution. What happened? The San Joaquin Valley Railroad made a first-class passenger rate from San Francisco to Fresno of $3.75. The Southern Pacific rate was $5.90, but it met the San Joaquin Valley rate. Afterward, when the competition had ceased, the Southern Pacific went back to its old rate of $5.90. Suit was brought to prevent this, and Judge BAHRS of San Francisco decided against the railroad company. The Supreme Court reversed Judge BAHRS. The Southern Pacific political machine failed to renominate Judge BAHRS, and when Judge KERRIGAN tried the case the second time he in his wisdom decided it in favor of the railroad company. The Supreme Court sustained Judge KERRIGAN. They read out of the constitutional provision the very power which the people, in clear, direct language, had sought to put into it—and the decision was written by Judge BEATTY, the Chief Justice. The court decided that the San Joaquin Valley Railroad had no right to reduce its passenger rate, or at least no business, but that, having done it, the Southern Pacific simply did a praiseworthy act in protecting itself by lowering its rate to meet the unjust competition; that is to say, the Supreme Court invoked the doctrine of justifiable self-defense in favor of the Southern Pacific, and to do it wholly destroyed a constitutional provision. Its decision is amazing reading, as can well be imagined.

Women and Enthusiasms

BETTER THAN SOCIAL WORKER, though her work is lasting, better than militant reformer, though her shrill crusade is often useful, are ways and works of the quiet-voiced unknown women. May their days be long in the land. These women go softly all their years, and only the census-taker hears their names. High are the virtues of the simple woman who is able to be glad when a new book by KIPLING is brought home, to find a keen pleasure in an afternoon's trolley excursion, one who is willing to go miles to hear a new lecturer, preacher, play. There is something momentarily attractive in the attitude of a man or woman who has tasted of so much experience as to be slightly tired and always aware of the next move. But live with one of them, and you will be inundated with fatigue and sadness. Each year men

like a little letter in their friends a freshness of emotional life, a capacity for new enthusiasms, an unwearied and zestful approach to to-morrow and the next day. To reach life at many points of contact—all of them unfatigued and unsullied—that is more wonderful than to take cities or capture votes.

The Undergraduate and the "Grind"

THE NEW PRESIDENT of Harvard, in a recent article in the "Atlantic Monthly," points out some very interesting differences between the undergraduate attitude toward scholarship in English universities and in our own. When the English discovered the low state of scholarship among their students a hundred years ago, they resorted to frank competition. An elaborate system of honors and prizes grew up, and they succeeded in making honors not only a goal of ambition, but an object of general respect. Of course, there were protests that the Muses ought to be wooed for worthier motives, but, as President LOWELL observes, it is not our province to insist on an innate love of learning, but to make the most of human nature as it is and of young men as they are. And "Oxford and Cambridge men are firmly persuaded that success at the bar, in public life, and in other fields is closely connected with high honors at graduation, and the contest for them is correspondingly keen. The prizes and honors are made widely known. They are remembered throughout a man's life, referred to even in brief notices of him—much as his athletic feats are here—and they certainly do help him powerfully to get a start in his career. The result is that by the Isis and the Cam there is probably more work done in subjects not of a professional character than in any other universities in the world." In this country the undergraduate seems to feel that distinctions won in scholarship are a test of industry rather than of superior intellectual power. The term "grind" is applied with great impartiality to all high scholars instead of being reserved, as Dr. LOWELL thinks it was formerly—and as it certainly should be—"to a certain kind of laborious mediocrity." And this complicates the difficulty of stimulating scholarship by a mere resort to honors and prizes.

Altruism and Athletics

COMPETITION IN SCHOLARSHIP has, indeed, almost disappeared from our colleges because of the elective system, because final examinations measure diligence rather than intellectual power, and, interestingly enough, because "the corporate nature of self-interest in these latter times," as President LOWELL describes it, makes work for high scholarship seem mere striving for personal distinction. That is to say, the football man, risking his limbs in a glorious cause, placing his courage and devotion freely at the service of his Alma Mater, becomes an undergraduate hero; the honor man an egoistic "grind." Altruism is replacing the extreme individualism of our fathers. The successful half-back's glamour is not the mere glorifying of physical strength. The half-back "serves," and every one knows how much men are weighed in these days by their service—to city, State, and so on. Nor does Dr. LOWELL accept the vulgar judgment that young men naturally love ease and self-indulgence and will not work unless driven to it. As he ingeniously points out, if his students were told that two regiments were recruiting, one of which would be comfortably housed at Fortress Monroe, while the other would march through fire and pestilence, not a man would volunteer for the first, but the second would be quickly filled. The need, then, is to hit the undergraduate imagination; to convince the listless college boy that the intellectual power which he may acquire during his academic years is quite as important, if somewhat more subtle a thing, than the use of the tools of his trade which he learns afterward in a professional school. Just how this is to be done, Dr. LOWELL does not state in detail, but apparently implies that for the natural stimuli which operate so powerfully in the professional schools, some sort of external stimulus must be substituted in the college.

The Brewers

THE BREWERS HAVE MET in annual convention and pledged themselves to another year of the higher morality. Again they have pounded that prostrate wicked partner, the saloon-keeper. Forgetting the ties that bind him to them—the rent collector, the beer collector, and the brewery driver—they have delivered a few more well-aimed kicks at his bruised carcass. Shocked by his guilty performances, they make fists, they slap upon the wrist him whose license-money they advance, whose rent and profits they pocket, whose obscure life they worry and hound. Too well-bred to sneer, they have yet indulged in many a merry gibe at the stern figure of the anti-salooner, who lacks their jolly sense of life's lighter side. Then home, well-pleased, they turn. And yet to the perspicacious eye, behind all that open-mindedness and broad-gauge human manner of theirs, they move, a chastened lot, to a diminishing heritage. They are deferential where once they were masterful. They chat amiable nothings with a public whom aforetime they damned with no faint oaths.

Getting the Other Man's Point of View

WHILE NOT EXACTLY suffering from indigestion, the dove of peace yet finds many crumbs of comfort in these brotherly days. The recent "annual" of the college Cosmopolitan Clubs, published at the University of Wisconsin, is a fresh illustration of the popularity of international neighborliness. There are Cosmopolitan Clubs now in most of the American universities and larger colleges, with an active membership of nearly one thousand undergraduates. They come from everywhere. Over fifty countries were represented. In this "annual," certainly one of the most interesting of innumerable books of the sort which sprout at Commencement time, are reports of the year's play and work. The Cornell Club describes its members "sitting in a great circle with a basket of apples in the centre, each one speaking from three to five minutes on such subjects as 'the greatest man of my country,' 'international boycott,'" etc. They are about to build a $25,000 clubhouse which will contain an auditorium, a dining-room, and dormitories for about thirty-six students. The Michigan chapter reports many interesting "national nights" at each of which the characteristics of the country chosen were discussed and illustrated. The make-up of the Wisconsin chapter is typical. Of the seventy-five members there are: From Argentina 1, Armenia 1, Brazil 1, Canada 1, China 7, Cuba 1, England 2, Germany 2, Hawaii 1, Holland 1, Jamaica 1, Japan 4, Mexico 7, Norway 2, Panama 1, Peru 1, Philippine Islands 8, Porto Rico 1, Rumania 1, Russia 4, Sweden 1, United States 25, Wales 1. It is a broadening experience for all these young men to get acquainted with each other. Is it too much to expect that out of that association something really practical may be accomplished for the cause of universal peace of which they write and talk with such ingenuous enthusiasm?

This Month

JUNE—WHEN THE FLITTING oriole draws a curve of gold among the trees, when wedding-bells peal, and school and college graduates front the world undaunted! In this month it seems as if all the immortal secrets of existence come closest to self-revelation. Life pervades everything. There is peculiar pathos in the fact that a great soul which has just passed beyond mortality should have expressed in words the thrill and mystery at which our halting pen is trying to hint. Of the first meeting of a certain youth and maid MEREDITH writes:

"Overhead solitary morning unfolded itself, from blossom to bud, from bud to flower; still delicious changes of light and color to whose influences he was heedless as he shot under willows and aspens, and across sheets of river reaches, pure mirrors to the upper glory, himself the sole tenant of the stream. Somewhere at the founts of the world lay the land he was rowing toward; something of its shadowed lights might be discerned here and there. It was not a dream, now he knew. There was a secret abroad. The woods were full of it; the waters rolled with it, and the winds. . . . So it was with the damsel who knelt there. The little skylark went up above her, all song, to the smooth southern cloud lying along the blue: from a dewy copse standing dark over her nodding hat the blackbird fluted, calling to her with thrice mellow note: the kingfisher flashed emerald out of green osiers: a bow-winged heron traveled aloft, seeking solitude: a boat slipped toward her containing a dreamy youth. . . . To-morrow this place will have a memory—the river and the meadow, and the white falling weir: his heart will build a temple here; and the skylark will be its high-priest, and the old blackbird its glossy-crowned chorister."

In such lyric prose speaks the great student of human nature, and symbolizes much of life in this picture of Lucy and Richard Feverel beside the weir. It all points to the same truth; that love and youth are two of the forces most potent in molding whatever is good and beautiful in this troublous life.

Firecrackers

THERE WAS SOMETHING alluring in the tightly packed Chinese parcel with its unintelligible characters in gold. As the package was opened the loose powder, black and red, spilled out. You wondered whether this loss would affect the intonation of the crackers. To unbraid them so that the stems would not pull out was a task, and it was here frequently that a girl came in handy. The punk was lighted, and the pungent odor somehow got into one's blood. In their dull-red coats, suggestive of festivity, they were like soldiers. They were like little grenadiers marching to war. They were like Chinese grenadiers with long, rat-like cues. They were marching away to be killed and horribly torn on the field of battle. Firecrackers are selfish enjoyments. If it is true that there are moments when one wants to be alone, Fourth of July morning is one of them. It is no fun when others shoot them off. Girls like to see you shoot them off, but not boys. Girls are afraid to shoot them off. They touch the punk to the tip-end of the fuse, and with a little scream fling the firecracker as far away from them as they can. It generally lands in the tall grass, and hardly ever goes off. It is only good then for a sizzer. The king, in his green coat, is supposed to explode the loudest. This must be a popular fallacy, for it most often happens that he is only a sizzer. The small boy has no use for sizzers. They are like ill-humored cats spitting at you from the fence. They are like little green snakes spitting fire, hissing, and coughing out flames and sparks. The queens—they are the yellow ones—and, by the way, why are all firecracker monarchs polygamists?—generally go off with a bang. They snap as if they would like to take your head off. They are like a school-teacher when she is cross; an unpopular aunt with jumpy nerves. Of firecrackers which have lost their stems or otherwise proved disappointing you make sizzers. It is best in doing this to arrange a cat-and-dog fight. Thus, they burn little holes in the front porch; little V-shaped black holes that can not be rubbed out. Others you fire off in guns or under tin cans. You tie three or four together by their cues and let them go. It is quite a debauch, though, to set off the entire bunch at once. The fun is over in a minute. It is most extravagant, but it gives you a thrill. One must have a good many bunches of firecrackers to do that.

Before the New Comet Came

Some Observations Concerning Its Preliminary Movements and Some Predictions as to Its Appearance and Conduct

JUNE 15, 1909.

By EDWIN FAIRFAX NAULTY

COPYRIGHT 1909 BY EDW. FAIRFAX NAULTY

Phenomena That *May* Be Observed During the Passage of the Comet Across the Heavens

THE explosion of great powder works, chemical laboratories, gas tanks, and naphtha tanks, from unexplainable causes.
Heavy rains and fogs, followed by clear bright weather, such as occurred in the early days of June.
Plural shadows of human beings and all dense objects.
Plural perception of all bodies and objects.
Prismatic fogs in which buildings will appear to be in flames. Vertigous shadows, which will flicker and waver.
Mirages of all magnitudes. Earth tremors.
Prismatic illumination of either the earth's umbra or penumbra, or both, in which case great rainbow rays appear to rise from the horizon to the atmospheric nadir point by day. Auroras at every point of the compass.
An unsettled state of weather, when the barometer does not agree with the apparent cloudiness.

A NEW comet has made its appearance in the heavens. It is a large one, and is, at the time this article is written, between the earth and sun, traveling toward the earth in an orbit at an angle with the orbit of the earth. The first report of the head of the comet was made by Dr. William Brooks of Hobart College, Geneva, New York, who saw it in the northeast in a line with the constellation of Pegasus, between two and three o'clock Monday morning, May 24.

Its "tail," so-called, I had previously noted on May 23, at 11.30 P. M. It was then perceptible as a faint "milkiness" of several stars, almost in a line north of the center of the bowl of the Great Dipper. Since the time of its first observation, this new comet has completed its perihelic journey around the sun, and is now traveling between the earth and sun, and very nearly on a line with the earth at its present place in its orbit.

On June 14, at sunset, an observation in New York, latitude 40° north, disclosed the radiant point or head of the new comet 25° south of west and between 20° and 30° above the horizon. A later observation, made at eleven A. M., June 15, showed the head of the comet at that time to be positioned between the triangle formed by the head of Orion, the great star Sirius, and the constellation Columba. Both observations showed that the rays extending eastwardly were straight, while those extending westwardly had a pronounced curve, the whole bearing a striking resemblance to the head-dress of the Indian on a cent piece. Without doubt the coma rays of the new comet will be startlingly visible at the moment of total eclipse on Thursday, June 17, and it is more than likely, if the weather be clear, that the head itself will be visible.

From the way the rays lie, the probable path of the comet across the sky will be a line running from its present situation (on June 15) northerly through the heavens.

On May 27, at 12.15 A. M., I saw a great ray of coma light traverse the heavens through 120° of arc, which proves that the comet at that time began its actual journey around the sun, or its perihelic climax.

For two years prior to the appearance of this comet I had devoted special attention to the phenomena of comets. In April I became convinced that I had discovered their true nature. The discovery was completely made, reduced to writing, and actually formulated, the results being arrived at by pure reason, before May 23.

This discovery may be reduced to these axioms:

What Is a Comet?

COMETS are generally spherical bodies, of gaseous constituency, orbiting the sun at all angles and from all directions. They have axial revolution as well as orbital revolution, and are densest at center and most diffuse at circumsphere.

Comets act as great globular lenses, collecting, condensing, transmitting, deflecting, and reflecting sunlight, or the force that is apparent as sunlight.

This force we *see* only because between our eyes and the comet is interposed the atmosphere of the earth, which acts as another lens and causes visualization of that energy which is apparent to us as sunlight.

Beyond the earth's atmosphere there is no vision for human eyes; since light, or the energy that is expressed as light, is invisible at *direct* speed and only becomes visible when its speed is *increased* by deflection.

The major axis of a comet's "tail" always agrees with a visible continuation of its radius vectors.

On May 24 I bought some spheres and arcs of glass, to demonstrate the truth, which I had previously perceived. Going to the roof of my house, to make some experiments with these globes and hemispheres in the afternoon sunlight, and looking toward the west to ascertain the exact position of the sun, which was hidden by the roof of an adjoining building, I saw great streaks of light, whose radiant point, or place from where they seemed to come, was not coincident with the sun's position.

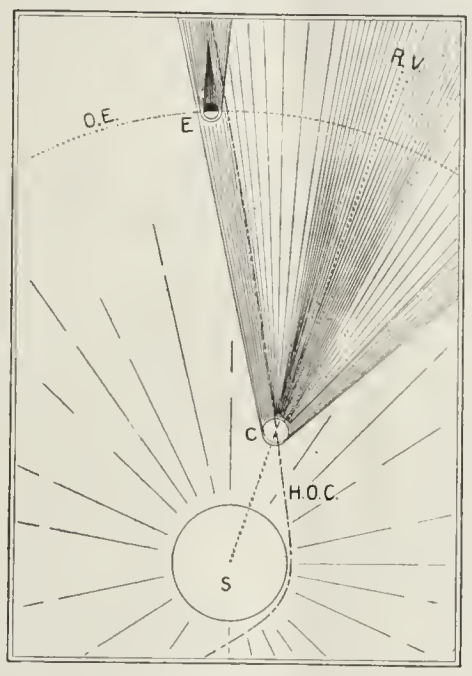
My first thought was that here was a comet, but it seemed too intensely dramatic that a comet should appear at this time in the sky, so I called my son and asked him what he saw. Without knowing what I meant, he described the very "streaks" in the sky that I had seen. That night I went to the roof of my house again to trace the comalight of this new comet to its source, but I could not see the head of the comet itself, which, at that time, was rapidly approaching the sun.

Every day and night since then, until the time of writing this, I have followed the great rays of comalight through the heavens, sometimes very faint, just at the limit of perception, and sometimes strongly marked and easily seen.

Early Evidences of the Comet

ON MONDAY, June 7, in New York, from a point east-northeast, appeared a great cone of comalight, very much like an open fan, the ends of the fan spread at an angle of 120°, or two-thirds of the visible heavens. The central rays of light extended across the zenith. This appearance was observed also by Drs. Hood and Frank, two opticians, by Mr. Sarver, the editor of a New York newspaper, and by Mr. Armstrong, the last from a point in the Singer Building tower.

During the week of June 14 I noted many appearances of the comalight from the new Brooks comet both by day and night.



There will be no doubt about the presence of the new comet on Thursday, June 17, when, at sunset, will occur an eclipse of the sun.

On the night of the eclipse of the moon, June 3, I observed most unusual light effects, not, as I had anticipated, *through* the shadow or the umbra of the earth, but *on* the penumbra of the earth, after the moon had emerged from the umbra, or shadow, and the eclipse was over. At the extreme limit of vision (and what I mean by the extreme limit of vision is the perception required by a sharp-eyed person to see, with the naked eye, a star of the seventh magnitude many extraordinary manifestations of the presence of the comalight entirely around the earth were apparent.

On the morning of June 4, when Mars rose, instead of being its usual ruddy color, it was a very faint bluish-white, and looked more like the star Vega than Mars. This was due to the fact that the comalight from the comet extended from the head of the comet at that time beyond the earth and to Mars, then over sixty millions of miles away from the earth.

Relying upon my study and experience, I pointed out certain phenomena that should follow the appearance of the new comet. Two sets of light rays—one radiating from the sun, and the other, defracted sunlight, radiating from the gaseous head of a comet—meeting at angles varying from acute to obtuse are bound to produce results. The most obvious is an unsettled state of the weather. Prismatic effects, plural shadows, mirages, and the multiplication and intensification of auroral and zodiacal lights are logical consequences. Other things—unaccounted-for explosions, for instance—may follow. It must be remembered that the heads of comets are gaseous bodies, which are, in effect, huge celestial lenses. They condense, transmit, refract, deflect, and reflect the radiance of the sun's light. The earth's atmosphere tremendously affects the results, refractions, reflections, and other phenomena.

Comets' "tails," "beards," and "wings" have always been a great puzzle, but the explanation of these various appearances is, after all, very simple. The heads of comets are generally spherical bodies of gaseous constituency. Any one of these gaseous globes, traveling in space in an orbit around the sun, acts as a great lens, and the "tails" of comets are really long shafts of transmitted, or slightly deflected, sunlight, passing through the outer and more diffuse parts of a comet.

Effect of Comalight on the Earth

S is the Sun, showing solar radiance in all directions. C is the new comet having passed around the sun, now on its journey away from the sun. H. O. C. is hyperbolic orbit of comet. R. V. is radius vector, or line joining center of comet to center of sun. O. E. is earth's orbit. E is the earth, showing lighted hemisphere, dark hemisphere, umbra or shadow, and penumbra or almost a shadow. Although H. O. C. appears to pass close to the earth, the orbit of comet and earth's orbit are at angles, and do not lie in same plane. The left angle of comalight surrounds the earth, penetrating the penumbra, but not strong enough to penetrate the umbra. The comet is moving toward the earth now, but the earth is also moving in its orbit at 66,000 miles an hour

The Heads and Tails of Comets

THE "envelopes" of comets are really the meridian lines of high illumination, by the sun, of the outer portion of the comet. Where more than one "envelope" is observed, this is due to variation in density of the gas in the head of the comet. Sometimes the gas lies in strata, and each strata reflects light of itself. If the comet's path is in line with the earth, or if their orbits agree, the "envelope" of a comet will appear, not as a half-circle, but as an elongated ellipse. A dime first held at right angles with the eye, and then turned until it is almost flat with the eye, will show this clearly, the milled edge of the dime representing the meridian line of light, which, in so far as the comet or any body in the solar system is concerned, always agrees with the equatorial line of high illumination on the sun.

The "beards" of comets, so-called, are, really, light reflected back to the sun from the illuminated hemisphere of the comet. The "wings" are really rays of light deflected from the sphere of the comet at the same angle at which they enter. The curved "tails" of comets are explained by the fact that we see these "tails" through the globular shell of atmosphere surrounding the earth, but only through 120 degrees, so that the atmosphere becomes a convex lens. You take a convex lens, place it in front of your eye, and look through it at a straight line; that straight line follows the curve of the lens and appears to be a curve equal to that of the lens. Where comets' "tails" appear curved, it is due to the fact that they lie along the lens, or with their axes in the same direction as the chord of the arc, but when straight lie obliquely, so that you look along the line instead of across it, and the light or line appears straight.

The new comet is a good example of this, for its comalight comes to us, as I am writing this, at such an angle that its lines of light appear perfectly straight. When the new comet's head appears above the horizon the comalight will appear fan-shaped, but with straight rays, later probably changing to curved rays. The larger the comasphere, or head, of the comet is, the more diffuse will be the light reflected by it; the smaller the comet, the sharper will be the pencil of light, modified in appearance in both cases, by the orbit of the comet, and its distance from the earth at the time we see it.

Analogy of a Comet's Tail

LET me explain in this way. Suppose a great searchlight were mounted on the Capitol at Washington and you stood at the White House, and the searchlight were turned at right angles; if it were a powerful condensing searchlight, you would see a great shaft of light stretching straight away in the heavens. If, on the other hand, you were standing half-way down Pennsylvania Avenue, the pencil of light would become a great cone-shaped ray, and if you again moved your position, so that you were close to the searchlight, it would then appear as a wider cone, because you would only see a portion of the light. Variations of this will readily explain variations in comalight from comets.

In considering all effects of light, it must be remembered that light is visible only because its speed is increased by deflection in our atmosphere. Without the atmosphere we could not see. The outer circumsphere of our atmosphere is globular; therefore, any section of it must be convex, thus affecting our vision of celestial objects. Stars and planets, being points and disks, are not [illegible] long rays of comalight are.

A Strange Comet-like Object Observed in the Eastern Sky

By WILLIAM R. BROOKS,
Professor of Astronomy, Hobart College

ON THE early morning of May 24 I observed a very strange object in the eastern morning sky. It had the appearance of a gigantic naked-eye comet, and was so bright as to illumine the atmosphere. The time of observation was from two to three o'clock. When first discovered the object was in the middle of the great square of Pegasus, a conspicuous constellation at this time of year in the eastern morning sky. The square is formed by the well-known stars Beta, Markab, Algenib, and Alpheratz, the latter star really being in the constellation Andromeda.

The tail of the object stood parallel with the eastern and western sides of the great square, and hence at an angle of about forty-five degrees with the horizon. The rounded head of the object was of great size, while the tail stretched upward toward the north celestial pole, reaching at one time to the chair of Cassiopeia. A remarkable feature was the uniform and rapid motion of the object, which was nearly eastward or toward the sun. Shortly after two o'clock it occupied the middle of the square of Pegasus. A quarter of an hour later the head enveloped the star Algenib, giving the appearance of a stellar nucleus. By three o'clock, the head had reached the eastern horizon, and the great tail was soon lost to view in the rapidly advancing dawn.

While this strange celestial visitor bore some resemblance to an auroral streamer, it, however, differed from it in many respects. The form was in just the reverse position of a streamer from the aurora, and the fluctuation of both light and position was lacking, and, besides, no other auroral effects were in evidence in any part of the sky. The object maintained its form throughout the entire apparition, and its steady eastward motion was most impressive. If the object was really a comet it must have passed very near to the earth. I consider the reappearance of the object very uncertain.

JUNE 12, 1909.

Reunion of the United Confederate Veterans at Memphis, Tenn., June 7-10

A picturesque and striking incident of the parade of June 10 occurred when General Clement A. Evans, commander-in-chief of the Confederate Veterans, rode out of line as he came to the grand stand and shook hands with General Frederick Dent Grant, U.S.A., who was reviewing the procession. Thousands of people packed the city to watch the military and civic parade, in which were many decorated cars filled with pretty Southern girls—One of the lower pictures shows the unveiling of the Southern Cross at the Arlington National Cemetery, Washington, June 6

The Guest That Tarried

The Vagabond and Dreamer, Who Heard the Call of Manhood

By SIR GILBERT PARKER

COPYRIGHT 1909 BY P. F. COLLIER & SON

Illustrated by MAYNARD DIXON

"She's the darlin' of the parish, she's the pride of Inniskillen;
'Twould make your heart lep up to see her trippin' down the glen;
There's not a lad of life and fame that wouldn't take her shillin',
And inlist inside her service: did ye hear her laughin' then?

"Did ye see her with her hand in mine the day that Clancy married?
Ah, darlin', how we footed it—the grass it was so green!
And when the neighbors wandered home, I was the guest that tarried—
An hour plucked from Paradise: come back to me, Rosleen!

"Across the seas, beyand the hills, by lovely Inniskillen,
The rigimint come marchin'—I hear the call once more:
Shure, a woman's but a woman—so I took the Sergeant's shillin',
For the pride o' me was hurted: shall I never see her more?

"She turned her face away from me, and black as night the land became,
Her eyes were jewels of the sky, the finest iver seen;
She left me for another lad, he was a lad of life and fame,
And the heart of me was hurted: but there's none that's like Rosleen!"

A SOFT rain was falling, but, seated on the stump of a maple which had furnished part of the late winter's firewood, the singer took no notice. His leather jacket, made for him by one whose eyes were not so bright as those of Rosleen of Inniskillen, had resisted many a heavier storm than this, and his face was turned to the south, whence the spring seemed to come—the smell and the sweet sting of it making the sap of life flow eagerly in the veins of the winter-folk, stirring the flood of old memories, turning the sods of new dreams. Even the eyes of this incorrigible idler in a land of buoyant activities had warmed to the vibrant life which was pouring its desire into the womb of May. They shone with the potential power of unused and ample manhood. His voice, as he sang, had the pulse of a regiment marching—a phenomenon with one to whom the world was but a poorhouse, supported by those foolish multitudes who toiled from morn till eve for bread or fame. He had got bread and a good deal else without labor, and he had achieved fame, too—as the most useless white man from the forty-ninth parallel to the magnetic pole.

As he steeped himself in the luxury of vocal sentimentality, his face was turned away from the small house on the knoll above the little maple and poplar wood, toward the prairie breaking into green over a score of miles to the south. Who could have thought from his careless air and his still more careless song that—or was there, then, his tragedy in the song: a manhood not strong enough to take the adverse fate which had attended the life of his emotions? The careless lilt of the song had, however, a wealth of melody and sweetness which betokened something underneath, if perhaps that something was only a touch of temperament in the body of a vagabond, and the song itself only a luxury of that temperament. But who could have thought from the careless air and the apparently careless song that there was dark trouble, maybe deep tragedy, in the little house behind him, and that he was aware of it? As he finished the song, repeating the last verse twice—

"And the heart of me was hurted: but there's none that's like Rosleen"—

the face of a man, a young, bearded, keen-eyed man, appeared at the window of the house behind him. It was the Young Doctor who had lately come to Askatoon.

"How many years, you say?" he asked of a woman standing beside him, and nodding toward the singer.

"Fifteen years, doctor."

"He's no relation?"

"None. He's Irish and we're Irish, that's all."

"How did he come to plant himself on you?"

"Well, you see, doctor, it was pourin' wet, that day, fifteen years ago, an' he just stepped in out o' the rain!"

The Young Doctor turned and looked at her closely, reflectively. Was she mocking him, trying to be humorous, with this dismal tragedy behind them in a darkened room where two people lay stricken and beaten—flotsam of fate left to the sport of the monstrous sea of pain and helplessness? But he was Irish, too, this son of Esculapius, and the years he had spent in this new land had not dimmed or smothered that flickering fire, that fantastic glow of wit and humor, that quivering presence, like an unmaterialized spirit, which turns real life into the paradoxical and the grotesque in the Emerald Isle. As her words fell on his ear, and he looked at her, he was back again by Inniskillen, among the cabin folk, the barefooted, barelegged girls, with the flying hair, the creamy cheeks, and the wild glances of the eye. He was back among all the elements of superstition and poverty and tradition, where heart and head were in constant contradiction; where the heart seemed spontaneous and was only calculating; where the head seemed deliberate and tyrannical and was only spontaneous; where the pity and beauty and falsehood and disloyalty and comradeship and clanship, with treachery and bad faith went hand in hand; where love, chastity, and a sweet bodily morality were linked with drink and boycott and cattle-driving and the murder of landlords; where political immorality went cheek by jowl with financial good faith and reliability; where men cried out like martyrs for a free Ireland, and called settlers from the next county foreigners—he knew it all. And he had left it all, because the old estate was long since sacrificed, with scarce enough remaining to keep above the poverty-line his sister and mother and a futile uncle, whose only use had been to keep the peasants and the small farmers in good-humor by his dry wit and homely humor, saving his people from evil treatment when other landlords barricaded their households and never ventured forth without a firearm. Yes, he knew it all, and this woman's unintended, arid humor threw him back again into that land which has given more exiles to the world than she has people starving in her homes or lying in her churchyards.

"Oh, he just stepped in out of the rain, did he, fifteen years ago?" he rejoined meditatively to the woman. "That's a long time. But it's been dry since!"

"'Twas the luck o' heaven that whinever he wint out to take the road again, it began to rain—there, 'tis rainin' hard now, and him out in it, coaxin' death onto him!"

The Young Doctor's face suddenly twitched with a laughter which seemed uncontrollable. Then he recovered himself. It would not have been seemly to guffaw, with that tragedy in the dark behind; and, besides, it would have offended and shocked greatly the woman whose face was drawn with trouble and clouded by anxiety; though, as she spoke now, a light came over it which seemed stolen from a world with which she could have no part.

"How old are you?" the Young Doctor asked curiously, but with his face turned toward the bedroom where a woman's voice was sobbing softly and a man's voice was speaking in gentle wheedling tones.

"I'm thirty-one," she said with a toss of her head; and by that the Young Doctor knew beyond peradventure that she loved the man outside, for she was forty-one, if she was a day.

"And what for d'ye ask? Couldn't ye tell by lookin' at me teeth?" she added maliciously.

She showed her teeth not unpleasantly, and she could have no reason to regret doing it, for they were her best feature, as fine and even and white and beautiful a set of teeth as ever woman had.

"The teeth are twenty-one," he answered gallantly.

Something like a smile played at her lips, and lakes of light suddenly flooded her eyes. How far can not a woman go, and what hard roads can she not travel with a word of flattery in her ears and a little bread of praise in her wallet! The Young Doctor suddenly had a revelation on this matter. He had known it somewhat indefinitely in the past, but now the lesson was set down on the everlasting tablets of life.

"Now is a lie like mine any better than a lie like hers?" he asked himself. "And yet, my little lie will stiffen her back to the heavy task she has before her; and if I say it often enough, she'll die with a smile on her lips, breaking down 'neath the load of it all. Seein' the weakness of human nature, isn't lyin' a virtue of an exalted kind betimes?"

Suddenly his face grew very grave, and he looked at her fixedly and very sorrowfully, for skilful as he was his skill had not so far blinded him to that which could not be healed or helped by skill.

"What for d'ye look so sharp at me?" she asked a little flutteringly, as though he was repenting what he had said to her about her teeth, and the thought of it made her weak at the knees.

"You have the teeth of twenty-one," he answered slowly, "and the light in your face is that of a girl steppin' home along the road down by Tralee—steppin' home from school. Faith, I hope your heart is as young, for there's stiff work before you—bitter stiff work to your hand." He glanced toward the bedroom door, through which came only the man's voice now, pleading and kind.

A flush of pride stole over her face. The lines in it softened, and some of them stole away altogether. Never did liar reap so fine a crop of honest flowers from the seeds of false weed sown. Then a look of firmness and resolve came into her face, and courage seemed to make sacred the pride and vanity of it.

"There's a dark road ahead, I know," she said. "But 'tis me own that I'll work for, and that must be cared for; and, God's love! but the back will not break nor the hand go palsy."

The Doctor's eyes rested for a moment on the man without, whose voice still told the rain and the world of spring of Rosleen of Inniskillen, then they turned gently and inquiringly upon the woman.

"Your father may get well perhaps, but it will be slow, and he can't help himself much"—he nodded toward the other room—"but 'tis a kind man, and—"

"'Tis the kindest iver was—wid no whisky in the house. Wid the book of Isaiah and 'Burke of Ours' and the other tales of Mr. Lever he's contint. He was a schoolmaster in Ireland, at Malahide, it was. The kindest iver was and the best—widout the drink."

"Well, he will make it as easy for you as he can; but she—your mother—can't make it easy, no matter how she tries. She can only move one arm, and even that may go with the rest—but, there, we'll hope for the best. She has to be lifted often and often, and you can't do it alone. Besides, it's a night and day business. Is there no sister, or aunt, or cousin—?"

"There's no one at all, at all, of women folk. We were five—father and mother, the two b'ys, and meself. Terry, he's gone this fifteen year. Left us one day after a shindy—father'd been drinkin', an' he laid hands on Terry, and Terry flew off like a colt with the bars down. Did ye iver see a horse gone mad and wild, and runnin' over the long road from Connemara to Galway maybe? Shure, that was Terry. All temper and spunk and divilry, an' could do annything wid his hands or his head. Nothin' was too hard for him. Many and many a time he used to help the schoolmasters out with the algebry and the gaymomitry—as aisy as flyin' to a bird, it was to Terry. But he wint; and he niver looked back, or sint word, or give a sign. Ah, Lord, Lord, he was the pick o' the posy, wild as he was. And cruel, too, he was in goin', for him and her"—a hand flung toward the bedroom door—"was niver the same after Terry wint."

Her eyes filled with tears, which she dashed away, and her face turned to the man without. "'Twas a week after Terry wint, he came. He'd seen Terry down by the new railway, and they'd been drinkin' together, and whin he stepped in out o' the rain, 'twas like a link with Terry, for he'd seen him since we had, and—"

Suddenly she opened the front door and put her head out.

"Come in out o' the rain, Nolan," she said sharply.

"'Tis growin' weather," said Nolan over his shoulder at her, but not looking toward her.

"You've got your growth—come in," she urged.

"When the doctor's gone, I'll come," he answered, and went on humming to himself:

"Did ye see her with her hand in mine the day that Clancy married?
Ah, darlin', how we footed it—the grass it was so green!
And when the neighbors wandered home, I was the guest that tarried—
An hour plucked from Paradise: come back to me, Rosleen!"

The Young Doctor intervened. He touched her arm peremptorily. "Come in," he said. "What's your name?" he added, as she shut the door with a sigh.

"Me name's Miss Brennan," was the stiff reply. Who was he to command her and to question her?

"That's a woman's name. What's yours as they call you, girl?" . . . Girl! Oh, deceitful human nature—the black hypocrite! Yet, he had lived in the snakeless land of the broken harp and the shattered oath, and he knew—he knew!

"Norah's me name," she answered him softly, for he had got into the softest corner of her nature. Surely there was no trouble too big to be borne, even with the stricken ones yonder, and poverty so deep, and Terry gone, and—

"You've told me about Terry, but what of the other?"

"Shannon's carting over against Askatoon. He'll be back to-night. Ah, that's a man for all the year, is Shannon, drivin', drivin', drivin'—at four dollars a day."

"Why isn't he a farmer, with land so cheap and plenty?" He waved an arm round the circle of the horizon.

"That's how we started—farmin'; but after Terry levanted everything wint wrong, and then the land wint by and by, and only the horses and the two wagons was left, a hay-wagon wid a rack and a grain-wagon wid a box."

"It's a struggle to live then?"

"There's only Shannon's four dollars a day and the garden. Father had a job on the new railway—away all week and back on Saturdays, two dollars a day it was. But that's over now." Her face turned sympathetically toward the bedroom.

"And him—Nolan—what else—?"

"Nolan Doyle's his name."

"And Nolan Doyle—what does he do?" He knew well what he did not do, for the fellow's discreditable fame needed no special revelation. It was common knowledge: he was a loafer, a vagrant, and a pauper in a land of work and action.

"Shure, there's the garden stuff to be pulled, and there's food to be got in the city"—a village of one thousand people is a "city" in the West—"and there's prairie-hens to be shot, and fish to be caught, and—and all that, doctor dear."

"Four dollars a day won't be enough." He glanced toward the bedroom door again. "You'll need help for the sick-room and for the housework, and help out here is expensive."

"I'll do it meself, or die," she responded stubbornly.

"It'd be hard on the sick ones if you should die," he rejoined pointedly. "There's no glory or gain in that. 'What's all the world to a man when his wife's a widow!' they say on the prairies, and they're right. It's an expensive business, Norah, *girl*."

Her eyes contracted and expanded, expanded and contracted. Was he anxious about being paid then? But he had called her "Norah, *girl!*" and she grew younger every minute, braver and younger and stronger.

They heard a noise behind them, and turned quickly. The old schoolmaster stood in the door, his gray hair tumbled, his body bent almost double, but his eyes bright, feverishly bright. He had heard something of what they had been saying.

"The Lord will provide," he said tremblingly. "He sent the ravens to feed Elijah. There was manna in the desert. The widow's cruse of oil did not fail—oh, ye of little faith! . . . ah, doctor dear—!"

They were beside him now, lifting him back to his bed.

"Lave Nolan alone," he whimpered. "Tell him to step in out of the rain, Norah darlin'." . . .

As they laid him down, he murmured the name of the boy who had fled from his hand and his fury fifteen years ago. "Terry—Terry—Terry!" he said pleadingly, as it were to God above, for Terry had been the apple of his eye, in spite of all.

A few moments later the Young Doctor was out in the rain, now diminishing to a fine mist, making his way to Nolan Doyle. Still the voice kept dreaming of Inniskillen far away and all that was done and left undone by Rosleen—

"Across the seas, beyand the hills, by lovely Inniskillen,
The rigimint come marchin'—I hear the call once more:
A woman's but a woman—so I took the Sergeant's shillin',
For the pride o' me was hurted: shall I never see her more?"

"Why not go back to Inniskillen, where you'd have a chance of seein' her? Do you expect her to come to you?" said the Young Doctor.

There was cold irony in his tone, and Nolan, who had begun the next verse, stopped short. For an instant he did not move or turn his head or make reply. His senses seemed arrested. His eyes half-closed, as though in sulky meditation—or was it an effort at memory, for the Young Doctor's voice had struck strangely on his ear. They had never met or seen each other since the Young Doctor came to Askatoon.

"Inniskillen's the place for you, my man. You'd not be a *rara avis* there. Here you are a *rara avis*, and you're not popular."

"I'd be what I was before, and it wasn't a rareravis ayther," said Nolan, still without looking up, though the Young Doctor now stood almost in front of him.

"And what were you before then?" asked the Young Doctor.

"As good a man as anny—barrin' one, an' he was a lad of life and fame."

"What did you do for a living?"

"What does anny one do for a living in Ireland?"

"Why don't you do it here?"

"Me name's Miss Brennan," was the stiff reply. Who was he to question her?

"Where's the peat to cut here?"

"There's land to plow, man."

"Where'd I be larnin' to plow?"

"How did you learn to cut peat?"

"That's born wid ye; ye don't larn it."

"I heard you singing, as I came out, about a lad that took the Sergeant's shillin'. It's a pity you're not young enough to do the same, and make a man of yourself."

"Well, why didn't it make a man o' me—if it didn't; an' by the sour speech of ye, ye're thinkin' it didn't?"

"You took the shillin'? You were in the army?"

Suddenly Nolan got to his feet, for the first time looked the Young Doctor in the eyes, and saluted. "I was helpin' hold the pass beyand Peshawur whin you was ridin' the gray marc barebacked round the Bantrim Ridges. There was work doin' then beyond Peshawur. You're a doctor now, savin' a man or two here and there; I was a soldier then helpin' save the English pride—and that's life or death to millions from Rosslare to Gravesend."

The Young Doctor's eyes opened wide, and he stood astonished and inquiring. "You came from Inniskillen then—the song you sang . . . !"

"Oh, the song—well, can't the truth be told in a song annyhow?"

"It is your song—your words—you made it?"

"Shure, it's aysier than euttin' peat or stalkin' Afghins."

"And who was Rosleen—ah, was it then Rosleen Dennis from under Calladen Hill?"

The eyes of the vagrant grew brighter, and he threw his head back, as though his thick waving hair was in his eyes—as he had been wont to do as a boy when he wore no hat or cap, and his hair was the pride of his life.

"The same, sir. And I saw her kiss you once. You was but twelve years old then, and she was 'most a woman grown. 'Twas hard by Calladen Wood, where the red cross stands."

"But your name—Nolan Doyle?"

"Me name then was Phelan Fane."

"Phelan Fane—ah, now I remember! You joined the Divil's Own, and went to India with Lord Harry Nolan as your colonel?"

"And Captain Doyle was adjutant, sir."

"Why did you change your name?" He looked at the other suspiciously.

"I desarted."

"A deserter, too! Why did you desert? How many years had you put in?"

"Six and a half—sivin was me time. I desarted, because I had a friend in the same rigiment, and he killed a man—oh, a damned villain he was, that man! And I'd rather desart than swear false upon the Book before the Judge. For, God help me, I saw the man killed wid me own eyes, and I was the only one that did, and if I'd spoke the truth . . . !"

"And your friend?"

"Shure, how could they hang him, whin the evidence was gone away into the wide world—flyin' and flyin', and flyin' twinty thousand miles away?"

"Aren't you afraid to tell me this? . . . The arm of the law is long; years do not count when crime's been done. The law goes on and on and on, no matter how far you be flyin'."

"Hush! Arrah—hush! I'd never be thinkin' that one from Inniskillen would betray me. D'ye mind the day twinty-two years ago I filled y'r basket with fish y' didn't catch y'rself? And 'twas not aisy fishin' yander. Betray me! Shure, wan that's been kissed by Rosleen Dennis—is it that y'd have me think?"

"Rosleen Dennis!" The Young Doctor looked at him queerly, hesitated a moment, and then added: "Have you heard of Rosleen since then—how many years ago?"

"Oh, twenty-one years, and niver word of her. Shure, she wint with Michael Kelly, a lad of life and fame—wint to the altar wid him. But the day that Clancy was married I—"

As though oblivious of the other's presence he began to sing again:

"Did ye see her with her hand in mine the day that Clancy married?" . . .

His eyes were fixed on the eastern horizon where the light of the sun was breaking through the gray sky, a soft joyous radiance; and, overhead, a great rainbow drew its band of gorgeous ribbon athwart the heavens.

"Dreamer — sentimentalist! But there's something in him somewhere," murmured the Young Doctor to himself. "Poor devil, let him have his memory. I'll not tell him what happened to Rosleen. . . . And a damned clever song, too, as good as Tom Moore might have written! Oh, there is something in him! He deserted to save a friend. He's gallant and generous, too. He speaks of Michael Kelly as a lad of life and fame—the dirty dog of a buccaneer! Well, we'll see if what's left is as good as what once was, as far as it goes."

As Nolan Doyle ceased singing, breaking off abruptly, and sank back upon the stump, whispering to himself, the Young Doctor came close to him and put a hand upon his shoulder.

"You needn't have any fear, man, though Lord Harry Nolan was my uncle, and is still alive; and Adjutant Doyle is now commanding the troops in Canada—he was only fifty miles from here last week. I'll not give you away. But in return—"

"Must there be a bargain? Can't ye do it for its own sake—or for the sake of Inniskillen?"

"Quite right, quite right, Phelan."

The man started up. *"Phelan!* Is that the way you'll be kapin' me secret? Need I have told you? Didn't I trust you? Oh, wurra, wurra!"

"And quite right again, Nolan Doyle. 'Tis a good name you've taken; of two unwilling godfathers, as fine men as ever gave glory to Ireland. 'Tis a better name than you've sluffed. Now, here then. We've been palaverin' of Inniskillen and of you that's of no account—for is a man of any account that lives on bread he doesn't earn, and doesn't own?" His voice grew stern. "I'm ashamed of you, Nolan Doyle. I thought you a fine fellow over beyond the seas, when you filled my basket with fish, and when you beat them all, tossin' the stone in William Conner's yard."

"Oh, you remember that—the stone-throwin'! Shure, now, I recall ye sittin' on the gray mare watchin' us! She could take a fence in her day, the gray mare—"

"Never mind about the gray mare. You've lived on Larry Brennan and his family ever since you stepped in out of the rain fifteen years ago."

"And there's been a dale of rain since—and the deep snow that makes rain."

"Oh, have done, you idle gossoon! You're no better than a leech. As fine and handsome a fellow as you—"

Doyle spat upon the ground. "That for me looks!" he said. "Michael Kelly—"

"Damn Michael Kelly! Have done with all that. Man, it's over twenty years, and nothing's the same as you left it yonder. All's changed, and your song can't set it right. Have done with it. We're here to-day on the prairies in another life. You've been livin' in a dream; come out of it. You've moved from eighteen to near forty years of age since you joined the Divil's Own. There's no going back. There's sorrow here in the little house. There's terrible sickness. Mrs. Brennan is paralyzed, and the poor old man—"

"I know. Shure, I know."

"Then what you are going to do—?"

"Shure, I came out here in the rain to think it over."

"You're not to be trusted in the rain. 'Tis your habit to take shelter, and food, and bed, and friendship, *and all the heart a woman can give*—"

Doyle stood up and put out a hand. "If the place had been mine, and Terry Brennan or Shannon had stepped in, they could have stayed and welcome. But that's no matter. I—"

"I want to know what you mean to do, Doyle," the Young Doctor interrupted. Then he hastily drew a picture of the dark days ahead; of the misery and trouble and awful hardship, and the sickening burden which must fall upon the shoulders of Norah Brennan; of the killing expense, and only Shannon's four dollars a day to meet it. There must be help for Norah. There must be some one to nurse and some one to help in the house and all—a tale which grew more somber as it went on. Once or twice Doyle closed his eyes for a minute, as though to shut out the picture. When, at last, the Young Doctor had finished, and stood with a look of inquiry on his face, the clear eyes of the vagabond looked into his own with all the turbid emotions, and vague, useless dreams, and fifteen years' stagnation gone from them, and the deserter from the Devil's Own said slowly:

"I'm goin' to help."

"What are you going to do?"

"To nurse them—in there," he answered.

"You—nurse?"

"Could I earn as much as two hospital nurses'd want pay for? What can I do—a peat-cutter and a soldier? But I can nurse. Didn't I nurse a dozen b'ys that was struck wid fever in Injy? Have I a gift? Shure I have. I'll be two nurses yander—night and day. She's been a mother to me—Mrs. Brennan, an' the old man always sayin', '*The Lord will provide*,' and believin' in the manna, and Elijah's ravens, and the widow's cruse of oil, and all the rest. I lost me own mother when I was nine, and she's been like a mother to me. God save me, but I'll wait on her like a son."

"There's things a man can't do—nursing." The Young Doctor could scarcely take it in. It was unlike what he had expected.

"There's nothing a man can't do for his mother."

"There's Miss Brennan, a young woman— You alone with her in the house! Do you think—?"

Nolan Doyle's face flushed. "God forgive ye!" he said. "And you an Irishman, an' from Inniskillen! The cabins are small in Ireland, and there's a dale o' propinquity bewhiles, for poverty makes small rooms, and there's many slape in one room, but Irishwomen and Irishmen—!"

The Young Doctor suddenly caught the vagabond's arm. "That's all right, Doyle. Say no more. I apologize. If you mean it—"

"I'm going to pay for the last fifteen years' bed and bread," he said.

"Are you sure they'll—"

"Lave it to me. Mrs. Brennan's glad to have me by her. She says it kapes her from frettin' too much about Terry."

"And I suppose Terry was a waster."

"Terry? Terry was a man, ivry inch of him. He was as good as you an' two of you. Wid a head—ah, sure he had a head!"

"Very well. Settle it in your own way. But if you are going to nurse these old people—I warn you 'twill be a heavy job, a dismal and weary task!—then listen to me, Nolan Doyle, and hearken hard to what I say, and take note of what's to be done, and how it's to be done, and—"

II

AND it was so. As he said he would, Nolan Doyle laid himself out to pay for the bed and bread he had had over fifteen years. The summer came, and the autumn, the former and the later rain, falling on the just and the unjust, the snows of winter, the inexorable frost, with all the bitter outhouse tasks—the wood to cut and carry, the water to fetch, the wet clothes to be hung out on the line and brought in frozen stiff, the hundred harrying chores to be done. Yet all the time, day and night, the man-nurse, with the fine gentleness of a woman and his strong arms and coaxing voice, contested inch by inch the advance of disease and death, ceaselessly vigilant, automatically precise, concentrated, self-forgetful, comprehensive, thinking of everything, and doing all with a smile and a humorous word.

His long, idle life lived in the open air, without excess of any kind—for he drank nothing, smoked little, and had never been a big eater—had given him a store of energy and a reservoir of strength on which he now drew, steadily diminishing the supply. The Young Doctor watched him almost as closely as he watched the two sick people whom he was drawing slowly away from the brink and setting them on high, safe places. There was talk, of course, at Askatoon at first—ugly, unstinted talk; for there were days and days when Shannon was away with his sleigh or his wagon, and Nolan Doyle and Norah Brennan were alone in the house, save for the two bedridden people—and Another; and the talk became a scandal, which at least materialized in the definite proposal of tar-and-feathers for Nolan Doyle.

It was then that the Young Doctor, who had a gift for acting at the right time—not by any means a rare thing in his race—went out upon the warpath. First he went to the Rev. Ebenezer Groom, the Methodist minister in whose "parlor" much sanctimonious scandal had been brewed, and insisted that he should come out to "the house of shame" and learn the truth.

They came to the door of the shaded sick room at a moment when Nolan Doyle was holding the paralyzed woman in his arms like a child—and a very heavy child at that—and Norah was freshening the pillows. The pious sky-pilot saw the woman put gently back on her bed, whispering blessings on the head of "Nolan, dear," heard the whimsical replies of the man-nurse, saw the face—how thin and worn it had become!—met the dark eyes with the soft slumbering fires, saw the girl on the other side of the bed with that look of single purpose which sick-bed watching, more than anything else, gives to the faces of those who fight death and decay for others, and into his lean soul there entered a new understanding of human nature, the first glimpse of a real revelation of humanity.

"My dear friends, I would offer up a prayer at the throne of grace," he said unctuously to them all at last. "Verily, pain is the bowl into which God's mercy flows."

The old paralytic woman turned indignant eyes upon him, for she was a Catholic, though her husband was a Protestant of the Church of Ireland, and her daughter and Nolan Doyle were Catholics also. It was the old man who settled the question, however. He raised himself on his elbow, and a flush spread over his face, where undeveloped intellect did not wholly submerge the contour of the peasant—distinction and the commonplace in conflict—and he said in a low, reproving voice:

"The bowl will be no fuller for one prayer more. Shure, in this house we catch the drip of mercy at matins and evensong, and betune whiles—betune whiles. 'Tis not a Pagan place, and the only haythens here are those who come from beyond and away. Lave us be—lave us be wid the praying, but thank ye kindly for steppin' in with the Doctor. Ah, that's a man—the best that ever grew by Inniskillen! Shure, if it wasn't for him and Nolan—and Nolan the boy, the silver cord would be loosed and the golden bowl be broken—not the bowl of pain, as you say, but the bowl of life. Well, good-day to you, for 'tis time for us to be shlapin'—'tis time, isn't it, Mary, darlin'?" he called across to his wife.

"'Tis long past the time," she answered peevishly. Then with a faint flash of her eyes she drew a rosary from beneath her pillow with her one strong hand, and repeated a prayer over and over: "*Salve, Regina, Mater . . . Mater clementissima. . . . Ora pro nobis . . .*" with a look out of the corner of her eye at the preacher.

"You see we're papists here—most of us," said Norah as they all left the room, "and so we'll not be forgetting to remember where's help to be had whin needed."

In the other room Nolan Doyle said to the bewildered preacher: "I've had letters—from some of your flock, I'm thinkin'. Here's wan of them—read it. It come this mornin'."

The preacher read a letter of a dozen lines which brought the blood of shame to his fat face. He was not wholly a hypocrite; he had a good heart and an ill-used conscience. He had had forced into his Cornish mind, prone as it was to believe evil, that this house was saintly with self-sacrifice, and free from all impurity. He had been in hundreds of sick-rooms, and this he knew was shadowed by no umbrageous growth of sin or shame. He handed the letter back.

"A cowardly attack—a cruel slander," he said. "I will try to put things right. I should like to shake hands with you, Mr. Doyle."

"It was an inspiration fetching him here," the Young Doctor said to himself as Norah brought from a cupboard a jar of preserves and a cake, and poured a cup of coffee for the preacher. This softened the sting of the reproof the man had had from Larry Brennan, and he ate and drank with an appreciation which only those know who find that stimulant in food which others find in spirits. His heart grew warmer and warmer, and, by accident, his visit left behind it a seed of pleasure which flourished exceedingly in Norah Brennan's broken heart. As he was leaving, he said with oracular sympathy and pompous kindness to Norah:

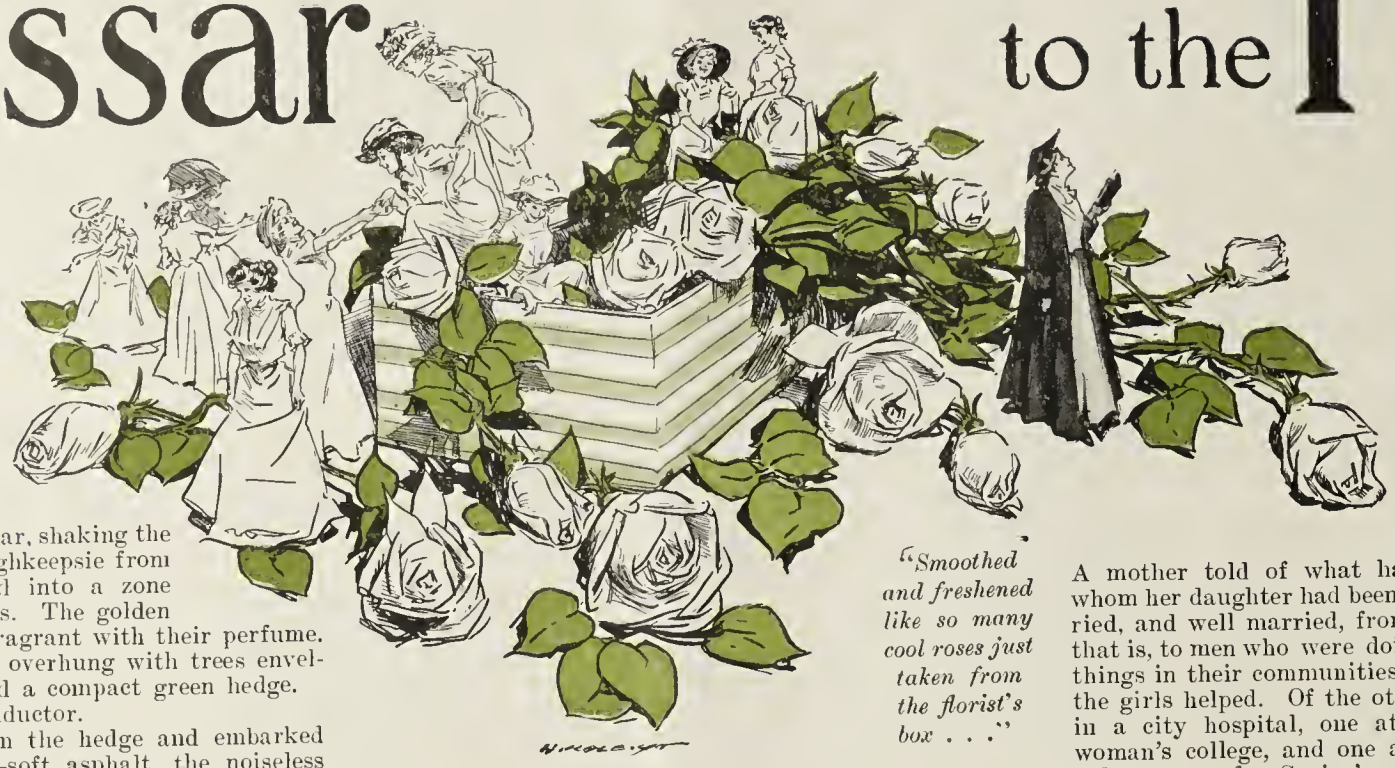
"Ah, to be young—young at the start of life, like you, and so to have opportunities for devotion and sacrifice and the Master's service! To be young, lassie, to be young like you! The coffee excellent—excellent, and the cake. Well, good-by. Good-by. God tempers the wind to the shorn lamb—to the lamb. Farewell and farewell—excellent coffee, excellent! Soon it will be spring again. Be patient and hopeful, lassie. '*He maketh me to lie down in green pastures, He feedeth me beside the still waters.*' The wind is tempered to the lamb, lassie."

After his fashion he kept his word. The Sunday following, having judiciously set the rumor flying that he would preach a special sermon, on a special subject of local importance, he found a congregation that filled the church to the doors; and when he stood up to preach, it was so still that only the roaring of the fire in the huge stove could be heard—typical of the flame of the spirit, as he very obviously said, when he gave out his text, which was: "*Judge not, that ye be not judged.*" He did not delicately veil his allusions, and, at the last, after ruthlessly condemning judgment by appearances, and asking if none of them had hidden sins and unrepented misdeeds, without mentioning a name, he drew a picture of an apparently worthless, useless being winning his way back to self-respect and manhood by service to the afflicted, such as few could sustain and probably no man had ever to the same degree, and in like delicate circumstances, done before. He repudiated the slanders brewed in his own parlor, though he did not say they were brewed there, and he called upon them all to put forth the hands of succor and charity, and help to lift the burden carried heroically by two people whose lives were being eaten away by self-devotion—"shredded of vigor and youth and strength," he said.

The sermon was very fully reported in the local papers, and the story he had told was of such an unusual nature that the sensational parts of it were copied in paper after paper till they appeared in cities on the Mississippi and ports in the Bay of Fundy. And the people of Askatoon, if not all wholly convinced, strove to make amends for slander and suspicion; though they not inaptly said that people should not fly into the teeth of decent custom, and should not give cause for suspicion by strange conduct, which the world said was beyond the bounds of convention. Their kindness came too late, however. They had practically boycotted the house of Brennan, they had ostracized Nolan and Norah, and—worse still—had let the effect of their ostracism and boycott fall on two helpless, bedridden people fighting with death. They had so frightened the few timid, if true, souls, and the charitable-hearted, and those women who might have helped in the sick-room or in the household work, that the people of the house of Brennan were on an island in the sea of Christendom, into whose harbors, to whose shores, no ship came, no boat brought freight of human sympathy, no corn and wine and oil of friendship—save that shallop of the Young Doctor which touched the sands now and then, and was gone all too soon, for he, too, was overworked, and medicines could do little in the house of Brennan. Nursing and nursing only with ceaseless care, could bring back to the height of land, where people lived in safety, these two falterers on the brink. Sometimes he asked himself, did the Young Doctor, if it was well that the lives should be saved at such awful toll of the health and vigor of youth, for the vital forces of Nolan Doyle and Norah Brennan were being worn away, and what would come if either broke down, he shuddered to think. Yet it had made a man of Nolan Doyle—or had he always been really the same man, waiting his opportunity, reserved for this strange experience, this terrible test of patience, strength, human love, and sympathy? The hospital? It was in a town far away, and the house of Brennan had opposed it from the first. That might come; it would have to come if Norah or Nolan fell in the struggle. But what was the end to be, and was it worth all the sacrifice?

People from Askatoon came to offer help, but Nolan

(Concluded on page 16)



"Terry—Terry, me own boy!" he cried, and was caught in the strong arms

From Vassar to the Hill

Illustrated by HENRY RALEIGH

A Somewhat Sentimental Journey of Exploration From Poughkeepsie to Wisconsin

"Smoothed and freshened like so many cool roses just taken from the florist's box . . ."

THE open trolley-car, shaking the hot dust of Poughkeepsie from its feet, whirred into a zone of apple-blossoms. The golden afternoon was fragrant with their perfume. A shady avenue overhung with trees enveloped us—on the left stretched a compact green hedge.

"North Gate!" said the conductor.

I stepped through a slit in the hedge and embarked on an empty asphalt walk—soft asphalt, the noiseless sinking of one's feet into which conveyed vaguely the notion that it was something to bite rather than step on. Across a level, spacious lawn rose dormitories and college buildings.

High in an upper story of one a girl was drying her hair. She sat in the open window, with her back to the sun, and the hair fell loose to her waist and glowed in the sunlight. The silence being pricked by the sound of a boot striking a harder bit of asphalt, the girl turned and looked down over her shoulder. She looked long and searchingly, as a deer might lift its head at the first sight of man in its primeval forest; exactly, indeed, to venture a more familiar simile, as cows lift their heads when a stranger climbs over the fence into their sunny meadow. Satisfied that the intruder was harmless, or uninteresting, she gave the hair a toss and again turned her back to the sun.

For perhaps fifty yards the silence of the desert. On the top step of North, almost articulate in the bright sunlight, lay a hairpin. In the teeming silence it seemed symbolical of something, one couldn't tell what. Without waiting for the visitor's name, the little hall-boy and little maid at once and smilingly volunteered in chorus: "She said to tell you she wouldn't be home till four o'clock." With some archness I asked if they were sure that I was the one. Embarrassed by such levity, the two little servants exchanged deprecating looks and vouchsafed no reply.

I continued my walk. All about were tall, quiet dormitories and the level green of a park; beyond, trees and grass, still more park-like. Groups of girls—sometimes one alone—were reading under the trees. In the distance figures moved across the grass—white, pink, blue against the green—silent as dreams.

Behind a circular hedge dresses flashed and there were occasional voices. The voices sounded light and strangely far away. They were playing tennis and basketball over there. Near the hedge, but outside of it, a girl dozing in the grass, with her body twisted half-round as if she were a mermaid who had come up to sun herself on the shelving sand, suddenly sat erect and brushed the hair from her eyes. One had a curious sensation of walking uninvited into a picture.

Three figures emerged from the hedge and proceeded down the path. One, a lithe, well-built girl in a white dress, loosened at the neck, seemed the leader and the admiration of the other two. Unaware of strange observers, she wound her skirt about her and struck an attitude, chin in air. Then, stretching both hands high above her head, she brought her arms down with a motion of swimming. And swimming leisurely thus with the upper part of her body, she continued to walk, and back across the silent, sun-drenched lawn came her song:

"Ev—ery little bit
Added—to what you got
Makes a lit—tle bit more. . . ."

We dined at six in one of the dormitories—one man among a great many girls, all smoothed and freshened for the evening like so many cool roses just taken from the florist's box—and then they gathered on the steps outside to sing. The Seniors sang to the Sophomores from the steps of one building, the Juniors to the Freshmen from the steps of another, and the underclassmen stood at a respectful distance, and after each song applauded politely, as I was told they do each evening, with unabated enthusiasm from the first day they can sit out of doors in the spring until snow flies in the fall.

From where we stood I could not hear the words, but I was told that the Juniors were probably telling the Freshmen how nice they were or singing about debating. Vassar students take a great deal of interest in questions of the day—they were much more excited over Governor Hughes's agitation for direct primaries than the rest of Poughkeepsie—and the inter-society debate is one of the great events of the year. Every Senior or Junior is a member of her class debating club and is obliged to attend its meetings. Last year the subject of debate was municipal regulation of the liquor traffic, and this year it was direct primaries, and both these fascinating topics were celebrated in their songs. I had heard many songs about bright college years, brown October ale, steins and alma mater [illegible] I had never heard undergraduates sing about debates. And until you are used to it it is a distinctly odd experience to hear that frail soprano chorus pipe across the grass and know that they are riming "mention" with "convention" and "Tammany" with "me" and telling what happened in the committee on credentials or what the weary truckman will do when the municipality abolishes the saloon.

Thunder clouds rolled up from behind the Hudson hills, and just as the singing and sunlight were ending the warm rain came. There was a general scramble for umbrellas, and the customary march across the lawn to chapel became a hurried scamper. Twilight was deepening as we emerged from evening service—the girls filing out, two by two by classes, Seniors first—and strolled across to the old main building between grass carpets washed and fragrant with rain. The dusk shut in closer, lights came out, and one understood the remark of the young teacher that it was now, when evening began to shut them in, that she felt more strongly the life of the place—the place that meant so much to them all.

One could scarcely be insensible to it: the quiet beauty, the decorous, well-ordered existence, the chance—unhindered and undismayed by the world's feverish necessities and forced surrenders—to contemplate and prepare for some ideal future life. And I do not mean by this a pallid, cloister-like seclusion. In talking with those interested in Vassar one becomes conscious of the frequent use of such words as "sane," "good citizenship," "lack of sentimentality," "service." When Mr. H. G. Wells was inspecting America he was troubled by the sight of Wellesley's art students making copies of antiques. From floor to ceiling of the room were drawers full of photographs—enough, Mr. Wells thought, to contain pictures of all the antiques in existence. And he lamented what seemed the pale and rarefied atmosphere in which these young women were preparing for the world in which they would be jostled as soon as they left college. One shudders at the kind of training and the kind of young women that would be found in Mr. Wells's ideal world, and yet, without in any sense referring to the sister college, I imagine that Vassar would object to a pallid estheticism almost as vigorously as he.

To do this, however, does not imply that she would have her undergraduates shouting for votes for women, rushing into settlements, or gulping down socialism. One gets the notion that there is an objection to the girls mixing up too precociously in things to which semi-political names are attached. As President Taylor put it in a recent address to the alumnæ: "Vassar affirms its belief in the home and the old-fashioned idea of marriage and children and the splendid service of society wrought through these quiet and unradical means. It cries out against the tendency to put the tag of social service only on a service which has a committee and a board and public meetings and newspapers behind it."

I once knew a Vassar girl who admitted, on emerging into an inferior world, that the only man whom she could consider as a prospective husband would be a Chief Justice of the Supreme Court. That was ten years ago, and her ideal is still, apparently, as unshaken as Gibraltar. For girls of a certain vigorous, unsentimental, and highly ethical trend, there may be a slight danger in shutting oneself up in a quiet park for four years and thinking acutely even of good citizenship.

And if You Don't Belong to the City Club—?

GOOD men-citizens, no less than good women-citizens, exist without the support of "committees and public meetings." Some of them, doubtless, run steam laundries or grocery stores, and would be very much improved by marrying somebody from Vassar. If the lady who had the Chief-Justice notion had tried to make a hit in musical comedy, endeavored to point her feet "to ten minutes to six and smile while you're doing it," as the Chorus Lady said; if she had chosen so astonishing a course as this and failed dismally and acquired a little humility and sense of humor, it might have been almost as good for her as Vassar. The objection to coeducation is, I believe, that it hardens girls' manners. There is also something to be said against hardening girls' hearts.

This was an aspect of the matter which we did not discuss as we strolled across the campus to Main that night. A mother told of what had become of the girls with whom her daughter had been graduated. Seven were married, and well married, from the Vassar point of view—that is, to men who were doing important and worth-while things in their communities, in which, in their own ways, the girls helped. Of the other three, one was head nurse in a city hospital, one at the head of athletics in a woman's college, and one a teacher of domestic science.

By grace of a Senior's permission we ascended to the Senior room. Each Senior class furnishes it completely, and after graduation the room is dismantled and each girl takes her things home. Here the Seniors can sit by themselves in undisturbed dignity, and here each class can express its idea of what a home-like living-room should be. As we came in, two girls were talking on a seat at one side, several reading under shaded lamps, and at the grand piano sat two, one with her arm about the other's waist, playing a low accompaniment and humming as they played. It was a pleasant room and it seemed a specially gracious courtesy—and expressive of the atmosphere which the place was planned to represent—that all went on with what they were doing, exactly as if they were at home and we were members of the family. Quite without self-consciousness the girls at the piano continued their low duet notwithstanding our audible comments and our active discussion of their college and themselves.

The Busy Shores of Lake Mendota

WHAT, I wonder, would they have thought could they have read through their guest's inside coat pocket to the letter burning there—a note from a Wisconsin man to the boys of his fraternity, genially urging them to take me out on the campus and show me "the skirts as they go by"? And what would have been their emotions could they have sat on the grass at the top of the Hill at Madison as I did a few days later and seen that army of men and girls—lawyers, engineers, farmers, and school-teachers-to-be, fussers, women-haters, man-eaters and girls just like themselves, pouring up and down the crowded walks and into lecture halls?

No cloistered park this—a city rather, a Middle-Western city, at once intensely practical and enthusiastically idealistic, crowded with young men and women, most of whom were driving at some specific tangible thing. Boys do not go to Wisconsin because their fathers went there—their fathers, generally, never saw the inside of a college—nor because they find there clothes, manners, and accents which suit their own esthetic tastes. They—and the girls too—go because they are hungry for "culture," a better standard of living, because they want something that will help them in their business. I don't imagine they think very much about sanity or sentimentality or service. They are thinking of how to make themselves engineers, lawyers, farmers, school-teachers. They're too busy getting the thing to spend much time over their attitude toward it—but this is not beginning at the beginning.

I was proceeding down Langdon Street toward the university, curiously scanning the horizon for the first signs of co-education. Spring was in the air here, too. They were plowing, harrowing, and planting corn all over the country through which we had ridden that morning, and the dry, sweet prairie wind blew into the car window across wide stretches of newly turned black earth and the vivid green of young wheat. Elms in their new foliage overhung the street, comfortable frame houses, each with its green front yard, were on either side; below, to the right at each cross street, was a view of Lake Mendota.

A boy and girl, sitting on the steps of a house across the street, came over to my side of the street and walked on in front of me. The boy was coatless and bareheaded; his sleeves were rolled up and his trousers turned into a broad cuff. He had tan bulldog shoes and a Bull Durham tag swung from his hip pocket. Possibly he was a Freshman, inasmuch as they are required at Madison always to have the "makings." The girl was also bareheaded, and she carried a lecture notebook. I was just trying to decide whether they were brother and sister or only acted so, when all at once, from a porch a short distance down the side street, came the wiry zing-a-zing of mandolins and guitars.

"Don't—take me home (zing-a-zing, plump-plump!)
Please don't take me home (zing-a-zing, pop-pop!)
What-did I-ever do to you (BING!)
Oo-oo-oo-oo— Have-a little pity, I'm—"

The contemplative pace and judicial calm became not altogether easy to preserve. A few steps farther ap-

peared, close to the sidewalk, a front porch crowded with exuberant young men humming, whistling, and evading the Wisconsin blue laws by rolling their own cigarettes. Evidently a fraternity house.

Directly ahead arose the sober, columnar façade of a library; beyond, other buildings and a grassy hill surmounted by a domed structure resembling a state-house. But in the immediate foreground, in front of the sober columns, was a baseball game. A crowd—hundreds—surrounded it, the men three deep from home to first and third, the girls mostly behind the fielders in the shade of the library. A big farmer-looking youth, with a great bush of fuzzy brown hair, started away for the Hill. I asked him who was playing.

"Laws an' the Agrics!" and as he galloped off he breezily volunteered that everybody hoped the Laws would get soaked because they made such a noise about it whenever they won.

Adventure with a Man-Eater

I ASCENDED the Hill—almost a mountain for this prairie country—a furlong stretch of lawn climbing steeply up to the main building, and bounded on either side by trees and walks. Classes were in session and the walks were empty. In the shade of a building on the right a benevolent instructor had taken his small class. They squatted on the grass, tailor fashion, all but one, intent on his book. This one was a girl in a tan-colored dress that might have been pongee, and a big pink mushroom hat with one stiff rakish black feather.

She sat erect, leisurely surveying the world. Some vague emanation that promptly flashed across the intervening distance convinced one that the alpine peaks of abstract thought were not those toward which her feet were irrevocably set. Of course, some co-eds come to have a good time. We gazed at each other fixedly until the building came between. When, a moment later, having passed the building, this same penetrating and analytical inspection was continued from another angle, I was conscious of a sudden and delightful exhilaration, such as a lamb might feel galloping gaily around a menagerie tent in front of the caged lions and tigers. With exaggerated slowness I proceeded onward up the hill, looking back now and then at the studious class bent over their books, and the lone figure sitting very erect and staring—not anxiously nor even curiously, but with a certain air of resignation, as if to say: "You may think this is funny, young man. It's all very well for you. But *some* day—"

I walked on over the hill and along the lake to the Agricultural School. Another class, all men, sat on the grass in front of the stock pavilion. The lecturer was discussing in-breeding, and the men played mumblety-peg as they listened. Every now and then a cow thrust her head through the fence behind the lecturer and, as if approving or protesting, emitted a loud "*Moo!*" At our very coat-tails a flock of sheep nibbled grass, and from time to time added to the perfection of this bucolic picture by lifting their heads in a quivering "*Ba-a-a!*"

Returning past an orchard where more Agrics, one a young woman in a blue gingham dress and wide straw hat, were learning horticulture, I passed the ball game and crossed over to the boat-house. The nearby shore was lined with the boat-landings of fraternity-houses. Two launches filled with girls put-putted by; a man and a girl put out from one of the floats in a canoe.

With a delicious *skwudge-skwudge* the 'varsity eight tramped down the float, swung their shell over their heads, and set it lightly on the water. At the same moment two girls ran down the wharf next door and climbed into their canoe. No one paid any more attention to the co-eds than as if they were butterflies, and the girls showed no more interest in the eight Greek gods than as if they were all members of a family at their own cottage at one of the Wisconsin lakes.

After dinner at one of the fraternities we strolled over to one of the girls' sorority houses, chatted on the steps a few moments, just as people were doing all over the Middle West at that hour, and then, two by two, in the fading daylight, drifted up to a concert by the college band on the hill. In the middle of that long stretch of grass stood the band, and all about were men and girls sitting on the grass like some vast picnic party. At the end, when the band struck up the college hymn, the whole regiment rose and stood till it was done.
